"The names of a great many accomplished verse-writers must remain unmentioned. . . . To-day there is a host of young poets filing corners of our magazines with lyrics which would have made reputations for many of

PREDERIC LAWRENCE KNOWLES

Bryant's contemporaries. There is Clinton Scotlard, who never writes an unmusical line, and whose very fluency and grace are his snare. His verse is so smoothly filed at every point that it doesn't bite the memory. Then there is Gilder, one of the noblest, most spiritual of our poets since Lowell and Whittier, but lacking the natural song faculty of such men as Scollard or Carman. If the author of 'The New Day' had the easy tunefulness of his younger contemporaries, this highly accomplished man of letters, whose scholarly verse pleases the thoughtful and educated reader, would win also the general popular audience. As to Riley, who does gain a hearing from the larger audience, one feels that his fatal blunder is in persistently preferring a corrupt and illiterate jargon miscalled 'dialect,' for the English of Tennyson and Wordsworth, Burns's songs are written in a true dialect which not only the peasantry, but also folk of breeding and culture, have conversed, preached, sung, and made love in for centuries. But that a vulgar, rustic patois forms proper clothing for the most serious and jealous of the arts is at least open to question. No such blumler is made by Bliss Carman, perhaps the most famous of our poets born since 1860, but Carman, altho very nearly the most imaginative poet we have had since Poc, is handicapped by a kind of mystical obscurity joined with a wellnigh complete inability to condense. Carman is s born singer, but he is almost as unmoral as the author of 'The Raven,' and has really more music than message.

The New York Sun makes the following semi-humorous comment on Mr. Knowles's list:

"With the exception of Mr. Moody and Mr. Mifflin, and of the late Professor Sill, whose work is not widely known, all Mr. Knowles's favorites are old favorites. So the few persons who have been able to refrain from admiring their own verses long enough to become familiar with those of the best-known Amercan poets, except Mr. Will Carleton, Mr. James Wiltenbu Bley, and Mrs. Ella Wheeler Wilcox, have the material of an opinion as to the merits or faults of Mr. Knowles's catalog. We shall not attempt to criticize it ourselves, because poetry is apparently incapable of each or miversal definition. A means one thing by it; B means another; C something clse. It is a waste of time to guess at the color of that chamelcoa. Purthermore, it is Mr. Knowlen's privilege to pick his favorites. And when he says that 'one feels that Lowell might have rivaled Tennyon on his own ground, if he had devoted himself to art with the same consecrated real, 'my,' one feels' that here is a sturgly enthusiant. All that we need to say about his Fifty is that he proposed to the proposed of the proposed of the proposed of Poor. The Whitmanians will bellow at the hitte space given to the gol of their idolatry. The Lanierites, a growing sect, will also complain.

"Mr. Stedman is left in the cold, perhans as a punishment for maintaining too large a storehouse of American verses. Probably such frivolous works as Mr. Harte's 'Plain Language from Truthful James' and Mr. Leland's 'Hans Breitmaan's Party' are aslamed to show themselves in Boston."

#### LUCAS MALET'S NOVELS.

"SINCE Mrs. Humphry Ward published! Robert Elsimere," and Mrs. Gladstone deemed it worthy of a serious refutation, probably no acovel has aroused such general interest as "The Illistory of Sir Richard Calinaly." This statement is made by Jance E. Hogarth, a writer in The Fortnighthy Review (March), who follows it up with the remark that, evea the a prime ministence of the property of the propert

viewed the book. "lesser folk have discussed it with a fulaess and frequency which may be thought to make further comment superfluous." For the most part, however, the book has been treated as tho it stood alone, regardless of the fact that "it is the seventh in a series of novels, all remarkable and all illustrating certaia clenrly defined teadeacies." The writer urges a study of "The History of Sir Richard Calmady" in its relation to its predecessors, add-MRS. MARY ST. LEGER MARRISON CULTURAL

MRS. MARY ST. LEGER HARRISON ("LUCAS MALET"). Courses of The Outlook

Lucas Malet's work affords so curious a natural history of the birth and growth of a taste for the abnormal, that it is, perhaps, worth while to trace its development in some detail." She continues:

ing that "a com-

prehensive view of

"It is now eighteen years ago since she published her first novel, 'Mrs. Lorimer.' That was closely followed by 'Colonel Euderby's Wife.' A year or two later came 'A Counsel of Perfection,' and, in \$91, after an interval, 'The Wages of Sin.' Thein a gap of five years, followed by 'The Carissima,' and four years later by 'The Gatless Barrier.' Finally, in 190, comes 'The History of Sir Richard Calinady.' Clearly she does not work quickly, or she may not closses to give the world anything immature or utafinished, for the looks afford conclusive evidence that they have not been published in order of conception. Some of the personages of 'Sir Richard Calinady' are incidentally alladed to both in 'A Counsel of Perfection' and in 'The Wages of

Sin, and in such a way as to leave no doubt that the halest novel was their in substance complexe, Vet 'A Counsel of Perfection' was published as long ago as 1855. Even without such as indication one might have divined that the mind which could conceive 'Sir Richard Culmady' was not making its first tentative eartmans into the sphere of the abnormal. Indeed, both the pre-ceding books had dealt definitely with the superratural, and 'The Carrison' explicitly amounced itself as a modern grow. The Carrison' explicitly amounced the substance produced the superratural in the substance of the substanc

Lucas Malet started with a spiritual and "almost sacramental" view of life. The theme of her first novel was "nothing less than that hunger and thirst after righteousness, that passion for spiritual perfection, which possesses only those elect souls who, if the gods isdeed love them, must surely die young." In her "Counsel of Perfectioa" she was still "preoccupied with the nature of holiness"; she desired "above all things to picture a saiut." In a remarkable article which she contributed to The Fortnightly Review in 1885, on the appearance of the "Life of General Gordon," she enumerated the various marks, the moral "sligmata," which distinguished the saints. Up to this time, she was "the true daughter of Charles Kingsley," combining "the ethical aim of the preacher with the selective instinct of the literary artist." But little by little her coacept of life seemed to change. "Whether from inability to realize the saintly type or a growing disinclination for it, Lucas Malet certainly seems to have decided that sinners were more interesting." The writer says further:

"She by no means cases to be a mornist; in 'The Wages of Sin' she preaches her most artifusje sermon. But she does it by portraying the sins and sufferings of struggling and repeatant humanity, and leaves spiritual perfection for disembodied ghosts. 'The Wages of Sin' marks an important step forward in her work, an advance upon lines already suggested in 'Colonel Enderby's Wife.' 'The Cousselod Perfection,' which intervened, and less of the decha and-bood element. In some ways the provided of the control of the control of the color of the color

In her later novels, Lucas Malet seems to have been drawn almost wholly under the spell of the absormal and the mobiful. "There is no denying, Art dörs fix the mind, uawholesomely, uascicatifically, upon extremes are words that she puts into the mouth of Antony Hammond, in "The Carisbian"; and of her hero, in "The Wages of Sin." she says: "There was unquestionably a sinster vein in him, a rather morbid elopyment of all that is strange, jarring, unexpected, abnormal. Some persons have gone so far arts to accuse him of a love of actual physical deformity and a relish of horror for mere horror"s aske." The writer concludes:

"And what of 'Sir Richard Calmady'? Does it not show every one of the tendencies traced in this article carried to their extremest point? The artist has, indeed, asserted both her right and her capacity to call a spade a spade. There are pages which, if read at all, can only be read through the eyelashes. They hurt like the sudden view of a street accident, they are as intolerable as the sight of a surgical operation. But side by side with them there are pages, and those the majority, quite as beautiful, perhaps more beautiful, than anything to be found in the earlier uovels. It is almost impossible to acquit Lucas Malet of a delibcrate wish to shock average susceptibilities by the choice of a theme, essentially cruel and running counter not only to the artistic tradition, which is as old as the Greeks, but also, as she herself suggests in not a few passages in the acvel, to the healthy iastiacts of the higher types of humanity. Yet she might argue that only thus could she have brought into fullest relief the beautiful figure of Katherine, tragic in her love and suffering, sublime in the uaselfish devotion of her perfect motherhood.

"She might use this argument, and yet leave us unconvinced. No doubt it is a question of balance of effects, but surely the abnormal, the grotesqué, whatever may be its proper position in art, should at least be used sparingly. Was it necessary to write

primarily a writer

of detection stories

laid hold upon that

Tiver, or the de-

lightful 'Tale of

Negative Grave

ity," and practi-

consider Stockton in any other light

than that of a master of invenious

clever fantasia. 'The Lady or the

scene after scene, each bringing home only the same truth, the cruelty of Richard's deformity? Does even the desire to see life whole quite justify 'The Rake's Progress'? Indeed, is that a drawing from life, or a distorted reflection, seen through the prism of French fiction? And would a judgment, not a trifle warped by prolonged study of exceptions, have created so inhaman a temptress as Helcu de Vallorbes? But if these questions have answers, it is for the authoress, not for the critic, to make

#### DEATH OF FRANK R STOCKTON

FRANK R. STOCKTON, who died in Washington on April 20 of cerebral hemorrhage, is regarded as one of America's most busyant and representative humorists. He was sixty-copbi years old, and yet, as the New York Sun remarks, "it seems as if one of the younger generation had passed away." His spirit, adds the Baltimore Herald, was that "of a healthy schoolboy on an outing," and the spontancity of his fun "captivated an audience wearied of more cumbrously constructed humor." The New York Evening Post says:

"By a carious but not uncommon fate, Mr. Stockton's pagelarity was based upon his least characteristic works. The people to whom Poe is

plot construction and of a marvelously dry humor. Of course these stories show very perfectly Stockton's favorite mechanism: they show very imperfectly or not at all FRANK R. STOCKION. his true tempera-Courtesy of D. Apuleton & Co. ment which was that of the realist. In the book which brought him note, and after a quarter century of unbroken popularity is still his most characteristic product, 'Rudder Grange,' the whinsical mishaps to which the canal-boat household is subject are not more re-

Pomona, and the Lady from Philadelphia. Where are there to be found more genuine and perfectly recognizable Americans? "This is not the facile verisimilitude upon which a fautastic romancer depends for credence; it is rather the kind of accurate portraiture upon which all genuine caricature is based. Mr. Stockton knew his people well enough to take all kinds of liberties with them and subject them to all the extravagant caprices which a very fertile imagination could invent; but he never lost sight of the fact that they were normal, wholesome Americans,

markable than the seriously drawn characters of Euphemia,

and he respected them, while in the slyest and most insinuating Mr. Stockton was dear to the heart of the present generation, observes the Philadelphia Press, because it had, in a sense, grown un with that talent. The same paper continues:

manner he planned to make them ridiculous."

Our generation began in pinafores with The Floating Prince and those other delightful fairy stories that brought joy to the hearts of the readers of St. Nicholas; in its salad days it puzzled its head over the untold ending of 'The Lady or the Tiger,' and it read, in its romantic moments, the charming love scenes in 'The House of Martha,' until, having finally settled down in life, it spent its vacations upon 'Rudder Grange' and admired. if it did not practise, the strange household economy of 'Mrs. Lecks and Mrs. Aleshine,

But, as nearly as contemporaries may judge of these matters, Mr. Stockton's charm will not cease with the passing of the present generation. It is true that there were times when it seemed as if his vein had been too strennously worked and it is true too, that in some respects his earlier work was better than his later. Yet, for all that, Mr. Stockton will last. The least artistic of his books has an individual charm which can never be successfully imitated.

Of Mr. Stockton's personality the Springfield Republican

"He was the most interesting of personalities, of small stature. shight frame, a face which had grown singularly wrinkled-for a sparer figure is rare-and blazing out of it a pair of the most brilliant and yet cordial dark eyes that ever shone upon a friend -no one will forcet him that has had the privilege of knowing him, and the Authors' Claic will be melancholy without him, This club gave him a reception on the appearance of his complete edition, which was one of the most interesting of such occasions. Mr. Stockton's wife, who was Miss Tuttle of Virginia, survives him '

"He had a genius for friendliness which attracted all men." adds the New York Outlook: "and once drawn to him, his friends were held by his sincerity, his integrity, his modesty. and his capital good-fellowship." It says further:

"He who adds to the pleasantness of life, to the good cheer of human fellowship, to the sum-total of human gaiety, is a benefactor. Mr. Stockton belonged in the small groun of those who make life more agreeable, but only by the play of their own humor, but by persuading other people to use this great resource."

#### NOTES

THE Pope is about to introduce a new decoration, as a mark of distinction, to Roman Catholic pien and women of letters of all nations who have produced excellent work. The name of the decoration has not yet made public; as described, it will be composed of two paim leaves sur-thounted by a lamb. "Both purpose and design," remarks The Catholic are certainly striking, and show the esteem in which litera-Telegraph. ture is held by the Pope "

SOME radical changes are contemplated in New York munical circles next season. The New York Times is authority for the statement that Mr. Gran has decided to retire the Wagner opera to the background, and in this event the function of the new Wagnerian conductor, Alfred Hertz, of Breslau, will not be an important one. Emil Pant announces his intention of returning to Europe and of accepting one of several offers that have been made to him. Waiter Damrosch is expected to take his place as conductor of the Picibarmonic Society.

Russia is perhaps the last country in the civilized world in which one would be tempted to seek "old masters," but the art journal Mer Iskussing save that many such are to be found in the most unlikely places, unknown and unseen. A woman who owns a farm in Tambow had two paintings by Adrian Van Ostade. They were in the milk-rellar, as the good soul had no When discovered by an expert they were already raiped. Little Russia is especially rich in old pictures, continues the same fournal, particularly the government of Trisernigow where in the day not Catherioe the Great many fine mansions were built and adorned with the works of Watteau, Boucher, Rubens, and even Titian. In a country house fifty versts from the railway a " Venus " by Tilian was found hidden behind an open door-"the only fit place for it," said the servant who pointed it It is a nude figure of a golden-haired woman standing ankle-deep in the sea on which floats the traditional "Titian mussel.

An interesting view of one side of Cecil Rhodes's character is given in an article in the London Telegraph. Mr. Rhodes's mind, according to the writer, wan "cast in classical mold," and the great industrial ing to the writer, was "cast in classical motor," and the great industrial magnate porced over his library of classical authors," more ihan the demands on his time seemed to have rendered possible." "I once laughingly suggested to Mr. Rhodes," he confines, "that on one or other of the appropriate kopies in the neighborhood of Cape Town he should construct a model of the Parthagon on its original lines, and commission what sculpfor he could find to supply it with reproductions of the finest Greek stat-He jumped at the idea, merely remarking, in parenthesis, that "One has so little time, and tho one is rich one has not money enough for everything." . . "I tell you what I would like to do," he added later; "they are always clamoring for a tax upon the output of diamonds at De Beers. Well, I would be quite willing to give them a tax of 3% per cent. of they would devote it to encouraging art and literature in every form in South

is mistaken. He says

#### SCIENCE AND INVENTION.

#### IS THERE SNOW ON THE MOON?

FROM a series of photographs taken in Jamaica a few months ago, Prof. W. H. Pickering has concluded that a small amount of snow may exist on the moon's surface. He noticed in particular that the great waited plain Plato shows a regular progressive change during the lunar day. White patchess are seen upon its floor, which, as the sun rises higher above it, diminish in size and vanish; and these Mr. Pickering believes to be snow. In an article entitled "Change on the Moon-Real and Apparent," in The Path Math Magazine (March), Mr. E. Wall-

"The observation itself may be unhesitatingly accepted. Indeed, there is nothing novel about it. Such changes in the illumination of the floor of Plato are described in all the text-books, and, so far as his observations have yet come to hand, they appear to contain nothing new. But as to the cause of the darkening of the floor of Plato under high illumination, we are still, as in the contain the contain the contained of the contained of the can culy say, with a very high amount of confidence, that by no possibility can it be due to the melting of snow.

ter Maunder states his reasons for believing that Mr. Pickering

"For to have snow we must have an appreciable atmosphere, capable of sustaining water-spor; and that the moon has no such atmosphere we know, both from observation and from theory. The sharpness with which a star disappasers when the moon passes before it, the intense blackness of all shadows on the lunar surface, the crispness of the borns of the crescent moon, the absolute lack of any spectroscopie evidence for a lunar atmosphere during an eclipse of the sum—an observation which was repeated under the most favorable circumstances by the French astronomers in Egypt daring the eclipse of November 11 last—are quite sufficient to rule an appreciable lunar atmosphere cont of court.

"But the theoretical considerations are yet more conclusive. The first point to note is that a lunar atmosphere, if it existed, would be distributed in quite a different fashion from the atmosphere of the earth. Here we find that if we climb a mountain some three and a half miles high-a little higher than Mount Blanc, that is to say-we should have passed through one-half of the atmosphere; the barometer would record for us a pressure but one-half what it had done at sea-level. Were it possible to ascend to twice that height, to seven miles, the pressure would be reduced to one-fourth; and at ten and a half miles, to oneeighth. Not so with the moon's atmosphere. Whatever its density on the surface, we should have to ascend nearly twenty-four miles before that density was reduced to one-half, and to fortyseven before it was quartered. This difference of distribution. if we take account of it alone, would have a very striking effect, For, if the atmospheric density at the moon's surface were no greater than that at forty miles above the earth's surface, at fifty miles above the two planets the moon would have the denser atmosphere, and for all heights above that. The total amount of such a lunar atmosphere would nearly correspond to that above a distance of thirty miles from the earth, tho its distribution would be very different, for its density would be much more nearly uniform. Such an atmosphere could not fail to give evidence of its presence in twilight effects, and in softening the extreme hardness and blackness of lunar shadows; but it would be quite incapable of carrying any appreciable amount of watervapor, or of sustaining any cloud that could possibly make its presence feit across the 240,000 miles which separate us from the

"This curious arrangement of the lunar atmosphere, should there be one, is a direct and immediate consequence of the smalness of the force of gravity at the moon's surface. It is a most unformante circumstance for the various romanners who have described voyages to the moon and life upon it. Most of these, whether Laurie or Griffiths or H. G. Wells, recognizing that there is no sufficient evidence of air above the general surface, have tried to make provision for their travelers, or for the lunar inhabitants, by imagining that a fairly dense atmosphere exists in underground caverns, or in the hollows of deep craters. That could be the case much less on the moon than on the earth. Such an atmosphere would at once expand upward almost indefinitely, for there would be no sufficient pressure above it to keep it down."

#### THE PASSING OF THE HORSE.

V ERY early in the development of electric traction it was predicted that the use of the horse would ultimately decrease and perhaps disappear. Electric traction has now, however, been brought to a high degree of perfection, and yet the horse is still with us. Notwithstanding this, statistics show, we are assured editorially by The Electrical Review (April 19), that the horse is going—slowly, perhaps, but none the leas surely. Says this paper:

"Some interesting statistics lately published by our lively French contemporary, I. a Locanolise a telements, show that in Europe the horse is rapidly disappearing in the various large cities. For example, in Paris the total number of borses in 1921, according to a municipal census of these animals, was 96,698, while this year it is only 90,796, a falling off of about six percent. In London, in the same period, the equine population has decreased ten per cent, while in Berlin, Vienna, and even in St. Petersburg the same falling-off exhibits itself. This is parily due to the new trolley-roads, and very largely to the numerous and continual increase in the number of automobiles used both for pleasure and business.

"In this country the supersession of the burse by the trolley-car has been absolutely atomishing in its estent. Probably to-day in New York there are not more than two-thirds as many horses employed as were used twenty years ago. So far, the automobile appears to have made no great inroads into the borse business, and it is likely that the extension of the use of automobile away that the contract of the third than the contract of the contract of the third than the contract of the contract

"As certainly as anything can be predicted the progress of engineering advance will totally extinguish the horse as a beast of burden. We may look forward with certainty and satisfaction to the day when cities at least will be horseless and when we will be removed from the tyranny of this animal, which has imposed upon us stone-paved streets, unending dirt, and, curiously enough, the house-dy—an insect dependent upon the existence of stables for its birth and breeding. What the turture of the horse will be is hard to say. It is likely that horses will continue for centuries to come to be used as instruments of sport and pleasure, but the day of their emancipation from hard labor in the streets and roads is used fat distant."

#### THE HYGIENE OF THE STREET-CAR.

THAT the street-car is responsible for a large share of the suffering and pecuniary loss due to preventable sickness in our great cities, is asserted by Dr. George A. Soper in The Medical News (New York, April 19). He says:

"Theoretically, the trolley-car is a sanitary improvement over the public conveyance of a former day; but practically, as it is scen in New York, it is an invention of doubtful hygienic value. If we name in its favor greater size, better heating and lighting facilities, and higher speed, we must also take into account the fact that it is not well adapted to carrying the great number of people who ride upon it. Under present conditions, greater size does not insure greater convenience; in the rush hours of night and morning it means greater discomfort. Cars with a seating capacity of from twenty to thirty people often carry from sixty to ninety passengers. How great overcrowding becomes is illustrated by the nightly spectacle of the throngs who seek transportation to their homes across the Brooklyn Bridge. At this point it is not uncommon for people seeking to board cars to be trampled upon; men aud women have been killed here in their efforts to find a place upon the trolley-cars

"The sanitary evils of overcrowding are not speculative.

From the time of Sedgwick and Farr to the present day there has been a great stream of statistical and analytical evidence to prove that persons who breathe poor air and occupy crowded quarters furnish high death-rates."

That street-car ventilation is insufficient nowithstanding the frequent opening of doors, Dr. Soper shows by analysis of tho air is the cars, which has been found to contain as much as 26.2 parts of carbonic acid on the surface-cars and 31.2 parts on the elevated roads. Bacteria are present in abundance, a fiber of cocon-matting one and one-half inches long from an elevated-car having been found to contain three or four million microbes. Of course the spitting habit, which board-of-health threats have not yot stopped, does much to increase the danger. Conditions in tunnels and subways are still worse. The undoubted effect of all this on the city's health is thus summed no by the writer:

"Under present circumstances thousands of exhausted and fagged men and women seek the trolley and elevated roads every night and there fight for an hour or so for a place to stand while being transported from their business places to their homes. In the morning they repeat the experience. The foul atmosphere and inadequate warmth of the exar is winter predicpose them to disease, and the unclean habits of a dangerous micious heating and ventilation nor toronisent dangers also.

"Is there any remedy for the sanitary evils of New York streetcars? There are several. In the first place, the power of the community to make haws for public safety should be utilized, and for this purpose it is needful that the necessity for such ordinances should be ampreciated. Evidently, the call for deceney

and sanitary safety which has thus far been made by the board of health has not been heeded, and it is consequently incumbent upon every person who appreciates the importance of this subject to give it emplassis.

"The principal objects toward which, as the writer believes, laws intended to improve the sanitary condition of street-cars in New York should be directed are a reduction of overcrowding, the prevention of spitting, and the proper vontilation and warming of the cars. If overcrowding can be prevented, the problems of ventilation and warming can be properly solved; but not otherwise."

Cycles in Scientific Thought.—That modern theory, especially in electricity, is moving back into old growes, or rather that it is swinging around an orbit into an old position, is asserted by an elitorial witter in The Electrical World and in which these are regarded as his "chipped off from the atoms, is a striking return to the older methods of explaining phenomena by reference to infinitesimal material particles. A paper by Lord Kelvin in The Philosophical Magazine (March) furnishes a text for the writer referred to above. It osays:

"It is most instructive to see how neatly the modern hypothesis may be twisted into a ludicrously complete confirmation of the venerable theories of Æpinus. It is a metaphysical doctrine sometimes set forth that thought swings in great slow cycles, the learning of one becoming the ignorance of a second, and the brilliant speculation of a third. Lucretius advanced much of tho modern atomic theory hard upon two thousand years ago, and Omar Khayyam proposed a calendar even simpler and more precise than the one now current. The one-fluid theory has spanned fewer centuries than these, but it has been more fortunate in its champions. And so the cycles recur. There is already evidence of the recrudescence of the emission theory of light, and it would not in the least surprise us to see within the next year or two the whole wave hypothesis openly attacked. The late Professor Rowland used often to exclaim: 'Who will be the Kepler of tho molecule?' We do not know, but wo feel reasonably certain that he has not yet appeared. We are far from desiring to cross swords with so doughty a leader as Lord Keivin, but we earnestly wish that the next man who invokes an electrically charged atom electron or electrion to explain physical phenomena, would kindly preface his hypothesis with a definite and consistent explanation of what the connotes by the expression observing explanation of what he connotes by the expression observing in lowertigating the dynamics of electrical stresses that has been put upon hypothesis derived from them, we would know more about explanation just as hadly as the atom or the molecule, and the whole subject is open to the charge that it is degenerating into metaphysics."

#### A LONG BRIDGE.

A BRIDGE twenty-five miles long, more or less, even if it is only a treate across a comparatively shallow lake, deserves more than a passing notice. Such a bridge is that on which the Southern Pacific is to cross the Great Salt Lake, thereby saving over forny miles in its line between Lucin and Ogden. This re-location is add by I've Scientify American to be the most radical change of alinement ever known in the history of raitroad-engineoring. It is thus described by that paper:

"The present distance of the line from Ogdon to Lucin is 145.5 miles. Much of this distance is made by the line running about 50 miles north before turning around the north end of the lake. Over this route are many sharp curves and heavy grades.

THE GREAT TRESTLE BRIDGE NOW BEING BUILT ACROSS SALT LAKE, BY WHICH THE SOUTHERN PACIFIC MAILROAD WILL SAVE 41½ MILES OF DISTANCE.

Courtesy of The Scientific American (New York),

"The new cut-off will run west from Ogdon to the shores of telle lake, crossing to Promontory Point on seven miles of treats; then across the peninsula for five miles and then across the main body of the lake to Strong's & Roub on the west shore. The main length of this cut-off will be to miles, a saving of over 41.5 miles.

"From the east aboro over to the Promontory the lako is quite shallow, being not over eight feet deep. It is expected that this stretch will be filled in writt earth and rock ballast, after the temporary bridge has been constructed; but the deeper portion across the main arm of the lake will be bridged. The deepest water, about 90 feet, is encountered on this stretch, which will be on a tangent. Curve will be few and very light over the entire distance from Ogden to Lend. The fall from Ogden to the first own of the control of

"The most formidable task will be the building of the trestle across the main body of the lake. As is well known, the first material found at the bottom of the lake is a layer of very fine sand from six to thirty inches in depth. Then comes a hard stratum of soda formation of from a foot to eighteen inches in thickness, and after that alternate strata of sand and blue elay for an indefinite depth.

"The trestle will be built high enough to allow a rise in the waters of the lake. The low stage of water in the lake makes the present time a favorable one for the survey and construction of the new line. The experience at the Salt Lake bathing-resort has been that the sand tends to accumulate around driven piles. If the same experience is had with the piling of the trestle, the result will be a rapid shallowing of water along the same, giving an increased security for the route as time progresses,

"In addition to the great saving in distance, the construction of the line will bring the immense deposits of guano on the islands within easy reach of a market.

"Piling has already been ordered from Texas, and arrangements for its reception made in the Ogden yards. Contracts have been let, and work, which has already started at the Ogden end, will be rapidly pushed. The enterprise will call for an expenditure of about \$800,000 per year for the next three years."

## AN ATTACK ON MARCONI.

Tile claims of Prof. Oliver Lodge as the original inventor of writeless telegraphy are advanced in an article in The Saturday Review by Prof. Silvanue P. Thompson, the well-known English electrician, who at the same time handles Marconi without gloves. Professor Thompson praises Marconi's achievement in transatlantic signaling, but ascribes the result to Lodge's Invention. According to Professor Thompson, exiter's Marconi son Slaby is entitled to a patent on anything but the details of their systems, since Lodge stands as the original inventor. He adds:

"The Slaby-Arco system is as much a lineal descendant of Lodge's earlier work as is Marconi's. Both of them employ Lodge's methods, inasmuch as both use a coherer to relay the Hertzian waves upon a telegraphic receiver, and both employ automatic tapper. Eliminate these features, which are due to Lodge, and both Marconi and Slaby collapse. So Marconi, who uses without acknowledgment these devices of Lodge, mouths ont a denunciation of Slaby, who dares to use the same devices for the same purpose. It is a pretty quarrel. If Marconl imagines that his thin patent claims entitle him to a monopoly of the ether for the purpose of transmitting signals he is much mistaken. His dog-in-the-manger policy toward Slaby is simply silly, and the more so because neither of them can either transmit or receive a single wireless message in the United States witbout infringing on the patents of Lodge. It seems like the irony of fate that Lodge, the well-known principal of the University of Birmingham, after expounding the principles of wireless telegraphy in London and Oxford in 1894, should find himself pushed aside, first by the Italian, who by dint of advertising gains the public ear, and then by the German professor, and yet should actually stand master of the transatiantic situation because he holds the master patents in the United States. It is said that Lloyds has made an agreement with Marconl for fourteen years. Perhaps Lloyds is not aware where the patent rights lie. Marconi may whine as he pleases about other men snutching rewards from the scientific investigator. That is preeisely what he himself has been trying to do in the last four or five years, his victim being the Englishman who was first in the field, and who, if he but knew it, is to-day master of the situation.

The technical journals generally deplore Professor Thompson's course in making this attack, and it is generally pointed out that Macroon' has been careful to credit this predecessors with their share in his system, and that the successful perfect of an investion has almost always been subject to misrepresentation of this kind on behalf of the pioneers in his line who either did not care or were not able to bring their devices to a commercially profit-able point. At the same time, some of them hint that the real pioneer of wirefess telegraphy is not Lodge, but Herts, the discoverer of the electrostatic waves called after him "Hertsian." On the existence of these waves the Marconi system depends, and his inventions, as well as Lodge's and Slaby's, relate only to their detection and utilization.

#### OUR POSITION IN SCIENCE.

THE question of the standing of American science continues to be discussed at intervals, and, despite much difference of opinion, the general belief seems to be that it is far from satisfactory. The latest contributor to the subject is Prof. Carl Racos, of Brown University, who writes thus in Science (April 18):

"If we were britally frank we might agree that a man with us is hardly eminent until he has been acknowledged as an intellectual commodity in some foreign market. From some points of view this sericlistrust and lack of independent judgment is laudable; but there is also a habit acquired in such things that is periicious. It is not so long ago that the Germans went tuth-buntling in France, a custom from which they awoke one day in consternation. They have not gone there since. The question to consider is whether it is not now high time for us, in turn, to awake to a spirit of scientific particistism. One does not have to read many books to lears with what enthusiasm an Engishman, plithments of his countrymen. Is there such pride among ust I doubt it. There is rather a tendency to exhaust all other bibliography first.

"Somebody has wisely said that for the English-speaking race there is but one aristocracy, and that it has taken the vigor of England to found it. Certainly the daughters of our millionaires offer much convincing if not eloquent testimony. In a somewhat similar sense, it seems to me that the aristocracy of American scientists also resides in England, the one can not deny that the continent bas some fascination. Our efficient scientific men are apt to outgrow the American Association first. then they ontgrow the National Academy, and finally the country itself is altogether too small for them. Their voices reach us in this final stage, barmoniously blended, from across the water, It is all very nice as a well devised scheme of gradation, but where is the spirit of patriotism in all this? Can we ever hope to reach intellectnal maturity in the eyes of the world if we belittle the dignity of our own institutions? Self-confessed incompetency may be a virtue, but one should at least first be sure that the incompetency really exists. If Europe were to close its gates systematically to American scientific research. I believe that no greater blessing could befall us. There is enough good work done here, that, if it were only properly centralized and presented in bulk, it would command the attention of the world, We should then have on our own shores what we now so frequently run for abroad."

Dr. Barus sees in this fact a reason for consolidating existing technical scientific journals, especially in physics, in order to concentrate American effort along this line.

Hygiene and the Corset.—In an article on "Women's 'Clothing and Hygiene," contributed to the Revue Scientifique (March 29), by M. Frants Glénard, the author controverts popular ideas on the subject of the corset. He lays down the following propositions:

"I. The corset has its raison d'Are from the esthetie point of view;

"2. Esthetics and hygiene may be reconciled in women's clothing, even in the corset;

"3. The corset may be of use in certain maladies."

These statements, which he acknowledges are somewhat audacions on the part of a hygienist, he attempts to justify in the course of his article. As to the first, he remarks that the adoption of clothing by man is the result neither of modesty nor of a desire to protect the body against the weather; it is a result, he asserts, wholly of a desire for adornment—the same that leads the savage to attoo himself. Men's costume has tended more and more to straight these, signifying action: women's to curved lines, signifying, according to the author, that they are "made to please." "Rigidity and struggth for man," he says; "suppleness and fascination for woman." The corset, then, is an attempt to preserve and accentuate the enreved outline of the waist. It may not be successful in this; it may be in the highest degree artificial and inartistic, but it mins at a heartified result and it may be made, under proper conditions, to produce such a result. The two enemies of the Beautiful are, according to M. Gifeard, nature and fashion; the ideal corset should modify and improve upon the former without slavishly bowing to the latter. That this ideal may be realized and that such a corset will be hygienically valuable. M. Gifeard is certain. Enough has been said to indicate that his views are not only audacions, as he confesses, but even hererical. Doubtless they will give aid and comfort to the makers and wearers of corsets for many years to come.—Translation made for The Litrasay Diouxi.

# THE AEROPLANE AND THE DIRIGIBLE BALLOON.

THE arrival of M. Sautos-Dumont in this country has caused the old aromatical controversy between the balloon and the aeroplane—the light and the heavy methods of aerial navigation—to break out afresh. Lord Kelvin, as he landed on our shores the other day, is reported by an interviewer as referring somewhat contemptuously to Sautos-Dumont's air-ship, calling it "a halloon with a puddle," and intimating little the owner's securious were adventures, not scientific esperiments. It must be said, however, that aeroplanes, even if they are preferable in theory, will not yet fly, except in models. Balloons have "flown" with greater or less success for a century or so, and now we have one that can be steered and even driven against a light wind. The present state of the problem is set forth with sabstantial justice in The Nientific American (April 19) in the following brief editorial:

"There is no question that as between the air-ship and the aeroplane, the latter is the more scientific and mechanically the more attractive type of air locomotive-if we may use the term; altho it must be admitted that in the present state of the mechanical arts, a practicable aeroplane as yet exists only upon paper. The airship, with its huge, unwieldy, and perishable gas-filled balloon, has nothing to recommend it but the fact that it can float at a predetermined altitude and does not depend for its ability to remain in mid-air upon the continuous working of its motors. The aeroplane does; and the instant its propellers cease to revolve, its buoyancy is lost. But at what a cost and risk the airship maintains its equilibrium is shown by the numerous disasters that have befallen Santos-Dumont in the various (six in all) air-ships which he has built. The whole trouble with the gassupported ship lies in the vast bulk of the balloon, and the great area that it presents to the wind. In any but the most moderate breeze, the eraft is more or less unmanageable; and we do not yet know how to build a motor which will be light enough to be carried by the balloon and have at the same time sufficient power to drive it against a strong breeze. And even if such a motor could be built, the frame and fabric of the balloon would collapse under the wind pressure to which it would be subjected. In view of the many and baffling problems, we can not but admire the persistence and pluck of Santos-Dumont, who is to try again-this time on our side of the water.

"But why do we not hear from Laugley, Maxim, and others whose experimental work of the last decade was so extreme whose experimental work of the last decade was so extreme made of late in the development of light, high-powered most abould materially assist in the development of a successful aeroniane."

Reading in Bed.—There is much to be said in favor of reading lying down, says Dr. Carl Seiler in the Scranton (Pa.) Tribune, as quoted in The Dietetic and Hygienic Gazette (April):

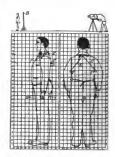

"The recumbent posture allows more rest of all the lodily structures than the sitting posture, and there is greater possibility of resting and repair in that position. Those who have tried

it know the benefits accruing, after a hard day's work, from the rest possible when doing a long night of reading, which the press of business makes almost an absolute necessity. One more fact is to the credit side of the score. Whenever possible we bring gravity into play to relieve congestion, especially that of a passive type. It has long been recognized that throwing the head slightly back beyond the perpendicular brings gravity into play to empty the veins which are principally overfilled by prolonged eve-work, but why this is not carried to its logical conclusion is a mystery. It is plain that placing the head back in a horizontal position so absolutely meets the whole problem of a relief of congestion by gravity-and it is such a very important problemthat it seems strange that people with weak eyes do not habitually practise reading in a recumbent position, with the head raised only so much as is necessary to make the position perfectly comfortable. Such advice, carried out with absolute care as to light and the position of the book, would in the case of a thousand onsy people add largely to the number of hours which reading could be indulged in without detriment to the eyes or general health.

Tailors' Measurements by Photography,—A recent patent of Franz Dolezal enables one to be measured for a suit of clothes by photog-

raphy. Says The Photo - Gazette as quoted in Cosmos (Paris, April 5): "The person to be measured is placed before the camera. and between them is introduced a network that is photographed at the same time and serves as a standard Certain artifices are necessary to obtain a complete result: thus, certain hidden parts, like the armpits, etc., must be indicated by objects visible from without; and, finally, several views must be taken from various standpoints. The subject is also

fitted with a sort of

TARON'S MEASUREMENTS BY PROTOGRAPHS

harness, which appears in the picture and which indicates points of comparison. These points may, however, he marked directly on the person instead. The relative positions of the camera, the network, and the subject are carefully adjusted so that the subject appears always on the same scale, and then the photograph is taken from the various necessary standpoints,"—Translation model for Tile Literacty Dioces.

#### SCIENCE BREVITIES.

"In apite of its coormous stee," says The Scientific American. "the Cathedral of Nôtre Dame in Paris has hitherto been almply lighted by was candles, as gas, it was thought, would damage the walls and valuable paintings. Now we understand that it is about to be electrically lit. The cost of installing the electric light is estimated at \$poone."

"WHILE M. Seaton-Demonst was inflating the balloon of his No. 8 all-cally an Jonness-Sary The Modeline American (April), "In we accommanded by the authorities to cross immediately the process of hydrogenemaling, on the activation of the process of hydrogenemaling, on the activation of the process of the process of the process of the process of hydrogenemaling, on the confidence of the process of the process

# THE RELIGIOUS WORLD.

# THE "ADAM MYTH" AND THE PRESBY-

THE refusal of preacher's licenses to three candidates for the ministry by the New York and Elizabeth (N. J.) Presbyteres, for the reason that these candidates declared that they viewed the story of Adam and Eve as an allegory, has started a lively discussion in both religious and secular papers. Vincent Noll, a graduate of Union Theological Seminary, New York, was the first student to be rejected, and his version of the facts which led to his non-neceptance by the New York Presbytery is as follows:

"Everything went well with me until some munister asked me what my views were on the third chapter of Genesis, which treats of Adam in the Garden of Eden. I answered that in my opinion the chapter was purely allegorical. In a moment things were in an uproar,"

The outcome of the uproar was that Mr. Noll's petition for a preacher's license was refused by a two-thirds vote, thu a committee was appointed, which, in the words of one of its members, will "pray with him, wrestle with God for him, moderate him, tune hun up and give him a dressing."

The two young aspirants for pulpit honors who were rejected, temporarily at least, by the Blanketh Presbytery are graduates of Yale and of Hartford Semiuary. Their trial sermons, it is said, showed them to be intellectual and even brilliant men. But they, too, denied the credibility of the first chapters of Genesis. "I don't like this kind of entching," deterated the Rev. Dr. Joseph M. McNnity, of Woodbridge, N. J., voicing the sentiment of the older members of the Presbytery; "this sort of material ought not to go into the ministry. The story of Adam and Eve is not mythical; it is an historical fact."

The conservative position in this controversy finds very limited support in either religious or secular journals. Prof. Francis Brown, acting president of the Union Seminary, when informed of the rejection of Mr. Noll by the New York Presbytery, observed: "If it is heresy to view the story of Adam and Eve as being allegorical, then there are plenty of heretics preaching sermons in Presbyterian pulpits to-day." Dr. Charles H. Parkhurst took occasion, on the Sunday following the incidents described, to preach a sermon in which he referred, in constic terms, to the "sifting process" of bringing men into the ministry, and declared that had Christ employed the same process, it would have caused the rejection of most of the twelve apostles. The New York Outlook goes so far as to style the examination of the theological candidates "ecclesiastical bullying," and thinks that it illustrated "the wrong of which Professor Briggs so justly complained-the encreachment on the liberty of opinion that the Presbyterian standards allow, which a party in that church is disposed to perpetrate by jusisting on extra-confessional tests of fellowship. The New York Independent says:

"We venture to say that there is not a competent educated professor of biology or geology in the obscurest Presbyterian college in the United States who believes that the Adam and Eve of Genesis were historical characters. One would have to rake all our colleges and universities with a fine-toothed comb to find such a teacher, and very few they would be. The belief, in scientific circles, of such an Adam and Eve is dead, and is no longer considered or discussed. Of course, the doctrine of a literal Adam lingers in popular belief, just as once did the belief in the world made in six literal days; but it is held by those who got their education a generation or two ago, or who never got any education at all. The older men in the presbyteries, especially those who have, for one reason or another, dropped out of the educative stress of pastoral life, have not learned what the colleges now teach; and it is they that oppose their large ignorance to modern knowledge. It will be a matter of great interest to see whether the new brief creed, which is to be presented to the Presbyterian General Assembly next month, will make any mention of Adam. We have no right yet to know, but we refuse to expect that he will be made a pillar of the faith."

The New York Mail and Express admits that "it is hard to accept quite literally the story of Adam and Eve"; but, it adds, "there are myths that are profoundly true." The same paper continues.

"It is one thing to say that the story of Adam and Eve is a myth, and quite another to say that it is false. Embodied in the Scriptural account in the first chapter of Genesis as the most profound bit of wisdom, the most scarching dip into the springs of luman action in the face of the great mystery of life and divinity that surrounds us, the most viril revelation of the power of God and the helplessness, yet hopefulness, of life, that all the world's literature has brought down to us. It is fundamental in many ways. That the guardians of religious doctrine should seek to hold neophyses to a belief in it is not to be wondered at.

"A myth is but old, old speech. All things are spoken in some shape before they are written. The myth is the spoken, elder Scripure Not all myths are entitled to become Scripure; but this one was so entitled—and it is true. If anything possesses, authority in this doubting age, this record does. There may be more wisdom in the act of simple dominines who require rigid adherence to its letter than in the proceedings of those who treat it with flippant doubts."

### THE NEXT GREAT RELIGIOUS AWAKENING.

THE Rev. Dr. John Watson ("lan Maclaren"), in a recent widely quoted sermon at the London Wesleyan Mission's anniversary, noted the fact that in late years great spiritual revivals have been lacking in England and that the present temper diumal is not prepared for such revivals. He went on to say

REV. DR. JOSIAH STRONG.

that he believed we are on the eve of a great revival. but that it will be primarily a social revival, inspired by the religious spirit. What if God be calling on men, he asked, not to build more churches, but to secure better and purer homes for His people? To cleanse communities of liquor saloons and haunts of vice? To see that every man for whom Christ died should have a fair chance to do hon-

2st work with honest pay, and to have a home where he can live in decency with wife and children? May not these be the most efficient means to bring men into conscious fellowship with God?

The Rev. Dr. Josain Strong, of New York, takes the same position in his new book, "The Next Great Avakeuing." All great religious revivals in the past, declares Dr. Strong, have come as the result of "the preaching of a neglected Scriptural truth which was precisely adapted to the peculiar needs of the times." Wesley and Whittield, in an age in which religion seemed to be given over to outward and formal observances, preached the need of "conversion," the coascions beginning of a new spiritual life. Charles G. Fieney, at a time when "the livine sovereignty of

God was held in such a way as to destroy all appreciation of buman freedom," thundered forth "the neglected truth of man's free-agency and guilt, and the retribution due to sin." Moody, following close upon the Civil War, when "millions of hearts were longing for consolation." Prached "the love of God." And now, declares Dr. Strong, the church is on the verge of a new spiritual awakening:

"It is quite obvious that the great questions peculiar to eur times are social. The industrial revolution has produced a social revolution; we have passed, within three generations, from an individualistic to a social or collective typo of evidination. Relations which a hundred years ago were few and simple are now becoming many and complex. New questions concerning rights and dutes are being asked. Society is gaining self-consciousness, which marks one of the most important steeps in the progress of the race. We are beginning to see that society lives one vast life, of which every man is a part. We are gaining what Walter heart calls "the sense of humanity." We are discover-thought; and with this perception of wider and multiplied relations comes a new sense of social obligations. That is, a social conscience is growing, tho as yet; it is uninstruction.

"The wonderful increase of wealth and of knowledge during the past century has served te create a new discontent and to kindle a new hope. It has transferred the golden age of the world from the past to the future; and this golden age, yet to come, constitutes a new social ideal.

"The social ideal of Jesus is precisely what is needed to inform and spiritualize and perfect this new social ideal, and the social laws of Jesus are precisely what is needed to educate the new social conscience."

Dr. Strong interprets the "social laws of Jesus" under three main heads, as follows:

(1) THE LAW OF SERVICE. Our substance, our time, our powers, our opportunities are all entrusted to us for service. Life itself is a sacred trust, and the whole life of every disciple of Christ is to be spent, like that of his master, in the service of the kingdom, and lu hastening its full coming in the earlt.

(2) The Law of Sacrifice. The spirit of sacrifice gives all, and longs for more to fill the measure of the world's sore need. It is the high prerogative of conscious and intelligent man to offer conscious and intelligent sacrifice. He receives according to his back that he may give according to his ability; receives food that he may give strength, receives knowledge that he may give it forth as power.

(3) The Law or Love. This is the supreme social law, the great organizing, integrating power, precisely as its opposite, selfisliness, is the great disorganizing, disintegrating, anti-social power. Disinterested love is divine; it is the love that God is, and makes possible Christian service and Christian sacrifice.

Dr. Strong proceeds to ask whether either church or society is making any serious attempt to realize these fundamental Christian laws, and he answers in the negative. "To be enthusastic about the church in its present condition," he says, quoting the words of Prefessor Bruce, "is impossible." The church has become "a very respectable institution which must be stanstand." It is doing "much to conserve the heritage of the past, but not much to modify the future." Dr. Strong continues

"Let us suppose a church somewhere, whose members have such an entlusiasm for humanity that when they lie awake nights they are planning, not how to make money, but how to make mear. Their supreme desire is to help the world in general and their own community in particular. They are striving daily to remove every moral and physical eveil; trying to give every child who comes into the world the best possible chance; longing and working and praying and spending themselves and their substance to save men from sin and Ignorance and suffering. What a transformation such octure would work in any community! How it would reach the masses? How it would grow! How it would be talked about and written np? How would make pligrimages to study its workings and its success. Yet such a church ought not to be in the least degree peculiar. This is simply the picture of a church whose membership is imbined with the social ideal of Jesus, and has taken seriensly bis social layed of service, sacrifice, and love; and this picture ought to be the likeness of every Christian church in every community. If it would't how many hours would't be before the kingdom would come with blessed fruless?"

#### JESUS AS A PENOLOGIST.

A NEW and interesting application of the teachings of Jesus to modern life is made by the Hon, Samuel J. Barrows, of New York, commissioner for the United States on the International Prison Commission. We are not accustomed to think of Jesus as having any special relation to the problems of penol-

HON. SAMUEL J. BARROWS.

ogy; yet, in the opinion of Mr. Barrows, Jesus made a most notable contribution te this science, and "anticipated conclusions which are not now regarded as sentimental or arhitrary, but as scientific and philosophical," "We speak of Howard. Livingston, Beccaria, Pope, Clement, and ethers as great penelogists who have profoundly influenced modern life," Mr. Barrows continues

(in a paper read before the recent session of the National Prison Congress at Kan-as City, and now reprinted in pamphlet form); "but the principles canuciated and the methods introduced by Jessus seem to me to stamp him as the greatest penologist of any age. He has needed to wall, however, nearly twenty centuries to find his principles and methods recognized in modern law and modern penology." Jessus first of all came into conflict with the traditional theory of retailation and vengeance—"an eye for an eye and a touth for a touth." Says Mr. Barrows

"Over against this punitive theory, which he rejected, Jesus laid down the principle that salvation is better than vengeance; that it is more important to save men than to destroy them. The contrast between the punitive view and the reformative view is well set forth in an incident in the life of Jesus. His disciples, James and John, were wroth against a certain village of the Samaritans which failed to receive Jesus, and they said: 'Wilt thou that we command fire to come down from heaven and consome them, even as Elias did?" 'But he rebuked them, and said, Ye know not what manner of spirit ye are of. For the Son of man is not come to destroy men's lives, but to save them." There could be no greater contrast than between the attitude of Jesus on the one hand and that of the old penology on the other; it is the difference between light and darkness, between life and death. The doctrine of James and John was the old doctrine of elimination, a doctrine which is still advanced to-day. It under takes to protect society by killing off the defective and the criminal; but society is not protected by any influence or method the effect of which is to brutalize society itself. Whenever harsh, viudictive, and destructive means have been used against the offender, the effect has been to develop in society a spirit of cruelty which engenders and propagates the very crimes it is supposed to destroy,"

The method of Jesus, affirms Mr. Barrows, was to deal with

the offender rather than with the offense, and "this is one of the marked differences between the old penology and the new." He says further:

"For centuries criminal codes pusished the offense without any relation to the offender. Offense were classified with reference to their supposed harm to society, and the penalty was attached to each and every act. Mitigating circumstances were not considered. Under the old German code, if a cow or a horse killed a man, the animal was liable to the penalty just the same; an offense had been committed, and the offender, wheever he was, must be punished. The difference between the old penology and the principles and methods of Jesus is brought out very clearly in a New-Testanent story. Certain Jewe brought an offender before Jesus, who was guilty of a capital crime. The penalty of that crime was setuing to death. On the one side offense on the other sides whe law which recognized only the offense; on the other sides whe law which recognized only the offense; on the other sides whe law which recognized only the offense; on the other sides whe law which recognized only the offense.

"To separate and classify offenders: to study their nature and character and circumstances; to distinguish between degrees of discernment, and therefore of responsibility; to make the sentence fit the criminal instead of fitting it to the erime, are among the intelligent aims of modern penologists."

When Jesus applied to what was even a capital crime in his day the principle of suspension of sentence, by saying. "Go and sin no more," he anticipated the idea of probation, which has now found expression in most of the criminal codes of the world.

Mr. Barrows continues:

"The attitude of Iesus, both toward the first offender and the persistent offender, is clearly seen in the eighteenth chapter of Matthew: 'If thy brother shall trespass against thee, go and tell him his fault between thee and him alone; if he shall hear thee. thou hast gained thy brother.' If he refuse to hear, the next step was to take one or more witnesses, that in the mouth of two or three witnesses every word may be established. If the offender still persisted, then an appeal was to be made to the congregation, and, if the offender refused to hear the congregation, then he was justly treated as a heathen and a publican. We have here in three verses an excellent epitome of a rational and intelligent procedure toward offenders. Save the first offender if you can, It is something to have gained thy brother. If this falls, the next step is that of appealing to a section of the congregation such as in modern usage might be represented by a reference, an arbitration, or a minor court. If the offender is still obdurate, then an appeal may be made to the social conscience of the community exercising its judicial functions. This decision, whatever machinery may be employed to arrive at it, must be final."

The method of Jesus, adds Mr. Barrows, was primarily reformative and curative, and it recognised the power of love as a redemptive force. "To interpret the teaching of Jesus in the largest way, we must interpret; it to mean that some friendly personal forces must be brought into relation with the life of the prisoner." The influence and practice of Jesus were also preventive. "As he was the first probation officer, so he was the first child-saver in Christednom," and "child-saving is the great new method of modern philanthropy." Mr. Barrows sums up his conclusions as follows:

"These, it seems to me, are the essential elements in the penology of Jeaus: the rejection of the theory of social wengeance; the substitution of a theory of personal and social salvation; the application of the penalty to the offender rather than to the offenses: the adoption of a carative instead of a merely pointive method; the application of the penalty to the offender rather than to the offenses: the adoption of the supended sentence or "probation"; the recognition of the fact that the great forces of nature are necessary for moral as well as physical results; the divinity of labor; the application of the moral and spiritual forces; the potency of the open care; the lemportance of child-saving; the visitation of the prisoner; the establishment of personal relations and the bringing to bear of personal forces, and, finally, resilution as one evidence of the reformation of the prisoner. The sprivate Johnson of the reformation of the prisoner.

the penology of Jesus Is that which makes the regeneration of

### THE "INSANE PHILOSOPHY" OF TOLSTOY.

TOLSTON'S book on the sexual question, in which he advocates aboutte chastity, even at the cost of the gradual disappearance of the human race, continues to arouse spirited discussion. La Revue Blanck (Paris) recently saked the opinion of several prominent European critics regarding Tolstoy's views. Some of the replies are appended. It will be noted that Madame Judith Gauthier, a retired opera singer who is now a literary woman, is the only one to endorse Tolstoy's thiblosoby.

Max Normau: "Count Leo Tolstoy preaches absolute chastity, I work of the same convince Madiane Tolstoy and the fine family she has raised! At all event, we should congratulate ourselves that his parents did not share his opinion. Otherwise we should have land no 'War and Peace' or 'Anna Karenian'. . . Speaking seriously, it seems to me that the ideas of Count Tolstoy on the marriage question are absolutely delirlous, and delirium con be diagnosed, but not discussed. It is useless to defend woman against the absord lossed for the state of the same against the absord lossed sone of a sick brain."

Grorges Ancry: "I know what respectful admiration we all have for the anthor of 'War and Peace.' Yet it seems to me that he has reached the point where he bears watching. He forbids us to love and boldly attacks natural laws. This was to be expected. Whatever the genins and the brilliancy of Tolstoy there comes a time when even he must pause; there is a barrier which even he can not cross. Possibly the ideal man is nearer nature. We can hardly, however, attempt to infringe the laws imposed upon us against our will."

MADAM CLEMENCE ROYER: "I can formulate in one word the opinion I have of Tolstoy. He is crazy. To explain why would require too much time."

Exaco Ferra, of Rome: "The affirmations of Tolstoy on the sexual question only confirm Lombron's theory of the degeneracy of genius. The fundamental needs of humanity are bread to preserve life and love to preserve the species. Topreach absolute fasting, Marriage, whatever Tolstoy may say, is the ideal state of human life."

Mañass Junyu Gavrautes: "I will limit my consideration of the problem to the question to birth. It seems to me an act of truest wisdom to prevent the unhappiness of existence, and many wise men, including Christ, lawer indicated the path which we wise mediated to follow. To give life and then inflict death would have failed to follow. To give life and then inflict death would not constitute the greatest of crimes, did not nature, in her search for victims, strike with blindness and unconsciousness those whom she allures into her snarch.

GRODERS EXRICOTE, OF Brussels: "Por a long time the neo-Christianity of the great artist who wrote "War and Peace" has been suspicious and odious to me. Pirst be blasphemed art; now he blasphemes woman, maternity, child, and life itself. Instead of coudemining carnal joy, I wish to see a revival of the Greek cult in honor of flesh and physical beauty. I repudiate the misogamous and misocypnous tendencies of Tolstoy, as I repudiate his vandalism and portionism."

ALEAT REVILE: "Pascal said, 'Man is neither angel nor beast, and the man who wants to be an angel plays the part of a beast.' If the hope of a future life is reasonable, and I believe it is, we may be able one day to rise above the organic conditions of this mysterious life. But as long as we live on earth, we are bound to admit the legitimacy of the acts and functions without which our own life and the life of humanity would be impossible. To state that marriage is unchristian, because Christ was not married, is absurd. It is like reasoning that we could not go to heaven because we travel by rail and wave trousers.

whereas Christ did nelther. Christ himself said that marriage was a holy and divine institution (Mark z. 2-q)."

MADAME EMILA PARNO BALAN, Spalin: "I admire Tolstoy as a literapar artist, but I think that his philosophy is senselsess. Absolute chastity can not be the ideal object of man. Possibly it may be best for a few individuals. The individual is free, but the species is subject to natural laws, which are just and good in themselves. If Tolstoy were not such a great artist, would we pay any attention to his theories.

EMIL ZOLA: "The idea of Tolstoy is not new, Marriage is legalized by society, but it exists in nature without laws. Christ did not get married, because he was too husy to think about it. I confess that I do not understand Tolstoy. I do not see, ... It is insane... also lute continence leads to all kinds of unhealthiness. ... all novels end in marriage, ... I am qualified to know it... ... It is insane... !"—Translation made for The LTERSAY DIGST.

# THE ROMAN CATHOLIC VIEW OF

THE late Bishop of London, Dr. Creighton, with a view to promoting a better understanding between the various parties in the Established Cluxchi, instituted a series of "Round-Table Conferences" in Fulham Palace. All schools of doctrine and practise in the Anglican Church were represented by their leaders. At the first conference the doctrine of the Holy Eucharist was discussed. At the second conference, held in December, 1991, the subject was the doctrine and practise of confession. The purpose of these conferences was purely irenical and not decisive, and the representative of the various parties departed, if not in agreement upon the questions discussed, at least with a more kindly celling toward cach other.

The report of the second conference has just been published. Upon the point of the doctrine and practise of confession the conference seems to have been in substantial agreement and took the view that the practise of private confession of sin was not a primitive custom of the church. Upon the general question of the forgiveness of sins they report:

"Our Lord's words in St. John's gospel. 'Whoseoever sins ye remit,' etc., are not to be regarded as addressed only to the apostles or clergy, but as a commission to the whole clurch, and as conveying a summary of the message with which it is charged. It is, therefore, for the church as a whole to discharge the commission, which she does by the ministration of God's word and the sacraments and by golly discipline."

The present Bishop of London, Dr. A. F. Winnington Ingram, hailed this declaration "as executaing the charge of 'sacordotal-ism' which is held in such odium by the Protestant masses," and declared that "the frank agreement that private confession and absolution is in certain circumstances allowed is all that the great majority of the parish priests of the Church of England who ever made use of it would notatian."

In a review of the report of the second conference, the London Tablet (Rom. Cath., March 29) points out the difference between the Roman Catholic and the Protestant conception of the ministry:

"In Catholic belief the rost-notion of the priesthood is an association by power-sharing with Christ. Christ is the mediator and high priest. He fulfils his cternal priesthood by the exercise of certain powers—notably two, the power of sacrifice and the power of forgiving sins. In this his presthood, he associates his aposties in the 'Do ye this for the commensurating to them the whose sins you shall forgive, thus communicating to them the claim of the commensuration of the commensuration of the comciate others. Men thus ordinate or made partners in the priest, hood of Christ, and invested with his priestly powers, are rightly, by virtue of this association, called pressts.

"The Protestant Reformation-under plea of reverting to antiquity-brought into the world a notion of the Christian minis-

try which was diametrically opposed to, and utterly subversive of, that which we have described. Just as the Catholic teaching had for its root-idea a personal partnership or power-sharing with Christ, so the Protestant system took for its root-idea a delegated ministry deriving its powers from the Christian people. It taught that the eternal priesthood of Christ was incommunicable, and that in a very true sense there was no priest but him. It taught at the same time that all the powers which were needed for the celebration of public worship, for the conveyance to mankind of the Gospel message, and the benefits of the Redemution, 'the ministry of the word of God, the sacraments' were indeed bestowed by Christ upon his church, but-be it observed-not on any priestly tribe or class, but on the whole body of the Christian people. But, as the Christian people as a body, and taken collectively, can not officiate or exercise these powers, it must set apart and approve and ordain certain men as its deputies to minister in its stead. The men thus ordained are thus essentially ministers. No doubt they claim to be ministers and ambassadors of Christ, but they are so just because, and in so much as, they are the ministers and duly appointed delegates of the Christian people. They hold their powers as functionaries directly and wholly from the Christian body of believers in whom all the powers of their ministry radically reside. It is obvious that such a theory makes a bid for the approval of the world, as it is the very negation of sacerdotalism-except, of course, in the harmless sense in which sacerdotalism attaches to every Christian."

Three consequences, declares The Tablet, logically follow upon the acceptance of the Protestant view of the ministry:

"First, if it is the Christian body itself which possesses these powers from Christ, it possesses inclusively of its own right the power to depute the exercise of its functions to its deputies, and no special intervention of Christ would be required for the purpose. Hence ordination would be simply a constituent act of the church, vir., a church-act, and not necessarily a Christ-act which we call a sacrament.

"Secondly, as a minister would be only a minister by receiving his office of ministry from the people, there could be no question of priestly or indelible character, and apart from his office, or on retiring from it, he would relapse into the status of an ordinary member of the Christian laity.

"Thirdly, if the Christian body be the constituent power in the ministry, the selection and appointment of munisters apart mome the ordination rites would naturally devolve on the Christian prince as head of the Christian people in a given country, or most elders where the congregation rather than the realm would be regarded as the unit of religious organization.

The Tablet concludes that the acceptance of the Protestant theory of the ministry by the High-Church party is an evacuation not only of the word "sacerdotalism," but of that sacerdotalism itself to which it has heretofore made claim.

#### RELIGIOUS NOTES.

PRESIDENT ROOSEVELT has consected to attend the New York celebration of the centenoial of Presbyterian home mission effort, end will speak at a mess-meeting to be held on behalf of this cause in Carnegre Hell on May 25.

THE Rev. Dr. R. Helser Newton, who has been rector of All Sools' Church, New York, for more than thirty years, has decided to accept the invitation of the trustees of Leland Sisnoford University of Palo Alto, Cal., to become the special preacher at that institution.

This Twestieth Centery Thank-Offering movement of the Methodist Spliciopal Chards, which has been in operation for the last two years, promises to result, eccording to the New York Outlook, "even more successfully then its most sampules supporters hoped at the beginning." The piae, which coolemplates he raising of Booonoon for church work, was incongrated by the Board of Histogies in tols, and already Sciencow has been accurated by the Board of Histogies in tols, and printing Sciencow has been was contribated to the various educational institutions of the church, and Supasson to philambropies and charthropies was provided to the property of the church, and Supasson to philambropies and charthropies.

# FOREIGN TOPICS.

#### CLOSE OF THE SPANISH RECENCY.

C PANISH newsqapers are filled with note and comment connected with the hippending accession of the young King and the relation of Sagasta's new ministry to the immediate future. On May 1: the 'official reception of the extraordinary missions from abroad, including one from the United Satest, takes place. From this time until the 20th the ceremonies continue. Says the dynastic Epicae (Madrid):

"As regards royal festivals, it is possible to choose one of two alternatives-either to celebrate them with all the pomp and splendor appropriate to the majesty of the crown when the general prosperity justifies and even calls for public rejolcing of such a character, or, on the other hand, to restrict them within the severe and modest limits that seem appropriate when Government and people happen to be emerging from a grave crisis and afflictions are not yet comforted and strength not yet restored. Neither the one nor the other alternative has been considered in connection with the approaching celebration. The Government has not come to any conclusion with regard to it and does not seem to have given a thought, even at this eleventh hour, to the subject. This is shown by the fact that while we have a program of the festivities there is no appropriation to pay for them, altho there has been presented and approved a budget for 1902, during the fiscal period of which the King attains his majority. Why was no heed given to this contingency, which was certainly not unforeseen, during the discussion of the budget?

that we are afforded some meager statistics in which are set forth the numbers of the friars and monks, the titles of their orders, the rule that goverus them, the aims of the community, and even the color of the habit worn by the members. But what benefit will the Government derive from this species of supervision? The need is to free the land from the plaque of friars, while the thing effected is to license their communities and compile their statistics. This is equivalent to fighting a plaque of vegetable lice or locusts by simply computing the number of the pests and the extent of territory over which they are special.

Spain will never have peace or progress or any workable constitution, declares the Publichad (Barcelona), ras long as there does not exist a Government strong enough to ent with energy the Gordian knot of Clericalism." The Radical (Paris) denonnees the Prench Government for proceeding against a Spaniah Republican paper which had began to appear in Paris after having been suppressed in Madrid:

"Poor French republie, that finds itself obliged at the behest of a monarchical Government to prevent Spaniards from propagating the principles of its own glorious republicanism!"— Translations made for THE LITERARY DIGEST.

# GRAVITY OF THE RUSSIAN SITUATION.

OUTSIDE of Russia the general opinion of responsible journals is that the situation in the Cxar's dominlons is far more serious than has yet been suspected. The students are making some impression on the masses and there is a revolution-

ary ferment everywhere. Says the Pester Lloyd (Budapest):

"It should not be overlooked that the latest Russian student revolution is not one naturally made by the people, but one which must be termed literary in character. It has been prepared by Russian literature. From Gogol Russian viries have never done anything else than deplet the suffering of the country, increase the harter fell for the government, shake the foundation of authority, and represent the state as a whole and in general, the

existing order in particular, as the sources of all evil. Their work has succeeded. The ereations of a sickly literature are

A KINO AT PLAY.

Alfonso changes one toy for another.

-Noterelle.

Why has a request for this appropriation been deferred to the last moment, thus divorcing if from the other requests made of the parliamentary body and thus challenging the Republican and the Carlists to a debate in which it will be easy for them to give free rein to their passions against the monarchy and the existing Government?"

The prospects of the ministry are poor, in the opinion of most of the Spanish papers, but the Iteration de Madrid, which, in a sense, is a ministerial organ, stands by Sagasta. The latter is said to have lost the confidence of the dynasty, as may be inferred from the extract quoted above. Nevertheless, the Iteration dudde Madrid says:

"The active life which the Government has begun to lead justifies the belief that it will not recede from the path it has taken, for the way seems a sure one. It is plain that the good of the Government can not be and should not be anything but the good of the country."

The Republican papers continue their propaganda in a more or less clandestine manner, some of them being suppressed. The Pais, which is published in Madrid or elsewhere according to the exigencies of the censorship, has this to say:

"The Clericals have won a signal victory. They have difficulty in dissembling their Joy. Ves. victory is on the side of the Clericals, of the Jesuits. After so much strying of 'Long live liberty!' after so much stoning of monasteries and so much street tumult, so much free talk and discussion in the Cortes, we have to admit that the religious orders are legalized. It is true

WHILE THE CZAR SLEEPS.

The Olive Branches of Peace come in handy to use on the Russian students.

-Kladderadatsch (Berlin).

deemed creatures of flesh and blood, and the wildest criminals pass for heroes that a whole nation should feel need of. But paper heroes have never yet led a people to victory. Of course, the Russian people have a right to freedom, and it is the duty of the Government to break with the old system; but the Czardom is not yet ripe for a violent wrench, and if the present order collapses, the new one will bring not salvation, but chaos.

The press in Russia can print only what the Government sanctions, and there is so rigorous a consorship still that nothing can be gleaned from it, The l'iedomosti (Moscow) violently denounces the "educated," while the St. Petersburg organ of the Government says students sent to prison will be "separated into small parties and incarcerated in different towns," as it has been found undesirable to put them all in one prison. Some European papers insist that the Czar is not to be held responsible. This causes Free Russia (London), "organ of the friends of Russian freedom," to say:

"The Czar is proclaimed a hero for his peace manifesto. But heroism involves running some danger, at least some risk-making some sacrifice; it means also earnestness of purpose and consistency in action. But we all know that the Czar signed his imperial orders to coerce Finland into militarism with the same hand with which he signed his peace manifesto, and at the same time too, . . . In the light of these facts, what have we to think of the carnestness of the Czar's championship of international peace? His Hague manifesto was only words, words, words, to use Hamlet's expression, while his imposition of militarism on Finland, which was also a threat to his Baltic neighbors, was a deed. Besides in uttering these 'words' the Czar, as we see nowadays pretty clearly, had absolutely nothing to lose and everything to gain. At so cheap a cost as a few academic sentences on the horrors of war and the blessings of peace, he has become a hero and he may now coerce Finland, Poland, the lews, and his own people ten times more harshly than he does, there will still be Liberal papers and sincere, good people who will declare that they 'do not wish to have their feeling for the Czar turned into one of horror or distrust. "-Translations made for THE LITERARY DIGEST.

#### BRAZIL'S FIRMNESS TOWARD GERMANY.

ERMANY'S alleged purpose to obtain redress from Brazil I for the violation of the terms of certain railway concessions makes the Brazilian press defiant. With reference to a proposed German naval demonstration in Brazilian waters, the Citade de Rio (Rio Janeiro) publishes a strong article against Germany.

> "Brazil is in a position to arm herself in less than three

It says:

months, and to offer that form of resistance to the exploiters indicated by the aerial navigation experiments of Santos-Dumont. Since squadrons are being transformed into international burglar's weapons, for the violation of our country's sovereignty, it is imperative to resist the robbers."

Brazil's navy is in a poor condition, necording to the Gaceta (Rio de Janeiro), and it urges the Government to attend to its reorganization at once. The Aurora (Rio de Ianeiro) calls for a dictatorship. The Gareta de Noticias takes very little stock in the German rumors and attributes them to the sensationalism of German press opinion. This opinion, by the way, is fairly friendly, with the exception of the Kölnische Zeitung, which continues to urge the Kaiser's Government to adopt stern measures. The Brisil (Paris) has the following, translated and quoted by The South American Journal (London) :

There is something amusing in the projected naval demonstration in Brazilian waters, attributed to Germany, because the state of Minas Geraes, in virtue of its powers under the contract, has annulled its guaranteed concession with the West of Minas Railway Company, and also because certain German colonists, settled in Rio Grande, have, it seems, had the validity of their land holdings disputed. This last grievance is simply fantastic; there may have been cases of contested rights, but the tribunals exist for the determination of such matters of disputed titles, As for the West of Minas Railway, it is in liquidation, and its material is fixed to be sold on May 1. The two syndics for the liquidation are the German Bank of Brazil and the Banco da Republica. The company had placed in Germany, through the medium of the German Bank of Brazil, and other banks, an issue of bonds. Doubtless these creditors are much interested, but the state of Minas had only to consider, the company not having fulfilled the conditions of the concession contract, whether or not there existed just grounds for annulling it and withdrawing its guarantee of interest,

#### CANADA AS A SOURCE OF IRRITATION.

"ANADA is "the fly in the American ointment," according to a paper in The National Review (London) by Harvey Maitland Watts, in the course of which he says:

"We Americans have underrated the Canadian abuse. Treating Canada as a primitive state, as a summer playground, where we fish and hunt and seek reinvigoration on wild reaches of coast, on island retreats, or in the lake-strewn wilderness, we, with the good-natured indifference of those who know what a source of profit they are to the neighborhood, have treated the sullenness, the implacability of Canada as a factor negligible. That a Halifax newspaper should see fit, at the height of the summer tourist season, to print a column of carefully collected criminal incidents and label it "Life in Yankeeland," does not

THE FOR TAX.

Miss ROOSEVELTY "If you don't let in our Prince Heary (Ulysses) rejoices at the singing by the American Strens of the song of "Wacht am Rhein" pork, we won't let in your German princes. -Kladderadats, & (Berlin).

annoy but amuses the American who knows that the present and the future of the Maritime Provinces depends on American capital; nor when he visits Upper Canada is he surprised at French disdain in Quebec-which greedily takes the tourist gold-or loyalist high Tory hostility in Ontario, or the mining jealousies of British Columbia. On the contrary, he expects it. It is to him part of that lack of development, that narrow outlook, that eighteenth-century atmosphere, that makes touring in Canada so interesting. Still the American recognizes the unfairness of it all, and can not but help noting in the Canadian attitude, whatever be its historicai, racial, and political excuse, a factor that must be taken into consideration if any real and basic understanding with imperial Britain be secured, for he sees that whenever the imperial Briton comes strongly under the influence of the provincial spirit his tone takes on a peculiarly petty shade of bitterness. This may seem an extreme American view, but look at Kipling's Quebec quatrain!

> From thy gray scarp I view with acornful eyes lgnoble broils of freedom most unfree. Fear nothing, mother, where the carrion lies That unclean bird must be ""

On the other hand, a grievance against the United States with reference to Canada is voiced by *The Saturday Review* (London), which charges that Canadian news, or rather news reaching Canada from the outside world, is wilfully distorted in passing through American hands:

"The rancher, whose fondness for the English turf is still strong in his new home, is digusted to find that the result of every little Selling Plate won by an American jockey is cabled over at length, while he has to wait two or three weeks to hear the judge's verdict on some big event in which he is strongly consected.

The property of cial events, are invariably the wives and daughters of American millionaires."

Canadian papers are not pleased at manifestations of regard for the United States by Goldwin Smith. *Events* (Ottawa) says:

"Dr Goldwin Smith has from the outset of his Canadian career apparently been determined to influence the course of public sentiment in this country to foment discontent and dissatisfaction with British institutions, and a desire among Canadians to attach themselves politically to the United States. He has steadily striven to make Canadians discontented with their lot, with their institutions, and with their portion as a part of the British empire. In decrying British institutions and British power and expressing the hope that the British shall be driven off this continent of America, Mr. Goldwin Smith has been able by the money power, which he is so fond of denouncing in others, to purchase a printing-press with which to carry on a political propaganda, and there are found papers in this country to aid him by reproducing his writings under the plea that these writings are couched in pure, mellifluous English. A weed by any other name would smell as rank. Disloyal sentiments are not any more acceptable to the Canadian people because they are clothed in smooth diction.

However, there are optimists who think all American differences with Canada can be settled. The St. James's Gazette (London) saying:

"Canada is naturally less disposed to compromise such a dispute as that involved in the Alaskan frontier than the imperial Government would be if it were not pressed by colonial opinion. But the this and some other questions, such as the Altanție fishieries, may present difficulties, it is greatly to be hoped that the present moment, when our relations with America are on a favorable footing, will not be allowed to pass without a general settling up."

THE TWO SPASIAL (CESSIONS—The recombined Segasia ministry has ped down to work and man last two serious problems, according to the Paris Tompt. "There is first of all the financial stiration, which remains embarrasing... Then there is the legal position of the religious orders. The delay granted them to comply with the law has expired. Between the anti-derival passions which have attained such a beight in creating quarters, and the other cale passions which have a times when the call of the contract of th

#### ENGLAND AND PEACE.

PEACE is a word that is much used in the English press just now. But there is no mention of compromise. The Britons will not yield an inch. That "pro-Boer" Radical paper, The Daily News (London) thus speaks:

"The one clear fact that emerges from the situation is that there is a serious movement on four among the Boers in favor of peace. We have grown so instred to disappointments, so accustomed to seeing the prospects of peace vanish like a mirage in the desert, that there is no danger of a too sanguine view being taken of the present position. But there are factors at work now which have not been in operation before. There is, on the one side, the factor of exhaustion, or something approximating to exhaustion, and, on the other, the factor, we may hope, of experience and warting. It is true that the Boers have still plenty of resistance in them, plenty of the ability to give and take hard knocks; but two and a half years of incressant fighting has inevitably reduced their supplies of many of the essentials of more existence to the vanishing pount, and, with winter ap-

BOUTH AFRICAN PRACE SCHOOLS.

Notwithstanding all efforts, it seems impossible to extract the desired word "Peace" from the phonograph.

-Aladderadatich (Berlin).

proaching, the clothing and commissariat questions must loom large in their vision. Their natural desire for peace must therefore be stimulated by the terFors which another winter in the field involves."

There is a special reason, says this authority, for welcoming peace just now:

"The coronation is approaching. It should be a time of national rejoicing; but the spirit of joy can not coexist with the spirit of war. If peace be not concluded now, the coronation will be robbed of all the qualities that should accompany such an event. If, on the other hand, we come to terms, the occasion will be invested with an enthusiasm and an éclat that will make it memorable for all time."

The only assurance of peace is the summary disposal of the Boer forces in the field, says The St. James's Gazette (London):

"If the Boers in Errope are really beginning to recognize that the game is up, while Lord Kitcheere in preparing to handle roughly the only leader in the field who still commands any considerable organized force, there may be some hope after all that, however irreconcliable Steyn may still be, a great change for the better may come over the situation before the coronation of King Edward."

The fighters among the Boers are simply wearing out, says The Standard (London);

"That most of the Boers, even the 'stalwarts' and the landless of bywoorers,' are heartily tried of the fatigues and miseries of the campaign, we can easily believe. It must be mortifying for them to observe that the sensible majority of their kinamen are quietly making the best of the new régime. A few days ago a block of land just outside Kroinstad was offered for sale, and buyers from all parts of the country came in to.bid for it. While a few desperate men are enduring hunger, cold, and danger out on the velid, many of the burghers are laying the foundations of a revived prosperity under British institutions. It remains for the

fighting Boers to embrace their last chance of getting back to civil existency, or condemning themselves permanently to the life of outcasts and law-breakers. There would be little uncertainty about the choice, were it not for the extraordinary decility with which many of the more ignorant Boers obey the mandate of their leaders.

The points in discussion as to peace can be conjectured with sufficient certainty, says The Westminster Gazette (London):

"They are amnesty for colonial robels, the hanishment prodamation as regards leaders, advances by the British Government for the restocking of Boer farms, and the date and form of the ultimate self-governing constitution. Our readers know our own views on all these points. They are that annesty, subject to a period of disfranchiement, should be given for all acts not outside the usages of war, that the banishment proclamation should be withdrawn, and that the most generous financin ald should be given to Boer farmers concurrently with the full compensation to which the logistics are entitled for the damage that they

# PROSPECTS OF THE GERMAN CLERICAL PARTY.

THE most powerful group, numerically, in the German Reichstag is the Center, or Roman Catholic, printy, to which the Volkzeitung (Berlin) alludes as "the Pope's bodyguard." This party is just now absorbing German attention, first, because of the death of its leader, Ernst Lieber, and secondly because certain differences are alleged to be acute between its democratic and its aristocratic wings. The Kollintek Velkzeitung, organ of the popular element in the party, is just now warning the German Government against inconsistency and double dealing

with reference to the tariff bill. On this topic the Roman Catholic Table! (London) notes:

"The Center party in the German Reichstag occupies a unique parliamentary position. Disciplined and organized by its late leader, Herr Windtborst, into perfect unanimity of action, it forms a solid phalanx, whose weight cast on one side or the other can. on eritical occasions. decide the fate of ministerial meas-

ures. It is differen-

UR. EUNS) LIBBER,
The late German Center Leader
Courses of The Stante-Zectung, New York.

tiated from all the other groups in the assembly by the compact unity into which is welded by religious conviction, and by the earnestness and vigor with which it maintains the interests of its fauth. Thus it has weested the removal of Catholic disabilitities from the imperial Government, and made itself a force to be recknord with in the heart of the great Protestant Power of Central Eurore.

Herr Windthorst, above referred to, was succeeded as leader of the Center by the recently deceased Dr. Leiber. If we turn, now, hack to German opinion, we find the Vostiscne Zeitung (Berlin), organ of the middle classes, critical:

"Windthorst was not replaced by Lieber. It will now be hard to replace Lieber. The proceedings in the tariff commission

afford evidence that the party finds itself in a difficult position. The interests of the North and of the South, the interests of the peasant and of the workingman, grow apart. It is beyond doubt that permanent political parties can not be based upon denominational surfagonisms. A government that understands what is for the good of the Inderstand and the determined to what is for the good of the Inderstand and the determined could console us if we were assured that we had a government that met these condition."

The Kulnische Volktzeitung, the Roman Catholic organ to which we have already referred, said of the late Dr. Lieber that "the always stood in the front rank of the Center parry, a conscientions, self-sacrificing son of the Catholic Church, who loses in thin one of her ablest champions in Germany." To which the democratic Berliner Volktzeitung retorts:

"Just us. Dr. Lieber, too, saw in the Center party, as his associate, Count Ballestrem, said in the Mente Catholic congress, the Pope's bodyguard. Not the interests of his German father-land were first with tim, but those of the foreign head of the international Catholic Church. To serve them and their ends, to render the German Government subservient to them, he voted millions in the Reichstag for military purposes, to the injury of the German people. We should be guilty of insincerity were we silent as to this beside the bier of this gifted parliamentarian."

On the other hand, the Berliner Neuesten Nachrichten gives Lieber credit for a high order of patriotism. And of the immediate future of the Center party, the anti-Roman Catholic Frankfurter Seitung says:

"It is difficult to determine whether the situation of the tariff to bill would have been improved, from the point of view of the Government, had Dr. Lieber been able to support it with unim-paired health from the beginning. Windthows thimself did not always succeed in uniting the hoterogeneous elements of the center party in matters of conomic policy, and since the death of this unequaled party leader economic questions have grown to greatly in importance. The conflict of interests between the agricultural Catholic voters and the industrial Catholic voters percentibly intonsifies."

A detriched view of the situation is afforded in the following comment from the Journal des Debats (Paris):

"The attitude of the Catholics consisted at first in not accepting the empire of the Hohencolbers in its new form and in systematic opposition to Bismarck. Were these the tactics that brought the Kulturkampf down upon them, ord dit they refuse to accept the new order of things because Bismarck, affecting to consider them a foreign element, tracted them as enemies? This question as to the responsibility for the commencement of hostilities has been endlessly discussed. At any rate, there was open war between the Catholics and the mutuoual parties, or those so stying themselves. The victory of the latter was formulated in styling themselves. The victory of the latter was formulated in than ever, thwarted the Chancellor's policy on every occasion, especially in the matter of increasing the armaments."

It has been alleged, proceeds our authority, that the Roman Catabolic Center, in supporting the Government, in voting military credits refused by the Left, was "not actuated by patriotic motives and that it had in view only the denominational advantages granted it in return for its good-will. But that is one of those problems in political psychology upon which it is difficult to pass with sufficient absoluteness." As to what will happen next the Paris paper says:

"Nowithstanding its apparent unity, the Center party is affected by certain internal dissensions. Together with those who regret the departure from the old-time tactics, there are those who wish to impart a more democratic aspect to the party, a thing that would make more defined an understanding with the Government. It will be seen, thus, that Lieber's successor must lack seither diplomacy nor formness to maintain the cobesion and the systematic spirit which have given the party lite strength."—Translations made for Tita Litracay Diocsx.

# CECILIAN

All this practice is simply for one purpose—to give mechanical dexterity. It cannot give feeling, expression or musical taste. Those are natural.

The Cecilian supplies all the practice—all the mechanical dexterity—and leaves the performer free to express the music that is in her.

The piano-player idea is not new. It has come to the point where you must choose from a number. You want the best. The consideration of the Cecilian will convince you that it is the best.

FREE An attractive and readable booklet, telling just what the Cecilian really is, sent free to any address

The price of the Cecilian is \$250.00 One dealer in your town sells it.

It is sold on the casy payment plan.

FARRAND ORGAN COMPANY, Detroit, Mich. They battled loud with jeer and mock ; Both seemed as firm as is the rock; And echoes of their conflict-shock

Went reeling up the skies, Then suddenly the snowy plume Slipped crashing down amain :

The victor heard the plaudits riog : We saw him back his visor fling ;-And to, the trimmph smile of Spring Above the Winter slain!

# -In April Craterion.

# My Lady April.

By EDNA KINGSLEY WALLACE. April, sweet soul of her. I love the whole of her,

Joy be the goal of her, Fortune attend ! Spring, win the heart of her, (Tho but the part of her.) Who bath a chert of her? Heaven forfend!

Witchcraft, the wile of her, Sunshine, the smile of her, Virtue, the guile of her, Dnly suppressed. Where is the harm of her, Or the alarm of her? Oh, but the charm of her

Can't be expressed! Say the malicious Her temper's capricious. But aren't they delicious-Her varying moods?-A smile in the water.

Where Phuebus hath sought her,-The wind shall have wrought ber To wrath in the woods.

While Summer's wooing her With life imbuing her, Gently undoing her Clonk of reserve; While Winter's holding her, White Spring's enfolding her,

Mortals are scolding her, Please to observe! Why ere ye flaying her?

Unjust the weighing her. With suitors swaying her, That way and this. The Winter tarry her. And Summer harry her. Spring yet shall marry her,-Great be their bliss.

-In Life.

# So hage the all-mastering thought that drove

So brief the term allowed Nations not words he linked to prove His feith before the crowd.

It is his will that he look forth

Across the jends he won The granite of the ancient north-

Great spaces washed with sun; There shall be patient make his seat (As when the death he dared)

And there ewait a people's feet In the paths that he prepared.

There, till the vision he foresaw Spiendid and whole arise And unimerined empires draw

To council neath his skins The immense and broading apirit still Shell quicken and control Living he was the land, and dead His soul shall be her soul.

-In London Times.

# PERSONALS.

Why Admiral Howell Married. - Admiral I. A. Howell is the inventor of the Howell tornedo. On account of this, says The Saturday Evening But he has been referred as the "father of the modern torpedo." It continues :

So wedded was he to the science of warfare that It was a general belief that he would never marry, and when he led a bride to the altar it was a surprise to the entire navv.

Several years leter a tellow officer visited Admiral Howell, and saw children of the distinguished sailor playing about the house.

"It's like a dream," said the visitor, "You're a

lucky man Admiral "he added : "but tell me how did you ever come to think about cetting mar-

ried?" "Oh," replied Admiral Howell, glancing effectionately et his children at play, "I got tired of being referred to merely as the 'father of the modern torpedo.""

Victor Hugo as a Benefactor, - Catulic Mendès, writing in the Courrier des États Units tells an interesting tale of how Hugo helped a poor presents who was in love. The following is a condensation of the story :

During Hugo's exlie Mendès was editor of a struggling journal which, for reasons of economy, was printed in a small provincial city. There Mendès became acquainted with a young pressmen who was well educated, and intelligent and a very entertaining companion. Usually he was very cheerful and light-hearted, but on one occaalon wee so morose that Mendes opentioned him until he confessed the reason.

He was in love with his employer's daughter and she with him. The master printer had risen from the case himself, and his present fortune and sociel position did not warrent expectation of a rich son-in-law, so that the young printer had been confident and serene until, having decided that there was no nee in waiting longer, he had recently eaked for the young woman's hand.

Then he had a painful surprise. The girl's father was financially embarrassed, it appeared, and a penniless son-in-law was not to be thought

of. The fearned suitor must have six thousands frace, at least, So the poor fellow was in despairs frace, at least. So the poor fellow was in despairs and tailed about, stowning himself. Mendés himself was pretty and up in those days. He advised the disconsolate lower to appeal to Victor Hugo for assistance. The young printer naturally objected that Hugohad beggers enough on his hands and would not be likely to do anyhing for a total extranger. But Mendés losisted and the printer compiled.

On Mendes's next visit, two weeks later, the young man met him at the station and showed him three thousand fraces in back notes which Hugohad sent him with these words:

"I am not rich just now. Please excuse me Here are three thousand francs."

The printer said that he would marry his Clementine next month. Altho her father had demanded twice the ann he could not refuse when he learned of Victor Hego's part in the affair.

So they were married. How loog or how happily they lived together Mr. Mendès neglects to atate.—Translation made for Tite LITERARY DI-CEST.

Mr. Translata, the Horse and the Mula.—At the beginning of Mr. Translate's administratration as president of the Lackswanna Railroad, he made a toor of inspection and while at Serance in visited the company's barns. According to the New York Times, he found there a fine horse comfortably blanketed and forther on a shivering male. He met the stable attendant and this conversation took place:

- "Whose horse is that?"
  "Mr --- 's," said the stable boy, naming a local
- official of the company.
  "Whose mule is this?"
- "Whose mule is this?"
  "The company's, sir."
- "Whose blacket is on that horse?"
- "The company's "
- "You take the blanket off that horse and put it on the mule," was the President's order. The local official "resigned" soon afterward.

# MORE OR LESS PUNGENT.

No Sympathy There.—"I am going to marry your daughter, sir," said the positive young man to the father.

"Well, you don't need to some to me for sympathy," replied the father, "I have troubles of my own."—Glumbus (Ohiot State Journal.

Couldn't Live Without It.—CAHILL: "Religion is a great thing, Dennis—a foise thing!" CASEY: "To be sore ut is: Of get into more foights about religion than annything like!"— Pack.

# Low Grade Ore the Most Profitable

RECENT CHANGES IN METHODS IN THE BLACK HILLS MAKE MINING A MANUFACTURING PROPOSITION. BY M. E. MAINTOSH, WESTERN CORRESPONDENT "WALL STREET JOURNAL."

A LONG with the prairie schooner, the greased and painted findian, and the Buffalo, there has passed from view the old-time miner of the Wast. Instrad of a hearded plencer, panning his gold at the brink of a creek, we have the skilled operator of a pneumatic drill, at work far under ground : instead of the pictoresque "diggings" of the California Forty-Ninera, substantial cities, to which the term " mining camps " seems badly applied. The cliemist and the mechanic have taken the place of the man who hunted nuggets, fought Indians, gambled and died with his boots on There is less romance in mining than of old, perhaps, but

Numbers in the world has scientific mining reached a higher stage of development theo in the filack Hills. Here the production of precious metals has been reduced to a busin so axact and certain of profitable results, that it is relieved entirely of the element of risk which in the past has been suggested to many people whenever the word mining was mentioned. When applied to the great deposits of low grade over found in this rich mineral field, the cyanide process placed mining

using cyanide on its low grade ores. Here is a complete ore such valuable adjuncts as a loundry, machine slup, chemical laboratory and assay office, and here have been built the great tanks in which the ore is " leached," as the miners say The Horseshou Company began to use its cyzoide plant on April 1. with the most satisfactory results. The Company has millions of tone of refractory ore that will run \$6.00, \$8.00, and \$10.00 in gold values that insure a large profit on every ton treated in the cyanida tanks. The plant is being added to as rapidly as vorkmen can ply their tools, and by midsummer the daily capacity will be 1,000 tons. This will yield a profit of \$3,000 a day.

Meanwhile the shipments of rich smelting ora go stendily on and without waiting for the full development of the cyanide plant, the Horseshoe is a ready earning at the rate of to per cent per annum on its capital stock. In one of its mines alone, the Lucille, the company has enough of this smeltin; ore blocked out to keep up shipments of ego tons a day for two years.

The deep mining that will come with the further development of the Horseshoe is certain to bring added rich returns. What enormous ora reserves are available beneath the deposits from which slidpmen's are now being made, is strongly set forth in a letter recently written to the general manager of the Horse-shoe company by R. W. Rodda, the mine superintendent, who has for years worked on these properties and who knows every foot of the ground. In the connection it may be said that no mining man in the Black Hills stands higher than Mr. Rodda, makes can be implicitly relied on During the past winter be caused a cross cut to be run in the lower level, 120 beneath the company's present workings, for the purpose of demonstrating the extent of a free militag quartz ledge which is encountered at that depth. This conservative miner did not make his report until he was absolutely certain of the facts respecting the quarts ledge, and when he finally wrote to inform the company of the t of his operations, the information which he gave was this; The cross cut proves the ore body to be 300 feet wide. The north exposure is 3,500 from the cross out, showing the quarts deposit to be 300 feet wide and 3.500 feet in length, with 2,400 feet of ground to the south, in the course of the ore chote that is undeveloped. While the depth of the ledge is uokoown, the present depth of the Homestake is t,000 feet and this can be taken as a basis of calculation, as the geological conditions are

Three hundred feet by 3,500 feet and 1,000 feet deep would yield more than Eighty Million Tons of ore. Concern quality of this ore Mr Rodds says that its grada is better than 50 per cept of the Humestake cross cuts run under the same

In all seventeen different properties have been conunder the control of the Horseshoe Company. While they would have continued to pay we'll as smelting ore propositions. on properties could not have been made to yield the rich returns which are now being won from their over except by means of more ample capital, and a broader

scale of operations One million shares of the stock of this company are offered to the public at par -\$1.00 per share. There is no preferred stock, the shares are non-assessable, and

the Company has on bonds. All who purchase the stock are on an equal footing. and will participate equally in the dividends. This is the first public offering of a mining stock of an substantial a character,

It will not appeal to those who expect somathing for nothing and put their money into get-rich-quick achemes, but it should engage the attention of cautious and thrifty people with money to invest, in either large or small sums, in a profitable, legitimate and stable busin Ask your banker about the men who coutrol the affairs of the Horseshoe

On the Company of the Chicago Is Piret Vice-President and Chicago And Milesakers in Second Vice-President.

Thus, Bourn Makan, President of the Montreal Harbor Baard, Vice-President Thus, Bourn Makan, President of the Montreal Harbor Baard, Vice-President States and Sta

This typifies the spirit of the management of the company. They are all pushe

on a plane comparable in respect to safety with that of the most solid manufacturing

There is something that oppeals to the imagination in the fact that it is a deadly son which has proven the most successful agent in scarching out the shining gold that is hidden in the stobborn Black Hills rock. Cyanide of Potassium must be handled with care, and yet there have been very few accidents resulting from its se at the mines, for the pionts are invariably in charge of espert and scientific meo.

While the technical details of this process chiefly concern the chemist and the ning expert, the economic results interest the whole world. The craniding of low grade Black Hills ores has furnished one of the best opportunities for investing money to be found anywhere. The first cost of a eyanida plant is less than any other process, and when economy is practiced in manipulating the mining milf, the ore can be worked into bullion for not to exceed \$2.50 per ton. Some cyanide plants in the Hills are doing it lor \$1 00 or less. On ore that averages \$10 00 per ton gold, the profits are very great.

The successful experiments on very low grade ores have demonstrated that millions of tons can now be treated at a profit by the cynnide process, which in the past would not have paid the cost of mining and milling, and as a result of these successful experiments carital will be fiberally invested.

A great corporation that has sdopted the cyanide method in the treatment of Its low grade over is the Horseshoe Mining Company. Ranking next to the omestake in the eatent of its holdings and the value of its output, the Horseshoe Company now owns nearly 2,000 acres of the richest mining ground in the hills. developed portions of the property have paid handsomely for years, and of late have yie'ded a daily net profit of \$2,500 from smelting ore alone. Gold to the value of over \$1,500,000 has been taken from these mines. To realize the foil possibilities of the property, however, means had to be found to treat the practically unlimited supply of low grade, refractory ore, which would not yield its gold onder the processes first employed in the Hills. The cyanide process, first used to South Africa in 1880 and since then tested, improved and developed in America, has solved the problem.

This company has been organized to cooled the Marconi System of wireless telegraphy and oil inventions and patents relating thereto in the Uoited States of America and Cubs and Porto Rico, the Hawelian Islands, the Philippine Islands, Alaska, the Aleutian Islands and oil ships under the American flag.

E. ROLLINS MORSE & BRO., Bankers 6 Wall Street, NEW YORK 43 State Street, BOSTON

# The Present Status of the Marconi System

It is the dominant and only practical system, not only because of its merits, but because of its patented rights and its position. It is already established upon a practical and commercial footing through

ane word.

Alter severe and unfriendly tests by powerful interests intending to evade and defeat its claims and to find means to do without its use, it has been accepted by them. It has been adopted by the British Admiralty and is being rapidly installed on all the vessels of the British Navy.

It has been adopted and is being installed by the Italian Government and Navv. If his leen adopted and is being instituted by the Italian Government and Navy-them has been adopted by Lloyds for exclusive use in all its nations scattered them has been adopted by Lloyds for exclusive use has it in nations scattered them has been adopted by Lloyds and the Lloyds and the Lloyds and a contract let fit is exclusive use for a period of at least fourteen years. It is therefore impossible for any other Lligent system to become infinitely exhibited. The impossible for any other Lligent system to become infinitely exhibited. The national contraction of the contraction of the contraction of the contraction of the national contraction of the contraction of the contraction of the contraction of the advantage of the contraction of the contraction of the contraction of the contraction of the advantage of the contraction of the co

The Marconi system has been established and is in successful than forty land stations, and this number is being rapidly increase

Messagee have been transmitted across a distance of over 1,500 miles of ocean. More than 8,000 words have been transmitted from one ship during a period of

Receipts from mensages have been taken on a single voyage during about two days operating time amounting to \$500.

Served communications which have not in any case been intercepted or interfered with are regularly transmitted between the Marconi Stations.

Marconi meanages can be transmitted at a speed of 22 words per mis

nearcoin measuages can be reasonated at a speed of 22 words per manue. Several message can be transmitted at the same time from one Marcoil station. The cost of the plant for the transmission of Marcoil Messages is infiniteeinal companyinos with the cost of plant of day opther method of communication can be maintained at all times with a moving base, the same control of the cost of plant of any other method. This is very important in

montary operations.

It is leasible to establish lines of communication by the Marcoel system morposition to opportunities by cable by reason of constructive clements in the waters, none of which considerations affect transmission by the Marcoel system.

# The Marconi System is Endorsed by the World's Greatest Scientists

Signor Marconi's work has been endorsed by the leading scientists of the world: LORD KELVIN, GRAHAM BELL, PROFESSOR FLEMING, C. P. STEINMETZ, of the General Electric Co., PROF. PUPIN, EDISON, ELIHU THOMPSON, and the American Institute of Electrical Engineers

The rapid progress which has recently been made in the devel-opment of wireless telegraphy by Mr. Marconi is well known and the demonstrated profits in its operation now afford the basis of a substantial commercial enterprise. The Corporation formed in England to acquire and operate the said rights is carrying on a successful business and the £1 shares are now selling at about £3 1/2 on the market.

The American Company has acquired all the rights for the use of the entire system for the United States and all its dependencies and waters.

This Company has also purchased all rights to the inventions of Prof. Pupin, of Columbia University, covering the tuning of electric circuits and receiving instruments as applied to wireless teleg-The purchase of these inventions, in addition to the inventions of Marconi, makes the position of the Company practically impregnable, giving it control of the general proposition of Wireless Telegraphy as well as of the fundamental system of tuning instru-ments. NEITHER OF THESE ARTS CAN BE SUCCESS-FULLY PRACTISED WITHOUT INFRINGING THIS COMPANY'S RIGHTS.

Basing the estimates of the immediate earnings of the American Company upon the experience of the English Company, it is considered ered conservative to assume that profits equal reasonable dividends will be earned from the beginning, and practically dividends will be earned from the beginning, and practically within immediate realization as soon as lie necessary equipment can be provided, and that the natural growth only in the introduction and use of the system will rapidly increase the profits. These earnings come from communications between ships at sea and between ships and shores, and the English Company has arrangements with a number of transatlantic liners, both English and foreign.

The English Company finds in practice that a profit of about £35 per voyage is realized by these vessels, and which would be equal to about \$3,000 per ship per annum. This profit is realized ly the ships now using the old equipment, capable of communicat-lng within only about 150 miles of the shore, thus limiting the use of the equipment to a small part of the voyage only. It is obvious that these earnings will be very much increased after the installation of the new equipment, capable of communicating with the shore at all times during the voyage, and \$5,000 per ship per annum is considered a conservative estimate of the increased earnings.

Assuming only 50 out of the numerous Transatlantic Passenger Vessels operating between American and European ports to be equipped with the Marconi system would at this rate show a revenue of about \$500,000 per annum, and assuming that one-half of this would belong to the American Company, would show earnings sufficient in itself to pay a reasonable dividend, to say nothing of revenue from smaller craft.

The use of the system by persons aboard ship and ashore is rapidly growing, and there is no doubt that this use will continue to increase with great rapidity, and so as to cover daily news reports upon all passenger vessels, stock-exchange quotations and orders, and private and business communications, both to and from ship and shore. When it is fully realized by the public and the busine world that these communications can be reliably made, the use of the system will very quickly become established, and a slight increase in the volume of this business alone will afford good dividends.

A substantial revenue should also be realized from freighting vessels, both transatlantic and along the coast, and from all such an annual rental can be obtained. The number of such vessels is very great, and the revenue from this source should be an impor-

The receipts from transatlantic messages should amount to very large sum. The speed capacity of transmission has proved to be about 22 words per minute. The average speed of the ordinary cable instruments is about 20 words per minute. With the improved Marconi instruments a working average of 20 words is considered conservative.

Estimating the receipts from only one of a series of two such Marconi stations, Mr. Marconi points out that, working at half their capacity is speed transmission and operating one-half the time and at half the present cable rates per word, the recei would amount to over a million dollars per annum. Naturalty there will be several such series of stations

# The Booklovers' Shakespeare

TATE HAVE now in press a new edition of Shakespeare. in forty dainty volumes. It is appropriately called The Booklovers' Edition. The volumes are light and easy to handle. There is a play complete in each volume. with Notes, Glossaries, Critical Comments and Prefaces, This is not a cheaply-printed, trashy edition. The printing has been done from new plates (large, clear type) on superior white paper. The edition is beautifully illustrated and bound in English cloth and half leather. The Booklovers' Edition is the same as our widely advertised International Edition, except it is in forty instead of thirteen volumes. It contains the same text, Notes and helps to the reader as the International Edition.

A limited number of sels have been reserved for introductory distribution. On these sets we expect to make very little profit, but we hope through them to make the edition known. At the introductory prices this edition in forty volumes is probably the best offer ever made on a first-class copyrighted publication,

HAMTEY MEN'S

CYMBELINE M

# Complete in Forty Volumes

The sets are in forty volumes. Shakespeare's Works-everything he wrote-are given complete, including the Sonnets and Poems. This edition reproduces the Cambridge text, which has been for forty years the standard text of Shakespeare, To this text have been added Prefaces; Critical Comments taken from the works of great Shakespearcan scholars: Glossaries following each play and defining every difficult word; Explanatory and Critical Notes, which make clear every obscure passage. There are over 400 lilustrations, many of them being rare wood-cuts of Shakespeare's time. Each volume contains a

frontispiece printed in six to twelve colors. Included with the set is a complete Life of Shakespeare, giving the facts actually known about him, by Dr. Israel Gollancz, with estimates of Shakespeare's genius by Walter Bagehot, Leslie Stephen, and Thomas Spencer Baynes,

The volumes are 71 x 52 inches in size, and are bound in handsome cloth or half-leather binding.

In addition to the plays we send free with each set a complete Index of Shakespeare's Works, by means of which the reader can find any desired passage. No Commentary can be bought for less than \$0.00, and this volume is worth more to the reader than a Commentary. also give a plan for the study of each play, with Study Questions. No other full and systematic Plan of Study for all the plays can be bought for less than \$4.00.

# An Unusual Bargain

Upon receipt of the coupon, signed by you, we will send you for examination a complete set of forty volumes. If you are pleased with it send us \$1.00 within five days and \$2.00 a month thereafter for ten months, if cloth The is ordered. If you desire the half-leather University binding there will be two more monthly Society payments. These special low prices are about one-third the regular prices, Please send me on Please approval, prepaid, a set of The Booklovers' Shakeand this offer may be withdrawn

at any time. After examination of the books if you are not satisfied with them you may return the set to us at our expense. Those who appreciate good books should not let this opil not satisfactory I agree to return them within 5 days. portunity pass. # One Dollars Worth of Music Free

If there is a piano in your home, we will send you without charge seven splendid musical compositions, two vocal and five instrumental. Three of these selections are copyrighted and cannot be bought in any music store for less than \$1.00. With them we will send four portraits of great composers and four large reproductions of famous paintings of musical subjects.

# Wbv We Make this Offer

We make this offer to reliable men and women to enable us to send information regarding our Library of the World's Best Music, which is absolutely the best collection of vocal and instrumental music ever published. It contains more music, more illustrations, and more biographies of composers than any other. It is for general home use and enjoyment, as well as for students. The brief letter given below, from the Associate Editor of The Ladies' Home Journal, shows what representative people think of this collection of music.

I have seldom seen anything so fine or so well worth having in one's home. I linger over the volumes with peculiar pleasure, and have no hesitation in saying that you have made a collection of great value, both in the musical selections and in the biographical and art features, which give the work unique interest .- MARGARET E. SANGSTER.

Subscribers desizing to receive THE LITERARY DIGEST at their vacation addresses will solding as and save themselves amonyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office-address." Send notice at least two weeks in advance, stating the date when the change is to go into effect. Similar notice should be given when subscribers are returning to beliep perimagent address.

#### TOPICS OF THE DAY.

# GENERAL SMITH AND HIS ORDERS.

"I F General Smith's ears are not red-hot these days," remarks the Boston Frankryft, "there is nothing in the old saying." Nearly every paper in the country contains more or less extended remarks, with the general for a text, and most of them condemn him roundly. All thick comment is the result of a brief despatch from Manila, saying that in the court-martial of General Smith on the charge of conduct prejudicial to good order and discipline, "Col. Charles A. Woodruff, counsel for the defense, said he desired to simplify the proceedings. He was willing to admit that General Smith gave instructions to Major Waller to kill and burn and make Samar a howling wilderness; that he wanted everybody killed who was capable of bearing arms, and that he did specify all boys over ten years of age, as the Samar boys of that age were equally at dangerous as their elders."

Journals of every political stripe and geographical location seem to unite in condemning the author of these orders. The New York Tribune (Rep.) remarks: "Herod was more merciful. He killed only the children, leaving the parents to live. Under General Smith's order the parents were to be killed, leaving the children to die." The New York Evening Post (Ind.) has learned that General Smith is commonly known in the army as "Hell-Roaring Take," and it now regularly refers to him by that title; the New York American and Journal (Dem.) calls him a "bloody-minded and red-handed slaughterer," and the Philadelphia Press (Rep.) says: "It is almost incredible that an American officer of any rank could have issued an order so shameful, inhuman, and barbarons, and it calls for instant rebuke, repudiation, and condemnation. We say this before hearing or considering his defense, for no defense can excuse such an order of ruthless and indiscriminate destruction," "This case will blacken the record of the American army and the history of the American people for all eternity," declares the Springfield Republican (Ind.); and the Chicago Exening Past (Ind.) regards it as "shocking beyond expression." "The civillage bepole of the United States can contemplate such proceedings only with feelings of horror," thinks the Kansas City Journal (Rep.), and the St. Paul Panter Prest (Rep.) believes that the General's "instant dismissal from the service he has disgraced by the Government he has disoleyed will be an inadequate atonement for the dishonor he has brought upon the American name." The New Orleans Times-Democrat (Dem.) observes: "If we are to benevolently assimilate the Filipinos by such methods, we should frankly so state, and drop our canting hypocrisy about having to wage war on these people for their own betterment."

It is said that General Smith bases his defense on General Order no, issued to the army during the CviV War, but that fact does not carry much weight with the Southern press. "He might also add a few precedents from Nero's code," remarks the Atlanta Contribution (Denn.), published in a city on the route of General Sherman's devastating march to the sea, and where he made his famous remark as to what war is. General Smith's friends and critics both quote from General Order 100 in support of their contentions. Here are a few paragraphs from it bearing on the present case:

"Men who take up arms against one another in public war do not cease on this account to be moral beings responsible to one another and to God.

"The law of war can no more wholly dispense with retaliation than can the law of nations of which it is a branch. Yet civilized nations acknowledge retaliation as the sternest feature of war. A reckless enemy often leaves to his opponent no other means securing himself against the repetition of barbarous outrage.

"Retaliation will, therefore, never be resorted to as a measure of mere revenge, but only as a means of protective retributes and, moreover, cautiously and unavoidably; that is to say, retaliation shall only be resorted to after careful inquiry into the real occurrence and the character of the misdeeds that may demand retribution.

"Unjust or inconsiderate retaliation removes the belligerents farther and farther from the mitigating rules of regular war, and by rapid steps leads them nearer to the internecine wars of sav-

ages.
"The more vigorously wars are pursued the better it is for humanity. Sharp wars are brief."

A defense, not specifically of General Smith's orders, but of the general conduct of the soldiers, appears in the New York Sun (Rep.), and the St. Louis Globe-Democrat (Rep.). Says the former paper:

"Well, suppose that the native barbarities have, in some cases, moved our soldiers to transgress the line of gentleness desirable for ordinary warfare? We are confident that, in view of the provocation received and the peculiar nature of the task to be performed, the transgressions have been extremely slight. And at the worst, they have been few. But nothing of what has been at the worst, they have been few. But nothing of what has been performed to the property of the prop

#### The Globe-Democrat says:

"American soldiers in the Philippines have performed a great work under trying circumstances with devoted patriotism and courage. No intelligent man acquainted with their past and present history believes that they have been other than generous

BATHER ONE-SIDES The Pittsburg Gazette.

# RESULTS OF THE PHILIPPINE "ATROCITIES" AT WASHINGTON.

and considerate, as far as possible, toward the enemy. Since organized Filipino armies were driven from the field the greatest danger has been from pretended nmigo officials. In Samar a native installed by our own military authorities us mayor betraved his trust and caused the massacre of over forty men of the Ninth Infantry. Maddened with this success, the native bolo-

men swarmed everywhere in the Island and there were several other massacres of our troops. It is said that the officers sent to command in Samar under these circumstances, and others in islands similarly disturbed, are to be court-martialed. What were they sent there for? Was it to try moral snasion on the infurlated bolomen who were massacring our soldiers daily and contident of exterminating them all? How much of this new policy of court-martial is due to the venom of copperheads and the tittle-tattle of shirks? It is strange, indeed, if American soldiers are to be called to the field to fight savages without hurring them,"

An article from General Smith's own pen, describing conditions in Samar and his attitude toward them, appeared in the Manila Critic on Feburary 1. He says in part

"The inhabitants were masters of the situation, and the little control by the volunteers and later few stations of the army on the coast amounted to nothing, as they had been treated by both officers and men with such kindness as would be proper to civilized moral people. Instead of placating these savages, it only gave them the idea of weakness and nonsense on the part of the accuts of the United States. I found the troops scattered over an immense territory. and with only the coast towns garrisoned and by barely sufficient numbers of soldiers to protect themselves from the raids of the mountain hordes. Little or nothing had ocen done owing to a feeling of security and confidence which had been engendered by officers who loved the 'Little Brown Brother' and imagined the natives were angels and only needed wings to make them perfect. Guard duty was almost entirely neglected; the soldiers mixed freely with the inhabitants; officers preached all kinds of good words to them, and, no matter

how far from their barracks the soldiers were obliged to go for meals, no guns were carried, and a general do-as-you-please was the order of the day. The only pack-train on the island of Samar had been neglected and was worthless for this reason. The

BRIG.-GLN TACON II, SMITH

steam-launches had not been inspected, and had been allowed to deteriorate from lack of care and attention. The first thing to be done was for me to see the troops and learn all about the lacalities of the stations; and in company with Lientenant Conger, A.D.C. to General Hughes, and my own aide, Lieutenant Shields, the posts were visited and officers instructed in the work

before them. "It did not take long before it was quite patent to any observer that only the 'fireand-sword ' policy could succeed in bring ing these people to understand that they must come under the absolute and complete control of the United States. The inhalmtauts are all our enemies, and those who live near our garrisons do so only to give assistance to the armed ones in the mountains. And it seems almost impossible to impress this fact upon our officers and soldiers who have the love for the Little Brown Brothers ' engrafted in their natures. None of the natives have any love for the Americans, but rather secret hate in their souls for anything pertaining to the United States, save food. They obey the wishes, orders, and requirements of Lukhau through fear, a feeling which we must instil into them by making 'War Hell.' 'The word 'amigo' is used by them only to deceive the officers and soldiers-the 'white flay 'an emblem of treachery. It is a fair rule to go by that the first stories of the Samarine are lies, and the truth only to be obtained when it is to his interest to gain the confidence of an officer or soldier in order to betray this confidence at the first opportunity,

### A Polish View of American "Barbarity."-In the opinion of the Zgoda (Chicago), the newspapers are raising too much line and cry over the tortures of the Filipinos by a few American officers.

"Every war has its ugly sides, and in every army there are a certain number of soulless tyrants who abuse their authority and power. History shows that this disgraceful element is least numerous in the

American army. Let us only imagine what would be done in the Philippines if Russians, Germans, or even Spaniards were carrying on war there. The guilty will be judged and punished, while the good which the United States has already

It says:

done in the islands and which it will yet do, will live for ages. The United States introduced in those islands equality of men before the law, liberty of conscience, of speech, and of the press, and gave the islands a liberal, local autonomy, and in order that the Filipinos might develop and progress, the United States immediately opened numerous schools and sent a whole army of male and female teachers there. In view of these benefactions, the abuses of a few brutal officers, however horrlibe and sad, vanish completely, and there is no necessity of weeping tears over the lot of the whole Philippine nation, which is seperiancing no injustice."—Translation made for The LITERARY DIGEST.

#### NAVAL OFFICERS JAILED IN VENICE.

THE King of Italy's prompt parton of the three naval officers and one marine of the United States navy, who were arrested on April as, in Venice, charged with disorderly conduct, recalls to many American papers the difficulty that Italy has experienced in getting satisfaction for the lynchings of Italians in this country. It seems that the naval officers and marines had misconducted themselves on days previous to the twenty-fifth, but on that night the officers visited several of the cafée, upsetting chairs and tables and interfering with civilians. The police interfered, but the sailors resisted and showed fight. When arrested, they gave fittitious names and addresses.

The King's generosity, says the New York Tribura, "will produce a grateful impression in this country, especially in consideration of the fact that Italians have more than once felt that they had some cause of complaint against us." The Philadelphia Record says:

"The coavicted men have paid the penalty demanded by the law of Italy which they set at defance; they have undergone alea of Italy which they set at defance are defanced in the pusishment has not been lessent in disgradefulness in consequence of the abheviation of the period of incarceration through royal favor and out of consideration for the American Government. But ins conducting themselves to come within reach of the penal statutes of a foreign guestion have also committed an offense against the United States; and this has not yet been atoned."

The comparatively heavy sentences (three and four months) imposed spon the men caused many American papers to believe that the lynching of selven Italians by a New Orleans mob in 1891, and the lynching of few more at Talluah, La., in 1890, had cansed some prejudice against the United States, and that his incident was seized upon by the Italian Government as an opportunity for retailation. The Tribura (Rome), as reported by cable, says that the condemnation of the officers was perfectly legal and correct, and adds: "We hope the painful incident will not disturb our good relations with the United States." The

Giornale d'Halia (Rome) takes the affair ligithy and says that it was due to too many good glasses of wine. The l'haladelphia Telegraph thinks that "the authorities at Rome, however, are too enlightened, and too desirous to maintain friendly relations with the United States, to permit their attitude in the present case to be influenced by the memory of these past grievances." The New Orleans Fizarune saws:

"The offense does not appear to have been of an aggravated nature, and in this city would have been junished in a recorder's court by a sentence not greater than a fine of ten or twenty dollars. In Italy, however, where there is a very hiter feeling against the American people, on account of the lynching by them of a tot of brigands, assassins, and smugglers deported to this of a tot of brigands, assassins, and smugglers deported to this States Government was doubtless eagerly seized upon and unised to get even with the hated Americans.

"The universal experience of citizens of the United States in continental Europe is that they are the subjects of a widespread prejudice, and in all probability would not be tolerated if they did not spend so much mosey there. This feeling grew very acute with the Spanish war, and altho it may have subsided to some extent in several countries, is still strong in Italy, where so resentment for the lynchings has been repeatedly manifested by the mistreatment of Americans, and by demands on the Government at Washington. Perhaps the Americans will finally learn a lesson of some value as to low they are lated advand."

#### OLEOMARGARINE.

THE new law to keep oleomargarine from masquerading as butter is arousing some comment. It is in the form of a revenue measure, and aims at the result just mentioned by taxing the "oleo" forty times as much when colored to resulte butter as when it retains its natural complexion. In the one case, the tax is ten cents a pound; in the other, a quarter of a cent a pound, and "process," or "renovated" butter, a quarter of a cent a pound, and "process," or "renovated" butter, a quarter of a cent a pound, and "great injury to the butter industry, "but does not explain bow it will do law great injury to the butter industry," but does not explain bow it will do this. The Retail Greecest Advocate (New York) makes this interesting comment:

"The law as finally passed does not require retailers to pay a license tax as has been the case heretofore, nor does the bill as it stands hamper the retailer in any way whatever.

"All the restrictions are placed on the manufacturers. Those familiar with the bill say that a retailer may buy the oleo direct from manufacturers, tear off the revenue stamps, and sell the goods as butter without any fear of punishment."

The labor papers have had little to say about this measure while it was before Congress. One of them came to the de-

- The Brooklyn Earle,

femes of "oleo" as "the poor man's butter," but another stigmantized it as "soap grease," and there the dispute ended. The Philadelphia Lodger thinks that the discriminating tax is merely intended to "prevent the great frauds that have been perpetrated upon the public by manufacturers who produce oleomargame in imitation of butter and retulers who sell it as butter," and it adds that "those who seek to profit by deceit may protest against the law, but the public will not.

The Chicago Evening Post comes to the defense of oleomargarine as follows:

"There is no objection to oleomargarine as an article of diet. The original line of attack upon it had to be ahandoned, owing to the infiversal testimony of chemists in its favor. No one now pretends to believe oleomargarine to be unwholesome or impure. It was simply too formidable a compettor, and the bill is a deliberate attempt to destroy an important and growing industry. "Hundreds of labor associations and other bottles have pro-

"Hundreds of labor associations and other hodies have protested against this unconstitutional abuse of the taxing power, this immoral piece of class legislation; but the farmers are supposed to demand it, and Congress hid not the courage and the manihees to resist this improper demand. There is no more sense or farmess in prohibiting the coloring of decomargatine than there would be in prohibiting the coloring of batter.

"There are some intimations that the ten-perseent, tax on yellow obcomingarine may not prove prohibitive after all. But we know from the frank textimony of the dairy representatives that they will not rest until the rival industry is obliterated. It a ten-cent, tax will not do the work, Congress will be importuned and correct into doubling the new tax.

"The bill has goue to the President. It is unfortunate that it comes to him in the gaise of a revenue measure. He is aware of its teal purpose and character, and a veto would be a signal manifestation of independence and devotion to duty. No oue, however, expects a veto."

The dairy and farm papers rejoice in the passage of the measure. The Rarral New Vorker (New York) says that the law "ought to steady the dairy business, and give the cow a fair chance with the olso factory," and The American Agriculturist (New York) calls the law "truly a trimuph for common bonesty." The oleo business, and as the latter journal, is "iniquitous from its inception, because it could thrive only through deceiving millions of innocut consumers.

- The Denver Republican.

### MR. CLEVELAND AS A SERENE DUCK-HUNTER.

X-PRESIDENT CLEVELAND has made a classification of duck-hunters, and gives the result to the public through the columns of the Philadelphia Saturday Evening Post. There are three classes, he finds, the market-shooters, the dead-shots. and the "Serene Duck-Hunters." The market-shooters be regards with disapproval. He says: "The killing they do amounts to hald assassination-to murder for the sake of money. All fair-minded men must agree that duck-hunters of this sort should be segregated from all others and placed in a section by themselves." The dead-shots, too, are placed in a separate class, because "there can be but little doubt that this contingent give unintentional support to whatever popular belief there may be, originating in the market-shooters' operations, that duck-shooting is a relentlessly bloody affair." The "screne" hunters, however, are not so "sordid and sanguinary" as the two classes just described. Mr. Cleveland says of this third class:

"These innecent ones comprise an undoubted majority of all duck-hunters; and their common tastes and enjoyments, as well as their identical conceptions of duty and obligation, have drawn them together in delightful fraterity. By their moderate destruction of duck life they so modify the killing done by those belonging to the classes already described that the aggregate, when distributed among the entire body of duck-hunters, is re-every way exert a wholesome influence in the direction of securing a place for duck-hunting among recreations which are rational, exhibitating, and only moderately bloody.

The New York Evening Journal, which has long regarded Mr. Cleveland with much the same feeling that Mr. Cleveland regards the duck, finds in this article an opportunity to let fly a shot at the ex-President. Whether or not The Journal is screen in its hunting may be judged from the following paragraphs:

"Mr. Cleveland in cold type expresses approval of the 'moderate' murderers, who kill just a few ducks, leaving plenty for others to butcher, and his idea of pleasure is 'ONLY MODER-ATELY BLOODY.'

"Can you possibly believe that the quotation which we shall now give you is actually written by a self-respecting man past middle age? It really seems hard to believe it, yet here follows

THE CAREFUL ATTENTION THE FAMILY COW WILL RECEIVE IF BEEF CONTINUES TO INCREASE IN VALUE.

— The Chicago Reco d-Herald.

BENEFICIARIES OF THE BEEF BOOM.

verbatim Grover Cleveland's account of the methods and sensations that accompany the wilful, unnecessary destruction of a beautiful, harmless bird:

""Our nunter's gun is coolly and gracefully raised, and simultaneously with its discharge the duck falls helpiesely into the water. This is a situation that calls for no word to be spoken. Merely a self-satisfied and an almost indifferent expression of countenance should indicate that only the expected has happened, and that duck-killing is to be the order of the day.

"The ex-President of the United States gives a clear insight into the beauties of murdering for fun and some of its results when he describes the 'appropriate exclamations' which express the feelings of the hunter when he has missed his shot. We now quote Mr. Cleveland verbatim on one 'exclamation'."

"'One which is quite clear and emphatic is to the effect that the fleeing duck is "lead-ballasted"; another easily understood is that it has "got a dose," and still another of no uncertain meaning, that it is "full of shot."

"In other words, in the opinion of this 'screne duck-hunter,'
who formerly inhabited the White House, on feeling of regret or sorrow is caused by the knowledge that a poor creature which never did you any harm is flying away wounded to die showly in the recels, while you are at home sleeping the leavy sleep that follows the heavy dinner of 'the screne duck-hunter.'

"It is not pleasant to speak harshly to a stout, middle-aged man who probably approves of limisef. But we must tell. Cleveland on behalf of all decent men and women that his nriele on duck-hunting would better become an ignorant savage and one who has posed as an example to his fellow citiesus and aspires to instruct the young men of a university."

#### PRESIDENT-ELECT PALMA IN CUBA.

SENOR PALMA'S tour through Cuba has not stirred up much comment in this country, and the reported selection of Herbert G. Squiers, who was in Peking during the siege of that city, as first minister to Cuba, is not receiving much notice. The Chicago Area, however, remarks: "The minister to Cuba is to get \$10.000, and he will earn every cent of it explaining to the people of the island how our tairli have are operated for the Cubann's ole benefit." The President-ebect has declared his opinion that the pensions for the soldlers of the revolution should be made secondary to add to the Cuban farmers; and he has shown much favor and attention to the Spaniards during his tour. Great good-will has greeted him in the towns along the route, even in the strongholds of his political rival, Maso, who met and welcomed him on the historic ground of Vara.

"The reception given him by the people, and their promises to be good, are a good start," says La Lucha (Havana), "tho, considering the occasion, much weight can not be attached thereor." El Navuo Pair remarks that there are few signs of real enthusiasm over the coming change in régime, and explains the coldness as follows:

"Those who really sought independence consider themselves deceived and betrayed, and the so-called republic for them is nothing but a sham. Also there are those who never wanted the republic at all, and these two sections are sufficiently large to account for a lack of enthusiasm when the economic condition for the country is taken into account, the present straitened flancial conditions of the people making it hard to work up much show of zeal."

A hopeful view of the island's future, however, is taken by El Avisador Comercial (Havana), which says in substance:

There is nothing to warrant any apprehension regarding the fact of work and capital with the advent of the Cuban repulse. Passons inherent to civil strife have disappeared in all noble measts. Those who, urged by maliciousness or covetousness, now attempt to revive them will be punished and despised in the name of the same Cuban nationality, which can not but see serious evils in the lack of unity among its inhabitants, evils that many bring the world downfall that we must dread.

Seflor Estrada Palma can not but be aware of the danger,

and the men he calls to constitute the Government will surely bear in mind the long period of uncertainties and misfortunes that has clapsed, the great need to prevent any spark that may produce a conflagration, all excitements that may bring on the

catastrophe. The country must be at peace, capital must not be distrastful, and activity must prevail in all the country.

The island of Cuba has ample wealth, and its inhabitants possess enough vigor to cope with all the obstacles that may arise, and that triumph will be theirs which is much the more brilliant when it is most difficult. Let them have equal confidence in the fact that order will not be disturbed, that justice will

HERBERT 6. SQUIERS, To be Minister to Cum

rule supreme, that passions will be quelled by a vigorous hand; let them remember that the republic of Chba is to be eminently conservative in what represents work, repose, and justice, and that there will be nothing to hinder the vigorous and flourishing revival needed by Cuban production to gain its neighted market.

with confidence and security assured by a strong public opinion, the republic will surely live long and prosperously, but without them it will not, and this should be the burden of our present thoughts.

#### CUBAN SUGAR AND THE TRUST.

M OST of the papers rely upon the statement of Mr. Heury O. Havemeyer, president of the American Sugar Refining Company (the "sugar trust"), to the effect that his company has bought only 93,000 tons of raw sugar in Cuba this year 100t of a total crop of about 600,000 long tous), and that, of this amount purchased, only 48,000 tons are now in Cuba and would receive any benefit from the proposed reduction in tariff. It was Mr. Havemeyer, it will be recalled, who made the frank statement before the industrial commission in Washington in June, 1800, that "the mother of all trusts is the customs tariff hill," and added; "It is the Government, through its tariff laws, which plunders the people, and the trusts, etc, are merely the machinery for doing it." "The high character of Mr. Havemeyer's testimony on previous occasions," says the New York Commercial Advertiser (Rep.), "will not permit of any yellow press doubts about the value of his evidence before the sub-commission yes-

It was the contention of Mr. Teller, of Colorado, and of other Senators from States in which the beet-sugar interests, are strong, that the trass owns the Cuban sugar, and that the proposed reciprocity measure would consequently help, not the Caban planters, but Mr. Havemeyer and his assectiates. So a Senate sub-committee was appointed to look into the natter, and has elicited Mr. Havemeyer's testimony. "On Mr. Havemeyer's showing, the Senate ought to pass the reciprocity bill without further delay," says the Baltimore Son Hold, and the New York Times (Ind.) regards "the latest and most sinister humbug of the best-sugar men" as exploded. Mr. Teller, as the Washington correspondent of the New York Tribune (Rep.) relates, "attempted to get from Mr. Havemeyer an admission that the

sugar trust had bought up many of the most valuable plantations in Cubin, but the witness testified flatly that his company did not own an area of Cubin sugar lands, altho he himself owned interests in several estates, all of which, however, he acquired before Cubia was freed from Spain.

It is ridiculous to suppose that Mr. Havemeyer would give testimony unfavorable to his own interests, however, thinks the New York Press (Rep.), which opposes reciprocity for Culta. It says: "This sort of investigation would be on a par with an investigation of the berl trust, with its officers as the solo witnesses, to determine whether or not there was such a thing as a beef trust, and, if there were, whether it was not a pitiantaropic of the pressure of the pressure of the pressure of the pressure of the open of the pressure of t

Copyrighted, 1805, by Alme Dupons,
HENRY O. HAVEMEYER,
President of the "Sugar Trust,

stitution. It would be like prosecuting a man for theft and putting him on the stand to give the only evidence for the state, or like trying one for murder and making his testimony the sole reliance of the prosecution!" The same paper makes the following comment on Mr. Havemeyer's testimony:

"Mr. Henry O. Havemeyer, the president of the sugar trust, can not see what his interests in Cuban

sugar plantations have to do with the investigation of the Senate committee to show who it is that will be benefited by a reduction in the Cuban sugar duties. He has, however, made 'some purchases' there, and the he does not consider it legitimate to compel him to reply to questions pertaining to those holdings, he admits that he does own sugar lands and sugar-mills in Cuba. He owns, for example, 40 per cent, of the Trinidad Company, which produces more than 17,000,000 pounds a year. He has an interest in a plantation at Santa Cruz which yields another 20,000,000 pounds a year. Other of his holdings are in the sugar factory at Chappawa. In these and others he is associated in the ownership with other officers and members of the sugar trust. There are still other holdings which it is impossible for a man of such extensive investment and speculation in Cuban sugar property as Mr. Havemeyer is to recall. Mr. Havemeyer classes himself in the rank of Cuban poverty, for he 'happens to be in that category himself," but he is not so povertystricken that he can recall all of his Cuban interests and possessions

"But Mr. Havemeyer can recall and does admit enough of the evidences of his poverty possessions in Cuba to show this: that in engineering the Cuban turnif reduction the president of the sugar trust have "played both ends against the middle." For when the present sugar duties are remitted either the owners of the sugar trust hap you more for their raw sugar than they awe just, and the difference of saved duties goes into their pickets, or the sugar trust owners of Cuban planatations and mills get more thy as much as the saved duties goes into their pickets, or the sugar trust owners of Cuban planatations and mills get more thy as much as the saved duties for their raw sugar, and thus same difference goes into their same pockets. In either reduction of duties. And it is the American sugar-cane planter in Louisiana and the American sugar-cane planter in Louisiana and the American sugar-cane planter in Louisiana.

The trust holdings of Cuban sugar were estimated by General Wood a month ago at even a smaller figure than Mr. Havemeyer gives. As the Washington correspondent of the Philadelphia Ledger (Ind. Rep.) says:

"So far as the ownership of sugar now held in Cuba is concerned, recent official reports from General Wood, based upon special inquiry, show in whose possession the augar is. As late as April 7 despatches from General Wood were received at the War Department, which show that the output of sugar for the year to March 25 was, in round numbers, 600,000 long tons. Of this the actual quantity in the hands of planters was 231,000 tons; sold and delivered to island firms, 206,000 tons; pledged as security for loans in the island, but not sold, 237,000 tons; held at the option of the American Sugar Refining Company, 3,300 tons; held at option of other American purchasers, 2,300 tons. General Wood states in his report to the War Department that all the above sugar except that at the option of the American Refining Company and other American purchasers is in the hands of Cuban planters and Cuban and Spanish commission houses doing business in Cuba, and is not at the option of any one. General Wood says: 'Where held as security for loans advanced to planters the planters will get the advantage of any rise in price, under conditions of deposit, as is the custom in the island," These figures and facts show that there is no truth in the allegations so frequently made that the sugar crop of Cuba is substantially held by the American Sugar Refining Company."

#### PASSAGE OF THE CHINESE EXCLUSION LAW.

A T no time during the progress of the Chinese exclusion measure through Congress has there been enough opposition to it to make it an "issue." The House passed a pretty draxic measure, the Senate substituted a very mild one for it, and then both agreed to lay saide their measures and reenact the present law for an indefinite period, extending its provisions to coverour new colonial possessions. A few papers have opposed exclusion, but seemingly with no expectation of stemming the overwhelming sentiment in favor of it. Thus the St. Paul Dispat. 6 saves:

"The idea of protecting the rude labor of this country by excluding the Chinese is abund on its face. It is furthermore disbanest, for the rude labor of all other countries is admitted without stint. Does not the greatest competition in the rude labor market come from Ireland, from Italy, from Poland, from Sweden, from Servia, from Hungary? Where is there a politican who would dare open his capacious mouth in opposition to the free egress of these laborers? Why should the labor market not be protected against all competition? Ah, there's the rub. The European immigrant usually possesses a rote, and the Congressman who lose the support of the nationality whose rude laborers be undertook to turn away from American shores. But the Chinaman can not vote, and he will not be allowed to become a voter under any ericemstance.

"This opposition to Chinese immigration is mere political bosh. It is nothing more than a whip in the hands of the sup-

"Whatee style 'open door' is Uncle Stamee Building?"

-The Detroit Journal.

posed labor interests to keep the brainless politician in line. As a matter of fact the United States wants all the rude labor that comes within its boundaries. The South must have better labor. The negro is not industrious or reliable in the mass. He is more independent on less capital than the Chinaman. The latter is industrious, frugal, adapted to the Southern climate the ris industrious, frugal, adapted to the Southern climate. Moreover, the Chinaman might stimulate the negro by affording labor competition. His presence would be the best thing for the negro and the salvation of the agricultural regions of that entire section. Neither is the North overstocked with farm hands. Rude cheap labor is needed all over the country, and the despised john might solve, if he also makes, some labor problems.

But the Washington Star says:

"Whatever the beginnings of the protest against Chinese cheap labor may have been, the fact is past all dispute now that the people of the United States, without distinction of creed or party, and led by men of the highest character and remow, are tirmly in favor of keeping the Chinese as a race out of the United States. This feeling has strengthened materially in the past ten years, and that it will grow still stronger as the years go on is certain. Protection to American labor means more than the arrangement of the tariff schedules respecting articles of foreign manufacture. Chinese cheap labor in the United States would injire the wage scales past the power of all tariff schedules to repair.

"And what we owe to the people of the United States we owe as well in this matter to the people of the recently acquired territory of the United States. In the Philippines in particular we have to revkow with a popular objection to the Chinese quite as strong as that we find here at home. The Chinese are as corduitly hated by the Filipinos as are the Spanish frars. To open ting gates at Manila therefore would be as serious a mixtake as enough in the arthipledgo without admitting within its borders a horder of people whose presence would work only injury to us and to themselves."

#### THE RETURN OF THE "RUSTLER."

THE present widespread discussion of the cause of the sudden rise in the price of beef has opened the eyes of the American public to the fact that swift and mighty changes are occurring in the industrial character of our great Western plains. The great cattle company will soon be an extinct institution, and the prossic hired man of the present will give place to the picturexque cowboy whom we have thought had passed or was passing away foreer.

At least this is the opinion of the Boston Herald. In its issue of April 27, it speaks as follows of the "changed conditions shortly to occur on the Westeru cattle ranges":

"The 'changed conditions' mentioned will occur when the order recently issued by the Department of the Interior requiring the leveling of fences raised on government lands goes into effect. This will occur during the latter part of June or the early portion of July.

"These fences have been placed about vast stretches of range land still owned by the Government, by large cattle-growers, but thus retain to themselves, without charge, an exclusive control of of the ranges enclosed. The fencing of government lands is robidden by federal statute, and heavy penalties are imposed for violations of the law.

"Violations have, however, grown so common that it has become almost a custom to fence government lands. The federal authorities have closed their eyes to the situation until such a feeling has been engendered among the small cattle-growers that blood has frequently been shelf, thou-cands of head of cattle have been shaughtered, and the courts have been burdened with prosecutions under the federal laws.

"These latter have been successful during the past few months, and so many heavy fines have been imposed against violators of the law that the large cattle interests began a crusade to secure legislation which would permit them to continue the fences. Appeals were made by them to President Roosevelt and to Congress for enabling legislation. The small cattlemen, however, proved the stronger, and the result has been that the Department of the Interior has recently issued an order requiring the removal of all obstructing fences.

"The effect of this order will be the restoration of prisine conditions on the Western ranges. The true cowboy, he of the familiar novel, has long been absent from the ranges, and only a heard of 'cow-punchers,' as they are now styled, has occupied their position. These 'cow-punchers' duties are about the same as those of the 'hired man' on Eastern farms, except that, instead of following the plow, the cow-punchers follow the herds.

"The real cowboy found his operations curtailed a number of years ago when large cattle interests began fencing government land, thus doing away with the employment of hundreds, and possibly thousands, of cowboys. The cowboys departed from the raisees, settling into other buses of employment.

"The first effect of the department's order will be to cause their return to the prairies of the West and to their former pursuits. It will be but a few months before the swaggering braggadocio of the real cowboy will again he witnessed, and can their former individuality, will again be restored.

"With the return of cowboy days will also come the days of 'cattle rustling,' which in the late eighties caused a strife on the Western ranges so bloody as to startle the country, and which also caused the United States-Government to send troops to the cattle regions to combat the 'trustlers.'

"These 'risklers' were practically an army, not only because they traceled about in numbers equal to or greater than a trop of cavalry, but because, being of daredevil disposition, armed to the teeth, and careless of the rights of others, while knowing that if caught a rope would end their existence, they made more formidable fehrers than would an ordinary evarly troon."

## LETTERS AND ART

### DOES A COLLEGE EDUCATION EDUCATE?

T is not often that a college graduate ventures upon wholesale criticism in public of his Alma Mater; especially when the institution in question has just celebrated the two-hundredth applyersary of its foundation amid general congratulations and enthusiastic eulogies of its work and prospects. Nevertheless, Harlow Gale, a Yale graduate who is now professor of experimental psychology at the University of Minucsota, does not besitate to declare that his college education did not give him culture in any real sense; and his industricut of Vale is indirectly an indictment of our whole modern college system. In a leading article in the March Pedagogical Seminary, Professor Gale reviews his college experience fifteen years ago, describing the methods of teaching then prevailing, and the relations existing between the Yale faculty and the student body. Taking up, first, the scientific methods of the professors of his day, he asserts that he and his fellow students "got no scientific knowledge worthy of the name, " "got nothing of the scientific method and spirit," and "never saw or heard of any of our instructors doing any original work." Proceeding to a consideration of the attitude adopted toward Darwin's epoch-making law of evolution, he says:

"As to the wealth of biological evidence for this law, scarrely any Yale student ever heard of it: for only an occasional eccentric student dared to go out of the traditions of the college and take the little elective botany and zoology which had crept into the curriculum from the Sheffield Scientific School. And yet, by a strange anomaly, Yale slightered in its Peabody Museum a wealth of evolutional material which was known and honored throughout the scientific world. . . . Yet not only was no instruction offered concerning this material, but we were never encouraged to visit it unofficially. In geology we did get some perspective of evolution time, and some observation knowledge of the cosmic forces, in our Saturday-afternoon geological tramps with a modest and marvelously energetic aged professor. But the memory of his classroom hours with us is a special series of lectures on the 'Harmony of Genesis and Geology,

"The only other teacher from whom we ever heard anything of evolution introduced it in connection with sociology as a graduate study. And it is an interesting criterion of the college's ignorance and fear of evolution that, altho he was the most admired and stimulating of the whole faculty, we students shared in a blind imitative way the suspicion of the college authorities

which compelled him for some years to cease using Spencer's sociology."

Natural science generally was rated low; astronomy was "the most unpopular study"; and mathematics "were made unadulterated discipline in selfdenial." Physics and chemistry were in little better plight. Professor Gale continues:

"In chemistry we had to learn the chemical formulas by heart like so many Chinese characters, before we had ever scen,

touched, smelled, or tasted any chemical substance. This learning we struggled, with every known device of promptings and cribs, to give out again in recitations throughout the whole book. Having been thus refined by discipline, we were shown at the close of the term a few experiments at the dark end of a long room, and by a voice mumbling almost inaudibly through its massive heard. Thus only the few conscientions classmates on the front benches got anything from these absolutely undemonstrative demonstrations, while the rest of the class sought the rear benches as they rose up to the ceiling, and there enjoyed the natural relief from our chemical catechism by yielding to the foul and hot air as we stretched out on the dark benches and slout '

English literature was considered "the greatest snap in colloge." The environment in the required literary courses was "so deadening and morbid" that "the few electives in the last two years were chosen by the great mass of us because of their being the easiest things to get through." The time given to Latin and Greek was altogether disproportionate to the importance of these languages. Too much attention was devoted, in both of these subjects, to "words and their grammatical relations," and students "were fostered into a false and morbid attitude in regard to the use of translations," The philosophers were treated "impersonally, or classified into 'schools,' as the discoverers of patent systems of knowledge or solutions of the universe in general, instead of as men living through their literary works." The required course in ethics, with "its childish truisms, its endless charging, countercharging, and recountercharging of mere verbal abstractions, and its careful avoidance of the manifold cthical problems of the real human heart," was "no more scientific than 'Christian Science' and nothing at all so practically helpful."

"There are some of the deepest and most precious resources of a cultured heart," continues the writer, "which find no paths of connection with our Yale education. One of these is music. . . . Let me record my deliberate judgment that all Yale College could give me in four undergraduate years and two graduate years up to a Ph.D. does not begin to have the living culture worth which I got during my first year only in Germany from Beethoven alone. As for art, "none of our professors told us by precent or example that we would find art a beautiful, comforting, and stimulating friend to cultivate; so we left college with the popular barbarian contempt for art as being a harmless occupartion for girls and weak-minded men." Professor Gale adds:

EDITORS OF CURRENT PERIODICALS.-VIII. THE LADIES'

service with its de-

siccated sermon.

were a farce even to

the best of us Christians '

Gale mentions "the democratic spirit which was particularly characteristic of Yale student life." The fundamental cause of the antiquated methods employed, he thinks, is to be found in the habit of inbreeding its teachers. He concludes by saying:

"Yale has progressed greatly during the fifteen years since the foregoing picture of its education, notably in the introduction of laboratory methods of teaching the sciences, in the range of the sciences offered, in the less exclusive education of its teachers, in the pursuit of original work by instructors and students, in the provision of noble music, and in the secularization of the presidency. But in a college where progress has chiefly been made by yielding reluctantly to outside pressure through imitation of, and competition with, other more advanced universities, instead of striving from within to realize the high ideals of culture as they are refined from the wide life-experience of the teachers themselves, and has gloried in its conservatism, there is little hope that it will ever become the equal or even the worthy compeer in culture of many of our larger and smaller American colleges, . . . The present academic college, as the core of the bicentennial university, is still grotesquely far behind the spirit, freedom, and methods of original work and the grade of culture which not only made Cambridge and Berlin, but which are happily engrafted on to our American life in such universities as Clark, Harvard, Columbia. Cornell, Chicago, Stanford, and several smaller ones.

The article is one of a series. Other articles in criticism of other universities are to follow in the same magazine.

#### THE DETECTIVE IN FICTION.

THAT the "detective story," which seems to have been languishing of late, has lost none of its old-time fascination for the reading public is apparent from the reception accorded to Dr. Conan Doyle's new novel. "The Hound of the Baskervilles." One hears wonderful chings, from a publisher's point of view, regarding this story, which is said to have doubled the circulation of the magazine in which it appeared. The Bookman (May) pronounces it "a really great serial,"—the "most successful since "frilly" came out in parts in Harper's Magazine." Mr. Arthur Bartlett Maurice, writing more guardedly in the same journal, declares that "as a story of mystery and horror, "The Hound of the Baskervilles' is a success"; but "for Sterotck Holmes, the master of the science of deduction, whose creator has proclaimed him the peer of Dupin and of Lecoq, it is a debids is."

Mr. Maurice, looking back to the days of his boyhood and recalling the eager Interest with which he devoured the dime novels of that period, including such tales as "Red Light Will, the River Detective," "Old Rafferry's Luck," "Ferrot, the Man of a Million Disguises," and "Butts, the Boy Detective," admits that the detective story, like other forms of literature, has progressed. He saxys:

"The different types of detectives in fiction may be classified according to the social scale. Old Rafferty, Chink, Sleuth, Butts, and all of that ilk may be designated as the canaille, the proletarians; Poe's Dupin, Gaboriau's Lecoq and Père Tirauclair, and Dr. Doyle's Sherlock Holmes are the patricians; they represent the grand monde; between these extremes are the detectives who belong to the bourgeoisie of detection, and they, of course, are of the greatest number. An excellent type of this middle class is the Mr. Gryce of the stories of Anna Katharine Green. A crime is committed; Mr. Gryce is appealed to; he catches the scent; and at the end of the volume he shows you that the real culprit is the person who has been before you throughout, but whom you never have thought of suspecting, This last is the very basis of the real detective story of any length. Some years ago there appeared a detective story-was it not by Prof. Brander Matthews?-in which the culprit was finally detected by a camera concealed in a clock. In the course of the story every character was at some time suspected, and then cleared of suspicion, and at the end the author explained that the crime had in reality been committed by a person of whom he had never before heard. This same law for the writing of detective stories seriously impairs the interest of one of Gaborius' best-T-L'Affarie Leonge. By the time we were half through the book and long before any limit of the true state of affairs is necessary, we are forered to the inevitable conclusion of the guilt of Niel, startling as that theory seems on its face, simmyided being the object of suspicion.

Edgar Allan Poe's Dupin, continues Mr. Manrice, was the first detective in fiction who in any real sense personified "the reasoner, the intellectual sleuth." It was Poe who "conceived the blea of an acute observer who should reverse the process of

DR 4. CONAN DOYLE.

thought, and by a careful analysis of character and temperament, and a close watch of such outside subjects as might have influence, accuracity follow from subject to subject the workings of his neighbor's mind. "The parallel between Dupin's achievements and these of Sherbock Holmes has been drawn by several writers, and some of the points of similarity are so close as to almost justify the charges of plagiarism that have been made against Dr. Dovle. The plots of Poe's famous' Roe Morque' story and of Coman Doyle's "Sign of the Four," for example, are essentially the same, the murder in one case being committed by an orang outang and in the other by a savage so low in the scale of creation as to be almost animal. Mr. Maurice adds:

"Dupin and his historian have rooms together, just as Holmes and Waston did. In each case the curiosity of the historian is first aroused by noticing the unconventional habits and studies of his companion. Dupin has his detractors among the official police, just as Holmes has his Gregoro and his Lestrade, and Lecoq his Gervol. The advertisement of the orange-outage which Ibopin puts in the Paris newspapers, and which results in of Shericket Holmes has found constant intractors in the carer

If something of Holmes's intellectual acumen must be traced

back to Dupin, Mr. Maurice thinks that others of his mental attributes, and, in especial, "that wide knowledge of criminal and contemporary history which enables him to throw a light on the most puzzling problem and to find some nnalogy to the most outer case," can be clearly distinguished in Gaboriau's detective ercations.

Mr. Arthur Waugh, a writer in The Academy and Literature (London, April 5), draws another comparison unfavorable to Shierlock Holmes. "Put 'The Hound of the Baskervilles' over against 'The Moonstone,' 'he says, and note 'how incomparably the advantage is with Wilke Collins: 'The former story is carelessly constructed, and "is dragged together with a jerk that throws is latogether off its balance", while Collins's tale was "prepared with extraordinary care" and is invested with "the tree spirit of mystery." 'Thave closed Dr. Doyle as being by far the best of Collins's successors," concludes Mr. Waugh, "and, putting their works side by side, I confess that I am jealous for the reputation of Wilkie Collins, who in these days of Inadatore's temporis acti's seems to me to have been passed over with but a portion of his postbumous receil."

## A QUESTION OF LITERARY ETHICS.

M. turer, has confided to an audicine of students at the University of Chicago that he was the author of "La Belle Nivernaise," one of the best-known short stories printed over the name of Alphonse Dandet. He said, in effect.

"While I was M. Daudet's secretary I faithfully studied his style, as did also many of his other young pupils. You know that we have in the Lonvre many paintings by Rubens. These all bear the name of the master, and ye it is a well-known fact that many of them are the work of his pupils, who closely inltated him, offering their results to him from time to time for correction and advice and final revision, but doing praetically all the labor themselves. One day my master came to me and said: "Le Roux, an American magazine for young people whiles me to produce for them a very moral story which shall have for its central figures such and such young persons of estimable character. Have you in stock such personages, and can you produce such a story?" I told my master that I would try, and the result ways 1. a Belle Myternaise."

M. le Roux's statement raises an interesting question in literary ethics, namely: Is it ever legitimate for an author to sign his name to another writer's work? The New York Times answers the question with some asperity. It says:

"Whether Daudet would or would not have been guilty of so contemptible à transaction as that with which M. le Roux charges him-it amounts to nothing less than obtaining money under false pretenses-must, of course, be left for decision to those who knew the man as well as his books, and even his nearest friends can not determine the matter absolutely, since the task imposed upon them, if they would refute the accusation, is the impossible one of proving a negative. The situation thus created is a very painful one, and not the less painful because M, le Roux has recently been criticizing Americans with some severity because of their mad desire for money and their willingness to make great and improper sacrifices for the sake of acquiring and possessing it. Now, it may well be that there are Americaus who publish over their own names stories they do not write, and other Americans who supply the first with the material with which to swindle publishers and the public, but it is safe to assert that no American of either class would voluntarily confess the frand,"

"A Friend of M. le Roux," however, who writes to the New York Timer, objects to such strong language. The French journalist, he says, "gave by his words the impression that not only M. Daudet, but also other notable French authors, not infrequently had the routine writing of short stories done by their pupils, tho under their own supervision and subject to their own revision." "I am cenifiden." he volds, "that M. le Roux's object in repeating the anecdote was simply that of a person who wishes to tell an amusing story of a famous man. He intended in no way to detract from the credit justly due to M. Daudet."

After all, observes the Denver Republican, "such a method of work is simply a new application of Andrew Carnegie's theory that the successful man is one who surrounds himself with men eleverer than their employer." It coutin ies:

"Mr. Curnegie says his success in the steel business arose from the fact that he knew how to get the best work out of others. Perhaps the same rule will apply to success in literature—the only difficulty is to find the literary assistant who does not know the real value of his raw material."

The New York Evening Post points out that this is by no means the first case of its kind ou record. Sir Wemyss Reid, in his new biography of William Black, tells how the English novelist came to the assistance of his friend. Charles Gibbon:

"During the severe illness of this gentleman Black found that be was in great distress because he was unable to proceed with a novel which he had undertaken to complete within a certain date. He questioned him as to his intention with regard to the characters of the story and the development of the plot, and, having learned what he wanted, set to work at once and finished Gibbon's story ledvore he set pen to paper on his own account."

The New York Times, returning for a last word in the controversy, does not find that the arguments in defense of M. Daudet mitugate in any degree the gravity of the French writer's offense, which was to sell as his own "a story which he did not write." It adds:

"However common it may have been then, or may be now, to do such things in France, their impropriety is evident, and much as M. lo Roux may revere the nessory of his model and master, he has not added to its luster by his revelation. It is not that Daudet's reputation as an author resis to any appreciable extent upon "La Belle Nivernaise," but that one's mental attitude toward the other and greater works is somehow affected by the that M. is Roux still livers Daudict. Does be think that if Daudet were alive he would still love A location. Does be think that if Daudet were alive he would still love M. le Roux? That question is the key to the problem."

#### ELBERT HUBBARD AND HIS CRITICS.

POR some time it has been rumored that all was not well in the camp of the "Noycrofters" at East Aurora, N. Y. Whatever the auture of the trubles existing there—and they have been vaguely indicated in several of the radical literary magazines—matters recently came to a lead in the eruption of Mr. Michael Monahan, one of Elbert Hubbard's lieutenants, who, it has been said, "was taken to East Aurora by the Fra to be the modern Boswell to his Dr. Johnson," but who ended his career there by hiring the local opera-house and denouncing Elbert Hubbard, in a perferviol speech, as a "chattering, posturing prophet, who mountchanks them (the Roycroft workers) for the benefit of his own pocket."

In an autobiographical sketch appearing in *The Cosmopolitan Magazine (March)*, Mr. Hubbard admits that his "virtue has never been of so extreme a type as to challenge attention"; but, he adds: "I have never committed capital crimes, and altho the blackmailer has recently camped npn my trail, I have childe his seal and dampened his ardor by a willingness to 'tell all.'" He continues:

"I am a graduate of the University of Hard Knocks, and I've ideace several post-graduate courses. I base worked at five different trades enough to be familiar with the tools, attho it would not do to say I am skilful in any. In 1899 Tufts College bestowed on me the degree of Master of Arts; but since I did not earn the degree, it really does not count.

"I have never been sick a day, never lost a meal through disinclination to eat, never consulted a doctor, never used tobacco, nor intoxicants to excess or as a habit. I have loved several women—one at a time—and have been greatly benefited, blessed, inspired and helped by women. Horses have been my only extrawagance, and I ride horseback daily now, a horse that I broke myself, that has never been saddled by another, and that has never been harnessed.

"All the money I make by my pen, all I get for lectures, all I make from my books, goes into the common fund of the Royerofters—the benefit is for all. I want no better fold, no more conflorts and conveniences, than my helpers and fellow workers have. I would be nahamed to monopolite a laxury—to take a heautifal work of art, say a painting or a marble statue, and keep it for my own pleasure and for the select few I might invite to see my beautiful things. Art is for all—beauty is for all. Harmony in all of its manifold forms should be like a sunset—free to all who can drink it in. The Royeroft Shop is for the Royerofters, and each is limited only hy his capacity to absorb and assimilate."

This "autoliographic preachment" draws some caustic comment from Mr. George French. a witche in Yale. American Printer (New York), who solemnly puts it on record that "never since the departure of the great dean of the great gild of seld-entitisers, the late lamented Phineax Taylor Barnum," has "Fra Eliberto's" peer been seen! It has away further

"It is vain to point out the flaws in the Roycroft scheme. It has succeeded, and its success is its warrant, and the warrant of its prophet and promoter. It is quite useless to assert, as it would be to prove, that the Roycroft books are neither good literature nor worthy bookmaking; but it is easy to prove both propositions with respect to the product of Mr. Hubbard's pen and shop, and the latter against the total product of the shop.

"In one sense there has been no false pretense upon Mr. Hibbard's part. He has always wrought by daylight, and no reader can complain that there has been an assumption of virtue that did not reside in the stuff as it has been produced and promulgated. This in the literary sense only. What the Fra has written has had his lailmark stamped upon every page, and its intent and leading has been as apparent as are the motive and intent of the literature and pictures which faul to win the apiment of the literature and pictures which faul to win the apiment of the literature and pictures which faul to win the apiment of the literature and pictures which faul to win the apiment of the literature and pictures which faul to win the apiment of the literature and pictures which faul to win the aplate of the stuffer of the stuffer of the stuffer of the stuffer which will be a several times of late descended to a plane of valigarity so low as to make it impossible to refer to instances in decent society, wuch less quote condennatory passages."

Mr. French is exceedingly skeptical in regard to the professions made that all the Roycrofters participate in the benefits accruing from "the very profitable business Mr. Hubbard has been doing at East Aurora these six or seven years past." He adds:

"It is not a very severe indictment against a business man to allege, or even to prove, that his treatment of his employees is not ideal. That is a matter for the man and his employees to settle for themselves. It is, however, competent for the public to take such cognizance of the conduct of a given business as the owner and manager invites by his own descriptions and allegations. . . . 'The benefit is for all,' says Mr. Hubbard. But it is necessary to 'allow for the crawl' when reading the apparently frank avowals of some writers, especially such as set forth how they earn large sums of money and make public pretense of lofty philanthropy. If this declaration be scrutinized, and the whole confession-appreciation be carefully read, it will appear that the terms 'Roycrofters' and 'Elbert Hubbard' are regarded as synonymous by Mr. Huhbard. When he is speaking of the Roycrofters in this way he may mean it in a Pickwickian sense, or as that selfish man of tradition who told his wife: 'What's yours is mine and what's mine is my own." Probably Mr. Hubbard has had himself made custodian of 'the common fund of the Roycrofters,' to serve without bonds. Certain it is that a somewhat diligent inquiry has failed to bring to light Roycrofters who benefit by the great prosperity of Mr. Hubbard, beyond the meager wages he pays his craftsmen; but some evidence is easily secured tending to show that the Roycroft workers earn much less than similar workers earn elsewhere.

In conclusion, Mr. French makes still more damaging charges. He says:

"In some measure the buyer of books is responsible if he is

cheated in material and in literary merit. He should know the difference between literature and the product of Mr. Hubbard's pen, and if he does not he must expect sometimes to find sand in his literary sugar. Likewise he should learn the difference between Roycroft dyed 'oose calf' and the common dyed skins of commerce prepared for and sold to shoomakers, or be prepared to endure the pitrying smile of the man who does happen to know. But against the fake' limited edition 'there is no defense but bitter experience. When a publisher advertises his promise to print and sell ouly so many copies of a book, and deliberately daplicates these 'limited edition's for sale in different sections of the country, so that there are in fact perhaps; 1500 expless od instead of 500 as agreed, it is a fraudulent practise which calls only for sharp condemnation.

"These things that are being said, more frequently and more positively, about the practies of the Reyroft shop, are hurting Mr. Hubbard, and they are hurting the fine-book trade. It is quite time for an authoritative word to he spoken, either confirming them or condemning the East Aurora enterprise, or disproving them and justifying the Royscreters. While I believe the books made by Mr. Hubbard to be inartistic and unworthy of the claims made for them, I do not like to believe that they are not only fustion, but counterfeit and frandulent fustion."

#### THE BOOK BAROMETER.

M.R. GILBERT PARKER'S novel, "The Right of Way," which has held undisputed supremacy in the booksellers' and librarians' reports for several months past, surrenders its place to Miss Mary Johnston's "Audrey" in the lists for the month ending April 1. Two other new novels—"The Housewith the Green Shutters" and "Mrs. Wiggs of the Cabbage Parks"—"Also win prominent mention for the first time. The amoneded lists are taken from The World's I Work (May):

# BOOK-DEALERS' REPORTS.

- z. Audry--Johnston.
  z. The Righi of Way--Parker.
  J. The House with the Greeu Shutters--Douglas.
  The Histury of Sir Richard CalThe Velvet Glove--Metriman.

  95. Municur Beaucaire-Tarkington.

  16. The Making of a Marchioness-Burnett.

The seven best-selling books of the month, as given in the list compiled by The Bookman (May), are as follows:

- s. Andrey—Juhnson.

  2. Mrs. Wiggs of the Cabbage Patch

  —Hegan.

  Sir Richard Calmady—Malet.
- Hegan.

  J. The Right of Way-Parker.

  The Mac from Gleogarry-Coonor.

  The Pifth String-Soosa.

# INFLUENCE OF THE LIBRARIAN UPON PUBLIC READING.

THE librarian is generally regarded as a public servant rather than a public adviser, but some recent experiments in libraries throughout the country make it apparent that the librarian is becoming a very influential factor in the molding of the literary tastes of the community. Mr. William E. Foster, of the Providence Public Library, has, it will be remembered, established a "Standard Library," of the world's best literature, by means of which he seeks to remind readers of the claims of the classics. Mr. Henry L. Elmendorf, of the Buffalo Public Library, has set apart a collection of the same kind, aiming to meet the needs not only of the scholar but of the active and intellectual man of the world. Mr. John Cotton Dana, late of the Springfield (Mass.) Library and now of the Newark Library, has also sought to encourage the better class of reading by every method at his command, with the noteworthy result that during his four years in Springfield he effected an increase of forty-five per cent, in the number of volumes lent for home use, and a decrease of twenty-four per cent. in the proportion of fiction read.

The New York Times Saturday Review considers this movement on the part of librarians a most important literary development, and goes so far as to say that "the influence librarians exert in the promotion of better reading has now become the most potent that we have, and the one from which most may be expected in the future." The same paper continues:

"It has always seemed to us that the librarians of the country, in this natter of restricting public devotin to tepheneral books, were the main hope of society. They, in a measure, can control their output—not perhaps as a subcrasts, but through silent and taerful influences. It is hopeless for critical journals to denounce this class of literature. The results most commonly are to promote its circulation by calling attention to it. At best they can become influential only by the exercise of silence. They may select from the enormous flood books which seem best and ignore the others. It is usually beyond their provinces to take up rold of dealing with new ones. But the librarian has within his walls the world's store of great and good books. He flokes nothing better than to see his readers take them home, and in numberless ways he can induce them to do so."

The Times staturalny Review out long ago asked several prominent liberations to express opinions as to the best methods that abould be employed, in order to restrict the inordinate public taste for fiction and other ephemeral literature. One of the most interesting replies was that received from Mr. Herbert Putnam, Librarian of Congress. He says:

"We all read novels, we all profit by them. To supply them is a legitimate function of the public library, which is in part to furnish instruction through recreation and to cultivate the taste as well as the understanding.

"There is, however, a deniand for fiction which I do not believe can legitimately be met by the public library. That is the demand for the latest new novel merely because it is the latest new novel. . . . The free library can not supply the demand for current novels' bot from the press. In professing to supply it the library delades the public and relones its capacity for servters really serviceable. I believe that free libraries would gain in resources and in the ead in popular settem if they would agree to buy no current work of fiction until at least one year after the dates of militization.

"They should at the same time make obvious their intention to buy the latest work in the arts and sciences as nearly as possible on the day of its publication."

Prof. A. E. Bostwick, of the circulating department of the New York Public Library, declares that the librarian can improve the reading of those who use liki library (r) by seeing that its resources are brought attractively to the notice of the public by lists, bulletins, etc.; (a) by the system of giving out two books at a time and prescribing that only one shall be fiction; (3) by constant personal influence and advice; (1) by cooperation with the public schools; and (5) by excluding from the shelves all books that ought not to be read. Mr. James L. Whitney, of Boston, says:

"At the Boston Public Library the subject of the reading of fiction receives careful attention. The purpose here is to set the best from the mass of such books currently published. To this end all works of dection are read, not only by the officers of the library, but also by an outside unpaid volunteer committee, and when read are finally passed upon, after examination, by the board of trustees. In addition care is taken, when books are worn out, to replace only those of enduring worth. As a result of this sifting, the fiction read at this library has improved in quality."

One librarian, Mr. J. K. Hosmer, of Minneapolis, holds that it is rather imperitent for librarians to attempt to regulate public reading at all. "The American public resents paternalism." he says, "and is not disposed to believe that those in charge of libraries are any better able than they themselves are to judge of what should and what should not be read." The view of the majority, however, is more nearly expressed by Mr. James H. Canfield, of Columbia University, who states it as his belief that he librarian is exerting an ever-greater influence on public reading, and is coming to be recognized more and more widely as the "best friend and the wisest advisor that the reader may have."

#### NOTES.

RICHARD MANSFIELD promises for next season the grandest revival of Shakespearian drama Americans have seen since the time of Booth and Barrett. His repertoire will include "Julius Crear," "Othello," "The Merchant of Venice," "Richard III, "and "Henry V."

Two of the most striking pictures in the annual salou of the Society of French Artists in Paris are the portraits of Mrs. Roosevelt and Miss Alice Roosevelt by Chartran. They are presounced by French critics specimens of Chartran's best work, surpassing in grace and animalion anything he has yet done.

A HITHERIO uppublished essay by Thoreau, "The Service," has just been published by Charles E. Godspeed of Roston. The essay is the work of Thoreau's early period, and was written for The Did. but rejected by that organ's first editor, Margaret Fuiler, because not "auticlently deferming to conventionalities of style" and Too imperious in tone."

SOMETHING new and interesting has been added to the sights of Vienni, in the city's messum a room has been oppened entirely devoted to the memory of one of the greatest of Austrian-born muscians, Frans Schuert. "An extensively has muscimal been guthered together from all quarters," declares the Vienna correspondent of the New York Commercial, which is not worthly represented, one of the thirty-one years of this life.

This death of Nol Smith Russell removes a quaint figure from the America stage. "Probably very few people ever condidered him a great actor," asps the Brooklyn Engir, because his range was limited. But the man as agents. He had a native grif for quisizated humor which was almost as effective when he used to give reclations in small lowns, in company as the probability of the property of the probability of the probability and the probability as after he because a shiping tast in the theatrical fromsers.

At the twelfth annual dinner of those interested in the free-lecture courses of the Board of Education of New York, some interesting facts were brought out in relation to a movement for popular matruction, which, to quote the New York Ericony Post, is "of the first importance to the city." Dr. Henry M. Leipenger, the organizer of the movement, stated that that the total attendance had been more has no above. It past winer, and that the total attendance had been more has no shown.

The Chastasquaw Magazino, the Chastasquaw Circle book and special reading course pamplets at published in Clevel-and since October slop by Chastasqua Institution, which have been published and Chicherte, by "The Chastasqua Frazi, Assembly, will be published after Chichert, by "The Chastasqua Frazi, Chiatgo, The new company has a capitalization of Stonows, and the president is D. # SCIENCE AND INVENTION.

# LESSONS IN HEREDITY FROM THE BEES.

T was first announced in 1845 that altho impregnation is necessary to produce female bees, the male bees develop from unfertilized eggs. In an article on this subject in the Deutsche Revue, Prof. I. W. Spengel, of the University of Giessen, states that it required more than ten years of additional research to convince scientific men that the rule applying to the majority of animal forms admits of the exception now termed parthenogenesis. The writer goes on to say:

"Now if all female bees, the workers as well as the oneens, have developed from fertilized eggs, and all male bees, the drones, from the unfertilized, since the queen is the only one to lay eggs, the kinds of relationship between the three classes of bees are most unique, and must be remarkably instructive as regards heredity.

Take the progeny of any queen bee, which commonly consists of a queen, numerous workers, and several droues; and among these children of this same mother, the young queen and the workers are sisters, but the drones are only their half-brothers, because they have not the same father, or, in fact, no father at all. Of course, they all bave a common grandfather, the one on the mother's side. The workers remain childless all their lives. sustaining the relation of aunts to the numerous sons and daughters of their married sister, the queen. The drones never have any other children than daughters.

This situation provides for most interesting deductions on the process of heredity: (1) the male properties of the drones can not have been inherited from the parents, since they have only a mother: (2) the drones do not transmit their masculine characteristics to their descendants, since the eggs that they impregnate never produce other than females; (1) the workers possess characteristics that were not present in either father or mother. which accordingly they could not have inherited; and which, being incapable of reproduction, they can not transmit to descendares

"Before an attempt to solve these apparent contradictions, we glance at the most important differences among the three classes. physical and mental: (1) Aside from the reproductive organs, there is variation in size, in which the queen is superior to the drones and these to the workers. (2) Hairs and bristles grow on the workers' hind legs, and serve as brushes and baskets for collecting pollen from the flowers. (3) The workers have a peculiar development of instruments of the mouth, including the unusually long tongue for licking up honey. (4) Wax glands are provided for the workers. (5) The sting is present in the females, the queen and the workers, but wanting in the drones, (6) The eyes are smallest in the queen and somewhat larger in the workers, while in the drones they are so large as to meet upon the upper surface of the body. The well-known mental differences are in as sharp contrast. While the workers are remarkable for activity, skill, and loyal sacrifice for the state, the entire mission of the queen and drones is reproduction of their species; the queen being assiduous in the deposit of eggs, the drones stupid and slothful. How has heredity produced the characteristics peculiar to the workers and the drones?

"The heredity of the queen presents fewer difficulties, lnasmuch as her development from an impregnated egg is not peculiar except for the constancy of similarity to the mother; in other words, for the fact that the masculine properties of the father never develop. If, however, the queen and her husband differ in other characteristics, as when a light-haired Italian queen is united to a black-haired German drose, the queen children of the union as well as the worker children bear the marks of both parents as regards the hair, some resembling the father, others the mother.

"But when workers develop from the fertilized eggs, it is not according to the usual process of heredity. These young bees have characteristics not to be found in either of the parents or of the grandparents, but only in their aunts and grand-aunts who have had no share in their procreation. However, if the queen can transmit to these worker descendants characteristics foreign to her own, we must assume their existence within her in a latent state. The fact is, every fertilized egg of a bee contains the possibility of development juto either a worker or a queen. That depends altogether upon the nourishment of the larva into which the egg is first developed. After a certain day in the course of development, the specific diet that develops workers is steadily supplied to those of the larvæ destined for the worker class. Marvelous and mysterious as the fact is, it has no bearing upon heredlty.

"But how about the heredity of the drones, with neither a father from whom they could have inherited their masculuity, nor sons to whom they can transmit it? At first this seems more remarkable. However, as soon as we recognize that they have a grandfather and grandsons, we perceive that it is not necessary to posit any other variety of heredity than atavism. Of course it is not the usual form of atavism, since this is unvarying and of necessity, while usually the kind of heredity which overleaps a generation is, if not exceptional, at least only one of many possibilities. Here again the crossing of German with Italian bees has furnished important information and enabled us to establish the facts

"The most amazing thing is that the bee workers, that are incapable of reproduction, should nevertheless preserve their characteristic marks with a constancy we have been accustomed to explain as the result of heredity. Because this class is of the greatest importance to bee folk, it is the more remarkable that they are not capable of transmitting their characteristics to descendants of their own. Are they not the ones who perform all of the labor? Does not the weal or the wo of the state depend upon their activity, their canability? If there has been evolution of the bees, it must have been especially the workers who have undergone the process. But how can that have been transmitted by inheritance to the others? The explanation must be derived from the fact that the workers are the queen's sisters. whose differences have developed from a difference of diet; accordingly that the queen is in possession of the characteristics of the workers, only the variations have remained latent. And these, by means of her eggs that become fertilized, she transmits to those of ber female descendants that are destined for the worker class. However, this affords proof that it is only the innate characteristics of the workers that the queen is able to transmit; she never comes into possession of their acquired ones."-Translation made for THE LITERARY DIGEST,

## IS THERE A "NASCENT STATE"?

STUDENTS of chemistry are taught fu all the text-books that certain elements, especially gases, when freshly freed from combination, are in a state of unusually great activity and will then show increased affinity for other elements. This supposed condition has been named "the nascent state," and its existence has long been a favorite resort of writers on electrochemistry for the explanation of various obscure facts. In a paper read by C. I. Reed at the Philadelphia meeting of the American Electrochemical Society, this state is declared by the writer to be wholly imaginative, and he asserts that its existence has been assumed "for the purpose of hiding ignorance concerning certain phenomena which seem to be difficult to understand." He goes on to say, as reported in The Western Electrician :

"The hypothesis of the nascent state has fulfilled this useful purpose for nearly one hundred years; but now it ought to be put aside, as we no longer need the help of this hypothesis for the explanation of electrochemical facts.

"The nascent state is mostly attributed to hydrogen; it is nascent 'hydrogen' to which peculiar reducing-powers have been attributed. The error has been that one mistook coincidence for cause. The fact has long been known that hydrogen and other bodies are often reduced together by the same reducing-agent; from this fact one drew the conclusion that the reducing-agent first liberates hydrogen, and that the hydrogen in its nascent state then reduces the other substance. We can get 'nascent hydrogen' by different methods; and we can therefore determine by experiment whether nascent hydrogen has always the same reducing-power when produced by different methods."

Taking up the various substances whose reduction has been

assumed to be due to nascent hydrogen, Mr. Reed shows that there are two different classes, the first comprising such substances as have greater chemical energy than hydrogen (like aluminum); the second, such substances as have smaller chemical energy than hydrogen (like gold, copper, and various acids). He takes up each class in turn, and proves conclusively, as it seems to him, that the received theory fails in each case to account for the facts. According to the writer the freed hydrogen "has no special mysterious power of reduction, but simply transmits the energy or electric charge which it has received from the electric circuit to another body. In other words, the hydrogen would then simply act as an electric conductor and it behaves not differently at a cathode than in any other part of the electrolyte." The paper was sharply discussed and the hypothesis of the "nascent state" had able defenders. For certain chemical reactions, we are assured by these, the assumption of a nascent state seems the only possible explanation at present, Mr. Reed, however, maintained his views, and asserted that even for the cases cited against him his new theory holds good.

## LAYING RAILROAD TRACKS BY MACHINERY.

A NEW mechanical track-laying device, now being used for the first time near Greenville, Pa., and described by The Engineering Actas's (April), as "the most economical and rapid track-layer ever invened," has been devised by R. E. Hurge, of Scrauton. Pa. In this arrangement the construction train is preceded by a machine-car, bearing a steel truss-derick, or crame, extending sixty feet over the road-bed. Next comes a car with elevated platform, upon which the holier, lock, and water supplies are carried. The machine-tay client with its entire construction train of sixteen cars of tics, rails, etc., is hauled by the machine-car as motive power. To quote from the article just remembers are as motive power.

"The train is made up with the cars upon which the rails and track fastenings are loaded in the rear. Then come the tie-cars and at the head the boiler and machine-cars. At the center of the length of each of the rail and tie cars, and about a foot from each side, is placed a roller, and on these rollers two lines of rails, one on each side of the car, are carried forward toward the head of the train. The power to haul the rails ahead is furnished by a cluster of friction-rolls in the machine-car. At the rear of this line of rails a gang connects rail after rail as the line moves ahead, securing them by placing the angle-bars to the rails and putting one bolt in both ends of each rail. When the rail arrives at the machine-car it is disconnected from those in the rear by taking out one bolt and slackening the other, leaving the angle-bar on the rear end of each rail as it is sent out into the derrick, by power-rolls, to a point about 20 feet in advance of the machine-car wheels. Here it is grasped by specially constructed hoisting-tongs and lowered by one man to the ties below. As the train moves slowly forward at a rate of 20 or 30 feet per minute, the suspended rail reaches a point about a foot back of the previously laid rail, from whence it is moved forward by hand, the loose angle-bars passing over the ball of the stationary rail, when a clamp is placed over them. The rail is then released from the tongs, and the bolting is done while the train moves slowly forward. The possibility of making these connections 'on the By' is one of the most important features of the machine, and accounts, in part, for its rapid work."

But the machine does more than lay rails; it also places the tites for them to rest on. The ties are loaded on cars placed between the machine-car and the cars of rails; and the rails as they move forward over the cars, pass under the ends of the ties, and thus act as tie convergors in the movement from the rail-cars to the machine-cart. In this imanner they are carried forward to the machine, where they are taken from the rails by an attachment on an endless chain, and conveyed over the top of the deririck, which delivers them on the road-lead about 12 feet in advance of the outward end of the rail. The road-bed under the deriric is thus kept constantly supplied with the sufficiently in advance of the rails to allow time for proper adjustment. To most examine.

"The machinery is so geared that the material moves over the cars at exactly the same speed as the train moves over the track, thus keeping up a constant supply of ties and rails at just the rate required. This work is all done with the least possible amount of labor, and with very little lifting. The men are distributed over the train and on the road-bed in front of the machine-car in such a manner as to be free to work without interfering with each other.

"The derick in front of the machine-car is at such a height as to give free action to the spikers below, and the front portion of it is so constructed that it can be swung to either side to suit the curvature, thus landing the ties exactly on the line.

"Special appliances in the shape of tools are also used with the machine, making it possible to work with a rapidity that would seem at first to be quite out of the question. . . . This machine, with forty men, is capable of laying two miles of track per day."

# THE EASY PRODUCTION OF LOW

R ECENT inventions have made the attainment of very low temperatures a process that is within the reach of atmost any one, the apparatus being simple and the necessary clemicals easily obtainable. In La Nature (April 12), M. Georges Vitous writes as follows on the subject:

"Not so very long ago, in physical laboratories the freezing of mercury was regarded as a remarkable experiment. It is no longer so, and physicists have showed us that by the fudicious use of liquefed gases we may without trouble obtain extremely low temperatures, in the neighborhood of zoo' below zero Centigrade [-]38' F.].

"Nevertheless, altho theoretically no scientist is ignorant of how such feats are accomplished, many find themselves unable to carry them out in practise. Contrary to what might be sup-

THE HURLEY TRACK-LAYING MACHINE AT WORK LAYING TRACK ON THE BEY-EMEN AND LAKE ERIC BALLHOAD, NEAR GREENVILLE, PA

posed, however, it is not very difficult to obtain low temperatures with easily procurred apparatus. Professor d'Arsonval has recently shown at the Academy of Sciences that with some precautions we can easily reach degrees of cold between —60° and —105° C. [—90° and —110° E.].

"Thus, if we place methyl chlorid in a porous vessel, by its simple and natural evaporation through the sides we bring the temperature to -60' C. With carbonic acid or acetylene it is

Fig. 1.—1, Cooling gasoline by liquid air. 1, Vessel containing liquid air. 3, Apparatus for volatilization of carbonic acid dissolved in acctone.

easy to obtain temperatures of  $-112^\circ$  or  $-115^\circ$  C,  $[-125^\circ$  E,]. To do this we dissolve in cold actions snow of carbonic actions are acetylene, either of which is easily made at the orbitanty temperature and pressare, by opening it vessel containing hquid carbonic acid or acetylene. The cold produced by the sudden evaporation of a part of the liquid mass lowers the temperature sufficiently to transform the rest of this mass into snow, which, left to itself, multist slowly. This snow may be collected by trecting into a cloth the jet of carbonic acid or acetylene coming from the vessel that contains the liquicfied gas.

"This snow is very soluble in acctone, and in dissolving it gives rise to additional cooling, which, if the acctone has been previously cooled sufficiently, brings the final temperature to —115 C.

"An air-current passing through the small tube and traversing the volatile liquid, provokes evaporation, which takes place with

Fig. z.-Chilling petroleum by liquid air.

an enormous absorption of heat. Thus the escaping gases are at a very low temperature. But these cold gases have to pass through the space separating the large tube from the small oue, and so the air-current through the small tube is cooled before reaching the mixture of snow and accton.

For temperatures below -115 C., we are told, we must have

recourse to liquid air, which is now easily produced by the machines of Tripler and of Linde. With the improved vessels of silvered glass now used to hold the liquid, the loss by evaporation, at a temperature of—iqi °C. [—195° F.] is reduced to 20 grams [about one-half onnee] an hour, a very small quantity, so that the use of liquid air for this purpose is now a practical method. D'Arsonval uses gasoline as a refrigerating agent and keeps this at a constant low temperature by dropping the liquid air slowly into a test-tube immersed in it. Different ways of doing this are shown in the illustrations.—Translation made for The Literakay Distars.

# THE MANUFACTURE AND USES OF GELATIN.

I T is seldom that an article is used both as a foodstuff and in the mechanical industries. Gelatin is equally important in both, as we are reminded by M. Elbie in Cerms (April 9): It is one of the commonest substances in the animal economy; it exists in isomeric forms, in almost all parts of the bodies of mammals, bards and fishes; in the skin, the flesh, even the bones. But notwithstanding this, in spite of its cheapness and altho it is susceptible of so many applications, gelatin remains, he tells us, one of the substances before which chemists confess that they are beaten and humbly declare that they know little more about it than common mortals."

"Of complex composition and essentially colloidal nature, the gelatum, incapilled of crystallization, are difficult to obtain, in a pure state; their molecule, which is probably very heavy, is of such a character that we can foresee numerous cases of polymerism and isomerism in their history. All that we can affirm is that, as with all organic substances, we find among their products amins of mixed function, nearly allied to the relonbiable toxins that form during the purefaction of dead boshes.

"Whatever may be the primary substance from which we startly (except in the case of bones), the extraction of griatin is nearly the same. The 'gluey matters,' softened by maceration in milk of lime, are subjected in a great caldron to the action of boiling water. The ossein and the other albuminoid substances of the same kind that exist in the tissues gelatinify and dissolve. The whole secret of the operation is to leave the solutions for as short at time at possible at the boiling temperature, for gelatin undergoes in these conditions a chauge that greatly diminishes its adhesive properties.

"Thus are obtained liquids charged with gelatin which are solidified by cooling. The jelly is cut into strips before it has hardened too much, and it is then dried. Here is a delicate point: gelatin is very sensitive to atmospheric changes. . The drying must take place in an over, after which the strips are cleaned by vigorous brushing after rapid passage through boiling wa-

"If bones be subjected for a sufficient time to the action of superheated steam, the ossen for organic portion will gleatinify and dissolve. When we do this with fresh beef bones at 106 'C, 123' F. J and introduce into the apparatus a slower of cold water, we get a gelatinous boulllon containing about 1.2 per cent. of gelatin, which has been regarded as very nutritions. This bouillon has been made the basis of a whole diet for invalids. With a pound of this liquid and two ounces of bread a soup

can be made that costs not more than 6 centimes [1.2 cents].

"By lessening the amount of cold water, it is easy to obtain a jelly that, properly colored and spiced, has at least the appearance of a healthful food.

"This had a certain vogue in Europe and even in America. Finally, however, physicians began to ask whether the nutricupalities of gelatin were real or whether the purity qualities of gelatin were real or whether they were merely a means of deceiving the hungry and starving the unfortnate. This second hypothesis was declared to be the true one; and a blow was dealt to the gelatin industry.

"The alimentary applications of gelatin are now somewhat restricted; it is used in the corkage of wines and beer, and cooks and confectioners employ it to some extent. It has a very important modern use in the preparation of sensitive photographic

plates; but its largest employment in all industries is as the basis of all kinds of glues,

"Gelutin is an adhesive material of the highest order, the better in its purer states; fish glue is its best form. It is used hot when dissolved in water or alcohol, or cold when dissolved in acids. In the later form it is less solid, takes hold more alowly, and does not hold so well. In strong glues, inert solid substances are sometimes incorporated—plater, powdered glass, inor rust—to give them the resisting powers of a cement. Certain resins are also added, as in the famous Armenian cement, colorless, limpfut, and waterproof, which the Turkish jewelers use to fix their genes. It is rarely found in commerce and sells for its weight in gold."—Translation made for The LITERARY DIGEST.

## DEATHS FROM ILLUMINATING GAS.

THAT modern methods, adopted to lesseu the cost of manufacture of illuminating gas, have brought about a greatly increased death-rate from gas-poisoning is charged by American Medicine (April 12). This, it claims, is due to the use of the so-called "water gas," in which there is a high proportion of the very poisonous carbon monoxid. Asys the writer.

"Several decades ago, it was found that by using a liberal admixture of water-gas, an illuminant of fair quality could be furnished at a price much lower than coal-gas and yield greater dividends. This was sufficient motive for energetic work by lobbyists in different States to secure the repeal of laws limiting the proportion of carbon monoxid in illuminating gas to 10 per cent., practically prohibiting water-gas, which contains at least 30 per cent. of this lethal agent. Following the repeal of these laws in Massachusetts, there has been a most remarkable increase of deaths and of accidents attributable to illuminating agents. In the thirteen years prior to the introduction of water-was the number of deaths registered as due to illuminating gas was only eight, all from the inhaling of gas as a suicidal agent. In the thirteen years following the introduction of water-gas the number of deaths due to this cause is stated to have been 450, and there have been a number of accidental asphyxiations with recovery. These figures take no account of the many cases of chronic gas-poisoning, due to leakage from pipes. Water-gas is far more enetrative than coal-gas, and those interested in sanitation claim that it has a corrosive action on metals leading to a far greater escapement of carbonic oxid. This seems evidenced by the saturation of the soil in the vicinity of mains, leading in many instauces to the destruction of all plant life. There can be no reasonable doubt that, with the great affinity of the carbon monoxid for the normal oxygen of the blood, constant absorption of the gas in small quantities will eventually produce a condition of general ill-health, greatly increasing the liability to disease and at the same time lessening the resisting-power of the organism. Many puzzling cases of decline in physical vigor possibly have their origin in a constant admixture of illuminating gas having a high percentage of carbon monoxid with the air of homes insufficiently ventilated. In view of these facts it should be made incumbent upon all gas companies to give public notice of the use of water-gas with a caution as to its dangerous character and there should be in addition municipal legislation limiting the proportion of carbonic oxid in the resident section, after midnight at least, to not more than ten per cent. and regulating the character of the gas-burners and their fittings, with appropriate penalties to secure enforcement."

Electrical "Feelers" for Ships.—A novel device which aims at the prevention of collisions at sea by electrical methods is the invention of a Russian engineer, one Nicholas Gherassimoff, says Electricity, quoting the London Electrical En-

"The object of the arrangement is to insure against collision between the ship and any moving or stationary body in the path of the ship, either at the surface or at a depth less than the draft of the ship, and also to give warning of shoals. The inventor's idea is to have electrically propelled bodies or 'feelers' moving in advance of and at substantially the same rate of speed as the ship, and at such a depth under water as to come in contact with any obstruction at a depth less than the draft of the ship. There are three of these 'feelers,' one of which moves in a line with the keel and the other two in paths to the right and left of this line respectively. The three electric cables controlling the feelers are united at a point in such a manner that this point and the position of the three feelers are at the corners of a square. A cable from the junction point is then connected with indicating apparatus aboard the ship. The feelers are controlled by an electric current from the ship, and are urovided with mechanism connected with the indicating-apparatus before mentioned to show the deviation in one direction of the two outside feelers, and the deviation in either direction of a third or leading feeler. Each feeler is also supplied with a luminons floating signal carried by a buoy at the surface of the water. The indications aboard ship denote also whether a feeler has come into contact with a floating obstruction or is over a shoal."

Invisible Microbes.—Microbes are known, says Cozmo,; so small that they are invisible even under the microscope, and can pass through porous substances that will keep out ordinary bacteria. Such are the microbes of peripneumonia and of aphthous fever in cattle. Sax Cozmoz;

"Messrs. Nicolle and Adil-bey have thought that the agent of cattle-plaque, which has bifured oscaped all search, might be an infinitely small microbe. To ascertain, they filtered great quantities of serum and other liquids from animals suffering from the disease. The filtrate, injected into calves, gave them sometimes the disease, sometimes immunity. These preliminary experiments showed that the microbe could traverse the Berkefeld hiter, which had arrested very small bacteria like those of chicken

"The microbes in the filtrate are evidently very few, since it is necessary to inject large quantities to obtain an effect... Messrs. Nicolle and Adil-bey conclude that the microbe of bovine plague is in the same class with those of peripueunoinal and aphthous fever. Like them, it is luvisible under the microscope and passes through all filters. According to these scientists it is contained especially in the white blood-corpuscles... The importance of these invisible microbes increases daily, since they are the agents of very grave maladies."—Translation made for TIM LITERAMY DIEST.

#### SCIENCE BREVITIES.

"A COMPARATIVE innovation," says The Western Electricism, in a description of the equipment of the "Overland Limited" from Chicago to San Francisco, "is the providing of telephone connection from the train, when important stations pendant telephone wires are arranged in such a manner as to be available to be brought through a window of one of the customer and the control of the customer and telephone customer and the c

"I KNEW the signals would come up to 2,200 miles, because I had fitted the instruments to work to that distance," said Marconi to Mr. H. H. McClure in an interview published in McClure's (April) tegarding his latest feat of mid-ocean telegraphy. "If they had not come, I should have known that my operators at Poldhu were not doing their duty. can sit down now and figure out just how much power and what equipent would be required to send messages from Cornwall to the Cape of Good Hope or to Australia. I can not understand why the scientists do not see this thing as I do It is perfectly simple, and depends merely on the height of the wire used and the amount of power at the transmitting end-Supposing you wanted to light a circuit of 1,000 electric lamps. You would use enough dynamos and produce enough current for that effect If you did not have that much power, you could not operate 1,000 lamps. same with my system. We found several years ago that if we doubled the height of our aerial wire we quadrupled the effect. We used one-fortieth of a horse-power then. Now I use several horse-power, and, by producing a powerful voltage. I naturally get an effect in proportion to that power It is not possible to keep on extending the height of our aerial conductors, so we simply use more power when we wish to do long-distance work.

# THE RELIGIOUS WORLD.

## A PLEA FOR AN AMERICAN PASSION PLAY.

WHEN a tentative performance of a Passion Play was given in New York a few weeks ago and a plan to continue the performances was broached, the clergy of the metropolis, louth Protestant and Roman Catholic, seemed to be unanimous in their dostility to the project. Since that time, the Roman Catholic Archibishop of Montreal,

JULIEN DAGUET AS CHRIST.
(Montreal, 1902.)
Courtesy of The Theatre (New York).

Mgr. Bruchesi, has put the formal ban of his church on the Passion Play produced in that city by Julien Daoust. Yet at least one prominent New York clergyman, the Rev. Percy Stickney Grant, rector of the Church of the Ascension, takes the view that an American Passion Play, if staged under proper conditions, would be of material assistance to the church in its efforts to quicken the religious spirit in the hearts of the people, He says in The Theatre (May):

"Chirch-going people are shocked when they hear that it is proposed to give the Passion Play on the American stage. Such a perform ance seems to them irreverent, if not blasphenous. Their objections, however, are largely theoretical, for very few people in America have seen a Passion Play. The idea shocks them. Why is it hat the bare thought

of a dramatic representation of the last days of the life of Jesus deeply offends Christian people? The story of Christian Green and the life of Jesus deeply offends Christian people? The story of Christian Green are careful in tragic and awtul meaning the earthly reinsitudes of the Creator of all things. Christ's life in its most human nud liberal interpretation is a great drama. Why, then, should the modern believer in the most dramatic of all religious condemn the dramatic representation of this story?

Mr. Grant proceeds to answer the question he propounds, admitting at the outset that many of the objections advanced are not to be lightly dismissed. Christian people very naturally, he thinks, shrink from the idea of the impersonation of Christ, the apostles, and the other characters in the sacred story by "actors and actresses who have played parts of a very different sort or whose lives are in conflict with the ideals of these holy men and women." Then there is something incongruous in the thought of a stage associated with comic, sensational, spectacular, or vul-gar associations being "trodden by the feet of Christ," and in the ideals of a Passion Play organized as a purely mercantile venture. But Mr. Grant believes that none of these obstacles are insurmountable. He declares:

"I personally know actors and actresses whose characters are

such as to fit them for even sacred jurts. Indeed, there must be many whose representation of Bulleda personges would not seem glaringly unbecoming. There are theaters of sweet association, there are puright theatrical managers. Financial proviies, after all, incidental to anything that is produced with expenses, and which is given to the public for a money consideration. I understand that the incident of profit does not always appear in theatrical ventures.

"I have no doubt there are religious people who would like to see the Passion Play given in America under proper conditions noble actors, a stage of fine traditions, and a manager devoted to high ideals. I have been very much impressed at the effect upon friends of mine who witnessed at the Lambs' Club, one Sunday evening in Lent, some scenes of Mr. Clay M. Greene's 'Nazareth.' The effect was spiritually stimulating, and it increased the reverence of those who spoke to me of the performance for Christ and his church. In the performance I mention, no one personated the Lord: a light prefigured him. Such a method would remove one great objection to the Passion Play in the minds of the public."

Mr. Grant thinks that the right kind of a Passion Play would be of service mainly "to persons not richly endowed with imagination," and maintains that to such it would prove a real inspiration. He concludes:

"The Ober-Ammergau Passion Play is almost universally approved of. Those who have journeyed to the little Bavarian town return in awe. The difference, however, between the German peasants' presentation of the Passion Play and a presentation on the American stage is one largely of sentiment. The

EDMOND DADUST AS PONTIUS PILATE.

romantic origin of the Ober-Ammergau play, the simple manuer of life of the actors, the distant journey, all conspire to produce a sentiment favorable to the play, quite independent of its merits and independent of the essential question whether the drawn should use the life of Christ as its theme. The conditions are forever will be, the

great human art.

favorable at Ober-Ammergau. Could not the conditions be made favorable in America?

favorable in America?
"The drama to my mind is the most effective form of art. It can combine at its best poetry, that form of art which depends

ANTON LANG AS CHRIST, (Ober-Ammergan, 100) I Courtesy of The Theatre (New York).

music is vague, in comparison with the drama. We do not use the drama enough in its highest ways—to present great histories, to display beautiful manners, to reveal the inevitable realization of spiritual states, to charm and awe with sacred spectacles. We have to thank the stage to-day for humor, for pathos, and for romance. If ever we have n national theater, the stage in America may enter into its larger inheritance. I should like to the control of the control of

# IS TOO MUCH MONEY SPENT ON CHURCH STEEPLES?

A STATISTICIAN of a practical and somewhat eccentric turn of mind has estimated that something like \$4,500,000 has been invested in ornamental church building in this country, civiledy in the form of church steeples. If this fonture of charch architecture were dispensed with and the amount represented turned into the regular channels of church beneficence, he believes that the relligious denominatious would be relieved for a long time to count from the necessity of appealing for funds to carry on their work. "Quericus," a writer in The Christian Work (New York, April 26), is led by this calculation to inquire "whether the churches generally are utilizing as fully as they should the vast amount of property in the shape of buildings and lands in their possession." It declares:

"The total value of church property in the Unibed States is set down at \$50,00,00. The greater part of this controus sum is represented in splembia and coady ethicas, devoted exclusively to religious purposes and open for only a few towns each week. For the remainder of the time these hubbings stand idle and empty monuments of religious patient and entering magnificent—all this but nothing more. From a practical and business point of view they represent capital that is 'tied up' and largely non-productive. This state of things is prejudical to the cause of religious progress. It is repugnant to common sense and enlightened reason; it argues wastefulness and extravaguane, and it ought not to be."

And yet if any radical changes are undertaken in the construction and use of church buildings, "a strong opposition will be encountered, based chiefly on sentimental grounds and on that spirit of ultra-conservatism which challenges everything pertaining to religious institutions." The writer continues:

"The disposition to cling to the old and conventional forms and uses in church buildings would be just as strong as it is to cling to old and outworn creeds and forms of worship. The thing that has been that it is which shall be-this is the rule in religious affairs all around. The sentiment underlying this is not to be be carried too far for the welfare of religion. After making all reasonable and needful allowances for the spirit of veneration and reverence attaching to old and established forms and uses. and often helpful to religious faith, we believe that the time is at hand when a radical departure should be made in the construction of church buildings and the uses to which they are put, Not even the most insistent defenders and literalists of the orthodox school will contend that the Bible prescribes the exact pattern for these structures or the precise uses to which they shall be put. There is nothing absolutely essential to the propagation of religious faith in an altar rail or even a pulpit. Some of the strongest and most successful religious movements that the world has known have, in fact, been carried on without these accessories \*

It would be more in harmony with wise and prudent business management and the utilitarian spirit of the age, concludes the writer, "if the vast capital now lying almost dead and useless in costly accessories to the churches, which they do ne well, if not better, without, were turned into the channels of missionary enterprise or into the funds for reaching and evangelizing the unchurched masses in our great cities and neglected country districts."

## THE POPE AND FREEMASONRY.

Leo XIII., in his latest encyclical, his so-called testament, makes a fresh attack on the Freemusons, whom he describes as "a dark, forbidding sect, which society has long nour-ished in its midst, like a deadly disease, endangering its health, fruitfalness, and life." He outnines:

"Like a standing personification of revolution, it forms a kind of subversive society, the nim of which is to dominate recognized society, and oppose its existence by warring against God and His church. It would seem altogether superfluous to call it by name, since the whole world recognizes by these distinguishing characteristics the Freemasons, of whom we made special mention in our encyclical' Humanum Genus' of April 20, 1884, warning all against their wicked designs, false teachings, and corrupt deeds. This sect, which embraces plmost all nations and has joined to it other sects, the workings of which it secretly controls, has, through its followers, which it knows how to attract by means of substantial inducements and how to govern by the employment of promises or thrents, as the case may be, forced itself into all social arrangements, with the result that it constitutes, to a certain degree, an invisible and an irresponsible state within the lawful state. Possessed of the spirit of the devil, it understands, as the apostle says (2 Cor. xi, 13), how to transform itself into an angel of light; it boasts of its humanitarianism while it renders everything subservient to sectarian ends; it declares itself to be free from all political aims, and at the same time takes an exceedingly active part in the legislation and the administration of the state; it recommends respect to the existing authorities and even to religion, and its ultimate aim-as shown by its tenets-is the overthrow of monarchical power and the priesthood, both of which are by it represented as enemies of

The well-known attitude of the Pope toward Freemasons and this renewal of his oft-expressed sentiments olicit a vigorous defense of Freemasourry from the great German middle-class organ, the Vestische Zeitung (Berlin). The Fossische Zeitung expresses itself as follows:

"In common with every Pope since Clement XII., Leo XIII. has passed sentence of death upon a society including among as members authors, thinkers, sovereigns, and statesmen. Not

once only, but a half-dozen times, has this been done by the present occupant of the threefold throne; as In 1884, so in 1894, 1896, 1891; he vented his anger against this subversifaction in exalted verse even, and during his reign it has been possible for an entire congress to assemble in Triest for the purpose of combating Freemasonry, and this with the papal sanction.

"Leo XIII, declares, indeed, that the 'tenets' of the society prove that the Freemasons wish to do away with mouarchical authority and the priesthood. In the struggle against God must this 'dark sect,' this 'personification of revolution,' this 'subversive society' seek its title to existence. The wording of the 'tenets' is not calculated to shock. We are acquainted with a considerable portion of them. Any one can procure them for himself, and nothing is more laughable than the hidden mysteries of the Freemason's lodge. The Jesnit, Father Gruber, as have many before him, has in his writings laid bare the 'venomous core' of Freemasonry, so that one may penetrate the mysteries of the order without joining it. Why does he not impart to the world those passages in the 'tenets' which establish the relentless warfare against God, against religion, against monarchies? Almost all Freemasons base their laws upon the old oaths of fealty, of 1721, the first sentence of which runs: 'The Freemason, as such, is bound to obey the moral law, and if he is wise he will neither be a stupid atheist nor an irreligious libertine.' In the second sentence is the following: 'A Freemason is a peaceful subject of the civil authority where he lives and works, and may not engage in riots or conspiracies against the peace and the welfare of his nation.' Political opposition and agitations may at no time be carried on within the lodge. The 'general principles of Freemasonry, which were established in Hamburg, June 7. 1870, and remain the rules of conduct for all German Freemasons' lodges, require (\$1) belief in God, in a higher moral standard, and in the immortality of the soul, and the practical proof of the injunction; 'Love God before all and thy neighbor as thyself,' In the manual of the grand lodge of the country we read in § 3: 'The teaching of the grand lodge is based upon Christianity, which must constitute the rule of conduct of all Freemasons, . . . The Bible remains the firm basis of the teachings of our order; it is the chief source of our knowledge, of our highest light proceeding from the altar," To what extent these or similar statements agree with or contradict the tenets of Freemasonry, will not at this time be examined. It, however, would appear that the charges brought by the Pope against the Freemasons as a body are false and without confirmation.

"But a person need never have seen a Freemason's lawbook, he need only look at the persons who have belonged to the order and who to-day still lend it support, in order to gain a clearer and brighter view as to its desire to abolish religion and monarchies. Old Fritz was at variance with religion and priests; he surely did not wish to imperful his own throne. And yet he protected the Freemasons. The King of England, Edward VII., was until his accession to the throne grand master of the King in Freemasons. The King of Sweden is to-day at the head of the order. Are they subversive, revolutionary, dark sectarians possessed of the spirit of the devil? The Pope makes no mention of them in his testament. He does not speak of this or that state, but only of the Freemasons as a whole, and confounds them with each other.

An article in the current number of *The Nineteenth Century* and After (London) on "Freemasonry in France" is of interest in this connection. The history of Freemasonry in France and England affords a curious contrast, writes the author.

"In England the order is practically coexistent with the dynasty, the foundations of the present organization having been laid in London in 1717, and in all essential respects it has undergone no fundamental change. For more than a century it has been directly connected with royalty, its humors and dignities are still attractive to the nobility, and it is strictly loyal, conservative, non-political, and non-democratic. In France we find an entirely different state of things. The order, first brought into the country by Englishmen in 121, has waved and waned with it has wavered between the conflicting claims of science and religion, and has now become a frankly political, unti-clernal, idea vershiping, and denoverate organization, no longer deserving, from the English point of view, to be called by the name it bears."

The gradual development, especially during the last twenty years, of Freemasonry as a political force is one of the most noteworthy features of the contemporary history of France. Says the writer.

"Freemasonry is above all things concerned with home polities. Religious opinious are a secondary consideration. Jesse, Turks, infidels, heretics, Protostants, and Catholics are equally eligible for initiation, but Momarchies are not. The order is, in a word, Republican. It matters of detail the lodges vary just as widely as the groups in the center and loft of the Chamber of Deputies. Some are moderate, some radical, and some Socialist, but all are absolutely bostic to Prince Victor Napoleon and the Duke of Orleans. No candidate is admitted unless the inquirios mattein regard to his political antevedentia leave no doubt of his attachment to the existing regione. The Freemasons, in fact, lution and the champions of the Gemeracy, whose rights, they consider, are incompatible with the existence of a monarchy in France."—Translation made for Turk Litznace Dieser.

# THE RELIGIOUS CRISIS IN HAWAII.

THE religious deadlock in the Hawaiian islands, created by the refusal of Bishop Willis, of Honolulu (Church of England), to surrender the charge that he has held for thirty years, has been adjusted, it is hoped finally, by his resignation. Bishop Nichols, of California, who was recently sent out as the official representative of the

American Protestant Episcopal Church to settle the difficulties existing in the islands, has assumed acclesiastical responsibility over the Hawaiian diocese, pending the arrival of the Rev. Henry Bond Restarick, who was elected Bishop of Honolulu at the April session of the House of Bishops in Cincinnati. The following account of the events leading up to this culmination is taken from the New York Outlook (April 12) :

MEV. H. B. RESTARICK, Missionary Bishop-Elect of Honolulu. Courtesy of *The Churchman* (New York).

"Before the annexation of Hawaii to the United States, the Church of England had direct control of the Episcopal communion in the islands. The Bishop of Honolulu was not a colonial, but a missionary bishop, under the jurisdiction of the Archhishop of Canterbury, but not removable by him. His salary was provided by the English Society for the Promotion of the Gospel in Foreign Lands. When Hawaii became United States territory, it was evident that the control of the church should be transferred to American authority. Against this transfer the aved Bishop Willis, the incumbent, protested. This action on the part of Bishop Willis was in some measure due to the fact that he suspected that the legal proceedings which a clergyman had proposed to institute against him originated in America. The foundation for this suspicion seems to be merely that the Bishop of New York had in a communication to this clergyman stated that a clergymau may properly claim legal protection

against a tyrannical hisbon," and that "the power of the hisbon is not despotic, but constitutional. The only way by which the office of the bishop could be vacated was by the resignation of the incumbent, and this for some time it was impossible to obtain: but, after a conference between Bishon Willis and other church authorities at the Enisconal Convention last fall the Bishop consented to offer his resignation, to take effect on April Since that time the Bishop has written an open letter to the chairman of the House of Bishops, alleging that he has been treated with discourtesy. It is, however, only a pathetic expression of disappointment,

The significance of this whole incident, declares The Outlook, is twofold.

"In the first place, it illustrates the independence of the blahoprie. Even the Archbishop could not exert his superior authority to any practical end, and altho the society which provided the salary withdrew its support, the Bishop through his own private fortune remained dictator of the situation. It was only by his personal acquiescence that the two great churches-the English Church and the Protestant Episcopal Church of the United States-were finally able to make this most necessary transfer of jurisdiction. In the second place, it illustrates the legal as well as the ecclesiastical questions which have arisen consequent to the acquisition of the new island possessions of the United States,

The future religious development of the Hawaiian islands will no doubt be greatly influenced by the new American bishop, Mr. Restarick, says the New York Churchman (April 26), has already proved himself to be an "able, efficient, resourceful organizer of religious effort." He is an Englishman by birth, and has been for twenty years the rector of St. Paul's Church, San Diego, Cal. Under his leadership, this church has become the mother of four others; and he has also organized, with what is described as remarkable success, an association of "Lay-Readers." The Churchman prophesies "a rejuvenated and vigorous life," in the Hawaiian church as the result of his assumption of his new duties.

## IS PRESBYTERIANISM DECLINING?

HE Rev. W. H. Roberts, D.D., stated clerk of the General Assembly of the Presbyterian Church, has prepared a record of the 7,000 churches of that denomination showing the number of accessions on confession. He found that in only 81 churches did the number of such accessions exceed fifty during the year ending May 1, 1901, and that more than 2,000 churches reported no accessions. The list of the 81 churches is published in The Church Economist (New York, April), which makes the following comment:

"Most of the churches named are in the larger cities, as might be supposed, owing to the larger membership and stronger organization generally. The Synod of Pennsylvania leads in the number of the churches (20), with New York second (17), and Ohio third (t1). This roughly agrees with the national distribution of membership. Only one church on the Pacific coast appears.

While a large majority of the churches are located in cities of importance, the following are among the large cities which are without representation on the list: St. Louis, Cieveland, Cinclanati, San Francisco, Buffalo, Kansas City, Omaha, Denver. Duluth, and Baltimore.

churches, asking the following questions;

- The Church Economist sent a circular inquiry to the 81 "Was increase due to special revival or continuous effort?
- "Was outside evangelistic help employed?
- "What was the main source of increase? "Did officers and church-members take effective part?
- "Were 'after-meetings' held?
- "Were many adults baptized?
- "What line of effort seemed most fruitful?"

Of the 53 churches from which replies were received, 27 re-

ported the increase due to continued interest. The accessions in eight cases were credited to "special revival." But the main source of accessions was the Sunday-school. To the question, "Did officers and church-members take an effective part?" most of the pastors returned a "rather, perfunctory and, guarded affirmative," and several said plainly that little such cooperation was had

" After-meetings," at which opportunity was given for decision and public confession, were held in 31 of the 53 churches replying. From one-fourth to one-third of the accessions were apparently from those not baptized in infancy. The last question, "What line of effort seemed most fruitful?" brought a chorus of emphatic testimony in favor of "personal work,"

The facts effected by Dr. Roberts's statistics and the inquiries of The Church Economist have caused disquieting reflections in some quarters. Dr. Roberts himself confesses that the progress of the Presbyterian Church in the United States is "not so rapid as in former years." "The real reason," he says, "appears to be the lack of spiritual vigor in ail the Christian denominations, for other churches in the United States than the Preshyterian report decided decreases in addition to membership." The Presbyterian (Philadelphia, April 231 says:

"There may be, and is, need for a greater and more wise adaptation of agencies to accomplish all that is desired; but the trend of evangelical opinion and effort is in the right direction, and the exhibit is encouraging, the not all that we could wish. Large additions are made to the church from the laboring classes every year. In fact, the larger proportion of its present membership have to labor for their living. And if it were not for the foreign ideas respecting labor and social questions that are being rapidly and extensively engrafted upon our American civilization, we would see still larger returns; or if the rum-power were broken our sanctuaries would make numerical gains that would be astonishing.

The following table, compiled by Dr. Roberts and showing the strength of the Presbyterian denomination in various parts of the world, is taken from The Westminster (Toronto, Presb.):

United States		8.350,000

# RELIGIOUS NOTES.

A MEMORIAL tablet and fountain in memory of the late Prof. Henry Drummond was unveiled by Lady Aberdeen in Glasgow a few days ago.

Title lewel-encrusted Bible brought to this country by Mr. I. S. Morgan. the nephew of Mr. J. Plerpont Morgau, is unique among books. Its hinding is of gold, set with garnets, sapphires, emeralds, and diamonds. which was bought in Italy, is in manuscript, and is believed to be the work of eighth-century monks.

COL. JOHN MCKEE, a negro millionaire who died recautly in Philadel-phia, bequeathed nearly all his immense fortuna to the Roman Catholic Church. Archbishop Ryan is uamed as executor of the will. "What makes this bequest especially remarkable," commeuls The Aire Maria (Rom. Cath.), "is the fact that Colonel McKee was not a Catholle and was personally unknown to Archbishop Ryan.

Miss Ellen M. Stone, whose trials and perila have brought her inter-national fame, is telling the story of her "Six Months among Brigands" in McClure's Magazine. She has also entered the lecturg-field, and is speaking to large audiences in Eastern cities. In view of some hostile criticism of her actions, she has issued, through the American Board of nissionera for Foreign Missions, a statement in which she declares that she hopes to devote whatever money she may receive (r) to reimburs-ing "any who may have embarrassed themselves by helping to provide my ransom"; and (a) to missionary work in her chosen field

# FOREIGN TOPICS.

## PHILIPPINE REVELATIONS IN FOREIGN EYES.

THE "water-cure" and the sanguinary aspect of some military instructions in the Philippines have not so far elicited as much comment in the foreign press as might, perhaps, have been expected. English papers are a practical unit in maintaining that the rule of the United States in the archipelage is humane, and that the alleged attrocities, if they were perpetrated, were exceptional and unauthorised. Says The St. James's Gasette (London):

"Our own recent humiliating experience of the way in which national honor may be compromised by one or two soldiers lossing all sense of the responsibility that rests upon them as the representatives and instruments of a civilized nation, enables us to offer the most sincere sympathy to our American kinsmen at a moment when they find their own good name similarly tarnished."

The charges against Major Waller, the "kill-and-burn" order of General Smith, and the "everything over ten" limit are then considered by this authority, which proceeds:

"It is almost impossible to believe that a general officer of the United States could have been guilty of such deeds unless his mental balance had been completely deranged. It is far from improbable that the climate of the Philippines added to the privations of war and the strain of responsibility may have so affected General Smith as to render him practically unaccountable for his actions; and the fact that he admitted his own violation of the white flag in an official despatch goes far to support this hypothesis. We devoutly hope that such may prove to be the case. If, however, he can not thus be exonerated, and the charges made by Major Waller should be proved against him, we do not doubt that American honor will be vindicated in the same manner as our own has been, by the award of swift and uncompromising justice to the guilty parties. It is natural enough for the American press to declare that their nation is 'disgraced in the eyes of the world,' and that 'it seems as if they could not hold up their heads again.' The feeling is creditable to Americans. But in England at any rate we know better than to hold a highspirited and honorable people responsible for the dishonor of a single criminal."

The investigation into the affair must be of the most searching kind, declares The Spectator (London):

"The Americans are greatly disturbed by 'revelations' from the Philippines. A revolt in the island of Samar was recently suppressed with what seemed commendable skill and vigor, but it is now alleged that the general in command 'ordered' what were practically massacres, which included male children, and that officers eager for information employed the old tortured the Inquisition, pouring into the throats of their victims enormous quantities of water. It is also affirmed that the frauds committed in hiring transports at San Francisco were enormous, something like ten millions being wasted in consequence of bring like the millions being wasted in consequence of bring silven to officials by the shipowaers. The latter story is conceived able, as America has no permanent civil service, and the heastily

FREE CUBA.

On May 20 Cuba's own government will assume power.

chosen employees for exceptional work, being liable to dismissal, are under great temptation to make money while they can; but the former—i.e., the story of massacre and torture—is wholly opposed to American character, and we are not inclined to accept it without better evidence than has yet been produced.<sup>10</sup>

The tone of continental European comment is less friendly. The Temps (Paris) even prints a letter from its correspondent in the Philippines—one of a series—in which the cruel character of the warfare is set forth and which thus coucludes:

"It is evident that if the Philippines accept foreign domination only with great repugnance it is because the American soldier is ignorant of the difficult art of making himself endurable in a foreign country and of rounding his too angular elbows."

What it terms an exposure of the scandal was duly made in the columns of the *Independance Belge* (Brussels), which comments:

"The indignation inspired by such revelations may be imagined. To motify somewhat the deplorable effect of this feeling, the Secretary of War caused the governor of the archipelago to publish a general order to the troops requesting them to treat the natives with the utmost kindness. The recommendation is good, but it is to be feared that it comes a little late, for Governor Gardener, of Tayabas, has sent the Washington Government a report in which he says the American troops must be recalled as soon as possible, since their attitude irrecoverably allenates from functionary expresses such an opinion and gives such radical advice shows that the excesses of the American soldiers have far exceeded anything revealed before the court-martial at Manila, and it can be understood why the Filiphos persist in such a desperate resistance."

The Philippines will never be of much practical use to the United States, says the anti-American and agrarian Kreuz Zei-Iung (Berlin), which gives prominence to all the discouraging aspects of the situation. The Kobe Herald (Japan) compares the problem with England's South African entanglement thus:

"The most significant fact bearing on the general situation in the islands is that the American Government unakes no sign, so ar, of reducing to any important extent the strength of its military forces on the islands. Time, of course, is with the United States as it is with Great Britain in South Africa, but there is a difference. The position of Great Britain in Africa requires that he must be resolute there unto any length of time. There is no strong law binding the American people to the necessity of completing the concuest of the Philippines, and there is the chance that in time they may come to ask whether the Philippines are worth it—whether they are worth what has been spent in lives and money, if there be no clear prospect of the end of the spending. — Translations made for The Literash Diestr.

# ASSASSINATION OF A RUSSIAN STATESMAN.

THE gravity of the Russian crisis had already occasioned general comment throughout Europe when the assassination of a leading statesman of the Caar's empire, on April last, occurred. Since this event, Russian internal affairs may fairly be said, for once, to have eclipted Russian foreign affairs in the sphere of European politics. Says the London Times:

"St. Petershurg has once more been the scene of one of those terrible crimes which from time to time shed a luril light upon the dark places of Russian administration. The Minister of the Interior, M. Spingaiuie, was struck down..., as he entered the Marinski Palace on his way to attend a committee of ministers. The crime was planned and carried out with consummate coolness. The assassian obtained access to the building by doning the military uniform of an adie-de-eamp and the consumer of the cooling of the coo

the students punished for participation in the disturbances at Kieff last year The stricken statesman was uncommonisingly conservative.

as the great London daily notes :

"Governments that yield," M. Sipiagnine is reported on one occasion to have said, 'are governments that fall. Rather than yield I would bring about a revolution in Russia." . . . Forces

The late Russian Winister of the Interior

Yet there is a probability of missing the whole point of this grave incident, according to the

are evidently once

Temps (Paris) : "There is a conflict between two systems of education, that which is applied to the German universities and which the Rus-

sian students want to obtain because it allows more liberty to the student, and that which is now in force in Russia and according to which the student is subjected to stricter control. What Russian students are eager for is the right of association in particular, which has given rise, in German universities, to the many students' societies, imparting to those universities their peculiar character. It is important, thus, to remember that the Russian

students' agitation had not, at least in the beginning, any other motive than their desire to obtain a reform in the internal organization of their universities. But. this point of departure being given, it was natural that the malcontents of the university world should make common cause with those outside of it."

"A tragic episode!" says the Socialistic Vorscarts (Berlin) : "Just at the time

when, during these last few days, the Russian official press, inspired by the Minister of thu Interior himself, was tircless in assurances

RUSSIAN FABLE. There was once a stupid bear who wanted to down the rising sun with the knout.

that after all the Russian disturbances were not so serious, that the foreign press had made space for exaggerated reports, the avenging bullet overtook the visible head of the knout brigade,"

The close alliance of the students with the working classes dis-

tinguishes this movement from all preceding ones in Russia and makes it correspondingly more dangerous, in the opinion of the Conservative Hamburger Nachrichten, A moving picture of the oppression of ambitions and aspiring youth throughout Russia is drawn by the Pester Lierd (Budapest), which concludes :

"To-day this youth is restless and auxious, almost all of Russian studentdom is roused from its calm, banished from its schools. Thousands are sent away, uncounted hundreds languish in jails, other hundreds are sent to Siberia, going forth to hunger, to disease, to the mines. The steppes of Russia are sown with martyrs, the air is filled with the lamentation of parents, robbed of their sons and daughters. Death stalks through the leading cities and strikes at the heart of joy in broad daylight. Appropriate time for the new life of underground Rus-

Nilulism may be dead in Russia, but assassination goes on, observes that organ of Germany's middle classes, the Vossische Zeitung (Berlin) :

"Russian youth has passed through that period of psychical sickness in which it could see no cure but self-torture, death, and annihilation. In its place has come an earnest longing for a higher future within the national sphere, for a destiny worthy of humanity in the rosy light of freedom. No longer is it asserted that all that belongs to the existing order is worthy of destruction. To-day's struggles concern rather the modernization of an antiquated conception of government."

The slain minister was with a single exception the most dreaded and the most unpopular man connected with the present Russian administration, according to the Nene Freie Presse (Vienna):

"Grown up in the service of the court, he combined a most comprehensive culture with perfect manners and an adaptiveness and suppleness that speedily assured him an influential place near the throne. Thanks to the police machine blindly subserviont to him, he was put in a position to carry out the policy of the procurer-general of the Holy Synod. Even more thoroughly than his colleague Wannowski did Sipiaguine stand for ruthless and unconditioned suppression of the student movement that is now in such agitation. It is in consequence of the principle of the maintenance of authority at any cost, which is stronger in Russia than elsewhere, that Sipiaguine was still minister. Before the vacations it had become clear to all who understand Russian affairs that he would be unable to put down the rising of the universities against their nnendurable subjection. Precisely on account of this uprising, however, he was kept in power, and the rumors of his retirement, consequent upon a chilling audience with the Czar, died away as rapidly as they arose." -Translations made for THE LITERARY DIGEST.

## THE NEXT STEP IN BELGIUM.

UCH speculation is being indulged in throughout Europe M us to what will happen next in Belgium. The press of that distracted little kingdom is actuated almost wholly by partizan considerations, and its views must be discounted to some extent. The Socialist Peuple (Brussels) says:

"The plan of the reactionaries is clear. It is proposed to extinguish in blood not only the movement for revision but also, and perhaps especially, the influential work of the labor organizations which the Belgian Socialists have begun and must carry on. It is believed that a great bath of blood will suffice to render the proletariat incapable of resistance. The commanders will receive their pay and the conquered and frightened toilers, rendered impotent, will slink back under the yoke. We demand universal suffrage as the only means adequate to give us the laws indispensable to the moral and economic uplift of the working classes. But we do not hesitate to say that the labor party itself has not the right, for the mere sake of to-morrow's reforms, to upset the work of yeslerday for years to come. Hence we cry aloud to the working classes: 'Avoid massacre by all means. Your leaders would rather die than yield, but they do not wish the toiling masses to be uselessly slain in an unequal contest. They do not want the whole great, enduring victorious work of twenty years of organization and agitation sacrificed, annihilated, and drowned in blood. As we are not living in the year

OVER THE BELGIAN WALL

GERMANY: "I'm only here out of curiosity, neighbor."

ENGLAND: "So am I, neighbor!"

—Le Figure (taris).

1848, during which a revolutionary movement could still succeed, we must have recourse to the general strike. . . . They want to kill us. Let us spread death in the land by remaining at home. . . . Victory is in the general strike."

It is not yet evident that any such general strike is either possible or likely to be effective. The Journal de Bruxelles, organ of the Conservative Clerical party, says:

"The leading authority in the uprising is virtually beaten. On one side it runs risk of incurring the lilwild of its partians. On the other it must be broken against armed force. The leaders of the red party are between two stoods. To get out of this absurd attitude they have found but one means; to sit on the corner of the stood of general strike. The disorder within the red camp is complete. It is with verifable amazement that they note the state of public opinion."

The organ of the Radicals, the Reforme (Brussels) thus coneludes one of its

POLICY OF THE OPEN DOOR.

Sick China is wounded at the sight of the many doctors who guarantee the status que of her malady.

- Eladderadated (Berlin).

"In its sectarian fury the Conservative Clerical party has actually made the King its prisoner. Public opinion itself is free. It wants no more of the present style of government and openly shows as much by demanding revision of the suffrage laws."

The Clericals come in for a good deal of denunciation from the Liberal Indépendance Belge (Brussels):

"Neither the ministry nor the majority take into account sufficiently a leading evil in the present situation, in which the exestement over the right to vote and revision of the constitution is intensified through the disillusion, discontent, and hatred accumulated against a party which has never ceased to misuse its power. For the Clericals understand only power. Because they are in power they me in the right, and because they are in the right-in power, that is to say, through a fraudulently won majority-they jufer that they may allow themselves to do anything to sustain this power and make it strong and enduring. Theirs is a purely physical, not a moral, power. For morality is the last of Clerical concerns. Hence the moral authority of the Government throughout the country has declined. That is no wonder since in the ministries, in the public departments, in the courts and so forth, everything is managed in favor of that party of fraud which is the strongest and which misuses its power. Instead of educating the people-we have twenty-five per cent, of illiterates, the public schools have been closed and those schools developed in which religious instruction is given: instead of doing away with the unjust tax on food, it has been increased: instead of resolutely opposing alcoholism, it has been tolerated and indirectly encouraged; instead of establishing social justice in the army, the power of money has, on the contrary, been increased and the gulf separating rich and poor made wider; instead of honorably applying the constitutional principle of the plural vote, it has been misused and all fraudulent misanplications of it have been, if not encouraged, at least endured."-Translations made for THE LITERARY DIGEST.

# VATICAN AND VOTERS IN ITALY.

SOMETHING not unlike a ensation was produced in Rome by a recent announcement that the Vatican would permit Italian Catholics to vote in national elections. The report was denied, but the denial has been questioned. The ball was set rolling by the Giornale d'Italia (Rome). This anti-ministerial sheet printed some words by an Italian archibishop insinuating that there was a possibility of "the withdrawal of the non expedit intended to prevent Catholics from voting in Italian parliamentary elections." Thereupon the Vece della Verità (Rome), organ of the uncompromising (Ceircias, remarks:

"The Pope has constantly declared that the existing order of things imposes upon the Holy See a particular policy of action and judgment. Hence it is allowable to think that when in the opinion of the Holy Pather circumstances have changed to such

an extent as to offer a more inviting field for the church, certain interdictions will lapse in virtue of the conditions themselves. When the parties that are subversive of all social order have gone their extreme length, the participation of Catholics in politics will be forced upon them in the guise of a right and a duty to save society from final ruin. public good must be the supreme

THE ALLIANCE OF THE FAR EAST.

GERMAN COMMERCIAL TRAVELER: "Now we can quietly undertake to evaluit China." -Pasquine.

PICTORIAL VIEWS OF ASIAN AFFAIRS.

law is a precept allied with the essential principles of nature's law sanctioned by the positive ecclessiator-divine law... The probability of anarctical victory gross apace, inspiring correspondingly a belief in the probability of the participation of Catholics, in a body, in the political administration of the

The general attention drawn to this utterance was occasioning wide press comment when the official organ of the Vatican, the Osservatore Romano, declared:

"Nothing can be changed in the papal instruction given to Italian Catholics, particularly in regard to all that concerns action at the ballot-box. Abstention is commanded them to-day more what never in view of the vain but alluring efforts of those which to attract them into their schemes to compromise and exploit them."

"Was it not the Pope's purpose in this incident to give a valuable warning to the auti-clerical government now railing the country, and to show it what a strong arm could, in case of need, be brought into play one of these days in the general elections?"
asks a correspondent of the four not der bebets (Paris), adding:

"Who knows? For the time being the official utterance of the Osservatore Romano has caused silence to follow the noisy chate. But with a mind so deep and so informed as that of Leo XIII. nothing is left to chance. Everything is maturely weighed and calculated. Let us wait."

A totally different view of the question is presented in the London Times which has this from its Roman correspondent:

"Electoral statistics, as far as they go, bear out the belief that the Clerical vote would be worth very little. On an average, sixty per cent. of registered electors go to the pold during a parliamentary general election, in which Catholics are expressly forbidden to take part."

Before taking leave of the subject, it may be well to quote the following from an article which appeared a few months ago in The National Review (London):

"Some years ago, e.g., the present Pope sent for Tosti, the learned Benedictine, a man of wide and statesmalike views, and by far the greatest historical writer that the Italian Church has produced during the nincetenth century. Ills Holiness suggested to Tosti to write a paniphlet sketching an agreement between the Vatican and the Quirinal. When written, the pamphlet was shown in proof to the Pope, who made various suggestions and signified his approbation. In due course it was published, and provoked much indignation among the enemies of Italy. French ultramontaness were purtuenlarly rabid, and an unscrupulous Prench cardinal... enforced his views so strongly him to withdraw the pamphlet which had represented not meetly the views of the writer, but also those of the Sovereign Pontifi himself: "Trantations made for Tills Literasay Dictars."

# SUDDEN GERMAN FRIENDLINESS FOR

ORGANS of English opinion have been takeu completely by surprise at the friendliness to England manifested in a speech in the Prussian Landtag by the foreign secretary, Baron von Richthofen, who could have spoken only with high sanction, "Something important in international relations must have happened to account for the sudden friendliness of official Germany," was The Observer (London), adding:

"The oceasion was the communication to the Chamber of the British rely to the representations of the German Boer Relief Association. According to this, all articles destined for the Boers will be delivered free of freight, duty, and other charges to the camp committees. This arrangement Baron von Richtofen declared to be satisfactory. If it did not concede all the German Association asked for, it gave all that could reasonably be expected. And then he went on to give us credentials in regard to our treatment of the Boers in Ceylon, and to plead for juster methods of criticism of our actions in South Africa. All of which is satisfactory, if late."

The cause of this sudden friendliness is to be sought in the result of Prince Henry's visit, according to the London Times.

BARON VON RICHTHOFFN, Prussian Foreign Secretary.

Emperor William saw that his anti-English policy alienated the United States. Therefore he has changed it. This theory disguss the London Saturday Review, which thus relieves its feelings:

"The Americans, we hope, as we hope, as our friends as any other Power; but we have no wish to pay them compliments at the cost of unpardonable rudeness to a friendly Government. Can not The Times preach its philo-

Americanism without insulting continental nations?"

The German newspapers profess to be unable to comprehend the surprise of the English. The Frankfurter Zeitung has this:

"Most English journals have written themselves into such a frame of scorridu mind regarding Germany and certain periodicals in particular have attributed to Germany such face-enching, not to say devisish, designs against Great Britain that the figulial are no longer able to understand how people in Germany consame time approving the Bove war of extermination,"

People in Germany think the friendly speech of the Prassian secretary merits the thanks of the English, says the Hamburger Nachrichten, 'but we have not shared that expectation.' Then it quotes what it terms 'insolent' English comment on the speech. And numerous German newspapers do not like the speech either. Thus the Leipziger Newsteit Nachrichten:

"It is not agreeable to bite on granite, but it is no more agreeable to have to shed the salt tears of tender compassion, even the dropped by a man

of such distinction as it is to be hoped Herr von Richthofen may yet be-come. A slight slight doubt may be exwhether the elegy spoke in the Prussian Landtag when he heard of Methuen's Lord. fate will have the right effect. Germans would hardly experience sincere thankful-ness if after some defeat Mr. Chamberlain in the House of Com Com mons offered ns

consolation.

GERMANY'S REGARD FOR ENGLAND

GERMANY: "What" musi I stroke such a east?" [Commenting on Richthofen's declaration, the Admircke Zeitung says: "No one really carse to stroke a porcupice that points its quille at us on every occasion."] — [pagend (Munich).

What is the explanation of the "sudden German face about" to England? asks the Journal das Debats (Paris). Has the Anglo-Jayanese treaty inspired Germany with respect for England? Has something as yet unknown to the world transpired to put Germany on her good behavior? The French paper (rankly gives it up.—Translations made for Tile LITERAN DIGEST.

# NOTABLE BOOKS OF THE DAY.

## MR. PHILLIPS'S LATEST DRAMA.

PLYSSES A Drama in a Prolog and Three Acts. By Stephen Phillips loth, 4% x 7% inches. Price, \$1 stnet. The Macmillan Company, New

M. PHILLIPS is going back farther and farther for his themes. "Paolo and Francesca" first, "Herod" second, and now "Ulysses," And it must be said that he is also getting farther and farther away from the real life and thought and feeling of the world. This latest of his books has all his characteristic smoothness

GITTHER WILLIAM

and felicity of expression-a smoothness too pniform and a felicity too constant; it has strong dramatic scenes and passaves of aplendid, if somewhat declamatory, eloquence : it appeals in its main theme to a passion that is as old as Time and as wide as the world -the wanderer's longing for home, and rest, and love; and vet throughout the work is the note of insincerity, of an appeal that can waken no response even in the author's own heart of scenes so for removed from the faith of the world that they can no longer create any Illusion. Homer and his audiences believed in Olympus, and Hades, and his Odyssey has in it a vitality that is immortal. But neither Mr. Phillips nor his audience can for one moment yield to the illu-

sions required by this play, and the effect is somewhat that of a grotesque fairy story written for mature men and women and without the allegory. It is high time for Mr. Phillips to come back to the things and the thoughts that are still vital.

The scene of the prolog is on high Olympus with the gods and goddesses in conclave. In Act I, we see in the first scene the Ithacan home of the wanderer, with the horde of unscrupulous sultors, the wife and son still hoping against hope; and in the second scene Ulysses and his followers on Calypso's isle under her magic spell, which is soon lifted at the behest of love. The second act shows us the descent of Ulysses into Hades, led by Hermes. The third act gives us the return home, the overthrow of the suitors, and the restoration of the wanderer to his wife and boy. The appeal in this last act is for the most part vital and redeems the work from fatuity. Yet even here the stagey gods and goddesses must intervene and spoil the illusion in the finest parts. Had it been possible for Mr. Phillips to have sent packing all the supernatural personages, who must be even more ridiculous on the stage than in the pages of his book, and to have given us only the human side of the classic story, we should have had a magnificent poem and a powerful drama.

#### A MERINGUE OF HONEY, DEW, AND ATTIC SALT.

THE LADY PARAMOUNT. By Henry Harland. Cloth, 5% x 8 inches, 292 pp. Price, \$1.00. John Lane, London and New York.

VVIVA, the Lady Paramount | It seems unnecessary to do anything more critical over this delicious fantasy of Mr. Harland's

than gurgle with inarticulate content. It is daintiness with a backbone to it; honey of Hymettus that does not cloy; a nosegay of pure perfumes, fresh with sparkling dew; a vivid idvil in which the modern is toned with an aromatic

blend of medieval chivalry. It is a toothless meringue, but wholesome with the vitality of clean human nature. It is a butterfly flight of this airy romancer, but it is firm and sustained in its sun-bathed flutter. One will not lay it down once begun, and the savor of it will linger on the tongue. It is more than a worthy successor to "The Cardinal's Snuff-Box."

On the little island of Sampaolo, in the Adriatic, ever since Guido della Spina, a soldier-saint of the twelfth century, founded the Lords Paramount of Valdeschi, have his descendants reigned in liliputian but grandiose exclusiveness. Then, in 1850, there was a revolution, a storm in a teapot, and the rightful

HENRY HARLAND.

lord was ousted, and, as he had an English wife, betook himself to England, where his son begot a son, who was Anthony Craford. He is therefore the rightful Lord Paramount of Sampaolo, but has never seen it and never gives it a thought. The grandchild of the usurper is Susanna, the regnant Lady Paramount of the tiny realm in the Adriatic, who is the most charming lady that ever lived. Being that, uneasy rests her head that wears the crown that should encircle Anthony's British brow. So in the opening chapter she comes into her majority and sails away that very day to look up her English kinsman. But she doesn't let him know who she is. She is only an Italian widow, the Signora Torrebianca.

Everybody in the book is the nicest kind of a being, and hence one's brain need not creak with the effort to conjecture what will happen to the two young things. It happens, and belies the proverb about

The book is so artlessly untrue in its unlimited grace and charm that it seems silly to hint that everybody is too constantly and easily brilliant all the time. But altho all the dramatis persone bubble epigrams and poetic things and clever felicities without a moment's hesitation or pausing to draw breath, there is one who hovers above them all: Adrien Willes. Here is a character, and one that nobody can shut the door on. He is a fawn, a nightingale, a font of prismatic jest that makes the splendidior vitro of poor old Horace's Bandusian Spring a barnyard dribble, by comparison. Adrien must have shaken his can and bells in the cradle, and he will die with a rippling gaiety to make Death ashamed of himself.

Then there are such exquisite pictures of the spring woods, the birds, the rills, the flowers. The setting of the external world is just what it should be to harmonize with the persons in the tale. Mr. Harland's wit is ethereal, and so airily good-natured. Not a sting in it from start to finish

When one gets romance as it is romanced in " The Lady Paramount," who could desire the hard crusts of realism

# NORTHERN HERO, SOUTHERN HEROINE.

DOROTHY SOUTH. By George Cary Eggleston. Illustrated by C. D. Wiltiams. Cloth, 5% x 7% inches, 411 pp. Price, \$1.50. Lothrop Company.

NOTHER Virginia love-story, the scenes of which are laid just prior to the opening of the Civil War. The trend of the story is romantic, and it interests chiefly through the working out of character contrasts and complexities. It opens with the arrival in Virginia of Dr. Arthur Brent, Northern-born and European-bred, who comes to inherit an estate left him by

a near relative. At this place, Wyanoke, he meets a distant relative, Aunt Polly, who presides over the household and the negroes, also a young girl, Dorothy South by name, of whose existence Doctor Brent has heretofore been ignorant. Dorothy is but sixteen, and it is with the development of her free and strong character that the story largely occupies itself. Doctor Brent studies her as an interesting and somewhat amusing human problem up to the time that fever breaks out among the negroes, when he finds his hands full in the fight he makes to control it. The crisis brings Dorothy's latent womanhood to the front, To his surprise she constitutes herself head nurse and will not be denied. It is in the midst

GEORGE CARY EGGLESTON.

of their trials that the Doctor discovers that he loves her, and partially discloses his mind to Edmonia Bannister, a charming but more mature young woman in the neighborhood, without a suspicion that the latter loves him. Edmonia rises to the requirements of the situation and plays a noble part throughout the story.

Dorothy's inheritance is, according to the conditions of her father's will, involved with her marriage to the son of a neighbor. A mystery surrounds Dorothy, of which she has been kept in ignorance, suspecting only that it links itself with her mother, whom she believes to be dead. Her father laid certain restrictions upon her education forbidding her any knowledge of music, and keeping her from contact with the outside world.

At the girl's request and through taking advantage of a clause in the conditions, Arthur Brent contrives to outwit Dorothy's betrothed, a hard and vengeful personage, and make himself her guardian; and by virtue of this claim sends her forth to see the world, accompanied by Edmonia Bannister. It is while on her way to Europe that she meets a woman who proves to be her mother, and whose strange story explains the mystery of her father's actions. It is while Dorothy is away that the war of '61 breaks upon the country and hastens her return home. New complications ensue and divers trials are

endured, but the love-story at Wyanoke ends happily for those most cuncerned.

The story is well written, fair in war treatment, and sympathetic in tone. The situations in Southern plantation life hear the marks of he-

ing handled by one who knows all that lies behind their surface features. The combined trickiness and devotion of the slaves furnish humorone situations, varied and lifelike. The reader can not but enjoy the authors thorough knowledge of Southern feeling before the war, the planter's pride in his country estate, and his disregard of city life, which explained the comparative inconsequence of Southern cities in general. The story is engaging, and in literary value above the average.

#### A PHILOSOPHER ON AN ISLAND.

AN ISLAND CARIN. By Arthur Henry. Cloth, 4% x 7% luches, 287 pp. Prace, \$1.50. McClote, Phillips & Co., New York.

"HERE are three things in this book: there is Mr. Henry's experience, there is Mr. Henry's philosophy, and there are Mr.

Henry's friends. The first is altogether delightful. Mr. Henry found an island at the head of Long Island Sound, owned by nobody, and there he built a

ARTHUR HENRY.

little cabin and lived for two dollars a week in company with the wild sea waves. He tells the story of his adventures, a very picturesque and

Of Mr. Henry's philosophy, we can not speak quite so well. It is a very wholesome philosophy, but at times it is a little obvious. When Mr. Henry wishes to philosophize he just does it, without bothering about a pretext. The consequence is that he nakes one think often of Rasselas. The author seems to be aware of his own weakness: "' We can serve the happiness of others best.' I answered, by being happy ourselves.' In a moment more I should have been lost to my surroundings, hot on the heels of that idea, but I put it aside for another time."

As to Mr. Henry's friends, there are two young ladies who share the experiment; and he describes how he taught them to sail and to swim, and how he scolded them when they did wrong. Also there are two cats and a dog, who are charming. Also two or three friends, who came and proved to be bad campers, and spoiled things entirely. Our author describes the various little discords and how everything came right in the end, and gives one the impression of being a curiously matter-of-fact person.

All the same we have to confess that we envy him that island,

## DATA OF HISTORY.

THE SECTIONAL STRUGGLE. By Cicero W. Harris. Cloth, 6 x 9<sup>1</sup>/<sub>2</sub> inches, 141 pp. Price, \$1.50 net. J. R. Lippincott Company, Philadelphia.

PROF. BRANDER MATTHEWS'S doctrine of the preface is that you must put into it whatever you wish the reviewer to say. The present author has done something of this. He writes : "A full-length view of the long political and constitutional struggle between the North and the South is a desederatum in American history. . . . 1 have devoted my spare time from professional labor for many years to the collection of the materials and the composition therefrom of an elaborate account of the sectional troubles in this country from a time anterior to the formation of the present government to the adoption of the tariff compromise of 1833.... The portion now published is probably not without interest to students of our early politics, especially to students of our economic history. It includes a pretty full account of the tariff legislation and attempted legislation from 1789 to 1833, as well as of the memorable debates of 1830-33.

The present volume is technical in its nature and of interest only to specialists; the qualifications required for it are merely painstaking thoroughness and an acceptable style, which Mr. Harris possesses. He has consulted the records of the congressional debates, and given a minute account of the country's tariff legislation up to 1833, of the debate of 1830, and of nullification and the compromise of 1833. A history of the entire "sectional struggle" made up on the same method would, we fear, prove rather tedious; what Mr. Harris has given here the general reader will find more interestingly presented by McMaster, as far as the volumes of McMaster have gone. There is in this volume a noticeable lack of a general view, of condensation and breadth, and of imagination. It is a book of details, of data of history rather than history.

#### MORE TALES OF WILD ANIMALS

FOREST NEGLIGORS. By William Davenport Holbert. Cloth, 5% x 8% inches, 240 pp. Price, \$1.50 ner. McClure, Phillips & Co., New York.

"INCE the success of "Wild Animals I Have Known," several others have tried their hand at the same kind of tales, and generally with success, as they are not a difficult form of art. It wa case

of rall can raise the flower now for all have got the seed." In the present case we feel the absence of some of Mr. Seton's poetry; but apart from that the book is both readable and interesting. Mr. Hulbert has been so lucky as to find several animals not hitherto dealt with-the list is narrowing very fast, by the way. His stories have for their scene a certain beautiful lake in the wilds of northern Michigan, which the author is fortunate enough to own; and on or about the "Glimmerglass" live and die in turn a beaver, a trout, a lynx. a porcupine, a loon, and a buck. Mr. Hulbert has a satisfactory style, and he knows the habits of the animals thoroughly; he has produced a series of tales that are very well worth while, and which the reader who loves the

WILLIAM DAVENPORT HULBERT.

woods will do well to look out for. The first of them, the story of the beaver, is particularly fascinating, and one speculates as to just why Mr. Seton did not stake out his claim to that,

# STILL ANOTHER HISTORICAL NOVEL.

THE COLONIALS. By Allen Prench. Illustrated. Cloth, 4% x 8 inches. toa pp. Price, \$1.50 pet. Doubleday, Page & Co., New York

striking feature of Mr. French's work is its adherence to historic fact. His view is at once broad and minute. He focuses incidents, fore and aft, in a way that enables the reader to realize all the forces that went to the making of historic results too yast to be dreamt of by the actors in them. But this historic accuracy and insight into persons and situations never impedes the course of the narrative, nor overfreights the creative impulse.

into persons and situations never impedes the course of the narrative. The story is divided into lour dissinct parts. In the first we meet Frank Ellery, of Boston, in the woods, whither he has been driven by mily verents and the machination of an under who has plotted to family verents and the machination of an under who has plotted to a famous rope-work property built by their father. Frank and an old a famous rope-work property built by their father. Frank and an old a famous rope-work property built by their father. Frank and an old a farm of the father and saves the girl from his intentions. This throws the girl and Frank again into company with the Indians, who are now furious at the Engagain into company with the indians, who are now turious at the Eng-lishman's baseness. The winter shows set in, Aneeb breaks his leg, his family are reduced to starvation, Frank delays with them and saves them by hunting in their behalf. He then, by superhuman effort, bears the girl on a sled and, leaving her at the door of an English garrison at

the girl on a sied and, leaving her at the door of an English garrison at Leaving Leaving the profession of the profession of the County from the county of the County from th army, and an aspirant for the hand of Alice. Neither brother nor sixer dreams that this man is the same who had attempted the villamost dreams that this man is the same who had attempted the villamost produced the state of the same than the same than the same that the are new power, an unusual story, and whatever one may say of its sensational scenes, no one can dispute Mr. French's right to frank as a notice of light in the property of high linaginative quality. His picture of the better side of lodian nature is fine.

dies to the complete work. Wise and witty, pathetic

THE men who made MODERN ELOQUENCE are each specialists. They are men who have achieved eminence in many and varied fields of activity. At their head, as Editor-in-Chief, is a man who brought to his task a superb equipment, unequaled by that of any other man in America. He has a wide and warm personal acquaintance with the greatest men of our literary, social, commercial and political life. He has a wonderfully fine instinct of discrimination, and has had the splendid assistance of 18 associates, and the unprecedented co-operation and contributions from the men who have voiced the greatest spoken thoughts of the Nincteenth Century. This has made possible MODERN ELOQUENCE, which, in its 10 handsomely bound and illustrated volumes, offers a greater opportunity for inspiring contact with great minds, and greater and truer educational and entertaining features than any set of books being sold to-day.

## OTHER PEOPLE'S OPINIONS

The roster of subscribers to MODERN ELOQUENCE now includes several members of the Cabinet and Diplomatic Corps, as well as the Federal Supreme Judiciary, Congressmen, Governors, Mayors and prominent Professional and Business men in nearly every City of the Union, and in Great Britain and Canada. What a few of these aubscribers have written regarding the work follows. These men are careful what they say over their signatures.

From Robert Collyer, One of America's Most Eminent Divines, From John Hay, the Secretary of State

"Mr. Red las won grest political distinction as Speaker of the House of Repre-entatives, and the American people have shared in his honors and his triumphs Again, Mr. Red, as Editorio-fiched of the great American classic, the monumental work of his gestion, privileges his countrymen to rejuce that they have not lost, but rather lound the statement and Partino In "Modern Ecloquetce."

# CURRENT POETRY.

#### My Country. B. BORERT WHITAKER

My country is the world ; I count No son of man my for. Whether the warm life currents mount And mantle brows like snow Or red, or rellow, brown, or black The face that into mine looks back

My native land is Mother Earth. And all men are my kin, Whether of rude or gentle birth, However steeped in sin: Or rich or moor, or great, or small, I count them brothers, one and all,

My birthplace is no spot apart. I claim no town or State. Love hath a shrine in every heart, And whereso'er men mate To do the right, and say the truth Love evermore renews her youth

My flag is the star-spangled sky. Woven without a seam, Where dawn and sunset colors lie, Fair as an angel'a dream, The flag that still, nustained, untorn, Floats over all of mortal born

My party is all human-kind. My platform, brotherhood: I count all men of honest mind Who work for human good, And for the hope that gleams afar, My compades in this holy war.

My heroes are the great and good Of every age and clime,

# Fame.

By SAMUEL VALENTINE COLE. In Plsa's baptistry the attered word, Sent upward winged with mosic from the ground.

Works in the dome a miracle of sound Most delicate, and all the air is stirred With its vibrations; till, like some sweet bird, Invisible, that circles round and round, Singing o'erhead, then seeks the heaven's profound.

It flees away and is no longer heard. Thus, too, it is with word or deed or song Caught up and echoed through time's ampler half:

It charms a while the listeners in the throng, But, with the days men never can recall, It fains and fades and vanishes erelong In the vast Silence that receiveth all.

-In April Critic.

# The Penalty.

By FRANK DEMPSTER SHERMAN. Implacable and stern, the captive. Hate, In silence sits, too anger-blind to see Love's shining figure at his prison gate, Longing to hear him bid her turn the key.

The Foulest Water is made palatable and absoluteby pure for drinking by the Sanitary Still. The dis-ease germs lurking in water are a most frequent cause of disease. You can be insured against them. Write for booklet. Cuprigraph Co., 68. N. Green St. Chicago, Ill.

#### PERSONALS.

Frank R. Stockton,-The death of Frank R. Stockton, on April 20, has brought out some remarkable tributes to his charecter and ability. He came of a literary family, his father, William S. Stockton, having been a prominent Methodist writer and controversialist. His brother, Joho D. Stockton, was a drametist, poet, and critic, end his sister, Louise Stockton, is well known as a magasipe writer. The New York Times publishes the following account of his life :

Frank was born in Philadelphia to 1814, and was one of twelve children. He received his education in the Philadelphia public schools. He then learned wood-angraving, but did not remeio faithful to his art. He began to write verses when he was teo years old. It is related of him that he once sent a poem to the editor of e religlous paper in Beltimore, who rejected it. Young

when he was ten years oid. It is related to hunthe he was ten poem to the collion of a relation has been as poem to the collion of a relation of the collion of the colling of the collion of the collion of the collion of the collion of the colling of the c

Carnegle and the Wall-Street Runner,-Andrew Carnegie seldom visita Wall Street, but a few days ago, says the New York Times, he passed through the street unobserved, "into the arms of a runner for a bucket-shop."

Come to put up a little money on the rise of the market?" asked the ranner. "Sure thing; can't lose. Stocks are going up. I'll show you where you can double your money in half an

# An April Bracer

Grape-Nuts Food Gives Spring in the Spring

Teachers require nourishing food more than the average person, for their work is nerve destroying, and unless the food taken will surely rebuild the lost gray matter nervous prostration will set in.

A lady teacher writes, " For the benefit of my fellow teachers and all legin workers who expend daily an amount of nerve energy I want to tell just what I know

When I was teaching in a boarding school at Pin '98 one of the day teachers ate Grape Nuts regularly for breakfast and support, and appeared so well and strong in all her work

Miss R- used to beg me to join her and give the food a trial, but for some reason I never would try it until the spring of the present year. Then one day in April when I was very much in need of something bracing and was on the point of buying the usual tonic, she prevailed upon me to begin using Grape Nuts. So we ate Grape Nuts together from then until June.

Previous to that, every spring I had been compelled to take bottle after bottle of tonics and then go home much run down, but this year June found me well and strong after a most trying month of work, with never a thought about tonics, other than the nourishment received from Grape Nuts. Naturally I believe hearthly

Since leaving that boarding school, I learn that nearly every teacher in the school from the principal down uses Grape-Nuts." Name given by Postum Co., Battle Creek, Mich.

An Unconventional Romance of the Philippines

# DANIEL EVERTON

# Volunteer-Regular

By ISRAEL PUTNAM

THIS is a splendid story of love and Soldier adventure in the Philippines, strong in plot, graphic in style, and thoroughly human in its feeling. It pictures both the strenuous and idyllic sides of life in the islands. It throws into bold relief the intelligent native planters and the ignorant insurgent class, and draws the contrasting charms of an impulsive Filipino beauty and a New York girl of aristocratic reserve and culture.

12mo. Cloth. Illustrated. \$1.20 pet. By mail, \$1,30

Leading Characters in Daniel Everton, Volunteer-Regular CONSTANCE:

"Her eyes we exceptionally larg, and there was a soft depth to them which, if the eyes are is very much the window of the sout, grown. Her forthead was high, and the upper large of the Her forthead was high, and the upper part of her lare auggested thought, as the iower did feeting. Armond the smooth while surface the hid grey portily. The unit per her was a surface the hid grey portily. The surface has grey per an early the surface the hid grey per large the per large three surfaces of the regularity of leasure which constitutas the conventional type of beauty from an artist's atmid-point," Pages 2.

MERCEDES:

DANIEL EVERTON:

"It only man in this exceptions extractions shown his directs that Datalel Everton had shown to bus commis-dening this two years he had apret among them, that he had come into the mais from a different world thus their. He may a good veloif-, and bit had been his passport to their confidence and extrem. For this rank is mattered little whether or not be was what the world ambignousity calls a gentleman—in was Private Everitor in them, ontilely during other charges and the contractions of the private Everitor in the contraction of the contractions of the contractions of the contraction of the contraction.

# TOPICS OF THE DAY.

# THE MARTINIQUE CATASTROPHE.

THE rain of fire that blotted St. Pierre from among the cities of the earth on the morning of the sith of May is reckoned among the worst disasters of history. Mont Pelée, in the opinion of Prof. John Milne and other eminent authorities on such disturbances, exploded with little warning, giving the doomed inhabitants of the Island and the shipping off St. Pierre no chance of escape. The vicinity of the volcano for miles around was covered with a fivry downpour, and the air so filled with dust, abese, fumes, and fire as to blot out all life. The total population of St. Pierre was about 23,000, and the population of the land about 175,000. It is not known at this writing how many are left, but It is considered certain that no one in St. Pierre survived. The newspaper comments consist chiefy of explanations of the nature of the volcanic eruption from a scientific standpoint, and recountings of previous disasters.

Professor Milne's theory, as given in an interview published in the London Daily Express, is that Mont Pelée has "blown its head off," owing to the infiltration of water through the rocks until it reached the molten material beneath, forming superheated steam of such tremendous pressure that something had to give way. The schooner Ocean Traveler, according to the despatches, "arrived off St. Pierre, Martinique, on Thursday morning, and while about a mile away saw the volcano of Mont Pelée explode, and fire from it sweep the whole town, destroying it and the shipping." The steamship Roddam escaped through a shower of pieces of white-hot lava, losing most of her officers and crew either by injuries from the lava or from inhaling the sulfurous fames. The eruption in St. Vincent, causing the death of hundreds more, has added to the anxiety and sympathy with which public attention is regarding these unfortunate islands of the Caribbean.

Prof. Robert T. Hill, of the United States Geological Survey, says in an article in the New York Herald:

"The present outburst of Mont Pelée, in Martinique, is apparently the culimation of a number of recent volcanic disturbaance which have been unusually severe. Colima, in Mexico, was its eruption but a few months ago, while Chelpancingo, the capital of the State of Guerrero, was nearly destroyed by earthquakes which followed. Only a few days ago the cities of Guatemala were shaken down by tremendous earthquakes. In a few days, when news can be received from the inaccessible interior of Central America, it will probably be learned that some of the numerous volcanic summits of that region have exploded.

"Altho widely distant, there seems to be a geological relation between the Caribbean and the Central American volcanic

"The whole region of the American Mediterranean, instead of being a body of water, as it appears on the map, is looked upon by geologists as a great east and west mountain system, whose ringles, except the great Antilles, are submerged beneath the waters, where profound valleys and submerged mountain crests are found between the banks and depths. This Antillean mountain system suddenly terminates at each end to the east and west, with lines of great voleanose running at right angles to it. These are the volcanic chains of Central America and of the Carribean Island.

"h is a singular fact that both these volcanic chains are of the peculiar type which crupt cinders and mud, and it certainly appears as if there were some sympathetic relation between them.....

"Across the throat of the Carlibean extends a chain of islands (title Carlibeae), which are really smouldering furnaces, with fires banked up, ever ready to break forth at some unexpected and inopportune moment. This group, commencing with Saba, on the north, near our own Porto Rice, and ending with Grenada: on the south, near Trinidad, comusst of ancient ash-heaps, piled up in times past by voleanic action. These old ash-heaps have moisture, has become covered with ripe growths of damp and moldering vegetation. This same soil also produces all the richest vegetable products of the tropics.

"These volcanic islands have been slowly pilling up since the beginning of the Tertiary Period, and their bases extend beneath the waters for a depth as great as their summits project above it, making their total height nearly ten thousand feet above their suhmerzed bases.

"The northern islands of the necklace, like Saa and St. Eusta, tas, are simple crater cones, but the center of the chain consists of four larger Islands—Guadeloupe, Dominica, San Lucia, and St. Vincent—each of which is a complicated mass of old volcanic vents, whose peaks attain their greatest leight in Mount Dioblotum, In Dominica, 4,747 feet above the sea.

"These volcanoes do not conform to the type which most people have in mind, for from them there flow no flery streams of lava, nor do they always give days of warning before their outbreaks. On the other hand, their cruptions consist of hot water, cinders, and mud. Their explosions come with terrific suddenness and when least expected. In volcanoes which eject lava, the ascending column of molten liquid vibrates the earth for days or months before it reaches the surface, and the people of with the cinder type, for they explode suddenly and do their damage without much warning.

"While the explosions by which the mud and cinder were ejected have been sudden, they have taken place only at long intervals of time, each one adding its pile to the surface débris and obliterating the previous landscape.

"It had been so long since any explosions occurred that most

geographers, as well as the inhabitants of the islands, had considered that the forces which produced them were spent, and classified them as extinct volcanoes. It is true that the sonfrière of Guadeloupe has sent up from its summit from time immemorial faint puffs of steam, and that upon Dominica and other interests of the islands there were a few hot springs, but for nearly a hundred years there had not been the least sign of explosion."

Some previous disasters are recalled by the Philadelphia Ledger in the following paragraphs:

"The reports of the number of lives lost in some of the historical disasters are probably overhawn, but are, nevertheless, sufficiently distressing. It is recorded that 200,000 perished by the earthquake at Yedlo, Japan, in 1790. At Lishon 50,000 were destroyed in the brief span of eight minutes by the great earthquake of November 1, 1755. It is estimated that from 175 to 1857 the kingdom of Naples alone lost 110.000 inhabitants by

"The destruction of Caracas, in 1812, when 12,000 perished; of several towns in Peru and Ecuador, in 1865, when 25,000 lives were lost, and the destructive cruption in Krakatoa, in 1853, and accompanying disturbances, which destroyed a wast number of people, are terrible reminders of the insecurity of communities in regions subject to such visitations. The United States and to been exempt from them. The earthquake felt at Charleson in 1866, resulting in the loss of forty-one lives and in a proposity loss of \$5,000,000, startled the country, and warned us of the destructive possibilities that latter in the mysterious forces of nature.

The Krakatoa eruption is described more particularly as follows in the New York Herald;

"The greatest volcanic explosion ever known was that of Kraktoa, an island in the Straits of Sunda, between Jawa and Samatra. The eruption began on May 20, 383, but the great explosion did not come until Angust 26. The flames from the erater could be seen forty miles distant. The crashing explosion which followed the flames set in motion air-waves that traveled around the earth four times one way and three times the other. Every self-recording barometer in the world was disturbed seven times by that blow-up. These waves traveled at the rate of 700 miles per hour.

"The noise of this cruption was heard at Borneo, 1,160 miles distant. It was felt in Burma, 1,478 miles distant, and at Perth-West Australia, 1,902 miles away. The explosion was heard over a sound zone covering one-thirteenth of the earth's surface.

"Sea waves were created by the explosion, which destroyed all the rowns and villages on the shores of Java and Sumatra bordering the strait, all vessels and shipping there and 36,580 lives; raised a tidal wave at Merak 135 feet high, covered 500,000 square miles of ocean with lava dust several inches thick, submerged an island six nitles square and 700 feet high to a depth of 150 fathoms, and created two new islands."

A correspondent of the Philadelphia Press, writing from Gnatemala City under the date of April 24, gives the following description of the earthquakes which have been shaking that region:

"For nearly a week earthquakes have been tumbling down cities, towns, and villages on the western slope of the Sierras in this republic.

"On the night of April 18, at the capital, a blinding flash of lightning, followed by a thunders-storm and torrents of rain, all in the space of a very few minutes, caused the people in the streets to run for shelter. In an instant, however, the earth-qnake was upon them. Rushing frantically into the darkness and through the foodled strets, anywhere away from the straining rafters and crackling walls, ran the multitude, crying, praying, and a few triping to sing the 'Salve Regina'.

"News soon began to come in from the hill country, where Queantlenango is situated. This, the second city of the republic, suffered by far the most. Hundreds of residences and public buildings were either totally destroyed or seriously damaged. Altho not half of the débris has yet been removed, zoo bodies have been recovered. Fire and flood added to the horror of the night, and many people have gone insane and others have committed staicities. "Amatitlan, San Juan, San Marcos, Escuinta, Santa Lucia, Utatian, and several other smaller towns have been partly ruined. The sessions of the National Congress at Guatemala City have been suspended. The meetings of the National Commission for the Louisiana Purchase exposition, and which Commissioner Chandler attended by special invitation, were continued without interruption for two boars, the the earthquake the bendulums over the heads of the commissioners.

"Approximately 50,000 people have been left homeless, and subscriptions are being raised to prevent the poor from starv-

#### REAR-ADMIRAL SAMPSON.

"A HEART broken by abuse and misrepresentation" is the probable cause, according to ex-Secretary Long, for the death of Rear-Admiral William T. Sampson, and a good many papers agree with him. Admiral Sampson was "the pathetic victim of public clamor and private prejudice," declares the Philadelphia Press, and the Springfield Republican says: "He has even gone to his grave with the din of a rancorous personal abuse torturing his ears. No successful naval officer in history has met so undeserved a fate. It is one of the monroful tragedles of the sea." Says the Boston Jewrad;

"It is one of the cruslest ironies of history that this brave, accomplished officer and kindly gentleman should have had the last years of his life, that ought to have been his best years, embittered by an angry controvery in which he bore no part and of which he was a helpleas victim. He was himself generous to a fault, sensitive, proud-aprited. He suffered keenly from the poisoned shafts of envy and of malice to which he was too chivatous to respond. Finally his own noble brain, worm out in his country's service, gave way, and his once-vigorous hold with it. So that, as a crowning grief, he never knew the splendid vindible scan heard the lardy but perfect acknowledgment that the sea-gloy of Santiago was his as the actual commander.

"But all of us, as we hope for our own peace and happiness hereafter, must believe that this great assurance, denied him here, will reach him in that other world, whither his knightly soul has gone."

Other papers recall the Admiral's eminent ability as a strategist. Thus the Buffalo Express says;

Experts in naval warfare are studying Sampson's campaign as they have studied no other naval operations since the time of Nelson, and it will for many years to come be regarded as establishing a standard of efficiency in the handling of a squadron in war. There is no question among these experts as to who earned the credit for the victory at Santiago and there never has been. The man who won the victory was the man whose tireless energy during thirty-nine days and nights of the most daring and successful blockade in naval history had kept the fleet in such a state of preparation that victory was assured at any hour, day or night, of that long period when the Spaniards cared to take the chances of battle; that no special orders were necessary when the critical moment came: that it was of no importance who the senior officer in actual command happened to be at the moment of the battle. Admiral Sampson did this, and those who fancy it was a trifling task have small knowledge of the history of naval warfare.

"Only a very superior commander could have held such a feet as the Spanish in blockade on a dangerous coast, many hundred miles from his base, for almost six weeks, and at the end have been as well prepared for fight as at the beginning, finally accomplishing the total destruction of the enemy without the loss of a single ship and with almost no loss in men."

The controversy began, it will be remembered, when Admiral Sampson's report of the Santiago fight was sent in, with no mention of Admiral Schley. It came out, long afterward, that the celebrated despatch was written by an aide and burriedly sigued by Sampson, who took no particular notice of the contents. Says the New York Evening Post :

"He signed the despatch which his aide wrote for him, and that was what did the mischief. Yet this very oversight of his, for so we must call it, was typical of his devotion to duty, and

of his freedom from the arts of a poseur. He was not thinking how his telegram would read in the United States. He was intent on the matter in hand, which was the saving of the Colon. That was what he was busying himself about, instead of composing despatches with care; and this piece of 'comsummate seamanship,' as Mr. Wilson calls it-that is, the pushing of the Colon up on the beach by the New York to prevent her from sinking-was, declares the English historian, 'one of the best performances of a wonderful day for the American fleet.' Yet it was just at that moment of sailor-like fidelity on the part of Sampson that Fortune fluttered her wings and flew away from him finally. It was a supreme illustration of Napoleon's saying, 'There is but one step from triumph to a fall.' Naval history contains no more pathetic instance of a sheer

mischance robbing an admiral of his laurels." Admiral Sampson served with credit in the Civil War, his most conspicuous service occurring in Charleston harbor, The story of

the engagement is told as follows in

the New York Tribune : "Admiral Sampson first won fame and recognition on the old Patapsco, which formed part of the blockading squadron at Charleston in 1864. The harbor had been thoroughly mined by the Confederates previous to and during the blockade, and when the blockading admiral decided to enter the harbor he detailed the l'atapsco to go ahead and clear the way for him. Sampson was executive officer of the ironclad, and as she steamed into the harbor he stood on the bridge in the most exposed position on the boat. He was

a fascinating mark for the sharp-

shooters. As the little boat entered

the harbor bullets from their rifles rained upon her. Sampson's men fell all around him, struck by the leaden missiles. He ordered them below and faced the fire alone. Slowly and carefully the mine destroyer went ahead on her hunt. Suddenly there was an ominous roar, columns of water were thrown into the air, and mingled with the liquid streams were the guns, turrets, and sheathing of the gallant boat. Of her crew twenty-five were saved by other boats from the fleet; seventy-five found their graves in Charleston harbor. Samuson was blown one hundred feet in the air and fell in the water many feet away from where his boat went down. He was as calm when picked up as tho he had been for a swim in the brooks of Wayne County, and was on deck ready for business on the following day."

The "pro-Schley" papers do not hold Admiral Sampson responsible for the anti-Schley campaign. "There has never been anything to indicate that Admiral Sampson was personally responsible for the unworthy attacks made by some of his friends upon Admiral Schley," says the Philadelphia Times; and the Brooklyn Times says, similarly, that it has "never held Admiral Sampson responsible for the storm of abuse to which Admiral Schley has since been subjected, nor has there been the slightest reason to believe that Schley has ever sympathized with, much less instigated, the intemperate denunciations of Sampson in

which his over-zealous partizans have indulged. The whole controversy has been deplorable, humiliating, and scandalous, and with all its bitterness and disgrace it should be buried in the grave of the great American sailor who died in Washington yesterday," Says the Baltimore American:

It is charitable to believe, and The American has long insisted, that after the end of the war Admiral Sampson was used as a tool by those who, having their own ends to serve. wreaked vengeance upon Admiral Schley

"Be that as it may, the end has now come. Admiral Sampson's death will, of course, have no bearing upon the controversy over the credit for the victory off Santiago, and the pity of it all is that in trying to take credit for that victory Admiral Sampson placed himself in such a light before the public that due account will never be taken of his worth and attainments as a naval scientist, mathematician, and ordnance officer '

Rear-Admiral Schley made the following statement to an interviewer the day after Rear-Admiral Sampson's doath:

"I regret very much the death of Admiral Sampson and I sympathize with his family. No one has ever heard me utter one unkind word about him. On account of his death I have requested my friends in Baltimore to postpone the delivery to me, which was intended to have taken place to-night, of the Cristobal Colon service of silver, and they have acceded to my request."

Cuba and the Tobacco Trust .- There is alarm in Ilavana over the expected invasion of the island by the "tobacco trust."

To let La Discusion (Havana) tell the story: "Our colleague, El Comercio, raises a voice of alaru:. The

occasion does not seem to us inappropriate, The great corporation, 'The American Tobacco Company,' intends to acquire at a great price the large tobacco and cigar factory 'Hijas de Cabanos y Carvajal,' with the intention, accord-

ing to the Tabaco, of exploiting the industry. What will be the method of operation? It will be a case of

carrying out the policy of all trusts. The products will be at first sold for an excessively low sum, rendering competition impossible and obliging the Cuban makers to sell their factories and plants, which will gradually come under the control of the foreign corporation. "Therefore the lowness of price will prevail only during a com-

paratively short period. When they have the trade in their grasp, prices will go up, God knows how high! It is not unusual to see in the United States-and such of our readers as have recently visited New York City must have observed it-husinesses in liquidation that display on their signs wordings like the fol-

lowing, that we read on an establishment at the corner of Broadway and Cortlandt Street: 'Rubber goods at half their value. We sell them so low because we are forced to suspend our business, having been ruined by the rubber trust.'

"Is such a destiny in store for the Cuban robacco industry?
"No; if the Cuban people oppose their public spirit to the odious machinations of the trust. No, a thousand times, no, if the Cuban people do their duty, a sacred duty, npon the fulfilled of which depends the salvation of an industry which, like that of tobacco, constitutes one of the great resources of the country.

"The duty of the Cuban people consists in not patronizing the foreign enterprise, in not buying a single one of its brand of cigars, and, on the other hand, in buying tobacco and cigars only from the national factories already established."—Translation made for Turk LITERAN DURST.

## THE VICTORY IN MINDANAO.

THE decisive victory of the American troops over the Moros at Lake Lanso, on May 3, will, according to many of the papers, bring a close to the hostilities in Mindanao. The Twenty-fifth Battery and seven companies of the Twenty-seventh Infantry, numbering about 450 men, under Colone Baldwin, worked their way through the tall grass, took successive trenches after hand-to-hand encounters, and captured the strongest Moro fort belonging to the Suittan Bayan. The Americans, who had a few more men than the Moros, lost one officer and seven men killed, and four officers and thirty-seven

IN FUTURE BATTLES.

FIRST AMERICAN ARMY OFFICER (to the inexperienced one): "What! You call this a dangerous scrap? Well, just want till you get back to the United States and have to do it all over again before a board of inquiry."

wounded. Eighty-four Moros surrendered after losing all their principal leaders. General Chaffee says it is impossible to tell the number of Moros killed, for many were lying in the tall grass and the "trenches were lined with Moro dead."

"The law has been enforced," says the Philadelphia Press, and "it has cost several hindred Moro lives and some American loosess"; but "it is worth it." "Civilization, peace, and order," says the same paper, "can be bought in no other market and paid for with no other coin, but bought and paid for they must be, if the world's work is to go on." The New York Press says;

"No doubt we shall henr that miserable wail from the American Amigo, as we have heard it so many times before, against the United States army for the performance of its duty in the profession of arms in time of war. We shall hear it unpersionably, and its echo carrying to some other peor, deluded brown man 'in the Philippines, be, too, will be encouraged to

murder American soldiers under flags of truce and articles of peace; but the Moro has learned his lesson, as all others in our Philippine possessions who resist the anthority of the United States army and the sovereignty of this Government there must learn theirs, at the hands of the American soldier, in whose manhood and honor, no less than in his fortitude and valor, the people of this nation have absolute faith."

The Chicago Record-Herald, however, says:

"We have punished the Moros enough. We have demonstrated the irresistible nature of our civilized superiority. We have no call to further inflame the harted of the inhabitants of Mindanao by alaughtering their fanatical warriors and devastating their island. Let us now demonstrate our civilization by our forberannee. Let us call the chief of Mindanao to a council and ofter to their people friendship and protection instead of incurring their eternal treachery and hate with fire and the

"If the island of Mindanao can only be reduced to subjection to our flag by turning it into a shambles and 'wading through a sea of blood,' the American people will turn from the revolting alternative in horror and disgust."

Several papers comment on the shooting of thirty-five of the eighty-four Moro prisoners, who tried to escape. The St. Louis Globs-Democrat tells us to "look out for a fresh discharge of crocodile tears on the shooting of the Moro prisoners who tried to escape." The New York Werld says.

"In that splendid record our unpatriotic skeptics can see what we have gained in the Philippines. From being ambitious but anatterish performers we have developed into so many virtuosos on the rifle. Loose us eighty-four Moros and pout! we kill you hitry-five of them without any trouble at all. Croaching or standing, running straight or doubling, it's all one to us; we bowl them over with our first shot!

"Hut an even greater benefit than this artistic marksmanship accrues to us from the Philippines. We shall soon have no need to legislate against the cruel and brutal butchery of live-pigeon shooting. When our sportsmen realize what an infinitely more fascinating amusement is presented by potting live Moros than tame pigeons there will be a sporting exodus to Mindanao. It is true that the Moros will thin out very rapidly and the island will have to be restocked from time to time, but we shall save our pigeons."

Afro-American Reflections on "Killing Niggers" in the Philippines.—Afro-American journals in this country are considerably stirred by the report that some of our troops in the Philippines have taken delight in "killing niggers" and burning their homes. Thus The St. Luke Herald, of Richmond, exercise the property of the Philippines and the principles and the principles are the principles.

"Killing 'niggers' in the Philippines ought to be stopped. This whole business has long since ceased to be war, and has become a bloody massacre of even women and children. Is it strange that the Filipino hates the white American soldier, and retainates by killing him on any and every opportunity!

"When Filipino children ten years old take up arms against invasion and give their lives and lay their little bodies upon their country's altar—such patriotism deserves consideration, not slaughter. Such a people may possibly be exterminated, they will never be conquered.

"" Make Samar a howling wilderness: prisoners not wanted "—
was the infamous order of Gen, Jacob H. Smith to Major Walter.
This bloody butcher, this inhuman monster with his unnatural
thirst for human blood, is the 'Weyler' of the United States
army and ought to be court-martialed and most ignominiously
dismissed. Even Herod of old was less bloody."

The Colored American of Washington, while expressing sympathy with the investigation of the "barbarities" in the Philippines, goes a step farther, and asks that some atrocities in our own country be investigated, too. It observes:

"Isn't'Uncle Sam' a trifle far-sighted in the discernment of outrages and crimes against civilization? Why use a telescope to sweep the horizon for wrong-doing when the cries of lynched negroes can almost be heard at the White House and the odors from the funeral pyre fall scarcely short of the Capitol, where Congress is engaged in solving the problem of government?"

# PLACING THE BLAME FOR THE PHILIPPINE "BARBARITIES,"

"HE present discussion of the conduct of our troops in the Philippines appears to hinge principally upon the question of responsibility. On the one hand, it is held that the soldiers

had no authority for the acts in question, and that the "atrocities," therefore, have no relation to our general Philippine policy. On the other hand, it is argued that the authorities in Washington could not have been ignorant of what the troops were doing; that they actually did know, from the Gardener and other reports, what was going on, and that their passive acquiescence in the matter makes the Administration equally responsible with Major Waller, General Smith, and the rest. The Atlanta Constitution says of General Smith:

"All his deviltry was not done, we imagine, on his own motion. If it was, others have since become his accessories after the fact by concealing and practically condoning his criminal career. It can not be denied that Secretary Root had all these records of blood, conflagration, torture, and waste before him months before the Senate, at the instance of General Miles, dragged them from him. And if the Secretary had them it is also certain that the President knew all about them-knew the full truth, even while he was rebuking other

generals and threatening them with disgrace for etiquettical indiscretions !

"What shall be said of and done to these officials who have made themselves coparceners with the Jake Smith campaign of torture and murder? What boots their present hot haste to try and acquit him? Do they think American people will stand for such mummery? If they do, then the gods have blinded them fatally to a future that means their certain defeat and disgrace."

The Army and Navy Journal thinks that General Smith's severe measures were necessary, and regards the clamor about them as "absurd and unreasonable." But at the same time it holds the President and Secretary of War equally responsible with the general who is under criticism. It says

"It is amazing to find journals of known loyalty to the Administration at Washington-like the Philadelphia Press, for example-engaged in zealous but misdirected efforts to exempt the President and the War Department from the responsibility for General Smith's conduct of the campaign in Samar. The Press says that General Smith's order 'was not approved by our Government or known to it.' Now what are the facts? General

Smith's orders in the province of Samar and General Bell's in the province of Batangas were submitted to Major General Chaffee. He approved them and submitted copies of them to the War Department at Washington, where not a word was said against them or against the operations conducted in accordance with them until it was discovered that it had been necessary to use harsher means than syringes loaded with cologne water to put down the insurrection. 'The order was not approved by our Government,' says the editor of The Press, but the Washington correspondent of The Press, in direct contradiction of his chief, says that, as everybody familiar with army routine knows must have been the case, 'copies of all orders issued by General Smith

"KHI LYFRY ONE OVER TEN Criminals because they were born ten years before we took the Philippines - The New York Evening Journal.

were forwarded by General Chaffee to the War Department and there is no record of any disapproval.' Not only was there no disapproval, but upon the surrender of Malvar, the insurgent commander in Batangas, the Secretary of War, by direction of the President, cabled to General Chaffee and General Chaffee transmitted to General Bell the hearty congratulations of the Government upon the conclusion of his brilliant and ardnous campaign. We believe, moreover, that the same deserved recognition would have been extended to General Smith but for the absurd and unreasonable clamor which has been raised against him. So far as the responsibility for the conduct of the campaign in Samar, Batangas, and other provinces is concerned, General Chaffee, General Smith, General Bell, and every man under them were acting as directly with the approval of the Government as if their orders had been written at the White House and countersigned at the War Department. This is no time to plead the baby act in behalf of the President and the Secretary of War. We don't imagine that they want anything of the sort. Wherefore they should pray to be saved from their fool friends. The plain truth and a fair measure of common sense are all that is needed to vindicate the Government and the army with equal thoroughness.

> The Secretary of War, however, says in reply to a request from the Senate for information :

> "The Secretary of War has no knowledge of any order or orders issued by Brig.-Gen. Jacob H. Smith to Major L. W. T. Waller, United States Marine Corps, pleaded by the latter in defense before the recent courtmartial which tried him at Manila. No such order has been received by the War Department. The Waller court-martial was convened at Manila on the 17th of March last, under an order dated March 5, by or under the anthority of General Chaffee, upon facts ascertained by him, not then known, as far as I am aware, in this country. The conclu-

TORIS MELCURELL

President of the United Mine Workers.

sion of the proceedings by the acquittal of the defendant was announced to the department in a telegram from General Chaffee, dated April 19, 1902. Immediately upon the conclusion of the trial General Chaffee was directed by cable to mail to the Department the record and proceedings, including all testimony and action taken. These have not been received, and in the ordinary course of affairs can not reach here before the 1st of June.

"All the written orders made by General Smith relating to the campaign in Samar received by the Department have been trans-

mitted by the Department to the Senate committee on the Philippines, and are printed in the report of the hearings before that committee. All of those orders are based upon and are in strict conformity with 'Instructions for the Government of Armies of the United States in the Field,' contained in General Order No. 100, of 1861.

"No order has been given and no action has been taken by the War Department regarding the campaign in Samar, except the foregoing direction and the formal order convening the court martial lor the trial of General Smith,"

Senator Lodge, in a speech in the Senate last week, said in the Secretary's defense:

"He has ordered investigations of every case which has been brought to him. More than 350 courts-martial have been held, for great offenses and small against the natives. There has been no desire to screen a guilty man from punishment wherever a reasonable cliarve has been brought before a court-martial and tried. There have been many, many convictions and much severe punishment. That

is all any Secretary can possibly do. He has done his entire duty. If gentlemen think that these instances of cruelty in the Philippines are to us, as they are, a source of bitter and deep regret, can they for one moment suppose that to a min like the Secretary of War, with his heart bound up in the fame and well-being of the American army, they are not even a deeper sorrow? His object is to elevate the American army, not to pull it down. But he also means, and he will always mean, to have justice, at least, for all the men and officers committed to his charge, and he will not knowingly condemn them unbeard and untried."

# WHAT THE COAL-MINERS WANT,

THE demands of the authracite coal-miners are, according to newspaper report, shorter hours for the men who have to work ten or twelve hours a day; higher wages for the men who work but 170 to 190 days in the year, and earn about \$350 for the year's work; and a more uniform and equitable system of weighing the coal for the miners who are paid by the ton. Most of the daily papers do not seem to think these demands unreasonable. "One-fifth of the advance in the selling-price of coal arranged between April and September would have met all the expenses incident to giving the miners what they asked for," remarks the New York Times : and the Philadelphia Times says:

"The operators have every advantage. They, or the combination controlling the business, can regulate production and prices and can recoup any loss at the expense of the consumers. The miners have only their daily wages to depend on, and even this dependence is subject to their employers' will. Under such conditions, there can be little question upon which side lies the ultimate responsibility for the peace and prosperity of the mining region, with its intimate relations to the general interests of the Commonwealth

A word of warning to President Mitchell, of the United Mine-Workers, however, is given by the New York Journal of Commerce in the following paragraph:

"Mr. Mitchell of the anthracite coal-miners has been reported to have boasted that the last strike was a great financial success : that in comparison with what the strike cost the men, what was

> gained represented a rate of profit far beyond that to which the great financial operators of the country are accustomed. We trust that Mr. Mitchell has not lost his head over the profits he claims his followers then made, and is not laboring under the delasion that a speculation of that sort can be repeated frequently. There are said to be 147,000 miners directly involved. and railroad workers who would be thrown out by a strike would bring the total of idlers up to 175 000 This army of men can not stop work without loss somewhere, and it very rarely happens that the greater part of the loss does not fall on the strikers. If it be a fact that they got through with their former strike with a profit, they had an unusual experience, and they can hardly hope to duplicate it. Mr. Mitchell's success turned the head of the man now pretty well forgotten who was running the Amalgamated Association of Iron and Steel Workers, and he precipitated a strike last summer as a speculation. He guessed wrong and his followers

the past twenty years has recently been estimated by the United States Department of Labor at nearly \$400,000,000, two-thirds of the loss falling upon labor, and one-third upon capital.

The United Mine Workers' Journal (Indianapolis) says:

"The miners' side of the question has been handled with superb skill by President Mitchell and his coadjutors. They have not made a wrong move on the industrial chessboard. measured intellectual swords with the brainlest men in the business world and carried off the honors. Their skilful diplomacy in the various stages of the proceedings has won for them the admiration of the American public. They could not be burried into an unwise course. They patiently waited. They could not be irritated into hasty action. They calmly submitted their cause to unbiased judges and awaited the verdict with serene confidence. The operators saw they were outmaneuvered and refused to submit their side point-blank. The attitude of President Mitchell and his lieutenants has given organized labor a prestige it never enjoyed before."

## IMMIGRATION RECORDS BROKEN.

"HE remarkable increase in the number of immigrants arriving at the port of New York is attributed by the newspapers to the industrial depression in Europe and the prosperity in this country. During the week ending May 4, about 25,000 arrived. The greater number come from Italy, Anstria-Hungary, and Russia, while those from the Northwestern countries of Europe are comparatively few. The number of immigrants arriving at New York during the four months ending April 30, was about 179,000. Of this number about 18,000 arrived in Ianuary, 30,000 in February, \$7,000 ln March, and 74,000 in April. The arrivals for these four months exceeded those of any previous

Each dot represents 250 emigrants, stars represent collecting points, solid and broken lines show main and subordinate lines of transportation.

year for the same period. The number of arrivals last year was about 430,000, and the number in 1852, which was the record year, was about 780,000. The New York Journal of Commerce prints the following table showing the destination of the immigrants arriving in January, February, and March, 1902:

Destination.	January.	February.	March,					
California	157	513	081					
Colorado	197	979	349					
Connecticut	427	784	3-724					
Illinois	993	2,015	4.779

North Dakota	79	Bo	458					

The same paper tells us that the Italians have gone chiefly to points in New York State. Pennsylvania, and New Jersey. The therews have stayed chiefly in New York, while some have gone to Connecticut, Massachusetts, Michigan, Illinois, and Minnesota. New York and Pennsylvania have received most of the Germans, while the Poles have gone to Massachusetts and Pennsylvania. No Southern States appear in the list. The Chicago Tribune aspar:

"Hard times at home or the reports of easy times in this country are precipitating the needy of Europe upon the shores of America. This is a flattering but in some respects a dangerous tibute to the existing prosperity of the United States. Most of the men who are now arriving come because they have heard from relatives or friends who have been a little while in the country that it is easier to earn a living here than it is in the fatherland.

"Many come to escape military service. European governments are willing to let women and old nen go, but they dislike to see the young men leave. The Italian Government has sent an army officer here to investigate the numigration from Italy to

the United States. He can find the causes at home. They are high taxes, low wages, and compulsory military service.

There have arrived at the port of New York during the first four months of this year 178,604 immigrants. This is an excess of more than 30,000 over the same period in any previous year. A large proportion of the newcomers are from Southern Italy and Eastern Europe. The percentage of illiteracy is high. So is that of unskilled labor. Fifty years ago unskilled laborers, whether they were literate or illiterate, were not always given a hearty welcome. First the native Americans and then the know--nothings-short-sighted and illiberal organizations-took the ground that the immigrants were going to overrun and take possession of the country. The new labor, skilled or unskilled, was sorely needed for the development of the country. Canals had to be dug and railroads built, mines opened, forests cut down, and fields tilled. It is a question how long the United States will be able to provide employment for unskilled labor if it shall continue to pour in at the present rate. The labor leaders have their doubts. They fear that the untrained labor will begin to compete sharply with trained labor and force down its compensation."

Cartoon that Won a Consulship.—The comment on the appointment of a poet to be Commissioner of Pensions has

hardly died away when the tews comes that the post of consul-general at Gunyaquil, Ecuador, has been won by n timely cartoon. Music, scuipture, and the other arts are yet awaiting office. Says the New York Heraldi:

"Thomas Nast, veteran cartoonist and uewly appointed consul-general to Guayaquil, Ecnador, sat down in the library of The Players, No. 16 Gramercy Park, vesterday morning, and in a few quick strokes produced a sketch giving a

faithful likeness of himself with a valies in his hand.

"This is as nearly as possible a reproduction of the sketch I drew in the State Department the other day," he said. 'I sent it to Colonel Hay, whom I have known ever since the Lincoln Administration. He was a literary man, you know, and I saw him frequently. I pasted a short clipping from The Herald on one side of the sheet, giving the difficulties encountered by for-

mer Consul-General De Leon, and I made myself look as fierce as possible to show that I would fear nothing.

"Outside of the clipping, this is just like the other one. I cau not tell when I shall start for South America, as my appointment has not yet been confirmed, and you know the Senate is a slow-moving body."

"Social Halls" for New York.—The Social Halls association, under the principal direction of Miss Lillian D, Wald, purposes to adopt the plan of Earl Grey, of London, and open "model" drinking-places in New York City. In these saloons or those halls was recently opened on the lower East Side. "It may succeed and it may not," says the New York World, but "It is at least more hopeful than the attempt to reform appetite by law." The New York Work Evening Post says: "If successful, they might point the way to a legislative distinction between a

spirits license and a fermented-liquor license—a most desirable reform."

Several papers believe that the experiment will stir up a "competitive war," for, as the New York Sox tellaus, the greater part of the saloons in New York "are already controlled by brewing and distilling companies," and with their "wast aggregate of capital they would have a tremendous advantage in the competition." It continues:

"It may be assumed, therefore, we are inclined to think, that be experiment of Lood Gray will not work successfully in New York better that the superiment of the superiment o

The Brooklyn Eagle, speaking of the attempt to "overcome the attractions of the saloons" by temperance resorts, says:

"Usually the experiment has been short-lived, because an air of patronage or charity has enveloped the places, and because the workingman wants his beer as well as his snoke and his glimpse into the doings of his own world. A few have thriven, but we are a drop in the bucket to the needs of the city. If the new movement makes social centers that are attactive without being dangerous it will have robbed the saloons of half their power for evil. But to do that its saloons must not be a charlty. Not only must their patrons pay for what they get, but they must be made free of the place as they are in the present saloons."

#### LETTERS AND ART.

#### DOES INDUSTRIALISM KILL LITERATURE?

T is often maintained that commercialism stifles the literary and artistic spirit, and that as industrialism udvances literature must decline. Dr. C. Alphonso Snoth, who writes on this subject in The World's Work (May), thinks that exactly the opposite is true, "The idea that we must de-industrialize a nation before the muse of literature will alight," he says, "is a perversion both of the facts of history and of the meaning of industrialism." He continues:

The conception of literature in the alleged untitlesis between it and industrinlism is no less perverted. The guardians of literature would not only materialize industrialism-they would unduly etherealize literature. The swould devitalize it. But the literature that is too finicky and anemic to live in an industrial age does not merit to live in any age. The purpose of literature, ' says Morley, ' is to bring snushine into our hearts and to drive moonshine out of our heads."

"It can not be too strongly emphasized that literature is the expression of life, and that the more full, free, rich, varied, and abundant life is, the more full, free, rich, varied, and abundant will the literature be. The Elizabethan dramatists did not ereate the vital energy of their time. They reflected it. They interpreted it. They were not the fountains; they were the reservoirs. New opportunities, new discoveries, new occupations had opened new vistas, and literary greatness went hand-in-hand with minterial prosperity. There was a twin renaissance, as there was in Athens under Pericles, in Rome under Angustus, and in Plorence under the Medici. With the satisfaction of 'existence wants' there came the uppeal of 'culture wants,' and this appeal was answered by national expression through literature and the arts.

"It is, therefore, in their joint relation to human need that literature and industrialism find their reconciliation. Antagonism can exist only when literature loses its grip on life or when industrialism degenerates into mammonism.

If it be true that the age of Raleigh, Drake, Frobisher, and Hawkins was also the age of Slinkespeare and Spenser, it is equally true that the industrial revolution that changed the face of the world during the fifty years following the invention of the steam-engine brought with it the poetry of Keats, Shelley, Byron, and Wordsworth, and the novels of Sir Walter Scott, Later still, in nn era of intense industrial activity, came Tennyson, Browning, and Mrs. Browning in poetry, Dickens, Thackeray, and George Eliot in fiction; Ruskin and Carlyle in miscellancous bterature. Dr. Smith writes further .

"The American people," says Mr. Mabie, "have not yet come to full national self-consciousness. They have come to sectional self-consciousness; and, in New England, for example, that clear realization of ideals and formative tendencies found expression in a literature the beauty and the limitations of which are significant of New England character.' But this literary self-consciousness was not attained until New England had felt the thrill of a vigorous industrialism, Until 1830 New England had no vital literature. But between 1830 and 1850 it was represented by Longfellow, Lowell, Whittier, Hawthorne, Emerson, and Holmes, -the six men who have given the New England States their supremacy in American literature.

"The West and South had to wait for their industrial awakening until 1870. The West in 1830 was either unexplored or nucxploited. Neither Chicago nor San Francisco had been incorporated, and Cincinnati had worn city clothes but sixteen years, But in 1870 the Union Pacific Railrond, which opened the West to commerce with Asia on one side and with the Eastern States and Europe on the other, had just been completed; and Bret Harte had just written the first chapter of Western literature in his 'Luck of Roaring Camp."

Literature and industrialism, concludes the writer, are "but different phases of a nation's activity. While each remains true to its goal there can be no antagonism; there can be only the frankest concord and the heartiest cooperation. Each is necessary to the healthiest development of the other. Industrialism is the body, literature the spirit,"

#### DEATH OF PAUL LEICESTER FORD.

HE death of Paul Leicester Ford at the hands of his brother Malcolm removes an American writer whose reputation was made in the widely differing fields of bibliography and history on the one hand, and of popular fiction on the other. A "more hideous tragedy" than that which resulted in his death, declares the New York Sun, "can scarcely be recalled"; but "it had one merciful feature, in that his brother Malcolm killed himself."

The Springfield Republican pays tribute to Mr. Ford's "striking individuality and intellectual power." "Altho only thirtyseven years old," it remarks, "he had been for nearly a score of years reckoned among men of letters, and his historical labors

SUCCESS AND THE SATURDAY EVENING POST. as editor and author had given him a high standing before he wrote that important and impressive book. 'The Honorable Peter Stirling.' " The New York Commercial Advertiser says:

"Paul Leicester Ford was an interesting personage both as an individual and as a writer. Of frail physique and in the face of many other deterrent circumstances-among them the possession of sufficient wealth to render easy a life of idleness-he

PAUL LESCESTER FORD

sources; and he was something of an authority on Americana in partlenlar. It is, of course as a writer of fiction that he is best known to the world at large. It was his good fortune to please the public at least twice in a very marked degree. His first novel. The Honorable Peter Stirling,' remains his best; and its popularity differed somewhat from the popularity that was afterward enjoyed by

his own 'Janice Meredith,' and by the successful books of Mr. Churchill, Mr. Major, and the rest. 'Peter Stirling' did not enjoy an immediate 'boom,' but its vogue came gradually and it lasted steadily for five years, so that even now it is continually in demand. The book is a serious book in its purpose; and its pictures of our political life are nearer to the real thing than what one finds elsewhere. The very general belief that Mr. Cleveland was the unconscious model from which Ford drew the character of Peter Stirling gave a certain piquancy to the narrative. Of 'Janice Meredith' one can hardly say a great deal either in praise or blame. Its top graphy and historical coloring are accurate, which is more than one can say of many of its rivals; it came at the psychological moment when the colonial novel was in great demand, and of it there were sold some 200 .ooo copies. Mr. Ford's other books show much keenness of observation, and occasionally a neat turn of phrasing, tho his literary style in general was very careless and uneven.

Mr. Ford, in spite of his diminutive size and fracile appearance, possessed a strong personality. He was eminently masterful. In general conversation he almost always dominated the talk, and his high-pitched voice could be heard above the tones of all the others. He was remarkably quick in his intellectual processes, nimble in wit, mordant, jucisive, intense. A natural man of business, he drove hard bargains with publishers, playing off one against the other with consummate diplomacy; and yet all publishers sought him, for his books were eminently profitable even when secured upon his own terms. The fact that he did not really need the money gave him also a coign of vantage which most authors do not enjoy. In fact, in almost everything that life can give, except robust health, Mr. Ford was preeminently a successful, happy man; and this fact makes the circumstances of his tragic death the most distressing and denlorable."

Mr. Ford edited the writings of Thomas lefferson in ten volumes, the writings of John Dickinson in three volumes, and numerous other works of a historical character. He was the author of "The True George Washington" (1896) and "The Many-Sided Franklin" (1899); and at the time of his death was editor of The Bibliographer, a new monthly ionrnal devoted to the interests of the collector of books, manuscripts, and autographs, Other works of fiction written by him, in addition to those already mentioned were, "The Story of an Untold Love" (1897); "Tattle Tales of Cupid" (1898); and "Wanted-A Matchmaker"

(1900). His last book, announced but not yet published, is "The Journal of Hugh Gaine, Printer."

Mr. Ford married Grace Kidder, daughter of Edward H. Kidder, of Brooklyn, in December, tooo,

#### ESTIMATES OF BRET HARTE.

THE newspapers voice many different opinions as to the permanent worth of Bret Harte's work and the place that it will take in American literature, but all agree that in his chosen field as the interpreter of Western life he was supreme. "His work," says The Pall Mull Gazette (London), "was the common property of the Anglo-Saxons on both sides of the Atlantic." The following account of Bret Harte's career is condensed from the New York Evening Posts

Francis Bret Harte, whose vivid stories of an idealized wild West have made his name known wherever the English language is spoken, was born in Albany, N. Y., in 1839. In his veins was a mixture of English, German, and Hebrew blood. He migrated to California in 1851, living there the life of school-teacher, golddigger, and type-setter, and acting from 1864 to 1870 as Secretary of the United States branch mint at San Francisco. During this period he began to show marked literary abilities, and started a paper called The Californian. It proved a failure financially, but attracted wide attention to his work.

His full opportunity came with the establishment of The Overland Monthly in 1868, and his appointment as editor. From the first number he was a liberal contributor of poems, sketches, and stories, whose freshness, interest, variety, and originality at once created a great demand for the new magazine. In it first appeared those famous stories, "The Luck of Roaring Camp" and "The Outcasts of Poker Flat," which were followed in 1870 by "The Heathen Chinee," one of the most successful bits of humorous verse on record, which was quoted all over the conntry, and was soon almost as well known in Europe as in Amer-

ica. His fame was now assured. In 1878 Mr. Harte was appointed United States consul at Crefeld, Germany, a post which he held for two years. Then

he was transferred to a similar position at Glasgow, where he remained until 1885. Since that date he has lived chiefly in London.

Almost until the end\_his health had been in a precarious condition for some time-Mr. Harte continued to produce new stories, all more or less marked by the characteristics of his style, and irradiated by occasional flashes of his peculiar genius, but in his later productions the glowing inspiration of

his earlier efforts

FRANCIS BRET HARTE.

was missing. He was also the author of many poems which enjoyed much temporary popularity; and several of his stories have been adapted for the stage, with varying degrees of suc-

The greatest achievement of Bret Harte, in the opinion of the Boston Transcript, was that he "brought home to us the great fact that American life, even in its most elemental relations, in its greatest undress, is rich in material for a true and enduring literature." The same paper says further:

"He was a pioneer in the broadest sense of the word. Courage

REV. Hot.138 B. PRISSELL, Principal Hampton Institute.

DR CHARLES WILLIAM DARNEY, President University of Tennessee.

#### LEADERS IN THE SOUTHERN EDUCATIONAL MOVEMENT.

is always demanded in the man who sets about ignoring old fashions in any walk of life; but respecially is that true of the world of art. There are pleuty of men who can follow quietly in the wake of those who have biased the trails, keeping their cautious eyes upon the landmarks and their timid feet in the beaten paths, making good names because of what is called the artistic quality of their work; but there are very few who dare to strike off into the heart of a widereness, without chart or compass, playing the part of pathfinders. That was the rôle assumed by Bret Harte. If he had ever studied the use of the literary compass, he courageously forgot all about it when he took up his pen; it became outer does not cannot in seed of such along its eyes to the stars. The ability to do that marks Bret Harte as the possessor of initiative geatins.

The Chicago Evening Post sets a lower estimate on Bret Harte's workey While it conceled to him a secure and conspicuous place in American literature, it maintains that his reputation was made by the work that he did twenty years ago; and at since that time his literary output has been steadily on the decline. The Past continues:

"Mr. Harte neglected literature for other pursuits and experitated himself at a time when new conditions, new developments, and new currents in the great territory he was so familiar with should have marked a new advance in his career. He preferred to settle in London and live on his past, repeating himself in faint copies and miniations of his best work. Of all American writers Bret Harte could least afford to abandon the sacred fount of natural impiration, contact with life and humanity. To studies, the midnight oil is not necessarily fatal. To a Bret Harte the atmosphere was everything.

"His decline began at the time when he should have entered upon a second period of vigorous, spontaneous, original activity. No one knows what he might have done for American literature and for himself, but we know his failures and are entitled to draw from them a tolerably obvious uporal."

#### Of Mr. Harte's personality the Boston Journal says:

"Harte was a big-souled man. Up to the time be came East and submitted to head-uring flattery and the lucrative thraidom of the old-fashioned editoral chair be was Western in mood and in achievement. He was by nature a philosopher and roamer. He possessed the happy impulse of smiling at fate. He worked when be pleased and where he pleased. But his evident occupations were the philosopher's disguise. The miner—the eschool-teacher—the journalist—each of these parts was the as-

sumption of a shrewd and kindly student of that brusque yet chivalrous, that riotous yet honest, that altogether paradoxical type of human nature which characterized the Californiau fifty years ago."

#### THE SOUTHERN EDUCATION CRUSADE.

HE fifth annual Southern Educational Conference, held at Athens, Ga., a few days ago, marks something like au epoch in the educational development in the South. The Atlanta Journal goes so far as to say that "never before were there so many brainy men gathered together in a cause so inspiring and so truly unselfish." Special importance was given to this conference by the fact that it was the first since the inauguration of a new and most efficient "Southern Education Board," organized by such men as Robert C. Ogden, William H. Baldwin, Ir., Morris K. Jessup, and Dr. Daniel C. Gilman, and backed by large financial resources, including a million-dollar gift from John D. Rockefeller. "The attendance of the delegates," declares Mr. Hamilton W. Mabie, in his editorial correspondence to the New York Outlook (May 3), "was much the largest in the history of the Conference, every Southern State being represented, and almost every Southern institution of note and prominence, from the oldest university to the most recently organized public schools." He continues:

"Many topics were discussed at the several sessions of the Conference, but every topic was vitally related to the two great objects of the Southern board and of the Conference-the awakening of public interest throughout the South, and the advancement and extension of public-school opportunities until education is within reach of every boy and girl in the South, without reference to color. The Hon. Hoke Smith struck one of the keynotes of the Conference in the title of his address, 'Popular Education as the Primary Policy of the South'; Governor Aycock, of North Carolina, one of the most interesting men in the public life of the country, and one of the leaders of the New South. struck another keynote in his very effective plea for a generous support of popular education by the taxpayers; Dr. McIver, of the North Carolina State Normal and Industrial College, one of the leaders of the new movement, Dr. Alderman, President Dabney, the Hon. H. St. G. Tucker, of Virginia, Dr. Albert Shaw, of New York, Professor Farnam, of Yale, Dr. Felix Adler, Mr. William H, Baldwin, Jr., of New York, the Hon. H. Hugh Hanna, of Indianapolis, and Mr. Hamilton W, Mabie, were heard at different sessions on different aspects of the single problem of the education of Americans as a untional need for the sake of higher citizenship.

"It was significant that not a single note of retrogression was heard in any speech, and that all the notes of progress were emphatically applicated. Every Southern speaker duelt on the necessity of the broadest educational opportunities for both races, and this sentiment inver failed to meet with instant response, and this sentiment inver failed to meet with instant response. Every reference to the new relations between the North and the South was more than sympathetically received; and, by an act as just as it was generous, the Southern board, at its session on Saturday, the Memoral Day throughout the South, announced an unconditional gird of firty sciolarships for the benefit of the State Normal School, and the gift of firty additional scholarminon of the memories of the day, a gift to the Normal School of the Islance still needed to complete the library, which is to be known as the Winnie Davis Memoral I Hall.

Mr. Robert C, Ogden, of New York, who presided over the Conference, and who, previously to its sessions, chartered a special train in which he entertained his friends during an investigating tour through the South, is regarded as the leader of the new educational crusade. He tukes a very optimistic view of the notion, declaring that "a subsudid group of nen" is coming

MR. ROBERT C. OGDEN

fully capable of developing Southern educational possibilities. He outlines his plan of campaign (in The Educational Review, May) as follows:

the front and one

"The idea is this: Go into a locality, just as the Slater board and the Peabody board have done, and get the people to tax themselves. If there is not money enough to build a proper schooliouse, costing say \$1,000, put

people will raise and build it; then supplement what they will pay for teachers, get letter teachers by paying more. Give the people of a locality these facilities for three years or four years, and when they have had educational advantages for that period then you may withdraw your support; they will take eare of it then selves after that. But a million dollars for that purpose I will, it is a mere tride. A hundred millions could be used, and a hunried millions will be used before the work is throughly done."

The Southern papers seem disposed to adopt a very cordial attitude toward the new movement; the the Baltimore Sun complains that too much Northern money goes to educate the engon, and too little to educate the white man. "It is predicted by some," continues the same paper, "that in a generation or two it some communities the educational tests for the ballot will operate most severely against the white man rather than against the black man." The Richmond Thurst says:

"We are a very proud people and we never pass around the hat. We are not disposed to not favors from any, and some of the Southern people are so proud that they are unwilling to accept favors seven when proffered voluntarily by the Northern people. But we can see no reason why the people of the South should not accept in good falls the offer wholt these Northern millionarres propose to make in the line of promoting our educational interests.

#### CORKY'S FIRST DRAMA.

H AVING achieved an extraordinary success in the shortstory and novel forms of art, Maxim Gorky, the peet of the vagrant kingdom, has just refle this hand at the drama. The critics argue that he has won in this new field a signal triumph, Even those who are distinctly hostite to the philosophy of Gorky's fiction recognize the strength, the freshness, the vitality and sustained interest of his blay.

The theme is not new, 'The drama, entitled "Mestchanic" ("The Small Bonrgeois"), deals with the irrepressible conflict hetween the old and the new, the fathers and the sons, the declining order and that destined to supersede it. Turgeneff treat his scenes were laid among cultivated and refined people. Gorky portrays the life of a low-lired family, of a group of people representing the third estate, the poorer and larger part of the class insta above the nexant and weve-laborer.

Strictly speaking, his play is not a drama. It lacks developing Gorky himself calls it a series of scenes in the house of Bessenienoff, one of the principal characters. But each scene is declared to be significant, full of movement and life, and the whole seems to be an illustration of the "will-to-live" principle.

The story is slight, and it is difficult to convey an idea of the play by summarizing it. The St. Petersburg Navesti, in an enthusiastic review of the first and successful production of the play at the leading theater of the capital, thus tells the essential slot:

Bezsemienoff, a rich but illiterate and coarse tradesman, has a son, Peter, an ex-student who had been expiled from the unversity for some political offense; a daughter, Tatiana, a school teacher of modern ideas, and an adopted soo, Nick, a half-cucated mechanic. The same house shelters a vagrant "singer," disrendable, but keen and world-wise, named Teterieff.

This house is in a state of intellectual and noval choos. It is emphatically divided against itself. The literal is a despot of the old type, seeking to rule with a rol of iron; selfish, larsh, cruel, and unreasonable, he respects no one's rights to independent judgment and freedom. His children, ou the other hand, despise him and openly manifest their contempt for his ideas and ways. They are weak, superficial, and parasitival, but they have acquired the jargon of "advanced culture." Brutally and inexcusably do they abuse, ridicule, and mock their parents (for the mother, a negligible quantity, is also a figure in the drama to a slight extently when there is no possible occasion for it. Friction is constant, and yet there is no great, single, important eause of

Niel, the adopted son, is "the strong man," the true representative of the new order. He is practical, free, vigorous, and certain of his aims. Tatiana is in love with him, but he has httle respect or affection for this feeble specimen of the new woman. He is fould of a poor seamstress doing odd jobs for the family. She is simple, but healthy, nutural, attractive, and devoted. He matries her against the consent of the man who has been his recard. He wilks out hand-in-hand with his beloved—defant, confident, master of his destiny. To him life's riddle is easy of solution, and he is assured of a happy, wholesome existence.

Tatiana poisons herself, while the incapable Peter, also against father's wish, marries a lively widow of doubtful repotation. All leave their home, one after another. It is the law of nature: the new rises on the ruins of the old. The comments on the episodes of the play are put in Teterrelf's mouth, who is supposed to express the dramatics' sown views of life and human nature.

Notasti, in reviewing the production, deelates the play to be "a triumphant soug of life," an apothesis of lorce, mental and moral, of work and of freedom. The critic of the Nature I'remya is inclined to point out artistic flaws in the piece, but he admiss that all the characters are vividly and strongly portrayed, that the play is followed with intense interest, and that its moral is leadily, optimistic, and refreshing. Gorky's gunius, he adds, speaks here effectively and convincingly und artistically. Ferry character is flesh and blood, and their speech is not only intelligible und generally true to ustarce, but replace with characteristic native realism. The personages are typical and yet thoroughly individual.—Transitation made for True Literacts Ducker.

# SCIENCE AND INVENTION.

# A SCIENTIFIC INVESTIGATION OF A RELIGIOUS RELIC.

A CURIOUS religio-chemical investigation whose good faith an actionific accuracy seem to be vouched for by so high an authority as The Lance' (London), is described by the Paris correspondent of that paper. It is a photographic study of the so-called "holy shroud" or traditional winding-sheet of Christ, long preserved at Turin, Italy. The investigators, Professors Delago, Vignon, and Colson, who exhibited their pictures and described their results to the Academy of Sciences at Paris, come to the remarkable conclusion that the marks on the shroul are due to some natural photographic action of a human body on the chemicals with which it was once impregnated. Says the report in The Lancet:

"This winding sheet has on it certain markings printed in a brown color which when photographed give a white imprint, as does a negative when printed from. These markings, therefore, act as a true negative, and M. Vignon has shown by certain very careful experiments that cloth impregnated with oil and aloes, as was the winding sheet in question, will receive an impression when in contact with ammonical vapors such as would be given off from a sweat very rich in urea, as is the case in the sweat of a person dying a lingering and painful death.

"Any idea of fraud need not be considered, for no one has touched this winding sheet since 1953, and no painter at that date had the skill to reproduce such an exact drawing. The impression of the head is excellent. The wounds produced by the crown of thorns and the marks of the blood drops are quite obvicus. The wound in the side and even the marks of the stripes produced on the back by the flagellation are also quite evident. Each of these stripes has at its end an enlargement such as would be produced by a cord with a ball of lead at the end. It is well known that this form of scourge was employed by the Roman soldiers and such a one has been found at Pompeli. Finally, the marks of the nails in the arms are out in the palm of Finally, the marks of the nails in the arms are out in the palm of level of the wrist. M. Vignon's poper has created accreme interest both in the scientific and the relicious world."

The following editorial comment is made by The Lancet on its correspondent's report:

"The remarkable description which appears in our Paris notes of the photographs taken by M. Vignon seems to justify the belief that the human body is either radio-active or that it gives of 'vapors' which exhibit a similar action to light upon sensitive surfaces. We have frequently recorded in our columns the fact deduced in an elaborate research by D. W. J. Russell, P.R.S., that almost all substances are able in the dark to act on the photographic plate and to pode on pictures. The property of the proper

"In the case of the sheet in which tradition says that the dead Christ was wrapped we have the analog probably of a photographic plate or sensitized film. The cloth was impregnated with oils and aloes. It is well known that fixed oils are sensitive to oxidation and aloes contain constituents, allied to the pyrogallic acid series, which would probably turn brown in the presence of an oxidizing process. The action by which, therefore, the image of the dead Christ was recorded on the cloth would appear to be due to chemical change rather than to the effect of light. On this explanation an exact image even to minute dethe blood drops and of flagellation by whips of a definite kind is not by any means beyond the bounds of probability.

"It is an intensely remarkable and interesting instance of the high twist he very latest developments of scientific research may throw on traditions and controversial matters in history. We age face to face undoubtedly with a set of new phenomena, the ingidiatinct indications of the existence of emanations hitherto the outer recognized from both animate and inaminate bodies.

discovery of these emanations has been due to the fact that they effect the sensitized silver film, but there is no doubt that there is a very large number of substances also which are affected in a similar way, tho not to the same degree as silver in the presence of albuminous substances.

"Natural photographs appear on all sides, as is proved by the simple experiment of placing an opaque object on grass or on fresh gravel exposed to the light. An exact outline of the shape of the object will be found on removing it after a time. The property of radio activity is different, the substance in this case actually emitting raduations itself. The images due to the emanation of vapor are yet another but not less interesting phenomenon, as is abundantly manifested in the case of the traditional winding sikeet of Christ."

#### THE INVENTION OF WIRELESS TELEGRAPHY.

As the first experiments on which wireless telegraphy is based took place less than twenty years ago, it would seem possible to relate the history of the invention in a way that would not involve controversy. This is attempted by The Electricial World and Engineer (April 9). Referring to the recent classifier distributions of rival inventors, which have been loudly pushed of late, the editor stays:

"The bitterness of the controversy has reached a point where, for the sake of decency, a halt should be called, particularly as the warfare appears, from the manner in which patents are flourisided, to be a mercenary one instead of in the interests of scientific chronology. The matter has, in fact, ripened for the contrs, and the sooner it is brought in por legal adjudcation, the better, that the public may be spared an intefinite continuation of the present almost. In the matter has, the first proper that the public way have a signal of the proper way for the control of the present almost the state of the property of the property

The writer starts with the discovery of electric waves by Hertz about twenty years ago. Next comes the discovery of the socalled "coherer," or the "filings electric-wave detector," which was made by Onesti in 1884; but he did not seem clearly to apprehend its importance, and it was left for Branly in 1890 to rediscover and perfect the instrument practically as it exists today. In 1892 Crookes clearly suggested wireless telegraphy, but he did not know of the coherer and so his suggestions could not be put into practical form. In 1894 Lodge signaled forty yards across space with a coherer and an electric bell, and asserted that he could do so for at least half a mile. This experiment seems to have had no practical effect on the development of wireless telegraphy, and the first real wireless telegraph appears to have been the outcome of a suggestion by Popoff in 1895. This experimenter used the antennæ, since employed by Marconi, and a tapping-hammer to "decohere" his coherer. In the same year Marconi began his work. Of the precise part played by the Anglo-Italian in the development of the invention the writer speaks as follows:

"The first Marconi patent was applied for June 2, 1896, and a consideration of this will show the advance over his predecessors -an advance which was, in fact, the creation of the art of nonsyntonic wireless telegraphy as it exists to-day. This patent described the use of antennæ at both stations, the construction in detail of a transmitter particularly adapted to its purpose, the construction in detail of a Branly tube of extreme sensitiveness, the proper arrangement of the coherer, tapping, and relay cirenits, and of the transmitting and telegraphic circuits. In other words, his work was comparable to that of Edison in producing. in 1850, a complete practical system of incandescent lighting from elements, some new, but mostly old, their commercial coordination involving practical inventive ability of the highest order. Since then Marconi has added numerous other improvements to the system, the most important of which is the 'jigger,' or inductive relation between the tube and antenna

"The controversy over the invention of wireless telegraphy has

been conducted in such vague terms that the public could not otherwise than conclude that credit for every part of the invention was denied to Marconi and claimed by others. In point of fact, the apparently the claimants would deprive Marconi in the eyes of the public of all credit, yet the contentions of the two principal claimants relate specifically to the invention of syntonic telegraphy; and the patents which have been flourished and the experiments adduced relate specifically to the syntonic feature. and in date are subsequent to the date of issue of the fundamental Marconi patent. As Marconi has not disclosed the details of his system of syntonic telegraphy, we leave this branch of the subject for such a time when atl the facts will be at hand upon which to base an opinion as to the priority and relative credit of the several claimants. Whatever may be the issue with respect to syntonism, the credit will remain to Marconi of having created the art, unless better evidence can be produced to deprive him of it."

#### LORD KELVIN'S VISIT.

ORD KELVIN, better known to many as Sir William Thomson, which was his name before a peerage was conferred upon him in 1892 in recognition of his scientific work, has just come to the United States for his fourth visit, and all who are interested in science, pure or applied, have united to do house to the man who is probably to be regarded as the most eminent living scientist. At a special reception given to Lord and Lady

Kelvin at Columbia University April 21, he had an enthusiastle greeting. Says The Western Electrician (Chicago, April 26), speaking of the visit:

does for the fourth time, or Von Helmholtz, as it did in 1893, than in entertaining the kiusman of any monarch whose title to distinction is of mere hereditary right. In science, comparisons are even more odious than elsewhere; but surely no one can cavil at the assertion that the eminent Scotch-Irish professor is the greatest of living physicists. His contributions to the sum of human knowledge have been so numerous and varied that he will go down in history as one of the greatest scientists of the nineteenth century, which has been a period particularly rich in scientific investigation and achievement and characterized by many great names. And yet, at the ripe age of 78, Lord Kelvin is still a student-still striving, with simplicity and earnestness, to solve some of the many complex problems that natural philosophy presents to the human mind. He is a man entitled to the great honors be has received, and nowhere is the value of his work more highly appreciated than in the United States. Electrical investigators, in particular, look up to this living successor of Faraday and Maxwell as the 'Grand Old Man' of electrical science and venerate him for his accomplishments. American electrical men join in giving Lord and Lady Kelvin a hearty welcome and unite in the hope that the present visit may be a pleasaut one and not the last."

Says The Electrical World and Engineer, in its editorial columns (April 26):

"Lord Kelvin does not belong to England alone, but to the world at large, which his geous has made wastly more habitable and comprehensible. If any other country than Great Britain should claim him, however, it might well be the United States, for to him we owe perhaps more than to any other great mind the achievement constituted by the laying and operation of the Atlantic cable. What nobler work can scientific genius find than bringing mankind into closer and more brotherly relationships? Or if it be in the purely intellectual sphere that such an intellect should labor, regardless of human wants and welfare, surely Kelvin again is the man who has linked together not merely bemispheres, but planets and solar systems, by the cables of mathematical reasoning and physical demonstration, weighing even the universe in Kelvin balances.

"We are glad to know that keen as was the pleasure enjoyed by all who participated on Monday in greeting the green physicist, it was very thoroughly shared by the distinguished guests of the evening. And best of all has been the wider intelligent recognition in the public prints of the value of such work and services as Lord Kelvin has rendered in his day and generation. No better proof could be given that thetellect, rather than wealth or birth, still commands here the profoundest respect; and in a democratic community it would be a sad day when that were not the case. It is too much to expect that Lord Kelvin, hale and the case. It is too much to expect that Lord Kelvin, hale and occan wyage of 6 too mules; but we shall venture to believe and hope that the cordiality of his reception here and the benefit due to change of air and scene will add many years to a tife so rich in achievement of the highest and finest known to man."

At the reception alluded to above, Lord Kelvin spoke of his work in connection with the first Atlantic cable, giving great credit to the late Cyrus W. Field, and also gave it as his opinion that wireless telegraphy would never supplant the present methods, but rather would supplement them, as the telephone does the telegraph. He spoke also of the possibilities of Ningara and asserted that the cataract, beautiful as it is, would still be more so when all its power should be exerted in "turning the wheels of industry." President Nicholas Murray Butler referred to the guest as Great Britain's greatest teacher and inventor, Prof. Elihu Thomson, speaking for the Institute of Electrical Engineers, attributed a large amount of the progress achieved in the last twenty-five years in practical electricity to Kelvin's efforts, and termed him the "father of electrical engineers," asserting that before his time there had been practically no electrical engineering.

#### PHYSIQUE AND ABILITY.

THE question whether physique has anything to do with mental ability is discussed in The Practitioner (London) by Dr. James Cantlie. According to an abstract in The Medical Record, the writer says that our greatest thinkers and our foremost men in many branches of life are far from robust. Pale, sunken-cheeked men, with insignificant frame aud troublesome digestion, are often endowed with mental capacity of the highest order. It is often argued that it is brains that are wanted nowadays, not muscle, and we are apt to console ourselves that what the town-reared child loses in physique is gained in the rapid development of mental power. The typical citizen of the United States is pictured by Dr. Cantlie as a tall, gaunt, dyspeptic-visaged man with hollow cheeks and lined features. We are told. he says, to look upon this man as the concentration of progressive ability. "Can this be?" asks Dr. Cantlie. Can man's frame and physique be changed, and yet what we call a healthy race continue? Are the men just cited the kind of human beings wanted for the future, and, if so, is this a healthy individual, and are his children to inherit the earth? Dr. Cantlie replies to his own questions by saying: "We will let the United States answer for themselves—but as to Great Britain, such men are not the type we hope to see become general." Commenting on all this, The Medical Record says:

"In the first place it may be said that the evil effects upon the health and physique of living in large eitles are as greatly deplored —though not so evident—in this country as in Great Britain, and that the matter has for long received the weighty consideration of thunking men, with a view to bettering the condition of things, It is quite true that towur dwellers deteriorate physically, but it is by no means certain that they, as a rule, excel in mental powers. But even if it be so, this superior agility of brain will not compensate for the loss of stamlina and virility which is almost invariably the lot of a descendant of dwellers in leits.

"Regarding Mr. Cantle's remarks on the European's idea of a typical American, altho the picture is not outriedy out of drawing, yet it is sufficiently so to convey a mistaken impression of the inhabitants of America taken en marise. The American whose ancestors have been in the country for generations is, perhaps, inclined to be a nervous, excitable, energetic, and somewhat dyapeptic individual; but, nevertheless, not generally unhealthy, and most decidedly not effect.

"But the fact must always be borne in mind that the United States is continually taking in fresh blood, which keeps up the standard of her population as a whole to a height quite equal, if not superior, to that of any European nation.

"No one, however, can disagree with Mr. Cantlie's contention that ability without physique is not of much use, and also that town life tends to degenerate the physical powers."

An interesting point in *The Record's* reply to Dr. Cantlie is its admission that the true American—he of several generations of American ancestry—is inclined to be neurotic. Is it true that our only hope is in continued immigration?

#### MAKING OF THE HALF-TONE PLATE.

THE "half-tone" photographic reproduction has revolutionized book and newspaper illustration. Some rejoice at this, while others grieve; but probably few of either class realize the care that must be taken in the preparation of a good halftone plate. In a paper read by J. L. Shelling before the Chicago Trade Press Association, and printed in *The Inland Printer*, the following information is given on this joint.

"A half-tone screen consists of two pieces of glass, each ruled with alternating black and white lines of equal dimensions at an angle of forty-five degrees. These two pieces are then cemented together with the lines at right angles, thus making a grating or screen. This screen is placed in the camera next to the sensitive plate, and the pictures photographed through it. The screen is the foundation for the process, and the principle involved has not been changed since the earliest patent was granted. Numerous other methods have been tried, but the mechaujcal lines of the half-tone screen have not been improved upon. But for this mechanically ruled screen we would not be able to reproduce colors with three or four printings that forme, ly required from teu to twenty impressions in lithography. All other methods that have been tried with a view to improving on the half-tone screen have a rough and unpleasing appearance, while the regular lines and dots of the half-tone give us a smooth, soft, clean picture, with all the modulation of the photograph.

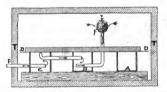

"Did it ever occur to you that the surface of the half-tone plate is composed of thousands of little dots, every one of a different size, and so small that you have to use a magnifier to see them; but if one were missing or not of the proper size it who show in the proof? Yet it is true, and they are all watched by every man who handles the plate from the time the negative is mado until the plate is delivered, and if one is missing it must be put in or a new plate made; that is, if high-gradle work is desired. How many of these dots me there in a square inch of half-tone? The ordinary screen, composed of 30 lines to the inch, has 22,500 black dots, and an equal number of white papaces. You talk about detail in your business. When you have to look after 22,500 dots to every square inch of your work, and see that none become loot, straved, or stollen, you can talk

about being busy. Just for the novelty of the thing we figured up the number of dots required to make up the surface of the large Dowie plate made by our concern, which measured approximately 24 by 95 inches, and was made on 133-line screen. There were 2, 204 quater inches in the plate, with 17,689 black todos per square inch—a total of 40,756,456; so you see we need good eyes and good glasses in order to make perfect printing plates.

"In addition to looking after all these little dots, the processman has to keep an eye on the wather. If the wind changes to wind change, to kender, or south, or it is warm or cold, damp or dry, he mnat change his methods and his chemicals to suit; and while he is reasonably sure he can deliver the cut on the day promised, he reasonably sure he can deliver the cut on the day promised, he that could happen before it was delivered into your hands that that could happen before it was delivered into your hands that you. So when your engraver tells you that he had an accident now thy you. So when your engraver tells you that he had an accident with your plate and can not deliver it until the next day, just be charitable with him, and remember the 22.500 little dots per square rich that he has to keep in place,"

#### ODOR AND THE NEW RADIATION.

THE curious radiation, discovered by Becquerel and named after him, which is given of by certain substances and can pass, like the Roentgen rays, through some solid bodies, has already been described in these columns. The best opinion now holds that this radiation is not a wave phenomenon like light, but is due to extremely small particles thrown off by the radiant bodies. These particles may be identical with the "chips" or "electrons" which, according to Thomson's theory, are given of by atoms. But whatever may be the nature of the emanation from radium, uranium, and the other so-called radio-active bodies, it is now asserted by Prof. William Crookes that it is the same emanation that gives rise to the sense of smell. In other words, for the first time in the history of physics, the physical

DEVICE TO SHOW THAT THE EMANATIONS FROM HADIO-ACTIVE SUBSTANCES CAN BE CARRIED FROM PLACE TO PLACE BY AIR.

cause of odor seems to have been connected with the other physical phenomena known to science. There are great possibilities in this theory, as we are assured by M. W. de Fonville in Cosmoz (April 12). Says this writer:

"The ideas and experiments of Professor Crookes are well shown in the figure. . . . All known odorous substances are carried by the atmosphere, which is, as it were, impregnated with them. In fact, it is only by the inspiration of a certain quantity of air into the nasal fossæ that such substances come into contact with the moist membrane that lines the interior. This contact produces a chemical action that gives rise to sensation of a particular kind. Some of these substances, such as chlorin, are simple bodies, while others are of very complex constitution. But they must all be dissolved by the air, must impregnate it, and then must be carried along with it. This impregnation lasts very long. Spuff-boxes that have been loug in use may preserve their odor for years while remaining quite empty. In order to show that radio-conductive substances are similar to odorous substances, it is necessary to prove that air impregnated with the former can be carried about without entirely losing radio-active properties and will act on a photographic plate as if that plate were in the presence of the radiant objects themselves. The nature and significance of the experiment will be understood by a reference to the figure. The box T is of wood and closed so tightly that all exterior light is excluded. Sensitivel paper is placed on the table D. The air is impregnated with the effluvium of radium or transim by a prolonged exposure in the compartment B, at the bottom of which the radio-active substance is placed. The air from the compartment B is denoted in the theorem because of the compartment when the proposed in the compartment which can work at the rate of about ten quarts a minute and which is kept in action during the whole experiment. At the bottom of the compartment A are placed the same radio-active substances as 1 n B.

"If we have to do with radium compounds, which are always luminous, they are covered with black paper or with an aluminum screen.

"With radium the action in the compartment N was at the end of eleven hours 0.68 of that in the compartment A, where the sir was still; thirty-two per cent of the electrons had been taken up by the 1 to liters of air removed. Again, this air had acted in its turn in the compartment C. The action on the place exposed under these conditions was quite noticeable. It was six to seen per cent of the action noted in the compartment A.

"If we accept the authenticity of the facts reported by Professor Crookes we must admit that the electrons are transported by the air, like the perfumes of flowers. We know certainly and from repeated observation that they act on the retius, where they give rise to phenomena of phosphorescence. It is difficult enough to admit that these hypothetical particles act on two senses [sight and smell] at once, but it is no less difficult to accept the control of the control

"The action of smell has been greatly neglected by physicists. One of the good poiats about these new hypotheses will be to put an end to a feeling of contempt regarding the subject that is quite unjustifiable. The sevue of smell, it is true, is almost obliterated in civilized man, and even among savages it is far from comparable to that of some animals. But is it not the same with the sense of sight? Can the English compare with the Boers in their power to distinguish distant objects". . . And can English, Boers, or savages hold place with carrier pigeons for acuteness of vision? And has this fact interfered with the development of the science of optics? We have discovered specialcies and telescopes with which the near-sighted can see better than all the comparable of the science of optics? We have discovered specialcies and telescopes with which the near-sighted can see better than lastruments for augmenting our sensitiveness to odors. "Translation made for The Literask Digies."

#### AN ENGLISH CLAIM TO PRIORITY.

ME are constantly hearing so much of American industrial supremacy and of our mechanical and commercial conquests that it is well once in a while to glance at the other side of the shield. We are familiar with articles in English journals lauding our methods and lamenting England's degeneracy. Our trade papers naturally fail to copy those that take the opposite tone; and so we are in danger of getting a one-sided view and of suffering from inordinate self-esteem. Our attention is called by The Street Railway Journal to the fact that, even in the field of electric transportation, where we had supposed our primacy as undisputed, there are other claimants for honors as pioneers, and our "pretensions" are ridiculed. At a recent meeting of the British Society of Arts, presided over by Prof. Silvanus P. Thompson, and participated in by Aiexander Siemens, W. M. Mordey, and Ferranti, the inventor, a paper was read by J. C. Robinson on "Tubes, Trams, and Trains of London," in which, according to the journal mentioned above, "the speakers united in denouncing the policy and tendency of adopting American methods and machinery, and contended that we were not entitled to the credit that had been given us for our work in this particular branch." To quote further:

"A sharp Yankee trick had been played in reality; our con-

fiding Eaglish consins had been betrayed; their ideas, iaventions, and plans had been stolen and the rest of the world had been hoodwinked into giving to the despoiler credit which rightly belonged to Eaglishmea. We are gravely told by Mr. Mortley, for instance, that priority of title to the electric road of to-day rests in England. We presume he bases this claim upon the establishment of the Portrush line, which is conveniently designated as a British enterprise for this occasion. If our Eaglish consins have lost any credit for the work they have done in Ireland, they should attribute their failure to secure it to a Fenian conspiracy. But how are we to explain later transactions of similar aspect? Here is an indictment presented by Mr. Mordey:

"England was the pioneer of electric traction. Years before any tramways were running in the States street tramways were running in England by the method now in use in America, When the first tube railways—the City and South London—was When the first tube railways—the City and South London—was recers, who reported that it was impossible for such a system of traction to take the place of steam traction on the overriend railways. After the Liverpool overhead railway was opened andier American deputation was seat over, with the result that a bead railway. Yet the Americans whea they visited England were welcomed as the pioneers of electric traction."

"The worst is yet to come. Mr. Mordey denies us all credit for progressiveness. 'America, having no roads fit to walk or ride on,' he says,' and no horses or 'buses, has been driven to establish electric traction services. It was not due to the enterprise of Americans, but to the absence of any other facilities for getting alroat, that the great transvay work had been done in the States.' We fear that Mr. Mordey must have gotten his ideas of America from Dickens' description of Martia Chuzalewit's experience in Eden. It looks very nucle as if the Water-Toast Association of United Sympathizers had been transplanted to England, or had at least imparted its spirit to the Society of

How Hair Turns White,-Important information with regard to the magaer in which hair bleaches is given in a communication from E. Metchnikoff, recently published in the "Proceedings " of the Royal Society of London. "It is there stated," says Knowledge, "that the all-devouring cells known as phagocytes are the cause of the mischief. These cells, which frequently have ameba-like processes, are developed in the central or medullary part of the hair, whence they make their way into the outer or cortical layer, where they absorb and thus destroy the pigment granules. Numbers of these phagocytes may be seen ia hair which is commencing to turn white. 'The part played by phagocytes,' writes the author, 'in the whitening of hair explains many phenomena observed long ago, but not as yet sufficiently understood,' Thus the phenomeaon of hair turning white in a single night, or in a few days, may be explained by the increased activity of the phagocytes, which remove the pigment within an abnormally short period."

#### SCIENCE BREVITIES.

It might be thought that a glacier would be the last place to search for microbes. According to a note presented to the Paris Academy of Sciences by Janusco, the celebrated French autonomer, however, M. Binor, Mont Blance glacers from the lacet-collegical standpoint by taking borings at different points, so as to bring up appeareness of ice from various depths, crobes of different appearance of the properties of the collegical standpoint of the collegical crobes of different appearance of the collegical secondaries of the crobes of the collegical points and the collegic of the collegical secondaries of the crobes of the collegical points and the collegical points and the collegical points are cropped to the collegic of the collegic co

REFERINO to the recent enactment of the New York board of health opervent containing from the promiseous use of brushes, sizons, rators, etc., in barbers' shops, Tak Lauer (London, April 3) says: "The question arises whether the barbers will endeavor to meet these use exiguesics. Historically apeaking, the barbers, whose precursors used to be barbers, and the same that the property of the property of the same and be willing to apply its principies to the miner and pulnices operations which they now perform. Trivial as these operations may seem they are not absolutely free from danger; and to not knowledge some barbers, both in Paris and in London, have already introduced antiseptic principles into their hist-dressing asiloons. They sterillus their metallic controls, their they are used, and it would be well if these and other precautions were more generally applied."

#### THE RELIGIOUS WORLD.

#### ARCHBISHOP CORRIGAN.

THE sudden death of Archbishop Corrigan, at a time when he was believed to be well on the way toward recovery from his recent illness, is regarded as a heavy loss to the Roman Catholic Church. "He was one of the most intrepid champions of Catholicking," the Prope declared when he received the news of the Archbishop's death; "America loses one of her best citizens and the church a devoted son. It has been one of the greatest bitternesses of my long life to see the strongest champions of the militant church claimed by death." Not merely the prominence of his position as "bead of the greatest diocece in America." gave

him distinction, observes the San Francisco Monitor (Rom. Cath.). but the strength of his own personality. "Under his lead and guidance," adds the Buffalo Catholie Union and Times, "the church, with all her salutary institutions of an educational and charitable nature, has made phenomenal progress in the chief city of the republic." The New York Catholic News thinks that if any proof were necessary to show the high esteem in which the Archbishop was held, "it was furnished by his serious illness":

"The rich and the poor, the amighty and the obscure, have been eager for encouraging news from his bedside. Whilst his devoted Catholic people were offering up prayers that their beloved predicts a garden and the property of the property

The New York Churchman (Prot. Episc.) prints the following brief resume of the Archbishop's career:

"He was a forceful character, a striking personality, and had a carreer of remarkable distinction. At, twenty-five he was a Doctor of Divinity, at twenty-nine president of Seton Hall, Orange, atthirty-four a bishop, the youngest ever consecra-

ted in the Roman Church in America, at forty-one coadjutor of New York, the most important diocese of his church in America, and five years later archbishop. His rule for the last seventeen years was that of a wise despot, if despotism can ever be wise; but the iron hand was always in the velvet glove, and the first impression of those who met him was that of a sweet and geutle modesty. His judgment seemed to crystallize slowly; but, ouce formed, it was immovable. One of his fellow bishops described him as a moss-covered rock. He gave absolute obedience to his superiors, and demanded it from his inferiors. It was this disposition that caused the clash with Father McGlynn, the shock of which was felt far outside their own communion as an assault upon political free speech. The archbishop was a strong and uncompromising opponent of Socialism in the state and of what has come to be termed 'Americanism' in the Roman Church, an intransigeant advocate of parochial schools. His ecclesiastical policy placed him in almost constant opposition to Cardinal Gibbons and Archbishop Ireland, and altho he seemed to win the day at Rome, it has been thought not without significance that he failed to receive the cardinalate or to shake the confidence that Pope Leo conspicuously placed in Archbishop Ireland,"

Several papers recall the fact that the Archbishop was "the son of a grocer," a fact which leads the New York II Furd to recognize in his lite "another conspicators proof that "the Republic is Opportunity." His rapid rise to ecclesiastical honors, says the New York Timer, "is without parallel in the history of the Catholic Church in this country." Some idea of the magnitude of the work carried on under his direction is given by the Rochester Patter Layers."

"The Catholic population of the see is about 1,200,000. In ten years 19,68,2 bulbram and adults were prepared for confirmation: 1,200,000 confessions were leard; 330,344 persons were baptized; 55,44 marriages were celebrated. There is one theological semuncy, where 200 young men are trained for religious work; there are four colleges, with an attendance of 1,500; twenty academies

for boys and thirty-five for girls, with au attendance of 3,500: 200 parochial schools, with an attendance of 65,000; eight orphan asylums, with 3,000 children; nine iudustrial and reform schools, with 3,500 children; twenty homes for destitute children, caring for 10,000 children annually; ten hospitals, sheltering 5,000 persons; a foundling asylum, with 2,000 inmates. and many other charitable and semi-charitable institutions. church edifices in the see of New York exceed 300 in number, and the church property is valued at \$50,000,000, on which the indebtedness is less than \$6,000,000. The successful upbuilding of the church in the see of New York was due very largely to the character and capacity of Archbishop Corrigan. He was phenomenally successful in business affairs as well as in spiritual affairs, and will long be remembered not only by the Catholics but by the Protestants of the United States as a singularly pious, lovable, and exemplary man."

Probably the most famous incident in the Archbishop's life was his conflict with Dr. McGlyan, and tho his natitude toward that priest was sustained by the papal authorities, popular sympathy undoubtedly went out to Father McGlyan. Says the New York Tribune.

ARCHBISHOP MICHAEL AUGUSTINE CORRIGAN.
Prom a photograph taken in 1800.

"The course of Archbishop Corrigan in the McGlynn case did not

at the time meet the approval of all Catholics, and it is possible that he may have made some tactical mistakes in dealing with that recalcitrant priest, the the issues, largely emotional and rhetorical, that were raised in that case have now almost completely disappeared, with no apparent harm to the church, The Archbishop, in fact, was by temperament unfitted fully to understand such a man as Dr. McGlynu. He was an accomplished canonist and theologian, with the methodical mind of an administrator and the typical ecclesiastic's reverence for church law and tradition. Dr. McGlynn, on the other hand, was a warm-hearted and emotional Irishman, the typical 'Soggarth Aroon ' of Irish folklore, most lovable in all personal relations, but hazy in his thinking, inexact as a scholar, and easily led into indefensible positions by his emotional exuberance and fondness for fine rhetoric. . . . Whatever else it was or was not, the course of Dr. McGlynn was plainly subversive of discipline, and that was a fault which the Archbishop of New York could least easily forgive."

"The one criticism made by men of other faiths who knew the lovely qualities of his nature," adds the New York Mail and

Expects," was that he lacked broad sympathy with the spirit of modernity. To deny this would leave an estimate of him unfair. But it was so only because Archbishop Corrigan saw the new spirit only as a menace to the church to which his life and all that was his had been wholly consecrated."

The Archbishop leaves behind him comparatively little personal property, having contributed the greater part of his private fortune to the theological seminary that he established at Dunwoodle, near Yonkers. Speculation as to his successor, the induged in by several papers, is considered entirely premature, as the canonical procedure for choosing an Archbishop requires a minimum of three months and may occupy twice that time.

#### THE PREVAILING RELIGIOUS ESTHETICISM.

A MARKED tendency in the direction of more florid nud elaborate forms of public worship is being manifested on the part of several prominent Nonconformist churches. Says the New York Sun (April 15):

"On Easter Sunday the Washington Heights Baptist Church (New York) started the innovation of a vested choir of sixty voices, with cassock and cotta oud the women wearing also mortar-board hats. That is, the vestiments are the same as in Episcopial churches. The introduction of such a choir into the Metropolitan Methodist Temple, a year ago, proved so successful, dist churches, one at Chicago having come into line recently and conspicuously.

"This is very suggestive because the two Protestant churches which in the pass were always most distinguished by the extreme simplicity of their worship and their church architecture, and were most violently opposed to anything like mere estheticism in religious services, were the Baptist and the Methodist. They were pain people, and all worldly display, in rainnent and in social life, was eschewed by them. Methodists were enjoined by Wesley, in his 'General Rules,' to 'evidence their desire of sal-vation' by refraining from 'putting on of gold and costly apparel.' Like assertied of life was the Baptist role, and the meeting-houses of both denominations were usually without steeples or any other marks of a distinctively ecclesiantial architecture.'

Such "revolutionary" changes os those chronicled, remarks  $The Sun_1$  would have stirred up "violent protest" a generation ago. Now they seen: "rather to provoke an amiable desire to extend the innovation." The same paper proceeds to ask:

"Will these ritualistic Baptist and Methodist clurches stop with vested choics merely? Will they not go on, naturally and logically, to the adoption of other features of the liturgical clurches they are initiating? We are likely to see the cross introduced, and perhaps the time will come when the plain communion table will give place to a veritable nature, with all its religious significance. This is, therefore, a serious innovation suggestive of a radical doctrinal transformation in the future. We have seen how ritualism in the Episcopal church has advanced to nodd teaching of the Real Presence.

The New York Independent (May 1), in a lengthy editorial on the same subject, takes the view that "the fresh inroad of ritualism" is fraught with danger to sincere religion. It says:

"In our Roman Catholic and other sacramentarian clurches the ritual grows out of the faith und can be thus justified, but the new ritualism being adopted in our non-liturgical clurches is of another order. It seems to have two different explorations. To some extent it may, as Professor Goldwis Smith lately said, indicate 'the growth of n routoum in the region of religious belief, which music, art, flowers, and pageantry are required to fill. When and women who do uot really believe very much yet want a quasi-religious sentimentality which can pass for religion. The form of godliness may be kept where its power is lost, and the form of most professor in the same properties of the s

quieting and soothing, and has marked the loss of real faith and relivious force."

Another principal cause of the growth of ritualism, continues

The Independent, is the "imitativeness of fashion." On this
point it says:

"Just as sacramentarianism in the Church of England copied the forms of the older and more venerable Roman Church, so, to Dissenters in England and to the hitherto nou-liturgical denominations in this country, the Episcopal Church, with its stately . service, looks venerable and admirable. It claims precedence and it provides high dignities of office and worship. It attracts fashion and wealth. Just as in England a rich Dissenter is drawn into the Established Church, so here the drift in society is to the Episcopal Church, and the reason given always is that we so like the service.' It therefore is supposed to be a necessity for Presbyterian, Methodist, and Baptist churches to assimilate their worship to that of the Episcopal Church, in order to provide a service which will hold a while longer those who are escaping to the more fashionable city denomination. And at the same time there is, of course, n real pleasure token by many in the more spectacular forms of worship and a revulsion from the Puritan simplicity which has characterized our services. Beyond question ritualism is bound to grow in all our churches. It would be a great misfortune, however, if the activity which is truly religious, and which has been directed to the service of men, should be expended in services, however artistic and esthetic,"

#### CAN MORALITY EXIST WITHOUT RELIGION?

R ELIGION plays so large a part in the cthical development of the human race that it is sometimes assumed that without religion morality could not exist at all. But altho religion is admitted to be among the greatest cthical forces in the world, many modern thinker's are unwilling to concede that a rejection of theological dogman necessarily involves the repudiation of moral standards. Prof. Goldwin Smith, of Toronto, who has recently been giving this question some attention, declares his belief that were Christiauity and the belief in immortality to be finally abandoned, the world would experience "a bad quarter of an hour." Nevertheless, ho adds:

"Whatever turn may ultimately be taken by our convictions about a hereafter, society will uphold by law or social influenrules necessary to its own security and convenience here. It may even uphold them more ingrously, perhaps cruelly, if it is convinced that the present life is all. The natural affections, parental, conjugal, and social, will also retain their force."

Prof. Morris Jastrow, of the University of Pennsylvania, takes a similar view in his recently published book on "The Study of Religion." "The religious sentiment in man," he says, "has an existence quite independent of morality, and one can even conceive of religions that do not foster morality." The gods of the savages, for example, are often an "accentuation of dormant or innate cruelty," and their favor is invoked by "bribes, flatteries, and threats," It is obvious, declares Professor Instrow, that man can not ascribe ethical quelities to his gods "until he himself has proceeded far enough along the line of moral development to have established for his own guidance some ethical principles, however simple they may be." According to this view, it is "man's ethical sense that exerts an influence upon his beliefs," and not vice versa. Or, to put it in another way: "Religion and ethics may be likened to two streams that have an independent source, but which flow toward one another until they unite, and eventually become one."

The life and thought of ancient Greece, continues the writer, affords a striking illustration of the separation of religion and ethics. Socrates, who at first attempted to give his philosophy a religious character, was "unable to resist the movement which finds its highest exponents in Plato and Aristotle, the former enhoring Reason as the ultimate source of ethics, the latter pro-

posing instead to assign the place to Will." The Buddhist religion has also shown "marked tendencies" in the same direction. "The pessimistic view of life, favored by the great religion of India," says Professor Jastrow, "helps to remove the religious sanction for ethics, altho so strongly maintained by some of the religious thinkers, and we find systems of morality cropping up in which there is no place for a central supramundane authority Imposing His laws upon mankind." In the case of Christianity, "it is not philosophy, but a skeptieism as to the fundamental doctrines of Christianity, which gives vitality to the movement to divorce ethics from religion." Professor Instroy adds:

"Religion is no longer the source of ethics, but proves a stimulus to it. Matthew Arnold's definition of religion as morality touched with emotion,' while defective as a definition, yet re-

PROP. MORRIS LASTROW.

We quote from the New York Tribune :

flects this modern relationship between religion and ethics. . . . But white religion thus furnishes the stumulus to morality, it must be confessed that in the most advanced or if you choose, the most diluted forms of faith, the influence of ethics on religion is reduced to a minimum. There may be ethical strains in these forms of faith, but if that is the case it is due to the inevitable entrance of ethical considerations into any purely intellectual interpretation of the universe-and its mysterins "

Someinteresting facts relative to the influence of religion upon conduct are furnished by a clergyman of a Western city who has gathered statisties about those who have dropped away from the local churches during the last ten years.

"Out of 670 adults now living who have ceased to go to church during that period, 239 were originally poor church-members, ranging all the way from notorious evil-livers to indifferent worldlings. Since these 239 have formally withdrawn from the church their moral condition has in no wise changed, except that a few of them are somewhat more open in their defiance of the moral law. Of the remaining 440, eighteen have deteriorated morally since they left the church. Nearly all of them, it is declared, are persons of unusually weak character, easily led by temptation to do wrong, and one of them confessed that while he was a member of the church he was kept from evil courses not by his belief in Christianity, but by the desire not to seem recreant to the faith he professed. Sixty-three persons have apparently led better lives since they left the church, tho the change has not been at all marked, and one of these sixty-three declares that he is a better man now because he wants to show his church friends that unbelief does not imply immorality. The remaining 359 of the 679 backsliders are morally pretty much the same as they were before. They continue to be reputable citizens, and are impelled by the same motives of self-interest, touched occasionally by unselfish impulses, that appeared to govern them when they were members of the church.

"It would perhaps he too much to assume that the results of this particular census would be true of the non-churchgoers of other communities. There may have been special circumstances in the city where it was taken that tended to make the result favorable as to the non-churchgoers; for favorable it certainly is, It is desirable, therefore, that some such investigation be made In other communities, as only in this way can the question be finally decided whether a rejection of the teachings of religion does or does not result in moral deterioration; and it would be better if it were made by men representing the church, as in that case religious men would have no reason to question its fairness."

#### CHILDREN AND CHURCH-MEMBERSHIP.

TF it be true that church-membership has declined during recent years, and this conclusion is being put forward with increasing persistency, this decline is due, according to the view taken by many students of religious conditions, in no small measure to the neglect of the proper religious education of children. "One has only to look at the year-book of the churches," says Mr. Frederick Lynch, a writer in The Outlook (April 12), "to satisfy himself that church after church with very large schools are receiving by confession a beggarly few of their many children. There is only one conclusion to come to-namely, that the great crowd of children that make up our schools slip through our fingers out into the great churchless world, while in the whole order of nature they ought to pass into the church as the boy passes from the grammar-school to the high-school." He adds:

The membership of to-day was largely recruited from revivals of religion, but revivals seem to have had their day. The only hope of the future is in holding the children. On this we are all agreed. There seems to be little faith, however, in the possibility of doing this. But I believe it can be done; and I believe the time is coming when the Protestant Church will take every child into its bosom just as the Roman Catholic Church across the street from me is doing."

In every church, declares Mr. Lynch, it is essential that there should be at least one man-and if he can not be obtained in any other way he should be hired-"well trained," "religiously educated," and "of consecrated personality," who should make it his special work to train the children of the parish. Mr. Lynch continues:

"Let him take these children at ten and instil into their minds the idea that the church is just as much to be thought of as having a place in their future as the home or trade or profession. Make them think that they are born for the church just as they are born for the state, and that while the common schools are educating them for citizenship in the state, he is training them for citizenship in the church, and that one follows just as paturally as the other. But this training most have all the system and regularity of the public schools. Above all, the children must be taken at this early age and put through a regular course of training in religious things until at fourteen they are received into the church and become its efficient workers. (You will be surprised to find how many are ready and desirous to join the church before the age of fourteen.) Where this suggestion has been faithfully carried out, these results have almost invariably followed:

- "1. Almost all of the boys and girls passed over naturally into church-membership.
- "2. Most of them have grown up seriously interested in spiritual things.
- "3. They have all of them gone out into life with a thorough knowledge of the Christian religion and of the teachings and ethics of Jesus, and with a high ideal of manhood,"

The Episcopal Recorder (Philadelphia), in an editorial on the same subject, laments the growing tendency on the part of parents to give their sanction to the non-attendance of their children at church service. "Parents are altogether too indifferent in this matter, especially in cities," declares The Church Economist (New York). It says further:

"In this connection it might be said that the Sunday-school is a splendid supplement to church attendance, but a poor substitute for it. In this age of specialization, many look upon the Sunday-school as the children's church. This is a grave mis-

"The Sunday-school has information for its keynote, not worship. Its stirring activity, its friendly bustle, its conversational and familiar atmosphere lack the quality of reverence which is the very first essential of public worship. The best Sundayschool for a child, if there can be but one, is a seat in the family pew beside its parents, at the ordinary services of the church."

## RELIGIOUS STATISTICS REVISED BY A MOSLEM.

A TTENTION has often been called to the unreliability of religious statistics. Islam (Paris), the international review of Islamism, commenting on the subject, says that altho we do not know, within a hundred million, the number of living human beings populating the globe, we are expected to believe that there are 230,806,535 Roman Catholics and 145,237,035 Protestants. The number of Mussulmans is estimated at 176,833,372, "not one more, not one less." Accepting these figures for what they are worth, it is interesting to know, declares the Moslem paper, "which is the religion possessing most adherents." It continues:

"Toward the middle of the nineteenth century Schopenhauer was authority for the statement that Buddhism was in the lead: the great pessimist was misled by the idea that the religion of Nirvana, which teaches annihilation as the supreme goal of human activity, had the largest number of followers on our planet. Renan and Louis Renard accepted this view, and it was computed that the Buddhists numbered between 500 and 600 milhons, all the Chinese and Japanese being recorded as Buddhists, A close investigation has demonstrated how false these figures were. It has been discovered that the Chinese practise several religions at the same time. They have very few priests, the cult of ancestors and the state religion requiring none. Yet they receive with respect the priests of Taoism (the cult established by Tao-Tsen) and those of Buddhism. These priests come to the funeral to sing, and the ceremony looks more imposing on that account; but this is all. Buddhism is dominant only in Tibet and the Northern provinces of Mongolia, and the true Buddhists bardly number one hundred millions."

Regarding the statistics of Christian believers, Islam says:

"If we classify as Christians all the Europeans who practise no other religion, we may reach 550 millions. Excluding the small sects, like the Armenians, the Jacobites, the Copts, the Abyssinians, etc., we find three large groups of Christians: the Roman Catholies, about 240 millions; the Protestants 170 to 180 millions; the Greek Catholics 120 millions. Protestantism progresses more rapidly than the other religions, but it predominates only in Northern Europe and Northern America; Oriental Europe and Russian Asia belong to the Greek Church. The Latin people of Europe and of South America are Roman Catholic. Protestants and Roman Catholics strive with each other in their efforts to conquer adherents from the outside. Their missions cost a large amount of money and bring but meager results, From 1882 to 1890, for instance, the 'Société de la Propagation de la Foj ' and the 'Association de la Sainte-Enfance ' spent 328 million fraucs; the British missious spent 784 millions from 1860 to 1884. They have converted a few African savages, several outcast Chinamen, and some Levantines in quest of a protector."

The Moslem review goes on to state that the statistics do not show the enormous loss of ancient religions through incredulity or indifference. If practising Christians only should be counted, not one-half of them would remain. It adds:

"Islam can place more reliance in its believers; most of them practise their religion, and very few are converted to other creeds. There are probably some \$28,700,000 Mussulmans. In Africa alone we count to a million disciples of the Prophet; we find 37 millions in Malaysia. The largest group is in India. A similar number is to be found in the Ottoman empire, in the Russian dominion, in French Africa, in Algeria, on the Niger, and in the Kongo. The Mussulman propaganda is the most active and energicie of all, on account of its religious fraternities, and it is the only religious which extends its sphere of action through numerous conversions.

"The religion of India, Hinduism, formerly called Brahman-Ism, has zon million followers; Shintoism, the national cult of Japan is practised by zo million people. Then come the cults of the vanquished which have survived to the nations practising them: Judaism, l'arcsetism, and the Mandaism of the ancient Persians. These small minorities play an important part in our social economy. Uproteel from the native soil, they have acquired financial power, and their religious solidarity is probably stronger than the solidarity of all others."

Islam concludes by stating that the enumeration would not be complete without including one hundred millions of adepts of least progressive religions. Among them are the Petichists, the Amimists, and the Polytheists, most of whom are confined to Africa, and who are very likely, maintains the Moslem journal, to be converted to Islamism. "Once converted, it does not seen plausible that they should ever become Christiansor Buddhist," it says, "India, China, and the Mussulman would form three groups unassailable by Christian propaganda." Christianity owes its expansion to science, which was formerly fought by its leaders; but "is it not to be feared that this scientific evolution, which has nominally benefited the religion of the Europeans, will finally make them as indifferent as the Chinese?"—Translation most for Tix Litzakay Dioxest.

#### RELIGIOUS NOTES.

THE Western Unitarian Conference, in session in Chicago iast week decided to consolidate the Eastern and Western publishing houses of the church and Sunday-school. The Chicago plant will be removed to Boston.

A RPUNION of all the descendants of the late Brigham Young, president of the "Mormon" Cuburch, will be held in Sait Lake City in the near future. These already number more than one thousand persons, scattered in various parts of the world. No building in Sait Lake is large enough for the resulton, and it will be held in the open air.

A LARGE and picturesque trect of land, overlooking the Hudson, thirtyeight miles from New York, has been secured by the "New Thought" or "Mental Science" exposents. A school will be opened there on July 1, and the place will be made a center for the dissemination of "New Thought" principles and the atudy and discussion of religious and social problems.

"SMOKING Church Services" are the latest innovation in London, and promise to attract workingmen who have hitherto been outside the pair of religious influence. Archdeacon Wilberforce of Westminater started the movement in April by inviting the men who were fitting up the Abbey for the coronation to strend service in the cloisters during their launch bours and giving service himson definers of tobacco. Many accepted the invitation of the control of the

#### FOREIGN TOPICS.

#### DOES RUSSIA MEAN TO GIVE UP MANCHURIA?

STRICT as the censorship of the press is in Russia, and limited as the freedom of comment is—hardly existing, indeed, as to internal politics-the foreign relations of Russia are discussed by the newspapers with considerable frankness and apparent spontaneity. The Manchurian question has engaged the attention of the Russlan press to a remarkable degree, at a time when more serious domestic problems might be expected to monopolize it. Is the Russian Government yielding to the Anglolananese alliance and to the United States in this matter of Mauchurian surrender? Is the treaty with China a reluctant concession to the "oneu-door" Powers, and is it an act of wood faith? Russia agrees to evacuate Manchuria in eighteen months. leaving no troops save as a railway guard, and she also abandons the attempt to secure special privileges in that province. Does she mean what she says? The Manchurian treaty has been received with skepticism and suspicion, and the explanations of the Russian press, whether "insuited " or not, throw new light on

The leading political paper, the St. Petersburg Notices Verwaya, declares it to be about to taik of any "retreat "be Russian Government. Examining the several conditions precedent to eveneation, and especially the demand for the surrender by the "concert" of the Powers to China of the city of Tein-Tain, the paper says.

"Our retrocession of New-Chwang will occur under such conditions as will exclude the possibility of any injury to Russian influence in Southern Manchuria. The terms our Government has imposed upon China amply and practically safeguard our interests in Manchuria. They indicate that our representatives have closely and minutely studied the load questions that, seeming unimportant as they may be, will assume serious political significance in the course of time."

Coercion or pressure, the paper says, is the invention of silly and shallow journalism. Russia has kated with entire freedom and in pursuance of well-defined and consistent aims. Her freedom is the product of conscious might. Russia gives np Mauchuria to prove her sincere friendship for China, and she has warned China that the treaty will not be deemed binding unless all the conditions are faithfully infilled by her. This is a warning against any anti-Russian policy in the diplomacy of the imperial Government.

In the same tone comments the Noventi. It says that the Manchurian question had nothing whatever to do with the "open door" or the integrity of China. Russia recognized no shadow of claim in the "concert" to interfere with her polecy in that province. Slos gives up the territory because she never intended to annex it. Long before the Anglo-Japanese alliance was formed the world was assured of the intention to return Manchuria to China. But the Noventi adds;

"The treaty will strengthen our influence in the province, Manchuria is conceededly within our 'sphere of interest,' and we have not anuexed it, it is because we do not need so much new territory. However, having constructed a railtonal endominant Mauchuria, Russia can not be indifferent to the conditions there are prevailing, and the intain year of 1900 or any other anteeburperiod can never be restored. Our influence there will of necessity be much more decisive."

Prince Mestchersky, in the Grajdanm, an ultra-nationalist organ, asps that the explanation is very simple. The Cars said to himself: "What need have I of Manchuria when every soldier, every officer, stationed there is demauded here at home? Russia is not so rich intellectually, morally, and materially that she can spare men and money for Manchuria. There is so much work at home, so much room for improvement, that I have no

superfluity either of men or of means." Russia wants stability, peace of mind, and economy of resources, while Manchurin has been a source of trouble, complication, and misunderstanding, adds the Prince-editor.—Translations made for The Literary Divers.

# THE MORGANIZATION OF THE ATLANTIC OCEAN.

THAT latest and most brilliant aspect of the Morganized world known popularly as the shipping trust has released a flood of English editorial comment. A note of alarm runs through and at times even drowns the roar of wonder with which this last-born Leventhan of Morganism is hailed by the Britons. The privilege of speaking first clearly belongs to the London Times, if only for the reason that it sees unthing to be afraid of:

"This combination-in the forming of which the principal agents have been Mr. Pirrie, representing at once the White Star Line and Harland & Wolff, and Mr. Pierpont Morgan representing the American commanies-will include the White Star Line, the Dominion Line, the Leyland Line, the Atlantic Transort Line, the American Line, and the Red Star Line. British lines mentioned will continue to sail under the British flag. It will be noted that the Cunard Line is not among them, and that the Allan Line also maintains an independent position. Neither can well expect any diminution in the stress of the competition it has to face, since it is plain that the combination of its rivals relieves them of disadvantages previously common to all. The the two German lines, the North German Lloyd and the Hambury-American, which have secured so large a share of the trade, do not actually enter the combination, a satisfactory working agreement with them has been arrived at; but as nothing is said about the French companies they, probably, intend, like the Cunard Line, to pursue their own course. There is a significant statement that the combination will work in unison with the large American railways. That is a very important factor, since there can be no doubt of the power of these railways to determine to a large extent the sea carriage of the goods they bring to the coast."

It was a lucky thing for the ocean lines that Mr. Morgan thought of combining them, as they were getting hard up. So says *The Times*, from which we quote further:

"The stringgle between the great carrying companies to meet and even to encourage the growing demands of the public for rapid and luxerious traveling over sea has ended in the production of fietes of powerful and magnificently equipped steamers for which there is not sufficient remnerative employment. In the busy season of good years they may all do very well, but, taking one season with another and one year with another, there can be secured. That is, the fundamental economic difficulty which all the companies engaged in the North Atlantic trade have to face, the other causes operate to request it more acute."

This way of viewing the "little combine" is by no means characteristic of British opinion. That great pessimist, when any-thing American is in question. The Naturaly Neview (London), actually heads its article on the subject "The Shipping Gang and Yankee Grab." It observes:

"Mr. Morgan's latest achievement, the Atlantic shipping 'combine,' may excuse him for thinking himself as almighty as his own dollars. He might naturally say of England what Jugurtha said of Rome' A city for sale; to be had of the highest hidder,' One by one our industries are betrayed to the American. Our oil industry is controlled by the Standard Oil Company; the match trade, after a shameful exhibition of incompetency, has fallen into the linats of the Diamond Match Company; Mr. No corner of the industrial world is safe from the extraordinary gang of capitalists that govern the great republic,"

This critic next considers the details of the accomplished fact and avers that the London Times was "taken in." It was not taken into the combination, but was "taken in by the specious concession that the several lines are to retain each its old flag and management":

"English directors must dance to an American tune, Mr. Morgan and his colleagues have no intention, we may be suffered for allowing the men they have bought to play ducks and drakes with £44.000,000 sterling of despital. In such circumstances for flag, to put it binntly, is a lie. And we have no leasting guaranty that we shall be left even that to cover our shame."

As for the statement about being hard up, The Saturday Review has no nationce with it:

"The official explanation of the more is the necessity for economies in management, but it is significant that the deal was braided by the raising of both freight and passenger rates from ten to fifty per cent. under mutual agreements between the various transport companies. At present a large share of the Atlantic tonages is no the trust, and when the grip is tightened a little more there is no one so foolish as to believe in the moderation of the shipping kings."

What would happen in the event of war? That is what The Daily Chronicle (London) would like to know;

"For, however unwilling we are to contemplate the possibility of a writ with America, we should be foolish to allow this sentiment to blind us to the contingencies of a novel situation. And we regard as the least assistancy of cementing influences of peace the interest which it is said American financiers will have to maintain good relations between the two countries. We trust that those good relations will depend upon something more of monomobilist.

But the war specter is not so terrifying to The Daily News (London):

"This combination, at any rate, will so clearly make for peace that our withers are unwrung by the prospect. It is at least better than that mischievous dream of a secret society of financial Jesuits, with Jesuit ethics, but without Jesuit religion, which filled the vague and immense dreams of Cecil Rhodes. It is not the fact of combination we fear, or the working of the whole transatiantic passement raffice on a coordinate basis. That ought

to mean increased economy and efficiency; and the absence of competition will not be felt just yet. What alarms us is the announcement of the Americans that American capital will predominate, and that the whole control of the syndicate will come from the United States."

There are various questions, however, which the organ of the English non-conformist conscience from which we have just quoted asks itself:

"What is happening to us? Have we lost the business faculties of our fathers? Has our commerce lost its enterprise and its imagination? Or are we too much handicapped by the toll we pay to the hereditary killer—by our land-system, our vested interests, and all the enervating traditions of a lieisured ruling class? It is time we began to look some of these questions fairly in the face. The sudden subordination of three great English shipping lines to ultimate American control is, a rude shock to our island pride. It hits us in a tender point.

It is "humiliating and unsatisfactory that so large a part of our carrying trade may be directed and controlled by eapitalists living beyond the jurisdiction of the erown and legislature," says The Mandard (London):

"The shipping of Great Britain is vital to our political existence and our mercantile prosperity. It is to protect it that we bear uncomplainingly the burden of supporting the heaviest na-al budget which any nation has ever incurred. Why should we build battle-ships and cruisers to police the trade routes and watch over vessels which are at the disposal of foreign capitalias, whose interests, political and commercial, may run counter to our own? It may be said that under our existing laws there is nothing to prevent such transfers as those of which we hear. That may be true. But a law populi upp rand is. The freedom of contract which takes the form of weakening the strength of contract which takes the form of weakening the strength of a limited that depends upon navel efficiency may stand in need

An English glance at the German aspect of it all is afforded in what follows from The St. James's Gazette (London);

"Why the Norddeutscher-Lloyd and the Hamburg-American Line have joined the movement, we are at a loss to understand. But we feel very sure that the German Emperor does not mean

PEACE: "I wonder if there will be a place for me at the coronation."

-Punch (London).

KINO EDWARD: "Will be tame the beast in time for me' to appear publicly with it?" - Kladderadatuk (Berlin).

COL

to lose command of those speedy vessels on which his new-born many largely depends for cruisers. . . . But to us the loss of the service of these vessels as cruisers is the very least part of the service of these vessels as cruisers is the very least part of the veril. The advantages of merchanterusiers in time of war are problematical, unless the ships are so constructed as to fulfil certain requirements in regard to protection, which detract seriously from their value as passenger and cargo-carrying vessels. But the continuance of our merchant-shipping nader the 'red duster' is of the utmost importance to us from a national point of view for other reasons. In the first place, for the transport service. If we have been able to place and maintain a quarter of a million of men in South Africa, it has been owing to the fact that the Admiralty have had the call on a practically limitless number of merchant-vessels sailing under our flag."

German opinion regards the situation more from a business than a sentimental point of view. Says the Vossische Zeitung (Berlin):

That the combination aims at increased freight and passenger rates is beyond dispute, and in view of the demoralization of the freight business this is justified. Whether the trust will use its power to obtain anduly high rates and to impose onerous conditions upon shippers, who under the free competition prevailing hitherto have done fairly well, remains to be seen. . . . It is to some extent a satisfaction that the German lines do not enter the combination directly, but merely assent to a common regulation of traffic, and further that the great Canard Line and the French companies are wholly outside the agreement. But it is doubtful whether these outside lines will not later be forced to enter the combination. It must not be overlooked that Mr. Morgan and his associates exercise control over the American railroads, which must be taken into account in the matter of through traffic. Hence it is in their power to distribute favor and disfavor in most unequal measure. Indeed, our New York correspondent mentions a report that Mr. Morgan wou over the English lines to the plan of combination by threatening them with a boycott,"

"What principally interests us in all this business is, naturally, the relation of the German steamship lines to the trust," says the Kreuz Zeitung (Berlin):

"It is said everywhere that the two German lines have not formally entered the trust, but have merely made certain agreements with it. Whether this is playing with words or not must in the end be made apparent. . . The difficult position in which they (the German steamship lines) lave been placed by Morgan's activities will be seen by any sensible-minded person."—Translations made for The LITERARY DESIGN.

#### NORWAY'S CABINET CRISIS.

THE change of nilnistry in Norway involves the definite retirement as premier of J. W. C. Steen, and the formation of a new cabinet by O. A. Blehr, who will, it is announced, hold the portfolio of the interior. The crisis greew out of that old difficulty between Norway and Sweden, the demand by the former for a separate consular system. The editor of the Verdens Garge (Christiania) thus writes to the London Times:

"The differences between Norway and Sweden on matters touching the union are now discussed in a friendly spirit. The Swedish Government has lately proposed a joint committee to inquire into what is the most exactious anomaly of our system—namely, the absence of separate consular representation for commercial purposes. It may be of practical interest to our English friends to be informed that, this proposal having been agreed to by the Norwegian Government, the committee has been formed, and is now holding its meetings alternately in Christiania and matter and the second of the committee of the

Notwithstanding this reassuring tone, the Morgenblader (Christiania) expresses what it terms 'bitter disappointment' at the state of public opinion in Norway, which is influenced by irresponsible radical journals. The press generally devotes most attention to Sigurd Ibsen, son of the dramatist, tho will be in the new cabinet. Sigurd Ibsen married a daughter of Björnstern Björnson and is forty-three years old. He has had a distinguished career in public life. The Indipendance Belge (Brussels) thus analyses the situation:

"As is known, the entire internal policy of Norway has as its pivot the consular separation of Norway and Sweden, and, a dozen

J. W. C. SIPEN, Retiring Premier of Norway.

years ago, things were carried to the length of openly defying the King's veto, he having opposed the law for separate Norwegian consulates passed by the Stortblng, Mr. Steen, then premier. led this movement, and his opposition to the King's policy compelled him to surrender power to the Conservatives. The general election of 1898 having given the Radicals two-thirds of the seats in parliament, it was necessary to have recourse to a combination of the Left.

The Radicals, bent upon consular separation, forced Mr. Steen into power, but he disappointed all their hopes, and his retirement will doubtless lead to combination among the Radical groups of the Storthing.

In any event, according to this paper, a political situation of a grave character may develop at any moment, while the 'orwarts' (Bernin), the Socialist paper, calls attention to the determined agitation for universal suffrage throughout the Scandinavian peninsula. Translations made for The LITERAKY DIGITAL.

#### HOLLAND'S FRIGHT OVER WILHELMINA.

THE dynastic peril presented by the illness of the young Queen of the Netherlands attracts universal attention and the press of Europe has taken up the topic very seriously. The following from the London Speciator is characteristic:

"It must not be forgotten that altho the Dutch have fallen in low with their bright young Queen, they are also greatly moved by the prospect of political dangers which might have followed her disappearance from the scene. Tho it is not true that the Queen is absolutely the last of her race, all other heirs claim through the female line, and are princes born and educated in Germany. The Dutch do not like that, believing that a prince so trained will always look up to the German Emperor, and that William II. will leave no stone unfurned to attract Holland, probably on very liberal terms, into the circle of his dominion, from Java master the whole of the Eastern Archipelago, which he Australians at heart regard as their four her brigge."

Just what would happen in the event of the young Queen's death is considered at some length in the République (Paris):

"Prime Minister Kuyper recently said that Holland would rush to arms before she would become German. The event [of the Queen's death] would be the more serious because events in Belgium are inspiring equal anxiety. Should the uprising there prove victorious, were the Socialists to attain power, Holland as well as Belgium would present the question whether the principle of non-intervention could be further upheld. Would England remain indifferent as to which form of government pervailed in Belgium, and would Germany do the same as regards Holland? Upon the answer to tits double question depends the Europe, and its injurative to be ready for all continuous genetics. It is unique to the round to the continuous genetics. It is unclease in store, how much more seriously must believe, have surprises in store, how much more seriously must be believe, have surprises in store, how much more seriously must make the prospect of a change of affairs in Belgium and Hollanda be a change of affairs in Belgium and Hollanda be and and the former and the affair, and the surprise of the start o

Dutch papers express themselves with much reserve, and it may be inferred that their purpose in doing so is to spare the oppular feeling. The Handleiblah (Ansterdam) announces that "in view of the serious illness of the Queen it is to be expected that the provisions of the constitution in the case of a protracted illness of the sovereign will soon be applied, and that the States-General will be convoked in plenary session to deliberate on the question of a regency." The Matathlad (The Hague) and other papers refer to the serious factors in the situation and consider in all its bearings the prospect of a regency. It is noteworthy that the German press is most circumspect in its allusions to possibilities in Holland. The Kolnitche Zeitung, for instance, merely says:

"It can, unfortunately, no longer be doubted that the condition of the Queen of Holland affords reason for anxieties of a most serious nature."

The personal esteem which this young sovereign has won throughout Europe is manifested in a marked way. The Clerical Correspondant (Paris) says:

"Oneen Willedmina's illness has caused an anxiety throughout Holland in which the public sympathy is universal. The young sovereign is worshiped by her people. The lofty qualities she has manifested since her accession, her intelligence, her resolution, her capacity, and the respect her Government has impired by its advocacy of the Boers have gained her a dustinetion throughout Europe of which her subjects are justly proud." —Translations under for Tux Lutrasay Diosex.

#### SWITZERLAND'S RUPTURE WITH ITALY.

THE breach of diplomatic relations between the Swiss conlederation and the kingdon of Italy, growing out of incendiary attacks upon the Italian royal family in the Anarchistjournal Riveglio, of Geneva, raises deleate questions which the European papers are discussing. Swiss papers denounce Silvestrelli, Italian minister at Berne, for his rudeness. But the Journal of Geneve says "the windom of the two governments can be relied upon, for they will act together to prevent the Silvestrelli incident from having unpleasant consequences for the peoples who are united by such an ancient friendship." The New Zuricker Zetting says;

"When a ministerial paper like the Tribuna and an opposition paper like the Giornale of Halifus agree in the cortiality of the tone, and express sentiments of sympathy and friendship for Switzerland, the effusions of other minor journals may be disgarded and the way is cleared for a satisfactory mutual understanding."

But before taking up the subject of Italian opinion it may be well to consider the following from the London Times, which has all the force of an editorial opinion, since it is written by the Rome correspondent of that paper:

"The articles of the Anarchist journal Kisveylio, of Geneva, were unquestionably scurrilous and offensive toward the Itulian royal family. They were also susceptible of being interpreted as at least indirect incitement to assassiantion. It is said that Siguor Silvestrelli was chosen by Signor Prinetti to represent Italy in Berne because his unbending and peremptory temperament was considered likely to bring home to the federal authorities a sense of their duty in regard to Anarchist propaganda. Shortly between him and the Swiss Government over the presentation of bis credentials—an incident not calculated to dispose the federal

council to listen deferentially to his subsequent representations on the subject of the *Kitzycijia*. Possibly, too, the Swiss authorities may have believed that an Italian cabinet dependent upon the support of the extreme left could not be in earnest in combasing subversive propaganda abroad. If so, they were evidenily mistaken."

The legal and diplomatic aspects of the incident come in for treatment by this authority, which proceeds:

"These technicalities leave untouched the larger question of the position of switzerland as a refuge for revolutionaries of all kinds. If haly has manuged so to state her case as to place the Swiss authorities in the disadvantageous position of appearing, out of clerical or revolutionary sympathies, to wisk at propagardia against the Halland dynasty, alse will doubtless descreand receive strong diplomatic support from Germany and Auston of the strong diplomatic support from Germany and Auton the strong diplomatic support from Germany and Austonia and the strong diplomatic support from Germany and Autonia and the strong diplomatic support from Germany and Austonia and the strong diplomatic support from Germany and Autonia and Austria and

Italian press opinion supports the Government, with some exceptions, among them the Vatican journal Osservatore Romane, which says:

"While the entire Liberal press of Italy, ministerial and opposition without distinction, proved unanimous in asserting that where a question of the national dignity was involved it was not proper to discuss or draw distinctions, in ourselves the unexpected news of the rupture of Italo-Swiss relations and of the cause which provoked it, produced the impression that this appeal to the national dignity was in part untimely and in part unjustified. It was unjustified because there was and could be no question of even tacit approval of, or any form of solidarity with, the defamers of an assassinated king or the apologists of regicide. Rather was it, in one aspect, a question of the distorted application of the principle of freedom of the press, a form of evil anything but unknown to Italian governments, and in another aspect it was a question of procedure with reference to the method to be adopted by the Italian Government in demanding and obtaining the suppression of excesses which are certainly deplorable and worthy of every reprobation."

The deportment of the Italian minister at Berne throughout the crisis was all that could be desired, says the Tribuna (Rome). The incident nearly concerns the national honor and hence all personal questions sink into insignificance, according to the Patria (Rome), which urges the Italian Government to show by its demeanor that Italy is not disposed to tolerate any disparagement of herself. The Fractista (Rome), says the Swiss confederation, through respect for the Anarchists and also through fear of them, has permitted the publication of fifty articles defaming the memory of King Humbert. A more impartial view than any of these is afforded in the following from the Trupp (Taris):

"The affair, on the whole, amounts to this: a little Anarchist sheet, wholly unknown outside of its special circle, the Rispegtio, had published, in its number of January 18, an article which the Italian minister deemed insulting to the memory of King Humbert. He thought it his duty to ask the federal council to prosecute. The council replied that it was bound by the law, every prosecution of this sort having to be taken up by the Government concerned. Signor Silvestrelli replied by a note disputing this point, and, moreover-it is here that the irritating personal element comes in-he added certain reflections upon the federal Government's line of conduct in international relations. The federal council then had its minister in Rome take action and request as a favor the replacing of Signor Silvestrelli. Signor Prinetti [Italian minister of foreign affairs] refused this, and the result was the double diplomatic rupture that is known. . . . The Italians, like the Swiss, know how important are their mutual relations and their mutual interests. Italian workmen are much employed in Switzerland. Much Swiss capital is invested in Italian enterprises. Commercial treaties are on the eve of negotiation. This is truly no time to quarrel seriously for reasons so trifling. 'Time is a gallant man,' says an excellent Italian proverb. A very short time will suffice to arrange this little nothing."- Translation made for THE LITERARY DIGEST.

#### NOTABLE BOOKS OF THE DAY.

#### A GUY ON THE PUBLIC.

A DOUBLE-BARNELED DETECTIVE STORY, By Mark Twain. Cloth, 5% x 8 inches, 170 pp. Price, \$1,00 Harner & Brothers, New York

ONLY a few writers are independent enough or sure enough of their public, to venture to gay it. The late Mr. Frank R. Stockton was one who kept it guessing; but his attitude was one of letting his frends in on the joke. There were readers, he would imply, who might be mystified or taken in hy his whimscalities, but the might be mystified or taken in hy his whimscalities, but all his literary practical jokes had an element of fattery about the all, his literary practical jokes

There has lately been practised on the public a deliberate, unwinking loke. Its name is "A Double-Barreled Detective Story" and its

MARK TWAIN

author is Mark Twain. It is interesting to note Mr. Clemens's progress. Not so many years ago the public (not the great uncritical public that he always had with him) laughed He was held up to young at him men in college as a shocking example of what American literature was coming to. That was before we had entirely outgrown our stucco Olympia, and while young men were still taught that they must be classic or nothing. Later all America beartily laughed with Mr. Clemens. After making his reputation as a humorist, Mr. Clemeus proceeded to show how versatile he was, and penple discovered depths of real philosophy beneath much of his fooling. He wrote Jean d'Arc's life for her

and rebuked our Government for its course toward the Philippines; a and when he had brought the public to the point that they would not all have been surprised had he written a casual epic or two, he wrote instead a hidcoss and dreafuld detective story! The thing starts with a blood-curding crime. The manner in which it is written is her-deally hidfaultin. This story was published in a magacine, and after reading Mark Twain's. The second part no one said much about, for It turned out that the jobe was on the public and the whole thing was a colossal gay. Nothing, it seems, is sacred to Mr. Clemens, neither the public nor the sacred person of Mr. Shertock Holmes, of whom Mr. Clemens makes unmerciful fun. He brings him to the wids of this country and has his ways of deduction put to shame before a mining camp and has his ways of deduction put to shame before a mining camp and clemens Mr. Conan Doyle's permission for the use of Mr. Holmes's spering, just as Mr. Prohinani leich his starts to other managers, or did if Mr. Clemens had actually had Sherlock Holmes lynched, would the famous detective at last be really dead?

#### GUELF AND GHIBELLINE.

HOHENZOLLERN. A Story of the Time of Barbarossa. By Cyrus Townsend Brady. Cloth, 55 x 72, inches, 281 pp. Price, \$1.50. The Century Company, New York.

W1711 scenes laid in the year 1338 A.D. a romancer can well afford to let his imagniation play to the top of its bent with the fortunes of his puppets. However, the chief among the puppets chosen by Mr. Brady in his romance once had a vertiable place in life and cut a large swath in the world's history. Indeed, some of them since. "Henry he Lind," Duke of Saxony and Bavaria and head of the Guelfs, was ancestor on the German side—through the female hneatof the present sovereigns of flangland. Cornaf vou Holesmellern, and victorious lower in this story, a brave fighter and soldier of fortune, was foundered the royal family of Prussia, the present rulers of the German empire. Preferred won Holesmellern, Duke of Swabla, who around whom the play revolves.

In the opening chapter these three men are awaiting an important amountement in a hall of the royal eastle at Frankfort-on-Main. The session being held in another room is no less an event than the great Dict, wherein the electors from the several German states, presided over by the Pop's delegate, the powerful Archbishop of Mains, are to Courad III. the Crusader, as ruler of the ferman emptre. Henry the Lion, relying on the prelate's former friendship, expects to be chosen. Barbarosas, erlying on his now videoprend farm, is filled with a smillar hope. Holenzoldern, the younger sun of his house, and portunders are for the boung of Barbarosas, even for the boung of Barbarosas, even for the boung of Barbarosa, whose life he once saved in battle.

The young and beautiful Matilda, Countess von Vohburg, whose de-cased father has left the ward of the empire, passes through the hall, glances at Hohenzollern, and lets fall from her bodice a blood-red rose on the russb-overed flour. All three men spring to claim it, and in the scuffle disclose their feelings toward the lady. Henry the Lion reveals that he has asked her in marriage—because of her wealth no less than

her beauty—and been refused. Hohenzollern declares that he has won the lady's heart and pledge. Barbarossa laughs both men to scorn and reminds. Hohenzollern that as her guardian he can make her—"what he wills!"

His dependent draws his sword and burls the insult in Barbarosas is eeth, reminding him that he already has a wife. Barbarosas returns yes, between whom and himself, the world howes, there exists only hate, and his power will yet wrest from the Pope a divorce. Hobenouleur sanch and boust a divorce. Hobenouleur sanch and boust out that he will far alloth and boust and the second out that he will far alloth and boust and the second out that he will be allothed to the second out that he will be allothed to the second out that he will be allothed to the second out the second out the second of the second out the second out that he will be allothed to the second out the second out that he will be allothed to the second out the sec

CYRUS TOWNSLND BRADY.

named by the Diet as the man best fitted to wield the destinies of the German race. Thus begins the feud which gave popularity to the warcries of Ghibelline and Guelf,—the struggle for supremacy between the

Loan and Barbatonsa.

A space of six months intervenes between the first and second parts of the story; during which time Barbarossa obtains a divorce, offers marriage to the woman who will not have him on any terms, and Hohenzollern is put under ban with a price on his head. The greater scenes of the story occupy but a day non a night, and take place because of the story occupy but a day non a night, and take place be-

Mr. Brady handles his subject with telling skill. There is atmosphere and art as well as dash in his work. Giving full play to the clash and din supposedly inseparable from the times, he yet imbues with a breath of real life the three men and one woman whom he creates as typical of the four historic persons whose names he borrows.

#### THE WAYS OF TRAMPS.

THE LITTLE BROTHER. By Josiah Plynt. Cloth, 5½ x 8 inches, 244 pp. Price, \$1.50. The Century Company, New York.

BECAUSE an author can write a well-constructed short story it does not follow that he can write a good novel. The technique of the short story and that of the most story and that of the short store in the case is tended to be a story of the story and the

IOSIAH FLYNT.

scope; he investigated the ways of the crook and wrote a book concerning him that was very enlightening and full of dramatic contrasts. If, however, one takes pains to analyze any of these sketches that have been cast in the form of fiction, one will perceive that the mere story, apart from the interest of an unusual subject, does not amount to very much. Neither has Mr. Flynt created any characters among his tramp people. He has made real the hobo's world with its social usages and customs, but there is no individual crook or tramp that remains long in the reader's mind.

"The Little Brother," Mr. Flynt's long story, naturally falls into two distinct parts: the trainp part, dealing with the relation of the Prushun

to his yucker, which is full of interest and which the author treats directly and simply; and the story part, with its attempted analysis of character, which the reader can see at once Mr. Flynt treats with the touch of a novice. The story is that of a runwary boy who is nared by a tramp. His so-called suster, who is the eshool-teacher in a hitle willage, seeds for him or ain. An epidemic of typhold breaks out, and in the absence of her little bredier she throws herself into the work of nursing. While on the one hand she makes (friend, many of the will lagers gossip unkindly about her, as she came to the town as a stranger and told no one her history. Finally word is brought to her by a tramp that Benny is dying. She hastens to him and finds that the man who snared Benny is his father, she herself being his mother. The trainp then confesses that his marriage to Bennie's mother had been illegal. This of course leaves her free to marry the man with whom she is in love.

#### A CONQUEROR AND ONE OF HIS CAPTIVES.

THE CONQUEROR. By Gertrude Franklin Atherton. Cloth, 51/x 8 inches. \$46 pp. Price, \$1.50. The Macmillan Company, New York

RS. ATHERTON has achieved a great deal by her latest work, which she calls "The Conqueror; Being the True and Roman-tic Story of Alexander Hamilton," No one will question the fitness of the title, or the almost too subdued force of the epithet "Romantie" with which she herself qualifies it. She dedicates it "To

GENTRUDE F. ATMENTON

those suggestion and encouragement this attempt to recreate the greatest of our statesmen would not have been made: The Rt. Hon. James Bryce, M.P., Dr. Allan Mc-Lane Hamilton." These two gentlemen, the latter a grandson of the subject of this anotheosis, need not regret sponsorship of the work. If there is warrant, as there is, for her styling as "Conqueror" the marvelous boy blown to these shores by the wind of destiny, there is no less ground for regarding as the cantive most subjugated by his brain and heart the enthusiastic lady who, with two hundred thousand breathless words, has recreated him and recreated berself. Had Mrs. Atherton conceived and portrayed such a

c'uracter out of her imagination entirely, she would rank as the greatest novelist of the day. As it is, after she had delved unwearvingly into everything that concerned her subject and had become inebriated by the romance that produgally clusters about Alexander Hamilton, she decided to discard the impersonal poise of the mere biographer, which she had at first designed. In a foreword, which she styles an "explanation," the most justifying assertion is this; "I feel confident that I have held my romancing tendency well within the horizon of the probabilities; at all events, I have depicted nothing which in any way interferes with the veracity of history." Then she adds: "However, having unburdened my imagination, I shall, in the course of a year or two, write the biography I first had in mind.

"The Conqueror" is Mrs. Atherton's most meritorious contribution to literature. It is brilliantly entertaining, it presents Hamilton with new charm, and—is one of the longest books of the year? At regular Intervals, as a mother ecstatically huge her baby and smothers it with kisses, Mrs. Atherton pulls ont all the stops and makes the reader rock with the ululations of her peans. The book is one to arouse comment, praise, and adverse criticism.

Mrs. Atherton's literary style is not a model, and some of her generaland a full of the first and several several several several model, and under on the general actions and philosophic reflections may awaken a mild defail. More-tantian and the several several several several several several probes to the point of borting the reader. But, if she has de found of the several sev appreciation of the significance of the modest, simple, white marble monument in Trinity church-yard to one of the geniuses of the world.

#### A BATCH OF ALLEGORIES.

PARAMLES OF LIFE. By Hamilton Wright Matrie. Board, 634 x o'll inches. 103 pp. Price, \$1.00. The Outlook Company, New York

"HE material "get-up" of this small volume is in keeping with the literary content, and perhaps a little in advance of the same in artistic merit. It is the first issued by The Outlook Company, It is printed in clean-cut type by the De Vinne Press, on fine-grained paper with broad margins and is tastefully bound in two shades of brown.

As for the "Parables," It is difficult to see how they are worth while. They are rather thin allegories, of an ethical trend and poetic aspiration, in a style whose isoco orie rhythm becomes somewhat monotonous and suggests a "Sclah !" or "Here endeth the Lesson" at the end of each. The titles are the strongest part of these little quasi-poetic flights, with their sentimental appeal to middle-class taste. They approach the interrogative phases of life, but leave them no less mierrogative.

En uno disce omnes. In "The Last Judgment," certainly an appall-

ing theme, a soul awakens to the fact that it has passed into a new sphere of being, and while it waits to find its place therein recalls its past life with minuteness. " Everything was clear, not only in the unbroken record of what he had been, but in a sudden perception of what he was. At last, he knew himself. And while he pondered, one stood

don't you worry !" air to the vi ways in which Mr. Mabie sets forth the transition from the painful or the evil, to the peaceful and the good; from the probationary to the is so vague, so unconvincingly acsumed, that it would hardly soothe the nascent cogitations of a child.

MANUTOWN W. MARIE There is no striking originality of thought, and the style is smooth and restful in harmony with the content.

But it is, happily or unhappily, true that a large portion of humanity 

#### PROPHET OR DECADENT-WHICH?

SINGER BUATRICE; AND ARBUNE AND BURBE BURCE. By Maurice Mactertinck. Cloth, 1% x 8 inches, 183 pp. Price, \$1 yo. Dodd, Mead Company, New York

"HE audience which attended Mrs. Patrick Campbell's performance of "Pelleas and Melisande" was an interesting one. It was composed largely of people who went to hear the play expecting to find Mrs. Campbell acting in a variation of "The Second Mrs. Tanqueray," or "The Notorious Mrs. Ebbsmith." Besides this class were a few people who knew the work of Maurice Maeterlinck and understood it, or at least thought that they did. Those who knew nothing of Macterlinek laughed openly at "Melisande," while the devotees listened rapt. This attitude of the audience toward the play sums up very well the attitude of the reading public toward the work of Mr. Maeterlinck There are and there will always be those who laugh, to whom Mr. Maeterlinck's work will be nothing but a senseless and affected repen-

pression and which are the legitimate butt of ridicule. To others, "Les Aveugles," "L'Intrure," "La Princesse Maleine" are works full of an unspeakable fascination, full of an atmosphere of mystery and terror which no other writer has managed to convey with the same subtlety: and again there are readers who read all kinds of symbolism into Maeterlinek's work and explain each play more or less elaborately. All three classes of readers will undoubtedly have each its own kind of amusement from the new book of his which has recently been translated into English.

tion of phrases which convey no im-

MAURICE MARTERIANCK.

The plays are two in number-"Sister Beatrice," a miracle play, and
"Ardiane and Barbe Bleue." They were both written as librettos (the

music of which is being composed) and, unlike Mr. Maeterlinck's other plays, written in verse.

When a writer conforms to the usual modes of expression, he may be judged by the usual standards. When, however, he invents his own methods and strives after certain effects in a way in which no other mac methods antistrives after certain enects in a way in which no other man, has, it is more difficult to judge him. Time is a test which must be ap-plied to his work. M. Maeterlinck is one of these innovators. One can mercly say of him that one likes his work and finds strange beauty in it, or frankly admit that one does not understand it and, perhapdoes not care to

does not care to.

To one reader at least, "Sister Beatrice" is a play full of great positic. To one reader at least, "Sister Beatrice" is a play full of great positic brilliant illuminations in an old missal. "Ardiance and Barbe Bleue shares the mystery of his carlier plays, but the symbolism is perhaps more obvious, and the horror less than in those. Whether Maeter-linek will be considered as the prophet of a new phase of art or a period of the properties of an explaned for it or a period. verted literary curiosity, who can say as yet with certainty l

#### PERSONALS.

Archbishop Ireland's Song,-The rich melodions voice of Archbishop Ireland is well adapted to song as well as speech, and this fact led to an interesting little incident in his recent visit to the Pope, The Freeman's Journal (Dublin) tells the story in the course of an extended and earnest refutation of the charge that the Archbishop is ashamed of his Irish nationality." After marshaling many facts to disprove this "calumny," and to show that "that there is none more deeply fond of his native Erin than he," it says:

"During his recent visit to Rome he was often invited to pass his evenings at the Vatican with the aged pontiff and some of the cardinals. On one of these evenings, the conversation having drifted to music and national airs, as expressive of the character and aspirations of a people, Cardinal Satolli, who during his stay in America had learned to know the Pauline prelate, suggested to the Pope that he invite him to sing one of the Irish national songs. Of course, on such an occasion, the desire of the Pope is taken as a command, and immediately after some members of the papal choir had rendered Verdi's 'Miserere,' the arehbishop arose and sang a well-known Irish song, in his own mimitable voice, with such volume of resonance and feeling that, as it swelled and rose through the ancient halls of the Vatican, those venerable princes of the church were visibly touched, the Pope himself seemed stunned, and said to the cardinals around him, 'What pathos, Your holiness. what sincerity of feeling! answered the Jesuit, Cardinal Mazella, 'it is not feeling, nor sincerity, nor pathos-it is freland's

Secretary Root Among the Wags -The Secretary was present at a recent military tournament. The review of troops had been concluded, and one of the signal corps was to appear nest. According to The Times (New York) the members appeared, each bearing a fing in the left hand and a lantern in the right.

"What the dickens do they carry lanterns for?" asked a gentleman near to the Secretary

At that moment the lights in the Garden were turned low, whereupon one hearer was prompted

"Maybe it is in order that they may be able to locate themselves

"Or perhaps," said another, "so that they may make light of their work." "All wrong," said a third in the party, who was watching the drill (which was being done without any commands). "It's because with their lan-

terns they don't need any lantern-jawed, lustylunged captain to direct them." Secretary Root turned with a deprecating look to the speakers. "Gentlemen, gentlemen," he said, "This is

worse than the other light brigade with their cannon to right of them, cannon to left of them. Here am I with wags to the right of me, wags to the left of me, wags behind me, and wigwags in front of me."

Following Instructions.-The world has so long been at war with the hapless printer that it will be interesting to know that at least one compositor has been capable of following instructions. Once spon a time a printer brought to Booth, for inspection, a proof of a new poster, which, after the manner of its kind, announced the actor as "the eminent tragedlan, Edwin Booth,"

Mr. Booth did not fully approve of it. "I wish you'd leave out that 'eminent trage-

We have in press and shall publish about May 24 the most valuable and authoritative contrib tion to the literature relating to the Boer War

## By MICHAEL DAVITT The Boer Fight for Freedom

A Graphic Story of the Most Wonderful Struggle for Liberty in the World's History Large 8ro, Cloth, 600 pages. Price, \$2.00 net. Postage 28 cents.

Profusely litustrated with Views taken by the Author and others during the War, Seven Maps and Full Index

This book is the first authentic history of the Boer War from the Boer side.

Mr. Davitt went to Africa during the heat of the early fighting, and gives a most graphic description of the siege of Lady-smith, the crossing of the Tugela River, the Battle of Spion Kop, General Methuen's campaign, and of the subsequent events right up to date. He became acquainted with the leading Boer Generals, and had unusual opportunities for studying the people and their war.

"His book is sore to be an interesting and pic-turesque pro-Bore narrative of events, and will throw needed light upon the personality of the subborn burghers who are still making the British so much trouble in the field."—Chicago Becord-Hernid.

PERLISHED BY Funk & Wagnalls Company, - New York

# **Gas Factories**

In People Who Do Not Know How To Select Food and Drink Properly.

On the coffee question a lady says: "I used to be so miserable after breakfast that I did not know how to get through the day. Life was a burden to me. When I tried to sleep I was miserable by having horrible dreams followed by hours of wakefainers. Gas would rise on my stomach and I would beich almost continuity. Then every few weeks I would have a long siege of sick headaches. I tried a list of medicines and physicians without benefit.

Finally I concluded to give up my coffee and tea altogether and use Fostum Coffee. The first cup was a failure. It was wishy-washy and I offered to give the remainder of the package to anyone who would

take it.

I noticed later on in one of the advertisements that
Postum should be boiled at least 15 minutes to make
it good. I asked the cook how she made it and sho
add: 'Just the same as I did tea, being careful not to

let it steep too long."

I read the directions and concluded Postum had not had a fair trial, so we made a new lot and boiled it 15 or 20 minutes. That time it came to the table a different beverage and was so delicious that we have been using it ever since.

My sick headaches left entirely as did my sleepless nights, and I am now a different woman." Name given by Postum Co., Battle Creek, Mich.

# TALES FROM GORK

Translated from the Russian with Biographical Notes of the Author by

R. NISBET BAIN

Gorky is undoubtedly the foremost Russian novelist of the present day. This volume contains a selection of his most characteristic short stories—those by which he won his sudden and tremendous popularity. They are translated into strong and idiomatic English by the writer who introduced Gorky to the English-reading public.

#### NO OTHER RUSSIAN WRITER SO TRUTHFULLY PICTURES THE UNDER WORLD

Louisville Courier-Journal:

Not from ony other Russian writer can we get the awful truths of Rus-nian Peasant and labor existence as in Gorky's stories. They will be read by students of humanity, as well as by fection lovers. These stories seem a great cry from the suffering to humanity.

tlis forcelal style leaves no doubt as to the desire of the author to im-prose every use with his succerity.

Commercial Advertiser, N. Y.

He interprets the Under World

MAKSIM GORKY

#### HE KNOWS THE LIFE WHERE-OF HE SPEAKS AND WRITES WITH VIVID FORCE AND FLAMING INTENSITY

Boston Daily Advertiser:
He knows the life of which he writes, and lack of sauvity is halanced by vivid lorer and fansed the vivid lorer and fansed characters in their uter misery and rebellion against the society in which they are the dregs. It is us though the reader made a personally conducted town in Daiw's Shame in Daiw's Shame

Philadelphia Times: He has immense descriptive

The ability to speak a single one of these great languages, even fairly well, is not only a great social accomplishment but a wonderful aid to business. It increases your influence and adds to your profit and pleasure as long as you live. It enlarges the sphere of every man, woman-even of a nation. Lord Salisbury in speaking of England's decline in commercial supremacy says: "We do not sufficiently cultivate the knowledge of foreign languages," What is true of a nation is true of the individual; every one with a living to make should know something of foreign tongues, and about every one soon will know, since study and mastery is now made so easy through

# The Literary Digest

Vol. XXIV., No. 21

NEW YORK, MAY 24, 1902.

WHOLE NUMBER, 631

#### Published Weekly by Punk & Wagnalls Company.

30 Lafayelle Place, New York. 44 Fleet Street, London Entered at New York Post-Office as Second-Class Matter.

#### TERMS OF SUBSCRIPTION.

PRICE.—Per year, in advance, \$1,00; four months, on trial, \$1,00; single copies, to cents. Poreign postage, \$1,50 per year.

RECEIPT and credit of payment is shown in about two weeks by the date

on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent two weeks prior to the date they are to go into effect. The exact post-office address to which we

are directing paper at time of writing must always be given.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

#### VACATION NOTICE TO SUBSCRIBERS

Subscribers desiring to receive THE LITERARY BIOLETA I their vacalions addresses will oblige us and save hemselves annoyance by complying very carefully with the suggestion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, statisting the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their perimanel address.

#### TOPICS OF THE DAY.

#### PUBLIC SYMPATHY IN THE COAL STRIKE.

"IIE coal-miners have won a good deal of public favor by trying every peaceable means of obtaining their demands. through the Civic Federation, before resorting to a strike; and the refusal of the operators to make even the slightest concession, which could have been used by President Mitcheti before the convention as an argument for peace, has, in the view of some papers, but the operators in the position of bringing on a great strike that may seriously affect our era of prosperity. On the other hand, it is remarked that the miners have not shown that their condition is especially distressing, while the minority vote of 350 out of 811 against a strike is taken to show that a large share of the miners were satisfied with their hours and wages. The demands of the miners are: an eight-hour day for those who work by the day; an increase of five per cent, in the contract price for the men who are paid by the ton; a more uniform and equitable method of weighing the coal; and recognition of the union. It is generally understood that the miners would be content with a grant of part of their demands. About 145,000 hard-coal miners are affected by this strike, about 50,000 railroad men will be temporarily thrown out of work, and if the hard- and soft-coal miners throughout the country are brought into the strike, half a million men, or more, will be idle; "and in a short time," thinks the Philadelphia Ledger, "there would be an end to our present ern of prosperity, by reason of the closing of every iron and steel mill, as well as other large industries."

The Pittsburg Gazzite, published in the heart of the coal region, thinks that the strike "can not be fully justified in the public mind," for "if the miners themselves are so far from manimity of sentiment, others can not be expected to unquestioningly indorse the course that has been decided on," So, too, thinks the Pittsburg Carron, it Pictors the, which have:

"While every man is popularly supposed to know his own

business letter than an outsider, it is very difficult for the impartial observer to avoid the conclusion that the multracite coal-niners have made a mistake m deciding to continue the strike. This conviction is made the stronger by the fact that a very large minority voted against the proposition. Granted that there are grievances which origin to be redressed, the willingness of more than two-fifths of the delegates to go back to work grievances are not altogether use the governal public that these grievances are not altogether use the governal public that these grievances are not altogether used to great the was ordered against the counsel of President Mitchell and other advocates of peace."

On the other hand, the Philadelphia Tunes believes that "public sentiment, while nneonvinced of the necessity or wisdom of the strike, is in general sympathy with the men, as against the uncompromising attitude of the company officials, and will sincretly and earnestly wish that the controversy may yet work out to their advantage." And the New York Times says:

"The attitude of the operators throughout has been arrogand an supercilious. Admitting that the specific demands of the men, so far as they have been formulated, are such as could not have been granted in full, there are always and grievances which call for reform; and had a disposition been shown to discuss these questions frankly and tolly, and to reach a basis of agreement of the supercision of the supercision of the country of the supercision of the could have been done without such formal recognition of the union as would embarrass the operators and make the miners impracticably aggressive.

"The presidents of the coal roads, who represent the operators, appear to have quite wereholded the fact that they have a duty to the public which is as important as that involved in the manismance of their own official dignity. That they have not done what they could and should to put their industry on the basis satisfactory to their labor—at least to the extent of introducing reforms of obvious advantage—does not indicate a high degree mining was the business of shelf concern to them. It is not, and because it is not the business of shelf concern to them. It is not, and because it is not the business of said volume to the business of an authority of the said of the sa

The United Mine Workers' Journal (Indianapolis) quotes figures from the report of the Pennsylvania Bureau of Statistics to show that the miners worked an average of 193 days each last year, earning an average of \$1.28 a day, which "means that their daily wage averaged a trifle over 70 cents a day for a year." They ask "a leggarly to per cent. advance upon that 70 cents, which, if granted, their daily wage would average 86 cents during the year." Out of the miners' yearly average income of \$2.35, this paper reckons that he hast to pay \$50 a per for resul, \$5 for oil, \$1.4 for powder, and \$6 for the "company" doctor, leaving \$1.5 for food, clothes, tools, shoes, church, etc. It is also found, from the same report, that 4,374 miners lost their lives in the ten years preceding 190,0 and that an average of one man in 20 is killed every year, Over 10,000 men were injured in the same decade. The writer adds:

"The miners ask for an advance. Are the companies able to gipe 11? From all external accounts they are. Each railroad owning antiracite mines, according to the financial rejorts from Wall Street, has increased its profits, surplus, and dividends, With the exception of the Reading and the Lehigh, all paid big dividends during the panie of 1891—the Lackawann, the Delaware & Hudson, the Erie, the New Jersey Central in particular have been mentioned. The same reports show that the Reading,

the Pennsylvania, and the Lebigh Valley are exceedingly prosperous. The coal-trade journals have teemed with reports of the prosperity of the coal operators. Official after official has had his salary increased. President True-dale, of the Lackawanna, got an increase of \$10,000 per year upon his salary. The pitiful wages of the miners are shown best in contrast, as it would take the yearly wages of forty of them to pay the increase in Mr. Truesdale's salary."

#### STORIES OF THE PELFE ERUPTION.

HERE are so many different scientific explanations of a tentative nature of the volcanic eruptions in Martinique and St. Vincent that the effect upon the lay mind is much the same as if no explanation at all were offered. In the pages of material, explanatory and historical, found in the daily press, the points that stand out most clear are the facts presented in the stories of the survivors. Only two persons in St. Pierre survived, a nurse girl and a negro convict. The nurse lived only a few hours; Nie convict escaped to the woods, and has not been seen since. The steamer Roddam sailed out of the harbor with the loss of most of her crew; and part of the crew of the Roraima survived the eruption and were rescued. Captain Freeman, of the Roddam, who was frightfully burned, gave the following account to Captain Cantell, of the Etona, whicharrived at New York last Sunday:

"The Roddam had been at St. Pierre only an hour when the eruption occurred. I was talking to our agent, who was in a small boat alongside. Suddenly I saw what appeared to be a huge black squall like a wall approaching the ship from the land at a terrific rate, carrying with it a huge tidal-wave, and accompanied by a loud rumbling noise. The air suddenly darkened.

"I yelled out for everybody to stand clear, and almost in an instant the ship was enveloped in total darkness and the air filled with flame and falling patches of fire, which ignited everything they struck. The fire took hold of the ship in all parts, and the crew and laborers rushed about frantic with fright and pain. A

ROTIC

VILCANOES IN THE WESTERN HEMISPHERE.

number of laborers had come aboard to help take in cargo, and as nearly as I can tell, there were some forty-two persons on board all told. Of these six survive. Hell certainly can + 3 300

SURVEYOR SAM "Denmark had better hurry up, nr she may not have any islands to sell." -The Philadelphia Record.

worse than what we went through. I went into the chart-room and shut the door, but an open port admitted the flame.

"When the ship was first struck she heeled over and nearly capsized. The first shock only lasted a few minutes; but for over an hour the shower of falling matter continued. As soon as I could get out of the chart-room I rushed to the engine-room telegraph, and knowing that, as we had just arrived, we would have some steam up, I signaled the engineer to put the engines at full speed, and waited for an answer. The cable chain had been carried away by the volcanic eruption. Luckly some of the engineers were below at the time, and started the engines.

"I tried to work the wheel and start the ship, but the steering-year was jammed by the flood of lava and wouldn't work. I kept the engines going ahead and astern alternately, hoping the ship could thus be headed to sea. While I was maneuvering the ship in this way I nearly collided with the Quebec Line steamer Roraima. I remember seeing huge clouds of flame and steam rising from the ship. Some of her men were wringing their hands, and people were jumping from her decks into the boiling water. Their deaths must have been instantaneous, for the water was seething like a caldron. It looked like a mass of boiling mud.

"Many of my own crew were swept from the decks by the first shock. After a time I got the steeringgear to work and headed out to sea. As the sky cleared and it was possible to see around the deck, the sight was ghastly. Men lying screaming and writhing in agony all around, and the lava on which they lay was red-hot. People were dying everywhere. I was in a bad state myself, unable to lift my hand, and the blood from wounds and burns on my forehead kept running into my eyes.

I decided to make for St. Lucia, and, with the help of two sailors, two engineers, and the boatswain, I succeeded in making this port, During that terrible trip all hands were busy putting out fires, working in the stoke-hole, raising steam, and trying to do what they could for their dying shipmates. The chief engineer died a horrible death. He escaped from the first shock, and when we endeavored to get the ship out of the harbor, not finding his men below, he came on deck to look for them, and was struck by a falling mass of lava which burned one side of his face completely off."

Only a mile away from the crater when the fatal

ST. PIERRE, FROM THE HARBOR, SHOWING THE VOLCANO BEHIND THE TOWN.

eruption came was M. Albert, owner and manager of the Lagarrane estate; but luckily for him he was northeast of the crater,

while the storm of fire rolled down the opposite slope. His story is told as follows in a despatch to the New York Herald:

"Mont Pelée had given warning of the destruction that was to come; but we, who had looked upon the volcano as harmless, did not believe that it would do more than spout fire and steam, as it had done on other occasions. It was a little before eight o'clock on the morning of May 8 that the end came.

"I was in one of the fields of my estate when the ground trembled under my feet, not as it does when the earth quakes, but as the a terrible struggle was going on within the mountain. A terror came upon me, but I could not explain my fear.

"As I stood still Mont Pelée seemed to shudder and a moaning sound issued from its crater. It was quite dark, the sun being obscured by ashies and fine volcanie dust. The air was dead about me, so dead that the floating dust seemingly was not disturbed.

"Then there was a rending, crashing,

grinding noise, which I can only describe as sounding as the every bit of machinery in the world had suddenly broken down.

STREET SCENE IN ST. PIERRE.

It was deafening, and the flash of light that accompanied it was blinding, more so than any lightning I have ever seen.

"It was like a terrible hurrieane, and where a fraction of a second before there had been a perfect calm I felt myself drawn into a vortex and I had to brace myself firmly. It was like a great express train rushing by, and I was drawn hy its force.

"The mysterious force leveled a row of strong trees, tearing them up by the roots and leaving bare a space of ground fifteen yards wide and more than one hundred yards long.

"Transfixed I stood, not knowing in what direction to flee. I looked toward Mont Pelée, and alove its apex formed a great black cloud which reached high in the air. It literally fell upon the city of St. Pierre. It moved with a rapidity that made it impossible for anything to execute it.

"From the cloud came explosions that sounded as tho all of the navies of the world were in itianic combat. Lightning played in and out in broad forks, the result being that intense darkness was followed by light that seemed to be of

followed by light that seemed to be of magnifying power. That St. Pierre was doomed I knew, but I was prevented from seeing the destruction by a spur of the hill

KINGSTOWN, ST. VINCENT, FROM THE HARBOR.

hat slint off the view of the city. It is impossible for me to tell how long I stool there inert. Probably it was only a few seconds, but so vivid were my impressions that it now seems ns the I stood as a spectator for many minutes,

When I recovered possession of my senses I ran to my house and collected the members of the family, all of whom were panicstricken. I hurried them to the seashore, where we boarded a small steamship, in which we made the trip in safety to Fort de

"I know that there was no flame in the tirst wave that was seut down upon St. Pierre. It was a beavy eas, like fire-damp. and it must have asphyxiated the inhabitants before they were touched by the fire, which quickly followed. As we drew out to sea in the small steamship, Mont Pelce was in the throes of a terrible convulsion. New craters seemed to be opening all about the summit and lava was flowing in broad streams in every direction. My estate was ruined while we were still in sight of it.

"Many women who have lived in St. Pierre have escaped only to know that they are left widowed and childless. This is because many of the wealthier men sent their wives away, while they remained in St. Pierre to attend to their business affairs."

#### FREE CUBA.

A MERICAN sentiment appears to be very favorably impressed with the business-like character of President Palma's policy for Cuba. Fear has been expressed all along that the new republic might devote itself more to visionary ideals and the squabbles of small politics than to practical affairs. That fear, however, has been allayed considerably by President Palma's evident de-

19t LV IS FRIENIZ. Vice-President of Cuba

votion to the prosperity idea. He is reported to be "particularly enthusiastic over California's seedless oranges," which he thinks can be cultivated in Cuba with success; he hopes to restore the cattle industry to the condition in which it was before the war; and he favors enconfagement to the rubber and cotton industries. Superfloors offices and exerbitary sal-

aries will be sagufieed to the demands of economy. These evidences of practicality in government strike the American papers favorably, altho it is remarked that the Cuban congress, like some other congresses, may evince a disposition to devote itself mainly to the game of politics.

This opportunity is taken by many papers, too, to recount what the United States has done for Cuha in the last four and a half years. John Kendrick Bangs, in his new book on Cuba. sums it up as follows:

"To sum the whole story up, however, Uncle Sam may felicitate himself upon the facts that he found Cuba nuhealthy and he leaves her healthy; he found her without an adequate system of charities and hospitals and he leaves her a well-established one; he found her without schools and he leaves her with a good school law and a good school system established; he found the island filled with beggars and with an empty treasury; he leaves it without beggars, its people with enough to eat, and with a reserve of about a million and a half dollars in the treasury. He found her without any knowledge of popular elections and without an electoral law; he has given her both. He found the insane without any systematic treatment whatever, cared up like animals; he leaves them assembled in one large hospital under the best available treatment. He found her prisons indescri-

bably bad and leaves them as good as the average prisons of his own country. 11c has built mea good system of sanitary supervision throughout the He has island built and nut into commission a emall fluit of opact coard launches or revenue cutters, He has collected the revenues at a tivure which comnares favorably with the cost of collection in the L'nited States. He has broved the harlors and has added very largely to the lighthouses and lights of the island. Anime mense amount of road and bridgebuilding has been done. He has organized a system

PRESIDENT PALMA.

of civil service for the municipal police throughout the island in order to protect them in their rights and secure them from arbitrary dismissal. He has culisted, equipped, trained, and thoroughly established a rural guard which will compare favorable with any similar force, and not over one per cent, of those employed to help him in his work has come from within his own Lorders. For the first time in history the carpet-bagger in a situation of this kind has been held in subjection, and every penny of the trust has been administered for the benefit of the ward. It has been a wonderful showing. .

"To General Wood and the noble band of men who have fought side by side to help him and his predecessors in this regeneration of a fallen people the gratitude of the United States

goes out in fullest measure, and when in future days they come to look back upon the events of four pears of discouragement and toil they will see, I fancy, merely the outlines of that enduring monument to their own noblishy of character and purpose which step by step and loor by bour they have builded up. And Cuba? If Cuba in the remotest hour of the remotest century to come forgets this service and the names of these men who have the contraction of the contractio

# ATTACKING THE BEEF TRUST BY INJUNCTION.

HE proceedings brought against a number of Western meat packers by the Attorney-General, to restrain them from acting in combination and conspiracy to manipulate prices to the minry of the public, are naturally attracting a good deal of interest. The charges against this "heartless and rapacious association " are "strong and to the point," in the opinion of the Milwanked Evening Wisconson; and it is the belief of the Detroit Free Press that "if the cause of the people can be made to win in this instance, popular prejudice against government by infunction will be materially modified." It seems to the Minneapolis Journal, moreover, that "President Roosevelt is rendering a service of no small importance to the business interests of the country" in these actions against the meat ring "and other forms of offensive trusts organized in the restraint of trade." The Chicago Journal adds: "Of course he will be criticized and accused of playing politics over the matter. He would be criticized and maligned just the same, and by the same critics, had he not pushed the suits. Whatever he does or leaves undone finds no favor in their eyes. Meantime the President has had no ulterior object in pressing this case other than the welfare of the people."

The main charges against the Swift, Cudahy, Hanmond, Armony, Morris, and other concerns named in the bill for injunction are summarized as follows:

That the packers together control about sixty per cent, of the trade and commerce in meat, and that but for the fact of a combination they would be in free competition with one another.

That they have entered into an unlawful combination to manipulate the purchase of live-stock by refraining from bidding against one another except perfunctorily, thus lowering the price at which the stock-raiser is able to sell.

That they also manipulate the purchase price of live-stock by bidding it up for a few days and thus inducing stock-owners to make large shipments, whereupon the price is quickly dropped and the owners full to secure a fair profit.

That they conspire to manipulate the selling price of freal meats, combining to raise or lower it, restricting the amount of shipments, maintaining uniform systems of credits, imposing unjust charges of cartage on dealers and consumers, and jointly agreeing not to sell meats to "delinquent" dealers.

That by means of rebates and other devices they receive unlawful advantages in railway freight-rates, and because of this discrimination they are enabled to escape competition.

These charges are criticized adversely by the New York Sun, which says:

"Complaint is made in the sixth paragraph [the second paragraph in the above summary] that the agents agree not to bid against each other, and so the cattle-owners are not paid enough, while in the next paragraph complant is made that the agents bid up the prices of lives-tock and induce the owners to shup to the wrong yard. So it would seem that the purchasing agents have, in either event, a pretty hard time, for they offend when they do not bod, because prices are thus kept too low, and, on

the other hand, they offend when they bid up the cattle, because prices are then too high. It needs no argument to indicate that this second offense, the bidding up at stock-yards, is no crime or offense under any law, whatever the motive may be. This offense, like that of refraining from bidding, is completed at a particular stock-yard, and has, moreover, no immediate or direct effect or influence on interstate commerce.

"The next paragraph charges a conspiracy arbitrarily to raise, lower, and fix prices, and to maintain uniform prices at which it will sell fresh means to dealers. Now calling a combination a conspiracy does not make it a conspiracy, and an agreement to raise, lower, and fix prices and to maintain uniform prices is in no way the creation of a monopoly, nor is it inconsistent with fair competition. Otherwise the practically uniform rate charged

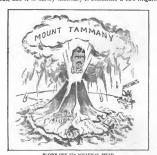

one given point to another would be evidence of a criminal conspiracy. Nor again in this charge can we find any traceable connection with interstate trade or commerce. The alleged offense in its very nature must be made up of various offenses committed at various different places, each to be judged by the law of its own locality.

by the rallroads from

"The next paragraph charges an unlawful combination in which will be uniform that the uniform charges for cartage of meats. This certainly can be no offense, and if it be an offense, it is committed in the locality where the

carts are employed, and must be judged by the law of each particular State.

"The tenth paragraph charges the defendants with continuing agreements with the railroads or common carriers by which the meat packers receive unlawful rates for transportation. This is the only offense charged which would seem to have any connection with interstate commerce, and the preliminary injunction granted by Judge Grosscup restraining the railroads from granting rebates to the beef trust disposed for the time being of that issue, and it is hardly necessary to commence a new litigation

BLOWS OFF ITS POLITICAL HEAD.

—The New York Tribune.

involving the same question. If unfair discrimination in rate be an offense, it is committed by the railroads and not by the beef-packers, and the lugging in of this averment in this paraciron would seem to indicate an apprehension that the base averments of the bill are insufficient in law, and that a demorrer thereto must be sustained.

### LEWIS NIXON AND TAMMANY HALL.

"I FIND that I can not retain my self-respect and the leadership of the organization at one and the same time," Mr. Nixon's words in resigning the leadership of Tammany Hall, are regarded by the New York papers as the fulfilment of their

prophecies, "It has taken Mr. Nixon exactly four months to discover what other people knew from the beginning," remarks the Brooklyn Times. The New York Commercial Advertiser observes that Mr. Nivon has at last discovered that he "has been the victim of a bunco game," and the New York World thinks he "is beginning to realize the immensity of the joke Richard Croker played upon him." The New York papers predicted that Mr. Croker would still be

BICHARD CROKEN AND LEWIS NAVON

the real "boxs," and now Mr. Nixon gives as his reason for resigning the allegation that "every important act of mine has been cabled to England before it became effective," and that "whenever anything important was to be done, it had to be vised from abroad." Mr. Croker has been interviewed in his English retreat, however, and denies that he has tried to interfere in the Tammany management in any way. He adds: "There is nothing to conceal. I am very sad timt there should be such trouble in Tammany. I can only imagine itat Nixon found the place too hard and was unable to lead the boys. I can conceive of no other reason for this step which I did not foresee, and which I deeply deplore." This step which I did not foresee, and which I deeply deplore. "This step which I did not foresee, and which I deeply deplore." This step which I denote the place for the seed of the step when I was unable to lead the boys, "finds considerable credence. The New York Times says on this point:

"Mr. Nison never has been the Tammany leader. There was a falai fault in the manner of his accession. Croker made himself boss by fighting his way to the top. He imposed himself jond the organization, punishing enemies till they subsided, rewarding friends until they were made loyal. He held the post by virtue of his own power. Nison assumed to hold it by virtue of Lower's designation. There is no such thing as a bosseship process confers a valid title. In a gong of stree ragamins the strongest and savagest fighter becomes the leader; and soit is in the Tammany organization."

A Tammany comment may be seen in the following paragraphs from a statement given out by John F. Carroll, one of the most prominent "district leaders":

"For my part I believe Mr. Croker's withdrawal, followed by Mr. Nixon's resignation from Tammany Hall, affords that organization an opportunity once more to equip itself, as it has always been equipped when it won its greatest victories. Tammany has never been beaten except when she was led by an individual. She has always been invincible when her nominations were made and her campaigns managed by the district leaders themselves. This is an excellent opportunity for the district leaders to resume control of the organization and lead it to victory, and I certainly do not aspir to leadership, except that of my own district. I will oppose any other leadership than that of the district leaders.

"The history of Tammany Hall under individual leaders, however worthy or pure they may have been individually, was the quiek sacrifice of all the advantages gained by her under the management and control of her district leaders. Even under the leadership of so good, pure, and upright a man as the liate John Kelly, the organization steadily declined in power in the city, and, consequently, throughout the country.

"In all this I do not mean to criticize anybody. If an angel were to become individual leader or bases of Tammany Halt is would be a misfortune for the organization. Much more would to be an ensistent of the organization. Much more would to be an evil to repeat the experiment of electing a moral to such a responsible position. I hope the organization will never again be in the position where the extravagance of speech or condition to the part of any individual can bring disaster upon the whole party. The only way to secure our-elves against this danger is to refrain from surrendering to any individual more authority than is exercised by every district leader.

"With this reform accomplished, there would be no excuse for opposition to Tammany Hall within the Puenceratic party. The Greater New York Democracy is organized against bossism or individual leadlership. The abolition of bosses in Tammely Hall would leave the opposition without any reason for existence, unless is leadlers themselves wainted to become bosses."

### MR. CARNEGIE AND THE PHILIPPINES.

MR. CARNEGIE calls his gifts of libraries to cities that agree to expend the money necessary to maintain them, the "best bargains" of his life; but the New York World thinks that the bargain which he tried to make with President McKinley, when he offered to furnish the \$20,000,000 which we agreed to pay to Spain for the Philippines, was the best bargain Mr. Carnegie ever tried to make, for "it would have been a masterstroke alike of business and benevolence." This offer was made known to the world last week by Mr. George F. Seward, president of the New York Fidelity and Casualty Company. It was made, it seems, and declined when the Treaty of Paris was still pending, and the condition attached was that Mr. Carnegie should be sent to the islands as a special commissioner, or as one of several commissioners, with authority to assure the Filipinos of our kindly disposition and to promise that the United States would recognize the independence of the islands as soon as we had established there a stable government. The comment of the Brooklyn Eagle is that "no sum, however great, could compensate us for the self-reproach that would surely follow a policy of abandonment"; and the New York Mail and Express says that "if it is true, Mr. Carnegie has found out that he can not make the Filipinos a present of their useless independence as he could make the people of Abilene or Tallapoosa a gift of a useful library." The Philadelphia Inquirer says the offer "was magnificent, but it was not statesmanship." 'The New York Times says

"Mr. Carnegie's fame rests securely upon his genius in business and his career as a philanthropist. He would have destroyed himself utterly and would have become the most distilked and owers diducted man in the United States if he had been permitted to carry out the terms of his offer to Mr. NcKinley. He was an astoundingly foolish proposal, and, not to put to he a point upon it, a reckless and wicked one. William McKinley had too deep a sense of the national honor and the national duty to give it any consideration. But all the same he must have been amazed that a man with brains enough to accumulate several hundred million dollars in the steel business should come to him with such a suggestion.

"This is by no means the first instance in which a man gifted with extraordinary capacity for getting money and doing good with it has exhibited the understanding of a child in respect to the large affairs of inational policy."

The Hartford Times, however, says:

"We do not undertake to explain the processes of Mr. McKinley's mind. He was personally a most gentle and kindly man,

CUB1: "Yo' watch me, chile, mebbe yo' hab a chance yo'se'l some day."

-The Ohio State fournal, Columbus.

whom nobody ever accused of harboring a cruel thought. Yet it is now indisputably clear that if he had earnestly desired a war in the Philippines he would have pursued exactly the course which he insisted on substituting for the humane, business-like, and truly American plan favored by Mr. Carnegic."

# VOLCANOES, EARTHQUAKES, AND THE

THE volcanic eruptions in the Windward Islands and the earthquakes in Gnatemial have roused some discussion as to which canal route is the best and safest. "'It is an ill wind that blows nobody any good,' "quotes the Rochester (N. Y.). Democrat and Ceronicle, to "already the terrific catastrophe at St. Pierre is being utilized in favor of the Panama canal route as against that by way of Nicaragna."

The noted French engineer, and former engineer-in-chief of the Panama canal, M. Bunau-Varilla, says that there are no volcanoes in Panama within one hundred and eighty miles of the canal, and that the isthmus there, "since its formation in the early quaternary period, before man appeared on the earth, has not been changed." He also finds that quite the contrary is the case in Nicaragua, which "has always been the site of seismic convuisions," and whose lake "was formally a gulf of the Pacific Ocean." No trace of volcanic activity, he adds, can be found on the Isthmus of Panama, "whose rare and small seisnic vibrations come from distant centers." Prof. Augelo Heilprin, the naturalist, also calls attention to the volcanoes on the Nicaragua route. The 1sthmian canal commission, in its report submitted last fall, states that there have been twice as many earthquakes in the Panama as in the Nicaragua region, but dismisses the possibility of canal destruction in this manuer as a "risk which may be classed with that of a great conflagration in a city like that of Chicago in 1871, or Boston in 1872." The report also states that "such danger as exists from earthquakes is essentially the same for both the Nicaragna and Panama routes, and

that in neither case is it sufficient to prevent the construction of the canal,"

Most of the papers in advocacy of the Panama route think it "folly" to appropriate some \$200,000,000 for a canal which may exist only a few years, while several of those in favor of the Nicaragua route believe that all the talk of the earthquakes and volcanoes should be disregarded, because those same conditions exist in some of our own States and Territories to-day. The Richmond Pilipatot & says:

"If we are to be deterred from building the Nicaragua canal because of fear that it might suffer from earthquakes or volcanic upheavals, by the same token we would as well desix from all great ventures of development and progress in all of our outlying possessions. Alaska, the first of these we obtained, is not free from vents for the earth's internal first and occasional tremors, and when recently we started out on our world-power career we are the started out on our world-power career we are the started out on our world-power career we are the started out of the started out of the started archipelago are all volcanic and earthquaky, and the last-named possession has an especially bad record in this line."

The New York Sum says that "even the mountains of Nicaragua are enlisted in the alleged conspiracy to defeat the great purpose of Sentor Morgan's life," for "one of them inoportuuely engages in an actual cruption at the very time when the possibility of dangerous activity on their part is described as a "bogy"; and the Baltimore American says:

"The moral is obvious. A less dangerous route must be chosen. We now realize that in all that region there is no place entirely free from the danger of sudden and disastrous seismic disturbances, but there are some places where the dangers are less than in others. The rotate of the Panama Canal is one of those places of minor dangers. The volcances or volcaniz mountains are more remote, and, while this route must always be exposed to the danger of earthquakes as the result of solsmic up-leavals, it is shorter, less expensive, would be easier repaired, and would be more difficult to destroy than the other. Under any circumstances the risk must be great, but where the odds are so largely in favor of the Panama route it should, by all reans, be chosen as that over which we will construct an inter-occunic canal.

# AMERICAN SENTIMENT TOWARD OLD-WORLD ALLIANCES AND WARS.

T has been evident for a long time to any one who reads the papers of this country and of England that the idea of Anglo-American union is making a far deeper impression over there than it is here. The feeling in favor of it and the feeling against it are both strong in Britain, while in this country it has failed apparently to elicit any expressions of intense feeling. In Great Britain, Lord Rosebery, Mr. Chamberlain, W. T. Stead, and Cecil Rhodes are a few of the men who have expressed hints and hones of close future union of the two countries, while the political leaders in the United States have been unanimously silent on the topic. The British press have apparently taken the shipping combination as evidence that the critical time in the progress of industrial domination by America is at hand, while the American press have regarded the journalistic glarm in Britain with good-humored amusement, British (and Japanese) comments on the Auglo-Japanese alliance confidently refer to the supposed fac' that the United States may be counted a silent partner in the compact; the American papers express no such view. In brief, American sentiment, as expressed in the press, is entirely friendly toward all the nations of the earth, but shows uo desire for alliance with any of them.

This is especially apparent just now in relation to the Anglopannese alliance, just mentioned. That alliance is a compact to protect British and Japanese interests in China and Korca, even, if necessary, by the sword; in the United States there are no thalf a dozen papers that have favored any agreement that implies a resort to war for the protection of commercial privileges in China. Sydney Brooks, who has been making a study of American sentiment on this matter, writes as follows in *The* Fortnightly Review:

"There is no possible development in the Far East that would tempt the United States to draw the sword, unless it were to rescue the lives of American citizens. This is a conclusion I do not advance nor ask to be accepted on the mere ibse dixit of a foreigner. It can be buttressed by the best of all evidence, the evidence of Americans themselves, 'Fortunately for the United States, wrote Mr. Josiah Onincy in August, 1900, 'in spite of our large army in the Philippines and our troops now in China, no sane American thinks that we will fight with any other member of the concert, whatever may be our policy or our interests. either to prevent the dismemberment of China or to secure any share in the partition for ourselves, or to reform the Chinese Government, or even to maintain the "open door" for our trade. Mr. Ouincy speaks for New England and New England for once is in line with the rest of America. What he says might be emphasized by quotations from papers of every shade and every twist of thought, and when, on any open point of American attitude or policy, Boston and yellow journalism think alike the point may be taken as settled. In this case Boston and vellow journalism have behind them all the conservatism, all the narochialism, and those first instincts which are also the second thoughts of the country. America's policy in China is one of despatch-writing simply. She favors the 'open door' and will keep it open so far as scribbling can. She would prefer 'a strong, independent, and responsible Chinese Government. which can and will be held accountable for the maintenance of order and the protection of our citizens and their rights under the treaties'; and to this end no pen will flow faster than hers, She values-possibly, like most of us, she overvalues-her stake in the future of China, and she will not spare the ink in its defense. But Niagara itself would not be more deafening than the roar of indignant protest over the slightest hint of a war in the protection of these interests or the development of this stake. If every Power that to-day claims a sphere of influence in China were to announce that it intended henceforward to preserve that sphere to its own use, America would lodge any number of diplomatic complaints, but she would go no farther. . . . . .

"America welcomes the Anglo-Japanese alliance as an effective instrument for protecting her Interests at other people's expense. She gives it all the approval and 'moral support' that any document can hope for. It works automatically on her behalf, and it relieves her of all responsibility. Therefore she blesses it. But I have tried to show that the practical value of her support, moral or diplomatic, will endure only so long as she in not found vait, and that directly it encounters resolute handling it will collapse like a pricked bubble. Is it necessary to were needed, America, with a considerable show of virtue, would point out that her policy of avoiding 'entangling alliances' would keep her from offering it?"

## LETTERS AND ART.

## THE NOVEL WITH A "PURPOSE."

In recent discussions regarding the function of the novel and the standards by which we may judge the highest forms of fiction, many voices have been raised in defense of the point of view expressed in the plirase; "Art for art's sake." "The novel must not preach," it has been repeatedly said, "the purpose of the story must be subordinate to the story itself." This position is now assailed by two famous American authors—one a novel-ist, the other a clergyman. The novelst is Mr. Frank Norris, whose book, "The Octopus," seems likely to win an enduring place in contemporary literature; the clergyman is the Rev. Charles M. Sheldon, whose unique experiment in Christian journalism is still fresh in the public memory. Says Mr. Norris (in The Horote Livel, May):

"Every novel must do one of three things—it must (i) tell something, (2) show something, or (3) prove something. Some novels do all three of these; some do only two; all must do at least one.

"The ordinary novel merely tells something, elaborates a complication, devotes itself primarily to things. In this class comes the novel of adventure, such as 'The Three Musketeers.'

"The second and better class of novel shows something, exposes the workings of a temperament, devotes itself primarily to the minds of human beings. In this class falls the novel of character, such as 'Romola.'

"The third, and what we hold to be the best class, proves something, draws conclusions from a whole congeries of forces, social tendencies, race impulses, devotes itself not to a study of men but of man. In this class falls the novel with the purpose, such as "Les Misérables."

The novel with a purpose is the highest form of novel, continues Mr. Noveris, for the reason that it "includes, and is forced to include, both the other classes." It "must tell something, must narrate vigorous incidents; and must show something, must penetrate deep into the motives and character of typen, men who are composite pictures of a multitude of men." He adds:

"The production of such a novel is probably the most arduous task that the writer of fiction can undertake. Nowhere else is success more difficult; nowhere else is failure so easy. Unskilfully treated the story may dwindle down and degenerate into mere special pleading, and the novelts become a polemicist, a pamplicteer, forgetting that, altho his first consideration is to prove his case, his mean must be living human beings, not statistics, and that his tools are not figures, but pictures from life as he sees it. The novel with a purpose it, no econtends, a preaching novel. But it preaches by telling things and showing things, to live the provide of the provideration of the story.

The Rev. Charles M. Sheldon makes a similar classification of feither are three large and legitimate uses for the modern novel: 1, tentertainment. 2, Instruction. 5, Inspiration." He continues (in The Independent, April 24).

"The fiction which probably at the present day is demanding largest attention is the fiction which comes under the head of inspiration,-in other words, the novel of purpose. Examples of such fiction may be cited as Hall Caine's 'Christian' or 'The Eternal City,' Frank Norris's 'The Octopus,' Miss Wilkins's The Portion of Labor, Gilbert Parker's The Right of Way. Paul Lawrence Dunbar's 'The Fanatics,' 'I. Devlin, Boss, by Francis Churchill Williams, and, according to some, 'The Crisis,' by Winston Churchill, would fall under this head rather than under the head of historical novels. The use of fiction for the purpose of inspiration-that is, to promote reforms, to incite to any kind of nobler action, to show un the sins of humanity, not as a critic but as a philanthropist-is the highest office of fiction. The man who calls attention to the faults of humanity and offers no remedy is either a misanthropist or a cynic. In either case he offers no consolation he proposes no line of conduct, he furnishes no inspiration. But the man who depicts sorrows, wrongs, injustice, unrighteensness, inequality, the neglect of childhood, the bruising of womanhood, and then, no matter how feebly, suggests something in the way of remedy for these human sorrows or sins, this man is a lover of man, and his fiction. however feeble it may be in point of style or literature, if so be it is an honest attempt, is the highest form of fiction.

The use of faction, concludes Mr. Sheldon, is "to build up life, to recreate, to inspire; and the abose of faction is the distortion of reality for the sake of producing momentary sensation or for immediate popularity or, in many cases, for mere mercenary gain. One of the transt and best things in the world is the faction which realizes its true use to the world, and one of the worst things in the world is whefer the producing the world is the faction which abuses this divine definition of one of the greatest factures of the mind of man."

### MRS. FISKE ON THE MODERN DRAMA.

M RS. MINNIE MADDERN FISKE, who is recognized as one of the most influential personalities on the American stage, and who recently acquired her own theater in New York as a protest against the methods of the theatrical syndicate. writes most interestingly on "The Matter of the Play" in the current issue of The International Monthly (Burlington, Vt.). While unwilling to acknowledge that the drama is degenerating in any real sense-while, indeed, insisting upon the fact that "the theater of to-day is far superior to that of even fifty years ago in many respects "-she yet finds much to lament in modern theatrical tendencies. Passing by recent comedies with the remark that they are, on the whole, "more refined and truer to life" than those of a century ago, she proceeds to consider the scrious drama. "By serious plays," she says, "I do not mean historical or romantic dramas, so many of which have of late been wrested from the contexts of books so rathlessly that the crude results have, no doubt, done much to try seriously the affection of the intelligent public for the theater. I mean the plays of original scope that deal with matters neither historical nor romantic." She continues:

"To me it seems to be an unfortunate matter that most of the serious plays are what may be called 'problem plays.' And thus I regard it as an omen of evil for the theater that the greater and more powerful minds devoted to dramatic literature are, almost without exception, evolving a drama that deals with unhappy or repugnant aspects of life. It would be impertinent in me to set myself up as a critic of what are called the master-works of the immediately modern repertory, when those works are so admired by great persons the world over. All I claim is an individual right to express my own dislike of this sort of drama generally, and my belief that a nobler literature should distinguish the theater of to-day. No one questions the genius of some of the foremost writers of the stage of this time, but some of us may wish that their great gifts had been and may be exercised in nobler directions. Nor does one question the ethical and human value of the greater works of the greater dramatists who seem to be concerned with social problems and human abnormalities almost exclusively. Such plays may well have an incidental and occasional place in the theater. But shall the theater in its serious purpose be wholly surrendered to such plays? .

"The stage should deal in a multitude of things, I admit : but the repertory on the whole should be recreatively happy and nobly tragic and poetic, and even romantie; for what this workaday world wants and needs is inspiration. A wholesome comedy is like a tonic to the jaded system. A profound tragedy works beneficently upon the emotions, and many in these days of convention so starve their emotions on the routine contacts of life that as a mere matter of humanity those emotions should be played upon by something of deep moment that will inspire rather than depress. There is need, also, for the exercise of the poetic and the romantic, and there is no place like the stage for that exercise. Here, too, I think, arises a question us to the real effectiveness of the stage for good. Our imaginations are so lively that we can enjoy the representation of something romantic and poetic on the stage much more readily and truthfully than we can accept the mimicry of seamy life, in its extremely modern representations. There can be no such illusion in the modern problem play, put forward as it is with commonplace detail, as there is in those stage pictures that excite the fancy and take one away to romantic scenes where life seems for the moment ideal. There is inspiration and aspiration in these things. What is there helpful or enuobling in plays of the other sort, if we are to see them one after another?

Ilisen, of course, is the foremost exponent of the "problem play." "This Ilisen is a wonderful man," exclaims Mrs. Fiske; "but is he a normal man?" She goes on to say:

"We have strange accounts of his recluse habits and of his peculiar vanities. He is said to be a solitary man, who manifests a real dislike for the domestic life which his plays so effectively dissect, in that they expose individual shortcomings or sins that have unhapor results. If the reports of interviewers

and observing travelers are to be believed, Iosen is a man agart from normal life. Yet the genius with which he has pictured human folbles and weaknesses in his plays has given him s vogue in certain circles and a following that promises almost obscure the modern drama with the shadow of pessimism. It is mesless to pretend that Ibsen is local or even autional in his perturture of character. Unquestionably he is human, altho many of his characters are perverts or abnormal. He pictures must that are too petty, it seems to me, to have place in the drama, which should concern itself with more admirable subjects. But no one can dispute his genius, or his marvelous technical skill as a dramatist."

lbscn's spell, continues the writer, has been cast over the whole modern drama. In Germany, the "problem play" reigns supreme; and a recent Berlin chronicler has remarked that the invasion of Freuch farees in that city was an agreeable antidote to the "serious, gloomy plays" of Sudermann, Hauptmann, Schnitzler, Philippl, Ernst, Halbe, Hartleben, and others. In England, it is only necessary to recall the name of Pinero, in Mrs. Fiske's opinion "the greatest of dramatists that write in English," to realize the influence of "Ibsenism," It is true that Stephen Phillips has lately come to the front; but "he stands almost or quite alone among English dramatists in tendency." In France there have been several prominent plays during the past season dealing with subjects fitter for the treatment of courts and hospitals "than of the stage. In Russia, Tolstov and other writers are guiding the drama in the same direction. Even Italy, as Madame Ristori in a late interview has taken occasion to regret, seems to prefer plays dealing with the "prosaic and seamy side of routine life."

The effect of such a dramatic atmosphere, concludes Mrs. Fiske, is inevitably unhealthy. "It colors life with a leaden hue," Acting she maintains, if it is to continue to be truly artistic, must include the "beautiful and lovable" as well as the "sinsister and eccentric." Her hope for the future is sufficiently indicated by the closing sentences of her article, quoted from Edward Dowderi's critique of the Shakespeare drama:

"Even the death end all, these things at least arc .- beauty and force, purity sin and love, and anguish and joy. These things are, and therefore life can not be a little, idle whirl of dust. We are shown the strong man taken in the toils, the sinner sinking farther and farther away from light and reality and the substantial life of things into the dubious and the dusk, the pure heart all vital and confident and joyous; we are shown the glad, vicarious sacrifice of soul for soul, the mallgn activity of evil, the vindication of right by the true justiciary; we are shown the good common things of the world and the good things that are rare; the love of parents and children, the comradeship of young men, the exquisite vivacity, conrage, and high-spirited intellect of noble girlhood, the devotion of man and woman to man and woman, The vision of life rises before us and we know that the vision represents a reality. These things then being actual, how poor and shallow a trick of the heart is cynicism!

A New Romance by John Milton?—The announcement that Mr. John Murray, the London publisher, will issue in the autumn "a new work by John Milton," has, as the London Academy observes, "naturally aroused considerable interest." The Rev. Walter Begley, the finder of "Nova Solyma: The Ideal City of Zion, or Jerusalem Regained," is a Cambridge graduate, and minister of the Anglican Church, and is described as "a genial-mannered clergyman of about fifty, as yet unknown in the world of authorship." To a correspondent of the London Pritish Weckly be given the following account of his discovery:

"My aim has been to gather books which are not in the British Museum or in the Bodleian Library. When traveling on the Continent I always go first to the booksellers' shops and to the public libraries. I make acqualitatione with the booksellers, and arrange for them to send me their catalogs. It was in this way that I came upon the Milton romance. I was looking over a cat-

alog sent me by the bookseller Weigel, of Augsburg, and was surprised to find this Latin romance with the London imprint. That such a book should have been published in England would of itself have attracted my interest, for altho the Durch and German have various Latin novels, very few have been published in England.

Mr. Begley is convinced of the authenticity of his find, and promises to furnish conclusive proofs of Milton's authorship in his introduction to the book. He adds:

"The book was published in 1648, but had been lying for twenty years in Milton's dock. He began it as a young student at college, continued it during his stay at Horton, but did not give it to the world until the stirring year which preceded the execution of Charles I. It has been a constant pleasure to me to note how full the book is of Milton's ideas. The passages dealing with love and jealousy could not have been written by any one except Milton. Curlous light is thrown on his first love, the 'Queen of the May,' whom the poet saw one May morning, and whose memory rever faded from his heart."

There are passages in "Nova Solyma" which recall John Bunyan's style. Furthermore, "the book is full of adventures by sea and land. Among the characters are brigands, robbers, and pirates, and there is a striring account of a pirate fight."

# HOW FRENCH IS TAUGHT IN THE UNITED STATES.

HE current number of La Revue (Paris) contains an article by Mme, C. Duby, professor of French at Columbus, Ohio, reproaching Americans for their notable lack of success in learning to speak the French language correctly, or even in learning to speak something resembling it. The cause of this is mainly due, according to the writer, to the unwillingness of the Americaus to employ the French method, that is, first to learn the sound of the letters and the syllables composing each word, and so adhere to the word-method by which they have been taught to read and pronounce English. While such a preliminary study is at all times advisable for the perfection of the French language, it becomes indispensable in the case of English or Americaus, who, owing to a radical difference in articulation, require a much longer time than the people of the Continent require. Mme. Duby, whose article is in the main a reproduction of a lecture delivered by her at the University of Ohio, before the Association of Modern Languages, writes, by way of preface, in part as follows:

If spoken French does not 'take' in America, it is the fault of the instructors, who persist in teaching, pronouncing, and reading French as English is taught, by means of the wordmethod. This method consists in reading the words at sight without first separately studying the letters and syllables. The teacher reads the word, the sentence; the pupil repeats it, parrot like, with indifferent success. The result, in French, is something horrible, calculated forever to disgust both pupils andmasters. And the ear of the pupil never succeeds in separating the words from the confusion of the liaisons and elisions of spoken French. The idea never seems to occur to the people here that there may be a rational and sure key to the enigma of our diction: I refer to the alphabet and the spelling-book. During the two years that I have been teaching in America, my experience has shown me that by applying himself to a patient study of the alphabet and the spelling-book, an American can learn to read and speak French correctly."

The fact that "French is not a dead language," is dweft upon by Mme. Duby as a fact that should be constantly borne in mind in connection with the system employed for learning French in foreign countries:

"It is studied and taught everywhere; but as the dead languages are studied and taught, without emmeiation, or with a perfectly arbitrary pronunciation, which is often the most ex-

travagantly fantastical-as in the case of Latin, Greek, and Sanscrit. . . . Your students devote three to four years to the study of the French lauguage. They learn the cutire grammar, the article, substantive, adjective, verb, participle, etc., in English. They know all the rules, all the exceptions, all the exceptions of the exceptions, and all the exceptions to the exceptions of the exceptions. They know all our authors, including Montaigne, Rabelais, Marot, the Romance of the Rose, and the Treaty of Strasburg between the grandsons of Charlemagne. They could give points thereon to M. Brunctiere himself. But let a Freuchman of France ask them if it rains, or what time it is, and they are unable to understand. And if they find it necessary to borrow an umbreila, they are at a loss how to formulate the question. If they undertake to name a French town, railroad station, or street, they succeed only in producing a terrific jargon. I have, in Europe, observed this a long time in astonishment. For more than twenty years I used to say to myself; 'Who can teach French to Americans, that they make such a mess of it? The schools of America must afford a field for French professors. How is it that there are none there, yet? It must be that these poor people can not obtain masters of living languages, and that each one learns it by himself from books.

Then follows a description of the writer's first experience in the class-toom of a French school in the United States. She records her amazement at discovering that the American was expected to learn French without even making the acquaintance of the syllable, much less the vowels and diphthongs composing it.

At the most, one in a hundred pupils can read current prose intelligibly. To illustrate the defective system of learning French prevailing in the United States, the writer subjoins a list of seutences showing the true signification of the Frauco-American dialect. A few selections are given:

You say:
j'ai une femme abominable
le fou de la cousine
j'entends le mâtin
li a six ânes.
bainser les cieux
le mott dans la cour
je dore les gros péchés

Instead of :
j'al une (aim abominable
le feu de la cuisine
j'altends le matin
ll a seire ans
baiser les yeux
le mor; dans le cœur
j'adore les grosses pêches.

Examples of this kind, says the writer, in substance, will help one to understand how indispensable it is in French to train the eye to recognize, the car to perceive, and the tongue to render, correctly and categorically, each one of the seventeen vowels, if French is to be regarded as a living language. The article thus concludes:

"Nevertheless it is imagined that there is no way of mastering on this side of the Atlantic those poor seventeen vowels, and that the only hope for Americans lies in braving a thousand leagues of sail sea, sea-sickness, and incurring great expense in order to go to France to make their acquaintance. Yet we have in the entire language only seventeen words sounds represented by forty-eight characters. Any one who knows how to read the Presented by forty-eight characters. Any one who knows how to read the reach strategy and future. How shall one learn how to read the present, past, and future. How shall one learn how to read the present past, and future. How shall one learn how to read the present past, and future. How shall one learn how to read the present past, and future of the shall be presented by forty of

"Fifteen hays! three weeks!" you exclaim. 'What a waste of time just to learn sounds!' Loss of time? Do you think of to fit me just to learn sounds!' Loss of time? Do you think of Ladies and gentlemen, if you wish to learn to play on the piano, are you losing your time in learning the notes, and the system which render each of these notes? Are you losing your time in practising scales, arpeggios, and exercises? What musician would consent to teach you music if you persisted in despising all these preliminaries? The French language is nothing than music. Our seventeen vowels are its notes. The forty-eight letters and combination of letters which represent them the keys. The syllable exercises are the scales, arpeggios, chords, and exercises. You offer the spectacle of an entire of the chords, and exercises.

tion wishing to play this music without familiarizing yourself with its constituent elements."- Translation made for Tue LIBERRY DIGEST.

# ARTHUR SYMONS; A POET OF "ILLUSION AND DISILLUSION."

M.R. ARTHUR SYMONS, the well-known English poet, is credited with having added "an entirely new note to his native literature"; but, if we may judge by the verilet of au American critic, that note is morbid and almormal. Mr. Paul Elmer More, the writer who takes this view, finds "extraonlist".

nary (sychological interest "in Symons's poetry, but maintains that it simply reproduces in English "the peculiar modes of thought and emotion which we attribute to the French decadence." He continues tin The In-

"If one were asked to name in a word the distinguishing mark of decadence, he would probably say illusion—not the voluntary illusion of art, such.

ARTHUR SYMONS.

for example, as enables Milton to impose on the reader as a reality the ideal fancies of his Arcadian world, but the false illusion of life which from some degeneracy of the will makes it impossible for the victim to hold fast the distinction between the flesh and the spirit, which, in fact, loses sight of the spirit altogether and sets up in its place some poor masquerading of the flosh. It is an inner blindness and confusion . it is false because there enters into it no faith in the joy of things unseen, no knowledge even that such things exist; it is false because for the voice of the spirit it hears only the clamorous outcry of a man's lower personality which springs from the desires of the body and the perceptions of the body, and is in the end one with what is desired and perceived. At the first this false illusion is sweet, but soon it is troubled with the lotterness of satiety; and the awakening from it leaves only the emptiness of endless regret and self-tormenting. The inevitable disillusion is a discovery that the phanton which has masqueraded as the spirit is no other than a shadow of the body; it is a perception of the hollowness of the old illusion without the power of escaping from its thrail.

Mr. More believes that he is able to trace through the various volumes of verse published by Arthur Symons during the past thirteen years "the progress of his poetic mood from the first illusion to its consummation in a false disallusion." He writes

"Passing over the first book, from which only it few disconnected pieces have been chosen, and those evidently written before the author had arrived at maturity of self-consciousness, we come to the collection entitled 'stillouettes,' which will probably appeal to the largest circle of readers. Yet even these poems can never attain to any very who popularity; in ore can they ever have much weight with practical intelligences that shin the exament of the properties of the still of dream should be able to the still of dream should be able to the still of dream should be able to the still of dream should be properties. The world is seen through a haze of abstraction, glimmeringly, as a land-

scape looms misty and cague through the falling, fluttering evil of the rain.... Love is the constant theme,—not the great passion of strong men that smites and birns through the world, but the lighter play of emotions that daily and wanton over their own flowering beamly. And these women to whom the poet's love goes out, girls of the dancing-hall still young and very fair, are mot moral and are not immoral, for they bear no relation to the claims of the soul; they are the figures of n fleeting illusion, a meter blossoming of the flats still undefited:

White girl, your flesh is illies Under a frozen moon, So still is The rapture of your swoon

Of whiteness, snow or liles."

Later there comes a note of poignancy and regret, expressed in such lines as the following:

And those pathetic eyes of hera: But all the London footlights know The little plaintive smile that attra The shadow is those eyes of hera

Last of all is the feeling of satisty and of utter world-weariness:

O rapture of lost days, all that remains is but this fever aching in my veins. I do not know you under this disguise: I am degraded by my memories.

Mr. More concludes

"And yet I would not leave the word despair as the last comment on these poems, which, no matter what their sadness and morbidness may be, stand quite apart form the ordinary versifying of the day. They have, whatever may be said, a great usychological interest, for Mr. Symons is the most genuine and adequate representative in English of a widespread condition. And sincerity in verse is a quality of inestimable value, But more than that : these poems are now and again so instinct with original perception of beauty and so lilted with cadences of sweetness as to be remarkable in themselves apart from any adventitious interest. And toward the end of the second volume and in the little book of recent poems that close the collection, there forces its way at times, through the turbulent eries of doll desires and stinging regrets, a recurrent note of the first simple delight in nature-a note which one would gladly accept as proplietic of a new life of artistic creation."

### NOTES.

Mr. Bernard Quartich, the London bookseller, recently paid what is believed to be a record price for a Carton,—\$\tilde{\rho}\_{\tilde{\rho}}\tilde{\rho}\_{\

An "Actors' Home" was opened at West New Brighton, Staten Island, om May I. The home is solended for superannuated actors, and was made possible by the efforts of the late Louis Additich. Among those participating in the dedication ceremonies were Joseph Jefferson and the Rev. George C. Homphon.

London.

A salution of photographs of positings and drawings by David Inhered Rosenth has been organized by the curator of the Frair Dayartanest of the Leava Library, New York. The reproductions have been selected from S. P. Averv's collection, and afford it rate opportunity for studying with some futures the work of one of the most distinctive and interescing personalities in the history of art.

Pixos Berlin comes an interesting atory which tells of the discovery of a bilteriu unknown work to Betenbowen. It is amonghe bilter analysis, said the New York Bilter Trade Review, which is melded and equivalent had to the young daughter of a friend. This treasure has been uncareful by Dr. A. Kopfermann, who found it under the lid of the music-box, which was tableten every in a left of trabbills in the house of the grand-hold of the

### SCIENCE AND INVENTION.

### ARSENIC IN THE HUMAN BODY.

THAT arsenic is not only present in every normal human organism, but is absolutely necessary to the health of that organism, is the assertion of Dr. L. Menard in Cosmex. This statement, which depends for confirmation on the recent analyses of Armand Gautier, does not mean that we are to eat arsenie for our healths; for the amount in the body, tho important to the functions of nutrition, it admost inspireciable, are is practically concentrated; in a single organ, the thyroid gland. This organ, long a puzzle to physiologists, is now known to be of the highest importance to health. Its failure to work properly brings on the terrible condition known as cretinism, and Gautier between the first in this state there is a deficiency in the system of those peculiar products of the gland that have arsenie for their basis. Says the writer:

"Brown-Séquard has taught us to recognize the influence of the internal secretions of certain vascular glands that have exerctions of certain vascular glands that have exerctory conduits. These glands, and, in a general way, most of the tissues, discharge into the blood more of less definite products, the combination of which is necessary to maintain the equilibrium of the vital functions.

"The nature and eltemical composition of these products are often impossible to determine. Thus there is yet no chemical reaction by which we can detect in the blood of a person immune to diphtheria the principle that makes it inhospitable for the bacilities of this disease.

"The mechanism of the thyroid gland, however, has now been explained to some degree in an investigation of M. Armand Gautier.

"In 1895 Baumann discovered in this gland very considerable quantities of iodin, and it was somewhat hastily concluded that its properties were due to this. In March, 1901, M. Armand Gautier announced that it also contains arsenic.

From a table given by the author, we see that in the human thyroid there are 7.5 milligrams of arsenic to the kilogram [about .05 grain to the pound]. The thymns glaud also contains a little—about one seventieth as much proportionally. The skin, hair and nails, and also the bones and brain have traces, but most of the other organs are absolutely free from it. Hence we see that the small quantity of arsenic normally present in the body is practically concentrated in this one little gland. Says the write:

"The arsenie of the thyroid gland is there as a constituent part of the phosphorated substances called nucleins, which form the chief part of the nuclei of cells... At the same time these arsenical nucleins contain also nearly all of the iodin present in thyroid.

"It has, then, been proved that in this gland there exist one or more arsenical nucleo-proteids. They are always present in health; they decrease or are modified in certain diseased states. "Iodin and arsenic enter juto these combinations in the thy-

"Iodin and arsence enter into these combinations in the thryroid gland, and the nucleo-proteids that they form are discharged into the lymphatics and make nutrition more active. They are eliminated with regularity... through the hair, skin, etc. Thus is explained the rôle of arsenic in skin discusses and in numerous affections of the nutritive functions."

Whence do our organs get this arsenie? Dr. Menard tells us that there is none in ordinary meat, but there are traces, as has been said above, in the skin, milk, and brain, and these are common articles of food. Very small quantities are also furnished by some vegetables, such as cablages, potatose, etc., especially when they grow in certain kinds of soil. Finally, arsenic is almost always present with iron in drinking-water. The writer goes on to say.

"From the medico-legal point of view, we may say that the traces of normal arsenic in the organism are so slight that their presence can not affect the results obtained by chemical analysis in cases of poisoning. "It is very remarkable that a fraction of a milligram of arsenic in the thyroid gland, which is not more than a four-hundredmillionth of the total weight of the body, is necessary and sufficient for the proper working of the organism.

"The fact is not easily explained; yet it is not without analogs. A drop of virus suffices to modify the animal economy profoundly, and yet it does not represent a larger quantity of toxic substance. The arscule does not act by its mass, but it brings about the formation of nucleo-proteids, and it is these that play such an important part in the phenomena of nutrition."— Transitation made for TIE. LATERAY DESS.

### AN UNSANITARY OATH.

THE uncleanly custom of "kissing the book," when being sworn as a witness in court, has many times been condemned by British medical nutrovities. It is, we are told by The Lancer (London, May 3), peculiar to Eugland and Ireland, and its origin is doubtful, altho possibly connected with the old custom of kissing reflex. The Lancer calls attention to the fact, which appears to be unknown even to many Judges in England, that this manner of taking the oath is not now required by law, the so-called "Sootch" method of raising the hand, which obtains also in this country, being permissible as an alternative. It saves:

"This permission was given by the Fifth Section of the Oaths Act of 1888, a statute which we owe to the late Mr. Bradlaugh. The Fifth Section provides that 'if any person to whom an oath is administered desires to swear with uplifted hand in the form and manner in which an oath is usually administered in Scotland, he shall be permitted to do so, and the oath shall be administered to him in such form and manner without further ques-The primary object of this section was, we believe to tion." allow Scotch witnesses to be sworn in English courts in the manner to which they were accustomed. It is, however, obviously so worded that any one who does not wish to kiss the book may avoid doing so without his religious or other motives becoming the subject of any inquiry. No doubt it would be more satisfactory if a form of outh excluding the kissing of a book were directly prescribed by the legislature, but the power to dispenso with the practise, long denounced by us as dirty and daugerous, is a step in the right direction. We trust that the power so given will soon be universally known. It has, however, been to a large extent ignored by coroners, while one county-court judge only, so far as we know-his Honor Judge Emden-has been active in calling attention to the act."

Now, finally, a notice has been posted in the high court of justice. In London calling attention to the fact that the "Scotch form" of eath may be substituted for "kissing the book." The smallpox epidemic and the spread of knowledge of sanitary laws have probably done their share toward breaking down the conservatism of the English courts and to discourage a procedure that had become universal from long usage, altho nowhere directly prescribed by law. The writer gues no to say:

"Medical men have frequently protested against being obliged to kiss a book, and since 1888 many have availed themselves of the act of that year when aware of it and when not prevented from doing so. And we have commended their action. We have not, nor has any one, proved or asserted the frequent spreading of infectious disease through the taking of the witnesses' oath. We have, however, insisted that kissing the book was uncleanly and that it might in conceivable cases be dangerous. In one case in 1898 Mr. F. D. Lys, late medical officer or health to the district council of Wareham and Purbeck, ascribed, in his annual report to the council, the death of a policeman to acute ulceration of the throat contracted through taking the witness's oath at petty sessions at Wareham. Besides ourselves many individual medical men and laymen since 1885 have contended on behalf of a sanitary form of swearing. . . . That the success obtained should have come slowly and should be incomplete even now affords a fair instance of the difficulty with which reforms are sometimes brought about, even the they are admitted on all sides to be desirable. It illustrates also the indifference of the general public to sanitary questions that are not brought vividly before them by the actual presence of disease."

# THE NATURAL PHOTOGRAPH ON THE HOLY SHROUD.

THE cemarkable investigation by some French scientific men-which has resulted in a statement of their belief that the marks on the "holy shroud" at Turin were actually produced by the body of the entombed Christ, has been noticed in these columns. Our previous account was from despatches to the daily papers; but we are now enabled to give from a French source a more detailed description of the investigation and of the scientific principles involved. The inquiry has certainly brought out some interesting facts, whatever may be thought of the inferences drawn from them. Says the French writer, who is a contributor to La Nature and signs his article only with the initial "N":

"The 'holy shroud' has been the property of the royal house of Savoy since the fifteenth century. The marks that it bears

FACSIMILE OF CHEMICAL IMPRINT.

SIXTEENTH CENTURY MEDAL

have been attributed to Christ and have been successively referred to a supernatural cause, to some medieval painter, and the spots left by perspiration on the shrond. Fine photographs botained by the Chevalier Fla in 1859 and authenticated by the Chevalier Fla in 1859 and authenticated by the Chevalier Fla in 1859 and authenticated by the centure, have enabled M. Vienno to make his detailed study.

"We regret that we can not give here an abstract of the powerled arguments that tend to prove that the image on the 'boly shroud' is formed not by a painting made by the hand of man, as has been asserted, but by a sort of staining due to peculiar conditions—a brown stain reproducing the body and features of Christ as a negative, that is to say, with dark shades for the reliefs, light ones for the hollows, and half-tints for the intermediate parts. We will simply say that those who have no idea of the striking impression of sweetness and majesty that is produced by the image. . . . We shall confine ourselves, however, to the scientific point of view.

"M. Vignon has already taken up, one by one, the various hypotheses hitters advanced, and had shown by direct observation that we have here a reproduction by projection to a distance, when he began to be assisted by Commandant Colson, lecture on physics at the Polyschnic School, who had made a study of the actions that may be exerted at a distance by radiations and vapurs on a sensitive surface such as that of a photographic plate. The resulting collaboration gave the investigation a trent toward experimental verification and led to interesting

"It was not necessary to invoke the effect of radiation, for from the physical point of view it was possible to conceive neither of a radiation emantating from the body in the sepulcher, nor of the presence on the shroud of a substance capable of being affected by radiation. It remained, therefore, to investigate the effects of vapors and to necertain (i) in what coaditions a vapor emanating from a body possessing points of relief and depression could give at a distance on a scere formed of a proper substance, an image of the same kind as that of the 'holy shroud'; and (i) conditions."

To answer the first question, investigations in a new field were necessary. Colson had lateady shown in 1850 that a sheet of sinc could produce an effect on a photographic plate even at a distance of an ineh or more, and he proved that this was due not to any form of radiation but to au emission of "vapor" by the sinc at ordinary temperature and pressure. He utilized this discovery in the present investigation as follows:

"M. Colson took a plaster relief, representing a head of Christ about a occurimeters I aimeba [high, and deposited on this freshly powdered zinc. This relief was placed on toe sensitive layer of a Lumière plate, in a hermétuelly sealed box. Two days later, the plate, when taken out and developed, gave a segative image on which the parts that had been in constat with the plate were represented by deep shades and the others by lighter this as the separation was greater. By printing a reproduction on a second plate an inverse image was obtained. . . . M. Vignon under the establistic layer; the thinge obtained showed every very slight differences of rehef. The positive and negative are shown herewith.

"These two experiments show that it makes no difference whether the object reproduced is above or below the sensitive

NEGATIVE OF CHEMICAL IMPRINT-

is above or below the sensitive film: in both cases the vapor is diffused in the air in all directions and reselves the film with a sense that the sense of the contraction of the contraction of the as the distance is smaller. The possibility of obtaining the representation of a body in relief by means of its vapor was thus demoustrated. It remained to ascertain whether in the case of the holy shroud the two indispensable elements—vapors and spensable elements—vapors and isted, and the answer was in the affirmative.

"M. Vignon from a study of the details of the image on the shread by means of photographic reproductions, and M. Coloron from experiments on the action of ammoniaeal vapors on aloes and from a study of the conditions of Christ's burial as see from in the Latin and Greek texts of the Gospels, came to the following interesting conclusions:

"As time was lacking, since it was the eve of the Jewish sabhath, the burial was only temporary, and the body must have been laid, without washing or anointing, in a large linen clock soaked in a mixture of aloes, myrrh, and olive oil. This cloth, which is what is called in France the 'holy shroud,' but which is rather a cerement, enveloped the body in its length, passing over the head.

"Then the ammoniacal vapors from the urea that must have been present in the sweat and blood in considerable proportion, after suffering such as that on the cross, began to act on the powdered aloes of the shroud and determined its oxidation, turning it brown in different degrees, according to distance, and producing a negative image as in the case of the vapor of zine. The oil also plays a part; it is attacked by the alkaline vapors and solidifies, forming a mordant that incorporates the brown color solidifies, forming a mordant that incorporates the brown color ing a negative image in brown, identical with that of the holy strong M. Visnon has reproduced the conditions with a modelstrong in the control of the color of the color

"The reproduction of images in relief by means of their vapors is thus a proved fact; and it has been brought to light for first time in connection with an image nearly twenty centures old, due to exceptional circumstances resulting from the provisional and temperary character of an entombment."—Translation made for Time LITERAN DIGAST.

The West-Indian Volcanic Outbreak.—It will probably be impossible to describe the great disaster in Marunique from the scientific standpoint for some time. The Government is sending experts to the spot, and many scientific men will accompany the relief vessels, so that we may shortly expect to know more about the outburst than we do at present. One autority is quoted as saying that absolutely profiting of scientific

value is contained in the accounts so far published (May 1), and this is probably not far from the truth. Enough is known, however, to warrant vulcanoiogists in saying that, owing probably to the penetration of the sea-water to subterranean lara-fields, there has been a sudden renewal of activity all along the time of weakers in the earth's crust that is amarked by the Central American and West Indian volcations. The pressure seems be been considered to the control of the control o

In a brief note in The Journal (New York), Garrett A. Serviss calls attention to the fact that experts who examined the volcano just previously to the final catastrophe announced that there was no immediate danger, and that others, on the arrival of the first news, declared it to be an undoubted exaggeration and predicted that revised reports would place the deaths at fewer than one thousand. He draws the moral that scientific caution, which properly prevents us from easily accepting reports of occurrences of an abnormal or minsual kind, should not also operate in the same degree to make us incredulous about events that are unusual in magnitude merely. That the late outbreak was almost unprecedented in size there can be no doubt. The only eruptions that challenge comparison with it were the one that destroyed Pompeji and the one that blew the East Indian island of Krakatoa out of the ocean in 1881, sending a sound-wave three times around the world and filling the whole upper atmosphere with dust that hung there for months.

### THE PHILOSOPHY OF NAUGHTINESS.

J UST how far are uncontrollable children morally responsible? Is the "naughty boy" sometimes impelled to act as he does by physical causes and conditions that he can not control? In a recent lecture on "Some Abnormal Psychical Conditions in Children," delivered before the Royal College of Physicians in London, Dr. Still asserts that badness in children is often associated with physical idefects, and that even where it is not it may be due to physical causes. Snys The Hospital (May 3) in a leading editorial on Dr. Still's secture:

"It has long been recognized that defective moral control is apt to occur in association with those disorders of intellect which are ordinarily recognized as idiocy, imbe-

cility, or insanity, and no one doubts the morbid nature of the moral defect in these cases. Whether it be regarded as dependent upon the intellectual failure or not, it is clearly part and parcel of the malady, and according to our conception of the processes going on in disorder of mind, so will be our conception of the associated disorder of the moral sense. If the one be regarded as due to disease or imperfection of brain-tissue, so also will the other. But children are occasionally met with who exhibit defects of moral control precisely analogous to those which occur with admittedly morbid brains, yet who, so far as ordinary tests go, pass for children of normal intellect; and the question is whether these naughty children are not naughty because of defect in the physical substratum of morality, if we may use such a phrase, just as imbeciles are defective in the physical substratum of intellect. . . . .

"There are children who lie and steal without reason, are cruel to animals, are dangerous to leave with other children lest they

should injure them, and who commit the same misdementartime after time within a few hours after punishment, notwithstanding that they may have been greatly affected by the punishment at the time; yet these children may show no sign of intellectual deficiency. Surely the defect of moral control in such cases, whatever be its cause, is of the same nature as that so frequently seen in cases of ovlyons intellectual deficiency. But Dr. Still goes further and shows that defect of moral control. while sometimes permanent, may be only temporary, in some cases passing away after an outburst, never to return, while in others periods of defective moral control may alternate with periods in which no such defect is present. Here we seem to come to the brink of a moral insanity, and it would be easy to follow the lead given by Dr. Still, and to discuss the question of the relation not only of some of the acute forms of magnity but of these cases of defective moral control in children, with the presence of toxins in the blood and their injurious action on those finer nerve complines which are brought into operation in all memal action, including the moralities. The matter is one of much practical interest. In regard to the more temporary attacks of moral defect, modern pathology by its teaching in regard to toxins would seem to give much support to the methods of the old schoolmaster who said that when he found a boy incorrigibly naughty he had recourse to Gregory powder; while in regard to the general scheme of education to be adopted in the case of naughty children one can not but feel, in view of the marvelous improvement which is produced in the intellectual faculties by early and judicious teaching, that perhaps an equally careful training of that residuum of moral control which is still to be found in all, might rescue some of those passionate, spiteful, lawless, shameless children, whose condition is allied to moral imbeeility, from the sad future that is before them."

### A DRY SEA OF SALT.

THE great field of crystallized salt at Salton, Cal., in the middle of the Colorado Desect, is described in The World's Work (May) by Arthur linkersley. This great natural phenomenon, which is only a little to the north of the Mexican border-line, is 2a feet below the level of the sea, and is more than a thousand acres in extent. Says Mr. Inkersley:

"Its surface is as white as snow, and, when the sun is shining, its brilliance is too duzzling for the eye. The field is constantly supplied by the many salt-springs in the adjacent foot-hills, the waters from which drain into the basin, and, rapidly evaporating, leare deposits of almost pure salt. The deposits, varying in thickness from ten to twenty inches, form a solid crust over

"To secure the harvest the salt field is plowed with a saltplow-a massive four-wheeled implement driven by steam and

THE STEAM PLOUGH
FULLOWING the constantly re-forming salt dust.
Courtest of The World's Work (New York).

managed by two men. The heavy steel share makes a broad but shallow furrow, throwing up the crust in parallel ridges on either side, and bringing to view a seepage from the salt springs that underlie it. About seven hundred tons are plowed up in a day. Laborest then work he salt with bost to and fro in the water to remove the earthy particles, and, when this is done, they stack un the washed salt in conicial mounds to be taken later t. the mill. The water in which the crystals are washed is already so saturated with sait that the crystals safer scarcely any loss by the cleansing process, which is a necessary preliminary to refining. To furnish additional water for washing the salt, an artesian well ises been sunk which, tho it is 900 feet deep, is still strongly alkalina. At present only about ten acres of the great field are worked, as a new crust forms almost immediately after the plow has passed on.

"To the north of the salt-field is a 'little settlement named Salton, where the drying and milling-works are. After the sait increase stacked in the field to drain, it is loaded on flat trucks and taken to the works, hoisted to the top, and thrown into a break. After being reduced to particles of uniform size, it is passed irrough a mill and ground to powder. Then it is sitted and packed into sacks for the market. The salt prepared in this manner is of the hest quality, but much is sold for commercial purposes in its unrefined condition, under the name of 'hide sait.'

White men can not work long in such extreme heat as that of the Colorado desert, so that the laborers employed in the Station district are Indians or Japanese. For weeks the thermometer averages 120°, and the sur reflected from the lazaking white salffields produces a glare like that of an electrical furnace. Even the hardy Japanese only sew the sacks in which the Salt is packed; the plowing and milling are done by Coabuila Indians. The atmosphere, laden with salt particles, causes a painful thirst, and the waters of the only well in the place are brackish and ware.

"Under certain atmospheric conditions appear above the saltfield mirages of broad flowering fields and towering cities. Moonlight, too, often produces weird and singularly beautiful effects on the great white field of gleaming salt.

"The most peculiar experience this basin has had occurred in 1891, when a flood from the Colorado River turned the salt plain into a lake. But the rapid evaporation of the region soon brought the country back to its normal condition."

Bacteria in Digestion,-The results of experiments with chickens to determine the effect of intestinal bacteria upon the process of digestion are reported by Professor Schottelius in a recent number of the Archiv für Hygiene, and reproduced by the Staats-Zeitung (New York). Chickens were kept in eages from which all bacteria were carefully excluded and were supplied with food equally free from bacteria. They ate ravenously and almost continually and evidently digested their food well, yet not only did they not fatten but they steadily decreased in weight and strength. Another series of experiments gave direct and positive proof that the presence of intestinal bacteria is necessary to nutrition. Chickens which had been hatched and raised in a sterilized environment, receiving only germ-free food, thrived for a week, and then began to decline in weight and strength. Then they were divided into two groups, one of which was fed on sterilized food, the other on food containing bacteria. Al, of the first group died in a few days, the others improved rapidly and soon were indistinguishable from chickens that had run free in the poultry-yard. Mme. Metchnikoff has obtained analogous results with tadpoles which, fed for a time with germfree food, attained an average weight of 25 milligrams (0.4 grain) and an average length of 15.5 millimeters (0.62 inch). while other tadpoles, fed for the same period on ordinary food, had an average weight of 142 milligrams (2.2 grains) and an average length of 26.5 millimeters (1.06 inches) .- Translation made for THE LITERARY DIGEST.

Emancipation of the Silkworm.—The domain of electricity in influstry is constantly widening and in no direction more rapidly than in that of elemistry. Says an editorial writer in *The Electrical Review*, speaking of the unexpected direction of this development in certain cases:

"It was not thought for example, that the electric furnace would emancipate the silkworm, but such seems to be the case. An interesting new process has been brought out in France for the manufacture of artificial silk from the wood pulp, using electrically unde carbon bissified as a solvent. The results obtained are most interesting and promising, and it is believed that a large outlet for carbon bisslidd will be found in this new in-dustry. The method is extremely simple. The pulp is prepared in the usual way, as In paper-making, and is dissolved in busslidd. The mixture is then squirred through glass nostes of exceedingly small dimensions, issuing in fine har-like threads, which are to all intents and purposes silk as soon as the voiatile solvent flux exportant. These threads are then worked in the usual way and spun lato threads for the weaving of fabrics of various kinds.

Electric Currents in Plants.—The results of some interesting researches on plant-electricity have been reported by A. D. Waller, says the Revue Scientifgue. He finds that whenever a plant is wounded, a positive electric current is established between the wounded part and the intext parts. This may start with an electromotive force of o.r volt, but it afterward diminishes. He writes further:

'Actual wounding is not necessary to obtain this manifestation: an electropositive current is set up when there is mechanical excitation, but it is much weaker (0.02 volt). And light acts like mechanical excitation with certain plants, such as the leaves of the iris, of tobacco, of the begonia, etc. From the illuminated to the darkened part flows a positive electric current that may be as strong as 0.02 volt. A similar reaction in the petals is not always observed. There is a certain correlation between the vigor of a plant and the electric reaction. The more vigorous the plant is, the stronger the current. Plants grown from fresh seeds give a more powerful current than those from old seeds. A bean a year old gave a current of 0.0170 volt; one five years old, a current of 0,0014; and the reaction is inversely and regularly proportional to the age of the seed from which the plant springs. There is observed in vegetable tissues subjected to an excitation of the same intensity at regular interwals the characteristic changes of reaction that are present in animal tissues—fatigue, recuperation, etc. Temperature plays a part in all these phenomena: below -4 to -6 °C, [+22 to +25 °F.] and above 40 °C. [108 °F.] there is no reaction. As we see, Mr. Waller has demonstrated some interesting facts, and doubt less he will pursue and extend his investigations."-Translation made for THE LITERARY DIGEST.

### SCIENCE BREVITIES.

NIETY-SEVEN American municipalities report that thay have established cremation or reduction-plants, for swape, according to Engineering Auers (May 1). "Pennsylvania and Indiana lead in the total number of plants, having 1; and in, respectively, and also in the number of crematories, which is 20 for each. New York, Pennsylvania, and Ohlo each report four reduction-plants."

A NEW line of refrigerator steamships for service between this country and Great Britain is to be established, according to The Scientific American. "The new line will be controlled by a British-American syndicate. boats will rus with weekly sallings from Bristol. One line will traval be-tween Bristol and New York, a second between Bristol and Boston; and a third line between New Orleans and Bristol. The principal purpose of the third is to facilitate and expedite the transit of the Californian produce to the English markets. The railroad runs from California to New Orleans will be two days shorter than to New York. Pruit will be carried over the Texas Pacific and New Orleans Railroad. A great warehouse is being built at Briatol containing 1,000,000 feet of space, capable of storing 12,000 to 15,000 tons of general produce. Already an extensive cold storage plant he been erected. New docks are being constructed, and several improvements with the existing accommodation are being carried out, at a cost of over \$5,000,000. This project is the outcome of the recent visit of the British manufacturers to this country.

"THE objection that wireless telegraphy can not insure secrecy is not of anch great weight," says Captain Perrié of the French military telegraph service in an article abstracted in The Engineering Magazine (April); this disadvantage is more or less common to all methods of electric com munication. Wirea have been tapped, and 'listening in 'ss not an unheardof occurrence in telephony. Code systems can obviate this objection. But a more serious trouble is the possibility of interference. If all the small stations have to 'shut up' when a big one is shouling in the neighborhood, the practical limitations of space telegraphy are apparent. But whatever the final outcome of the work to secure perfect syntony, there will still remain a large and important field which space telegraphy will have all to For communicating with ahips at sea, with isolated lighthonses and with islands which can not be reached by cable its advantages are unique. It seems as if there were room enough for all our systems of electric communication, and it is most probable that the net effect of wireless telegraphy upon the older methods will be an all-round improvement, such as lighting.

### THE RELIGIOUS WORLD.

### IS IT UNWISE TO SEND MISSIONARIES TO THE WEST INDIES?

S1NCE the acquisition of Cuba and Porto Rico by the United States Government, a considerable amount of missionary work has been undertaken, with varying results, on both islands, Plans are also under way to establish the Christian church more firmly in the Danish West Indies and the other islands of the West Indian group. In at least one quarter, however, these plans do not meet with approval. The Rev. II. Astley Parris, a Unitariam minister living in Barbados, writes an article in The Christian Register (Boston), in which he takes the view that this missionary propagands in the West Indies has not accomplished any real good, and that, if coutlinued in the same spirit as in the past, it is bound to be barren and fruitiess. He says:

"Noither the missionary societies nor the missionaries whom they send out have any adequate working knowledge of the inner spirit and temper-the only true seat of religion and ethical appeal-of the people among whom their propaganda is carried on. Little or no care is taken to discover how far the inner consciousness of the 'pagan' has traveled toward a receptivity of the principles which Christianity has to inculcate. He is generally regarded as an inherently inferior animal, who has never troubled his head about questions of obligation, and not as a man who, in the orderly working of the evolutionary processes of human development, has reached a stage of moral sensitiveness which, while responding to different impressions, is at bottom identical with the ethical sense of all the race. The consequence is that the attempts at religious education, instead of leading or drawing out what is in the man, takes the form of eramming and hammering some fad or dogma into him, -a mischievous procedure."

Mr. Parris proceeds to illustrate his meaning by an account of conditions existing in the island on which he lives:

"In the district in Barbados in which I was born and grew up, there are about 150 families of peasants. As I look back upou the scenes of a few years past, I see them as simple but thrifty folk, interested in each other's welfare, fervent in their belief in a God who required of them worship and reverence for himself and charity and kindness to their fellow-men. They knew little about creeds, and were troubled with nothing more than a sort of laissez-faire subscription to the confession of the Anglican Church. During the past few years a popular type of ignorant missionaries have gone there. First, they discovered that in districts where the Church of England has been established for nearly two conturies 'the Gospel was never preached' till they went. There are now five distinct sects in that village. Each has a specially patented brand of 'truth' which the other does not possess, which they can not obtain without due acknowledgment of these patent rights, and without which they must suffer untold retribution. Of these various 'missions' the people all strive to be expert theologians. Much stress is laid upon the study of the Bible 'under the guidance of the Holy Spirit.' All are similarly guided as to the desirability of being crammed full of proof-tests, in support of the veriest rubbish, and similarly guided, too, as to the necessity of intolerance-almost bitter hatred-of each other over the different conclusions to which they are equally 'led' by the same Spirit. So intense is this competition that little time is found for the legitimate business of life. This is paraded as an instance of the eagerness after gospel truth instead of being recognized as what in reality it is, - the development of a disposition to vanity and babbling.

The writer admits that all missionaries are not of the type that he describes. "There are glorious exceptions," he says; but "the men who are selected are generally not fit for the fight." "Christianity will do for the world," he adds, "if presented in its purity and simplicity. As generally presented by such missionaries, it will often be a faiture." He concludes:

"No denomination has any moral right to send to the foreign field any but the very best men; and, the more inferior the material on which to work, the more superior should be the workman. I do not mean of course that force-ripe superiority whose sham character is laid bare by its patronising air, but the superiority of the man who has so far traversod the cycle of et/cital and esthetical culture as to have come back in-sincere tenderness and helpful symaph ty othe spot where he standards who has not yet found the heart to begin, or who, having begur, is faltering and discouraged because of the difficulty of the way. I mean the superiority of him who, having reached some exalted height in purity and piety, can lose nothing by the grace of lowlines; who, having advanced farthest Godwar', finds himself nearer and nearer the very heart of human'ty. But few and far between are such men. The race is producing them; but, like all of nature's well-rounded products, they come slowly."

# THE STANDARD OF ORTHODOXY IN THE ANGLICAN CHURCH.

THAT the problems presented by a diminishing number of miniscrial studeuts are no less urgent in England than in this country is evident from an article appearing in The Contemporary Review (April) from the pen of the Rev. John Gamble, Mr. Gamble, who confines himself to the conditions confronting the Church of England, considers in turn the various reasons that have been given to account for "the ominous falling-off in the supply of clergy," but finds them all insufficient. Clerical poverty, the increased attractiveness of other careers, the trying character of clerical duties, have all been adduced; but, in the writer's opinion, the cause lies deeper, and the reluctance to enter the ministry proceeds "mainly from intellectual or spiritual causes." It is rooted in "a repugnance to the generally accepted standard of orthodoxy," He continues:

"Those whose dissatisfaction with orthodoxy goes deepest, but in whom, save for this, the Church might find some of her best servants, will, generally speaking, remain silent about their difficulties. They will simply shu out Holy Orders from their minds when they are thinking of their future. Of the numbers of such persons it is impossible for those in authority, or indeed for any one, to form an estimate. It is with them as with many who absent themselves from the church's worship. They do not believe that these can be removed by any possible explanations. They simply stay away."

The mere removal of the obligation to subscribe to the Thirty-nine Articles, continues the writer, would not bilkely to effect any very great change. It is necessary to look below the surface and to recognize the profound changes in religious thought which have taken place during the past generation. Mr. Gamble thinks that sermons give "the surset index of the prevailing religious feeling," and that attention can hardly fail to be arrested by the "significant characteristic" presented by the sermons of our date.

"We are struck by the authority they universally concede to experience. The preacher makes no demand upon his hearers which would not be supported by a monitor within their own breasts. His claims are only the formulated atterances of their own nature in its highest moments. While in the days of the Oxford Movement, and still more during the preceding Evangelical period, the bliss and misery of a future life were freely appealed to, such appeals have to a great extent ceased. We hear soldom of a heaven and hell in the future, but a great deal of these realities regarded as present states of being. If the sermons now addressed to educated congregations and thought worthy of publication are examined, this mark, we believe, will be found to distinguish them even from those of the beginning of the late Queen's reign. No doubt the tendency is more clearly defined among preachers of the liberal school. But it is quite recognizable also in the sermons of avowed High Churchmen and Evangelicals. And it becomes increasingly conspicuous the nearer we come to the present moment. Thus the constant assertion of Matthew Arnold that nothing could be insisted upon in religion which was not verifiable and unable to prove itself seems to be accepted by our modern preachers. They ask nothing from their heaters which an enlightened experience will refuse to concede."

A complete change of perspective, observes Mr. Gamble, has been silently effected. "What once stood unfeeded in the background has been given a central position, and what once was

central has become subordinate." In the words of Amiel: "Our epoch has made Christianity a psychological, rather than a historical, religion." The writer concludes:

"Here, then, is the onerous task that awaits every clergyman who seriously tries to speak to his hearers in their own language. He has to give new expression to ancient words without emptying them of their religious contents. Those who succeed are rewarded by the lively gratitude of those they benefit. Those who do not perceive the necessity of any such retranslation or who are unequal to it are said to be 'out of harmony with the age.' or are blamed in some of the other phrases which have been freely applied to the clergy in this discussion. . . . The real remedy is hardly to be looked for at once. As time passes, experience, we may believe, will be more and more universally recognized as the ultimate court of appeal in matters of faith. The real nature of the task awaiting the clergy as religious teachers will then be disclosed. And we may feel sure that, once this task is plainly seen and admitted, volunteers will not be found wanting for so honorable a service."

### IS THE "HOLY SHROUD" OF TURIN GENUINE?

REAT interest has been aroused in G religious circles by the scientific tests that have recently been applied to one of the most famous of the Roman Catholic "relies," the "holy shroud" preserved in Turin Cathedral. As already related in our pages, three eminent French scientists, M. Paul Vignon, doctor of science in Paris, M. Colson, of the Government Polytechnic School, and M. Yves Delage, zoological professor at the Sorbonne, are all of the opinion that the relic is genuine, and the subject is being seriously discussed in the London Lancet and Times (see articles in our department of Science and Invention last week and this week). as well as in many of the continental papers. The Paris Figure contains the following account of the relie:

"The 'holy shroud,' which is preserved, under many locks in a casket over the altar of the Capella del Santissino Sudario of Turin Cathedral, is a piece of linen 15 feet 5 inches long and 4 feet 7 inches broad. The color of the cloth is yellow, covered with various prints. Some are

black marks made by fire; others indicate contact with dripping water. Finally, there are brownish-red marks, showing the blotted image of a human form, one impression seen from the front and another seen from behind. This prece of linen is venerated as being the actual winding-sheet in which Jesus Christ was varped for burnty.

"The shroud can be clearly traced back to the year 1353, when

it passed into the hands of the house of Savey. According to tradition, it was enerated in Constantinople until 120; but between that date and 133 there is a gap in its history. In May, 1858, Some photographs were taken of the relie by Signer Secondo Pia, of Turin, and to his remarkable negatives is due the present revival of interest in the shroad.

Dr. Vignon finds in the impressions on the shroud an image which could be attributed only to the work of a painter or to the imprint of a human body. The first hypothesis he rejects without hesitation. Says the Figure 2.

"What a singular design it is: No neck, no ears, no shoulders! A head bearing no resemblance whatever to any lead of Christ known before 1353; A nude body! A broken nose, swelled cheekbones and calves too large! Finally, some inexpliciable singularities, no nukles on the front image, ankles strongly marked on the rear impression.

"There are details of prodigious realism. A drop of blood on the forehead is of the natural spherical shape, and not conventionally designed in the form of a tear. Who knew in the Middle Ages the exact impression made by a drop of blood? Who would have dared to have taken liberty with the traditions? There are marks of driven nails, not through the hands but through the wrists : not through the feet, but through the insteps. The wounds and lacerations indicated are of the kind that would have been made by the Roman flagrum, and are totally different from the wounds pictured by medieval painters. The theory that the shroud was painted is therefore hardly admissible '

Dr. Vignon contends that all the evidence bears in favor of the authenticity of the relic. In the course of an interview published in the Gaulois he says:

"How could I doubt? Look closely at the photograph. You will find the stigmata as they are described in the Holy Scriptures. The New-Testament parrative tells us that Christ was beaten, crucified crowned with thorns, and his side pierced with a lance. The marks of this fourfold torture, which are found on the Turin shroud, are too accurate, too much in conformity with the laws of anatomy. to have been invented by an impostor. A striking testimony to the genuineness of the shroud is found in the impression of the lance-wound. Medieval painters generally located this wound on the right side. and they were right, from the artistic point of view, because in making a picture they faced their model. The same reasons do not obtain in the case of the shroud, and we find the wound on the left side."

Many of the Paris scientists who have camined the relie admit that it was actually used as a shroud, and they see nothing inherently impossible in Dr. Vigono's theory of the imprint of a human body upon linen impregnated

with myrh and aloes. What is needed, they say, is more corvincing proof that the body was the body of Christ. On this point the Paris Whatration says:

"The 'body shroud' of Turin is not the only one in existence. The old clurch of Cadonia (Fance) possesses one which makes

THE "HOLY SHROUD" OF TURIN, Reproduced from Dr. Paul Vignon's new book

Dig west by Google

claims to authenticity. It seems almost impossible to decide which is the actual piece of linen given by Joseph of Arimathea to bury Christ."

The New York Catholic Netos says:

"There seems to be no need of relying on M. Vignon's experiments to decide the value of this relic. Its listory seems quite accurately traced for us. In 1877 Caton Ladore wrote a careful and trustworthy history of the shroud. He proved beyond a doubt that the linen cloth, preserved then in the Cathedral at Turin, was the very one that had been venerated at Lirey in the fourteenth century. . . It seems that the bishop of the discovery in the standard of the shrough the control of the standard of the standa

"If this account of the origin and history of the body shroud be above susplicion and in all senses reliable, and so it seems probe scholarly Jesuits who edit the Interface in Interface of the Interface of Section 1988. The 1989-1986 Fase, II, 139-151, then M. Vignoris experiments and theory are all in vain, and the good people of Turin, such as it may grieve them and the thousands who they traveled to see the relic, must admit that it is not the real winding wheel."

### THE JEWISH SABBATH PROBLEM.

THE annual session of the Central Conference of American rabbis, which was held this year in New Orleans, was marked by a debate of more than ordinary importance on the problem of the Jewish Sabbath. "No question before the Jewish of America Lodday," says The frecish American (Detroit), "is more important than that of the Sabbath. ... There can be no question that as things are at present the average Jew observes practically no Sabbath—neither the day sanctioned by tradition, because he deems it impossible to do so, nor the one adopted by some congregations as a measure of expediency, because he believes that expediency should not decide a matter of such moment."

Rabbi Jacob Voorsanger, of San Francisco, who opened the debate on the subject at New Orleans, confessed that the Jewish Sabbath has become "the attenuated shadow of its former strength and beauty." He continued (as reported in the New Orleans Times Democrab).

"Sabbath rest, so far as its public character is concerned, is nullified by the exigencies of the times, and the public, as well as the domestic, colebration of the day is affected in consequence. This is a fact that admits of no discussion. look it straight in the face and keep strict account with it. The fact that individuals may keep the Sabbath by no means affects the general statement. The latter is not only true as regards the centers of Jewish population in America, but the same facts may be noted in European centers like Berlin and Paris, Jewish banks and counting-houses are open on the Sabbath. Professional men are busy. Artisans pursue their toil, and the lamentable truth is that even many who theoretically accept the divloc authority of the Sabbath commandment ignore it practically. and pursue their daily avocation. Nor is this almost universal secularization of Sabbath for the pursuit of labor the greatest evil. Far exceeding the latter is that the sanctifying influence of the day is becoming lost. The day has not retained its hold upon the household. Women and children imitate their male relatives. Saturday begins to be a day whereon to discharge all the postnoned duties of the week. The crowds of fewish women who, preferably, do their shopping on Saturday, might testify to the almost hopeless change that has taken place in the practise, if not actually in the sentiment, of our people. As regards the public celebration of the Sabbath, we can best prove how it is affected by the loss of its companion principles of rest, by pointing to our audiences. Whether the latter be large or small, whether the service be prolonged or brief, decorous or otherwise, the fact is that the attendance of men is utterfy out of proportion to be fact in the service of the control of the extent of adapting them to the wants of a single sex. This may sound fulferious, between control can be tell what may betile in congregations, the men of which are reduced to the condition of mere contributors and business admunistrators, and whose women sustain the burden of maintaining the public ecclebrations as well as the foundation processing the control of the condition of the

In spite of these facts to which he called attention and which would seem to weight in favor of the discontinuance of the Saturday Sabbath, Dr. Voorsanger concluted his address by declaring that he was opposed to any change. He enlogaced the historical meaning of the Sabbath to the Jewish race, maintaining that it was not

of the integral clements of the Jewish faith, and that to change it at this day would break a chain of the centuries.

which followed the address, the younger rabbis for the most part the spoke in favor of changing the Jewish Sabbath to Sunday, while the elder defended the conservative position. The only definite result of the discussion was the appointment of a committee of the

RABBI J. VOORSANGER

the apparation of a committee of three to investigate the question and report at the next conference.

the next conference.

The Jewish papers complain that undue importance was given in the daily press to the debate on the Sabbath problem. Says

The American Hebreto (New York):

"The conference has itself to blame if the public was treated to a free-for-all debate on a subject which at least should have been treated with some preparation by many who discussed it. And the subject was so worded that, notwithstanding the conservative attitude of a number of rubbis, the impression conveyed to the public, and one which caused some consternation, was one implying a deliberate delate on a resolution to change the Sabbath-day to Sunday. This was unfortunate from any pout of view.

The real question at issue, adult The American Israelite (Cincinnati), was that involved, not in the transference of the Sabbath to Sunday, but in the holding of supplementary services on Sunday. "This much is certain," emphatically declares The Jewith Exponent (Philadelphia): "when the Seventh-day Sabbath of the Jews likes, Judaism will die with it."

There have been attempts at various times to relieve the Jews from the pressure of Christian Sunday legislation, as is pointed out by the Chicago *Tribune*;

"In 1878 the parliament of the United Kingdom provided that when Jewish manufacturers closed on Saturnlay the laws governing the employment of women and young persons on Sunday should be in certain specified ways modified for their benefit. In 1920 bills were prepared in Massachusetts and New York for the purpose of allowing Jews who practised Saturday-closing to indulge in Sunday-spening. These bills, however, were not passed. Perhaps it is well they were not, altho it would seem to be only just for recognize the scruples and wishes of a class of American chizens who now number more than a million. It is well that there should be one day of rest for the whole population. Unanimity in this matter will have great value. It would be unfortunate if it were necessary to have one law for the jew and another for the Gentlie. It is to be hoped, therefore, that when the Central Conference of American Rabio comes together mext year its committee will report favorably on the proposed change. Of course the action of the conference will not be binding on the congregations. It will not be without its influence, however. As a matter of mere plotty, the jewish church will find that Sunday services will help it to regain its hold upon those members who have got away from it. To worship on Sunday will not be in this case to commenorate the resurrection. It will be simply to accommodate extermonics to circumstances.

### REVOLT OF THE ENGLISH NONCONFORMISTS.

THE educational bill recently introduced in the British House of Commons, with the approval of Mr, Balfour and the other government leaders, bids fair to arouse a religious controversy of the most serious character. "So deep a wound does it purpose to inflict on religious liberty in this country," declares the London Fritish Wrekly (Nonconformist), "that it must be fought at all hazards. We are inclined to think it the very worst education bill ever proposed." And Dr. Clifford, the eminent Baptist clergyman, has said that he and his colleagues are ready, if necessary, to give up their summer holidays and agitate throughout England "to prevent this bill from ever passing into law."

The chief objection to the bill, which on its face seems innocent enough, is that it will intrench the Established Church at the expense of the Nonconformists. Says *The Northwestern Christian Advocate* (Chicago, Meth. Episc.):

"The bill, as construed by Nonconformists, in its operation, fastens upon the children of Nonconformists a sectarian education under the control of the Anglicans and Roman Catholics, It practically provides for the support of voluntary or sectarian schools by the state. What this means is shown by the fact that there are in England 11,777 Anglican schools and 1,045 Roman Catholic schools, making a total of 12,822 Anglican and Roman Catholic schools; 458 Wesleyan and 1,079 other voluntary schools, making a grand total of 14,359 voluntary schools, which are supported in part out of taxes and partly by voluntary subscriptions. There are 5,758 board or public schools, supported partly out of the national taxes and partly out of local rates or local taxes. The new education bill proposes to throw the 14.359 voluntary schools upon the local rates, tho in everything save secular education they will continue to be managed denominationally. Not only will the Anglicans thus secure the public support of their own schools, but they will practically control, through political influence, the board or public schools, and thus be in a position to control the education of the children of the Nonconformists, most of whom attend the board or public schools, and the appointment of nearly all teachers."

The supporters of the bill, however, are unwilling to admit that it would operate in any such way as is here described, and claim that it would improve the national system of education, without being unjust to the sectarian schools. The provisions of the bill, claims the London Guardáne (Prot. Episc.), are essentially democratic, and "the conscience clause," with its permission of withdrawal during the hour of religious instruction, gives the fullest latitude to Nonconformits parents.

The Nonconformist leaders and press, however, see in the bill only an assault upon the liberties of the Free churches. In the opinion of The Christian World (London, Nonconformist), it proposes "rank injustice," and the same paper asks whether "it befits a publicly endowed and wealthy church to make an aggrieved appeal to the nation wherewith to do purely sectarian work." "We are facing a crisis which concerns the future existence of the Free churches and the future progress of the state," and Dr. Townsend, in his presidential address before a greate," ference of Nonconformists, held in Lopdon on April 15; and at the same meeting a resolution was adopted, on the med nor of pr. Guinness Rogers, "indignantly protesting "against the proposed law. The Rev. Hugh Price Highes, former president of the Britistil Wesleyan Clurch, and Dr. Joseph Parker, the famous Congregationalist minister, have bottle-apressed themselves in no uncer tant terms in letters to the London Timer, the latter going so far as to say that, if the bill is passed, Nonconformists should "refuse to pay the new and outragoous church-rate which will thus be forced upon them." The Methodist Timers sets its approval upon Dr. Parker's words, declaring:

"This is very extreme advice to give and should be given only with a deep sense of responsibility and a determination at all hazard to set a personal example, if necessary, in defying a wicked law. We have never before known an occasion in political controversy when responsible journalists and ecclesiastical leaders would have been justified in going to such a length. Tut we must say that in our deliberate judgment an unprecedented execusion has now arisen when such men as Dr. Nicoll and Dr. Parker are fully justified in giving religious Nonconformists this advice."

Dr. Robertson Nicoll has addressed an open letter to the Government, in which he says;

"Nonconformists object to this measure because under it they would be taxed for the support of schools under clerical control. in which religious dogmas would be taught which they do not believe. These schools would be controlled by the clergy of the Anglican Church. The bill would make the Anglican clergy the sole educational authority, with the power of rating. which Nonconformists would be called upon to pay would go to the provision of sectarian religious teaching. I submit that this is an extreme attack upon the principle of religious liberty, Nonconformists did not provoke the attack. We earnestly desire friendly relations with the Church of England and cooperation in the immense task of winning back the multitude at present alienated from the churches of every kind. But we will defend our freedom to the last. It is to be hoped that the Government will pause. Our country is already sufficiently divided. If the fires of sectarian passion are to be lighted in every parish, the king will be crowned under the most evil omens."

The tone of this comment shows unmistakably how high feeling is running in England over the educational question, and, if the present bill becomes law, a period of bitter religious strife would seem to be inevitable.

### RELIGIOUS NOTES.

THE Brick Church (Presbyterian), New York, has set a generous example in his manificence to the families of its deceased pastors. When Dr. Maltible D. Habbouck filed, the church gave his widow \$3,000. On the more recent death of Dr. Purves, a plan was inaugarated to provide his widow and family with a fund of \$400,000, half of which amount has been raised.

Thissi are no Jewa in Namerch, declares Mr. William E. Cartis in one hielecters to the Chicago Recedellerald. They are not allowed to live there. They are permitted to come in and trade, but no Jaw can rests house or store or take up a permanent residence for fear of a public demonstration. They come and go, however, like other merchants, burjed and telling, midsing their owe basiness, and making money out of the death of the desired of the store of the desired of th

# FOREIGN TOPICS.

### RESULT OF THE FRENCH ELECTIONS.

THE French premier. Waldeck-Rousseau, won a great personal triumph in the elections on April 27 and May it last. European press opinion is in practical agreement on that point. The administration majority in the Chamber is fixed at about 85, althou with feasible combinations of certain political groups it may easily swell to 120 or more. The ministry's assured supporcers comprise Republicans, Radical Socialists, and Socialists. The opposition is made up of Nationalists, Conservatives, Royalists, Imperialiss, disaffected Republicans, and as few unaffiliated politicians. Of the newly chosen Chamber the correspondent of the London Times notes:

"Tho new Clumber can not last more than three years. M. Loubet was elected on February 13, 1899, and his powers expite on Pebruary 18, 1996. The new Chamber will come into existence on June 1, 1902, and lis powers will expite on June 1, 1996. Consequently, it would only have three and a half months of existence after the expiration of M. Loubet's powers. It would thus be absorbed in preparations for a fresh electoral campaign at the moment when called upon to elect a new President. This is quite out of the question, and as neither the existence of the Chamber not the powers of the President can be prolonged, there chamber not the powers of the President can be prolonged, there the Chamber and the state in April, 1995. It is well at once to note this fact."

The outcome is far from satisfactory to such men as M. Mélino, a leader of the opposition, nor can it be particularly pleasant to M. Millerand, Socialist leader, or M. Brison, the Radical. Neither Socialists nor Radicals did as well, it seems, as they anticipated. But, on the other hand, they appear to have retained considerable power. The Nandard (London) says:

"The dynastic partles remain impotent; the Nationalists, who are merely bent on change, no matter of what nature and in whose favor, have won only a handful of seats. The Republican regime remains secure and practically unassailable, provided its representatives are not tempted, by internal jealousies and dissensions, into playing the game of their adversaries. And what is true of the republic is true also of the present ministry. It is dependent on moderato Republicans and on the great bulk of the Socialists-on the latter in a very large and, apparently, increasing degree. This means, in practise, a good deal of give-andtake, of mutual concession and consideration, if the coalition is to hold its own. The alliance was, as we have said, not altogether palatable to many of M. Waldeck-Ronsseau's followers. and the maintenance of the Socialist strength at the polls will not tend to make that party less exacting in the ministerial counsels. But if the Government is to be kept in office-as every well-wisher of France will hope-the combination must be maintained, at any sacrifice of prejudice or preference. The Republiean Center will, indeed, have done a good work for the country when they have educated their Socialist allies to a sense of political responsibility.

'The French "are to be heartily congratulated on the result," according to The St. James's Gazette (London);

"Whatever opinion may be held on the question of monarchy or republic in the abstract, there can be no doubt at all that the latter alone can make France strong and prosperous to-day, That the parties of the French pretenders are continually dwindling calls for no surprise when we regard the personalities of those pretenders. A new Napoleon might win France; a William 11. might rule her. Men of the type of the Due d'Orleans or of Prince Victor Napoleon are fitted to do neither the one nor the other. It is probably a recognition of this fact which has crystallized the forces of reaction and discontent into the socalled Nationalist party. But that party is no party. Program or policy is inherently impossible to its antagonistic elements. It is 'agin the Government,' that is all, and its only hope is to muddy the political waters by means of a volcanic upheaval in the hope that fish for the catching may thereby be brought to the surface. Its methods have been violent: it has tried its best to revive the prejudice of the Dreyfus case, and it has, without doubt, received the subterranean help of the Roman Church, eager to give tit for tat for the religious associations law. Nevertheless it has failed."

A sort of political analysis of French conditions is made by The Daily News (London):

"We must never forget that the republic is ever surrounded by groups of implicable enemies, who form the permanent opposition to every republican government, and challenge the vey form of the existing counstitution. These parties are made up of the débris of all the systems destroyed by previous revolution and uphevanis—Royalists, Bonapartists, and Clericals. These groups, which, in a healthy state of things, would probably, in the long run, due the death of the jacobites in England, Lave which represents almost precisely the same phenomenon as the extreme imperialist movement in England.

French press opinion is, on the whole, strongly tinged by partizan views. Thus tho Kėpubėlyue (Paris), organ of M. Mėline, Insists that the French Premier has not woo such a very great triumph, after all. The Internatigeant (Paris), which sets forth the ultra-Radical views of Rochefort, denounces the trickery of Wahleck-Rousseau. The Libra Parole (Paris) says, or tather quotes a politician who says, that Jevush gold is at the bottom of the returns. The ministerial Temps (Paris) says:

"The opposition papers, Nationalist and Republican, will try in vain to disguise the striking defeat that universal suffage has inflicted upon them. On the eve of the voting they announced that the country was going to send a majority of them.elves to the Chamber. They would make but a mouthful, not only of the Waldeck-Rousseau cabinet, but also of all Republicans who, the ourselves, have refused to be led by the bid advice of the systematic opposition,"

Yet, in spite of their tremendous efforts and unheard-of procedure, says this authority, the enemies of the ministry have obtained but insignificant results, and their efforts to mitigate the crushing insignificance of those results will fail:

"Confident of this outcome, we have directed our attention toward the means of bringing the Republican groups into closer touch. Our growth in numbers and the ineptitude of the tremendous efforts against us now allow us to consider to-morrow's task calmly, without resentment, without nneasiness. Before the electoral struggle, concern at the perils incurred by the republic drew together many who were accustomed to antagonizing one another. During the electoral stroggle, a durable and productive harmony was tacitly engendered among eandidates widely sundered as regards point of view. Republicans of various shades of opinion who tried to adjust their program so as to make it a flag to rally around. The most radical, faced by universal suffrage, consented to modifications. We shall not insult those who have been elected by supposing that they already forget the spirit of conciliation with which they were animated when their political destiny was at stake. The Republicans who have been elected will come to the Chamber emancipated from the past. Upon this past the country has given a verdict of approval adequate enough to leave no necessity of justifying what has been done, either by dwelling upon it out of occasion or even by exaggerating it. What remains to be done is sufficiently great for the Republican party to undertake it with arder and assiduity. Nothing hinders it further. Universal suffrage has made a phantom of the national and reactionary peril. The Republicnn achievement is a reality."

Much consolation is derived by the anti-ministerial Patrix (Paris), from the fact that the city of Paris was, on the whole, against Waldeck-Rousseau. The Clericals got the worst of it, If an utterance in the Journal des Débats (Paris) may be accepted:

"Will it [peril to the republic] come from the Clericals? We will not say, like the reactionaries, that there are no more Clericals. No doubt there will nlways be some, but it requires strange preconceptions to find them dangerous at the period we

· Le Rire (Paris).

FRENCH POLITICAL LEADERS IN COMIC GUISE.

have reached. They were not dangerous before April 27. They have become less dangerous since, if that be possible, for the elections have not brought them a bit of strength. The Cherical peril is thus no more serious than the reactionary peril."

German opinion is rather conflicting. The democratically inclined Frankfurter Zeitung, after noting the ministerial victory, asks if the reform of the school laws and the various measures proposed by Waldeck-Roussean can be put through. It sees no definite answer in the result. Nor can the Hamburger Na.hiihten persuado itself that Waldeck-Rousseau's ministry is not ut the mercy of hostile combination.—Translations made for The Intrass Dusse.

### COSSACK WHIPS IN FINLAND.

THE Cossacks have lead free reu in Finland recently, owing to conscription rots, and women and children have been whipped through the streets, while "a captain whose name is given nearly killed a certain teacher for attempting to protect a young git." The result is, neconling to the Independence Belge (Brussels), "an alsolutely revolutionary situation":

"At Helsingfors the Cossacks broke open the doors of the Protestant clairch, entered private houses by force, and struck every one they met with their whips. . . . All this proves that General Bobrikoff did not justly estimate the situation when he said recently in a report that the population of Finland had accepted the new military law with satisfaction. It is by means of lying reports of this nature that the Russian authorities are misled concerning the true state of the country and hence govern against the wishes and interests of the people. It is not by means of Cossack ouslanght that the resistance of the Finns will be overcome. Brutal action can but exasperate this temperate and prudent people, who will never openly revolt, but whose protests against the unlawful acts committed will on that very account be more imposing and more impressive. The Government of St. Petersburg had in the Finns a people whose loyalty could inspire no distrust. Through incompetence it has made them a hostile people whose opposition can not be modified and who may, in certain contingencies, be dangerous. How, for instance, can reliance be placed upon Finnish recruits forcibly drafted into Russian regiments? Is it by arming enemies within that a resolute army con be formed, capable of withstanding a for for without? By an means. The only result the St. Petersburg Government will obtain by continuing its present anhappy gelicy in the grand duchy is an enormous impulse to Finnish enegation. A thousand enigrants a week are counted now, and is the near future the grand duchy will be wholly deserred by the native population which had nade it the most peaceful and comparatively the most prosperous country in Europe.

What the Czar's Government aims at is the reduction of Finland to an absolutely level footing with the other provinces of the empire, according to the Pester 1.loyd (Budapest):

"The Baltic provinces have already been deprived of their special privileges, and only Finland remains as a country that holds to its particular rights; that means to be bound to the great Russian empire only through the personal union; that had us own coinage and us own postage-stamps down to our own day; that even had its own army. Finland certainly had good reason to suppose that it would always be so. Alexander I. had decreed that Finland was not to be considered an integral past of Russia, and Alexander II., whenever he opened Finnish parliaments, always alluded to the grand duchy as a constitutional monarchy. Now it is to be different. In Russia the great inperial idea rules the Czar and his Government. It will no longer be tolerated that a small country shall exist on the Finnish and Bothman gulfs, that a small population shall have more freedom, rights, and advantages than all the other provinces of the empire enjoy. Above all, it will not be tolerated that the Finnish troops shall serve only Finland."

Care must be taken not to fall into exaggeration by accusing the Russian Government of more than it has to answer for, says the Journal des Debats (Paris).

"The policy jurisued by the Russian Government with regard to Finland is but the logical consequence of that already adapted in the Russification of the German districts of the Haltic pretinces. The protests heard to-day among the Finish directly interested, or among their foreign friends, take us back many years to the time of the Russification of the German Russiars. True, there is not a parallel in the case of the last naned with that of the Finns, inasmuch as Finland, which Sweden bad to cele to Russia in 1809, constituted a distinct political entity. & to this authority.

### THE COMING ELECTIONS IN JAPAN.

THE approaching general election in Japan promises to assume a complicated aspect, partly because of the unfamiliarity of the voters with constitutional government and partly because of the prospective participation of Buddhist priests in the struggle. On the last point The Japan Weekly Gazette, a British paper published in Vokohama, says;

"The Yorodzu is responsible for the report that the Buddhists are organizing worldly forces to influence legislation in their favor. According

VISCOUNT KATSURA,

resentatives of a prime Minister of Japan.

gravitation of the Minister of Japan.

gravitation of the Minister of Minister

Our vernacular contemporary concludes by pointing out that the constitution prohibits the Buddhists from participating in the general election, and that therefore all action of the kind referred to is being carried on clandestinely."

The object of the priests in taking to politics is thus hinted at by the paper from which we have just quoted:

"The proposed religions law, which esplicitly secures a dead level of religious freedom, would necessarily blast all hopes that the Buddhists may secretly cherish that their faith may again become the national religion, and it is conceivable that, as a last resort, they may have decided to fight the passage of the obnoxions law by influencing electors to vote dates for parliament. The plan has a certain feasibility. If the educated Japanese smile at Buddhum, the pooreendowed millions have a traditional reverence for its priests." "This is causing serious concern," says the Kobe ('hronicle (lapau), another British paper, which proceeds:

"The Asahi has been endeavoring to ascertain what truth there is in these reports, and finds that they chiefly emanate

from the Japan Buddhist Union. Among the .nembers of the society. there are several who are ambitious of seats in the Diet. Again, there are some among t h e younger priests of Hongwanii sects who are anxious to leave their religious profession and qualify as candidates in order if elected members of the Diet to alter certain provisions of the law of religions, which are objectionable to the Buddhists. Our contemporary holds it, however, to be incredible

COUNT OKUMA, Political Rival of Marquis Ito.

that arrangements have been made to provide large sums as expenses for Buddhist candidates."

Our authority concludes that if the priests do go into politics, "serons evils" may result. Meanwhile, Marquis Ito has issued a manifesto to his followers arging "clean conduct, full freedom, absolute good faith, studious a voidance of all unlawful pressure and improper influences, and the invariable placing of unational interests above party." Of this manifesto, the Kobe Herald (Japan), likewise a British paper, observes).

"In Japan it is still necessary—Marquis to is right in thinking that it is still necessary—to consolute and to extend the groundwork of modern politics in the true sense. This aim, the marquis thinks, is above party, and alove constitutionalism. It takes precedence of the seed of the principle of popular government. From the Irond statement of this paramount political need of the country, as given in the manifesto, Marquis Ito deces and recommends particular principles of action to his party

and through it to the country at large.

Reflection will, however, convise most observers of political conditions in Japan that Marquis Ito's most statesmanike 'lead' is that which he has given, for Japan is still some way off Western political conditions. From one point of view Marquis Ito's manifesto is a confession. It is a confession of the present failure of the constitutional idea in Japan. But it does not not be supposed to the constitutional idea in Japan. But it sates and the constitutional idea in Japan European Confession of the facts. This is toget rid of (illusions.

It may be inferred that Viscount Katsura, the premier, will have a struggle to retain power. Count Okuma, the political rival of Marquis Ito, is a factor in the situation. The paper last quoted said recently of the Katsura ministry:

"The present Japanese ministry was generally regarded as a kind of makeshift combination, brought together to take office because it was inconvenient or impossible for any of the recognized

MARQUIS YAMAGATA, Mentioned for the Japanese Pramiership.

[May 24, 1902

political leaders to form a cabinet. Manquis Ito actually had... the strongest party in the House of Representatives, but the difficulties with the peers which led to his resignation of office in the spring prevented has resumption of power, altho, as may be remembered, he was pressed to return to office. Marquis Yanungata was more or less impossible because in all probability he would have found himself opposed by the Ito party in the lower House, an opposition which might have checked the life of a ministry under limu at any time or at any juncture.

### GERMANY'S MILITARY TRACEDY.

A MILITARY tragedy which for more than a year has aroused intense interest throughout Germany came to m end recently at Gumbinnen, East Piussia, by the acquittal of two non-commissioned officers charged with the murder of their commanding officer, Captain von Krosigk. The case is universally admitted to be of far-reaching importance in its learnings upon German militarism. Before passing to German comment on the affair, the following statement of the facts, from The Times (London), which, like all the foreign papers, has followed the case closely, may be considered:

"The trial was the thrd to which the accused, whose names are respectively Marten and Hickel, had been subjected under the new military judicial procedure in consequence of appeals from two courts of lower instance. . . . Late in the afternoon of January 21, 1901, Capitali von Krosigk was shot dead by an unknown hand through an embrasare in the will of the riding-school where he had been superintending the riding exercise of some of his troopers. The underder officer that a reputation of extreme severity in his dealings with his men, and had at least on one occasion heep punished for exceeding the legitimate dictates of military discipline. The elaborate investigations which were instituted at Gumbinnen, and which were partly conducted with the aid of a detective from Berlin, laid bare the whole domestic economy and the daily life of the barracks."

German press opinion seems unanimous in indorsing the verdict. Even the Conservative Kreus Zeitung (Berlin) can see nothing to find fault with in the result. The Democratic Frankfurtar Zeitung says:

"For the third time judgment has been pronounced in the Gumbinnen murder case-whether for the last time can not be said with certainty, altho in view of the admitted correctness with which the proceedings were conducted it can not be easy to find a basis for revision. . . Captain von Kro'gk had made himself enemies in almost every garrison lie had been assigned to, owing to his personality, and this is true in less of the officers than of the men and also of civilians. He had repeatedly been slot at without suspicion being drawn particularly to Marten, civilians had made threats against him, and funally the internaces of an officer against Krosigk, on the occasion of the latter's violence to his wife, had been mentioned, and has been looked upon as a threat. Our attention has, moreover, been drawn to the fact that eight years ago a captain of Schleswig inazars amend von Krosigk was severely dealt with by two linzars whose identity was over ascertain. If this be the von Krowins of the dealth of the control of the control

Seldom has a judicial drama wrought so powerfully upon the public mind, says the Possische Zeitung (Berlin):

"The verilet satisfies the national sense of justice. The proceedings, as they have been unfolled, are calculated to restore in a measure confidence in the military judicial system which had been shattered by the former trials. But the opinion seems justified that many notable miscarriages of justice call for legal remedy."

The whole affair shows what "total lack of confidence in the military system of justice prevails in the land," according to the Vorwarts (Berlin), and the Rheinisch-Westfalische Zeetung says:

"Unconditional discipline is demanded in time of war, but in time of peace it is demanded only for the objects of the service and not for private needs, orders, and amusements. Army requirements will find the more support from the people the sooner the chapter of soldiers' wrongs is ended.

The outcome will cause miversal satisfaction and relief in Germany and far beyond her boundaries, says the Nune Freie Presse (Vienna), which adds: "The fact undoubtedly remains that an act of unlawful violence must go anymaished, but what is that to the possibility involved in the verdict which would have sent an innocent man to the gallows?... One has only to think of the result the trial would probably have had were it held behind closed doors to appreciate the full blessings of the newly enacted utilitary penal law,"—Translations made for The LIDERAK DISSEST.

### CURRENT POFTRY. Verses for a Child.

By IOSEPHINE DODGE DASKAM,

We lived out under the pear-tree, We dined upon tarts and cream, I married you there forever, But, dear, 'twas only a dream!

We sailed away in the branches To countries strange and new. For we owned entates in Dreamland, But, sweetheart, it isn't true !

We made a church in the pear-tree. Where the angels came to sing : We stroked their wings - but, dearest, You musto't believe a thing!

We cut our names in the tree trunk So the bank could never grow. And the Dryad cried! But my darling, Twas none of it really so!

How can I play any longer with my doil? You know she has lost her head. And Mary's the one that always fixed her for me-And Mary, you say, 25 dead.

. . .

Why do I leave the sand-heap all alone? Because it has dried and spread And Mary's the one that always brought the water-

And Mary, you say, is dead.

The New 20th Century Subscription Edition

FUNK & WAGNALLS

# Standard Dictionary

With Cyclopedia and Atlas of the World, for 1902

EXPENSE IN PREPARATION ABOVE \$1,000,000—THE GREATEST LITERARY ENTERPRISE OF ANY COUNTRY, OR OF ANY AGE.

The Publishers are willing to waive, for a limited time, the ordinary formalities of business regarding payment. We simply ask that you permit us to place this unequaled Dictionary upon your table, that you may have a week's use of this famous work. By such a practical test we believe you will admit that THE STANDARD DICTIONARY is more than we claim for it. Send it back, then, if you like, at our expense; but allow us to give you the company of this \$1,000,000 guest for seven days, gratis.

We do this because it is simply impossible to give any fair conception of the magnitude of THE STANDARD DICTIONARY by means of a Prospectus, however elaborate it be. A bare statement of facts would appear incredible. It is only in testing the Dictionary by actual use, and by comparison with other works of reference, that an adequate idea of this unique and indispensable work can be gathered.

YOU INCUR ABSOLUTELY NO RISK IN ACCEPTING THIS PROPOSITION. WE TAKE ALL RISK, PAY ALL CARRIAGE CHARGES, Etc.

We can not promise to hold this very liberal offer open long, and it is naturally limited in its operation. Immediate return should therefore be made of the special DIGEST Form below, when we will send the work to any responsible reader carriage prepaid. It will at once he seen that this is

## AN UNPRECEDENTED OFFER.

IT COSTS YOU NOTHING FOR A WEEK OF RARE PLEASURE AND PROFIT. THE FORM BELOW BRINGS A \$1,000,000 BOOK TO YOU GRATIS.

This Dictionary DEFINES OVER 80,000 MORE WORDS AND PHRASES THAN ANY OTHER Dictionary of the English Language as yet completed. Compare This STANDARD with any of the great lexicon wor completed. The Century Dictionary, for instance, omits above ONE-FOURTH of the entire language, but it costs about THEE THAES the price of THE STANDARD; and instance, omits above CNF-FOLK III of the entire language, but it costs aloud I IIK-F. I IMES, the price of IIE STANDARD, and of office the property of the price of IIE STANDARD, and office of the price of IIE STANDARD, and office office the price of IIE STANDARD, and office office the price of IIE STANDARD, and office office the price of III STANDARD, and office office office of III STANDARD, and office office office office office office of III STANDARD, and office office

# THE FAVORITE IN ALL NATIONS

THE LATE PRESIDENT McKINLEY used the Standard in the WHITE HOUSE; if is authority in the Government Printing Office, and with many members of the Cabinet, as well as in leading Colleges, and Public Schools.

KING EDWARD VIL uses the "Standard Dictionary" at SAN-DRINGHAM.

THE LATE OUEEN VICTORIA specially purchased it for the Royal Library at WINDSOR.

THE PRINCE OF WALES has bought a copy of the 1902 issue for YORK HOUSE.

ALL THE PRINCIPAL SOVEREIGNS of the World (22 in number) have secured this BEST Dictionary.

## YOUR Library Should Have the BEST. It is Magnificently Illustrated and Superbly Bound.

THE STANDARD contains 5,000 new engravings, many matchless color pictures, and 64 latest maps of the world. The single illustracolor pictures, and 64 latest maps of the world. The single illustration of the brilliant Solar Spectrum cost above \$5,000. This retired to the state of the stat modern reference Dictionary work is until you see THE STANDARD.

# Talks Out

Doctors Talk About Food

It is often the case that doctors themselves drift into bad habits of food and drink although they know better, but doctors are human you know like the rest of us, but when they get into trouble they generally know better how to get out of it, and the "food route" is a common one among them.

Dr. H. Barber of Laurel, Ind. concluded that coffee and badly selected food was the cause of his stomach trouble and his loss of weight from 184 pounds to 153 pounds with nerves impaired and general nervous break-down.

He did not give coffee up at once but began the use of Grape-Nuts and says. "Within a month I could see a wonderful change had taken place due to the use of the new food. I decided to give up coffee and use Postum in its place. So regularly for a time I have been on a breakfast made up of Grape-Nuts, a little graham bread, and Postum Food Coffee. My weight has increased to r74 pounds, my stomach trouble has exitrely gone, and my mind is clear and vigorous as ever. Wishing you every success I beg to assure you of my warm sopreciation of Grape-Nuts and Postum."

# Michael Davitt's History of

# THE BOER FIGHT FOR FREEDOM

The Fullest, Most Graphic, Most Reliable, Most Ardent History of the War from the Boer Side; Authoritative, Final.

### WHAT THE BOOK CONTAINS

603 pages of original research and description, much of which is the result of Mr. Davitt's personal observation in South Africa during the war.

More than 100 illustrations of Boer generals, battles, camp-scenes, etc., many of which are from photographs taken by Mr. Davitt himself.

7 maps, which localize the victories of Botha, De la Rey, and the other great Boer generals, as clearly as the they occurred in your own country.

A copious index by which you can instantly pick out the descriptions of your favorite heroes and trace their exploits.

The Chicago Record-Herald says: "Michael Davilt, the stormy potrel of Anglo-Irish politics, has written a book on 'The Boer Fight for Freedom,' which is to be issued soon by Funk & Wagnalla Company of New York. His book is sure to be an interesting and picturesque pro-Boer narrative of events, and will throw needed light upon the personality of the stubborn burghers."

# The Mahin Method

A 72 page collection of valuable advertising matter containing reproductions of posters, street car cards. magazine and newspaper advertisements, and a symposium presenting the strongest claims for various kinds of advertising by F. N. Doubleday, E. W. Spaulding, Thomas Baimer, J. E. Verree, O. J. Gude, R. C. Campbell, Barron G. Collier, Everett Sisson, John H. Snitzler, J. T. Snitzler, John Lee Mahin, William C. Hunter, William Bancroft, F. A. Partenheimer, R. S. Thain, H. H. Mailory, E. J. Mitchell, P. E. Faust, J. J. Rockwell, Condé Nast, F. H. Kochersberger, Herbert J. Day, and H. Jenkins.

### 2 The Commercial Value of Advertising

A lecture delivered by John Lee Mahin at the University of Chicago, being an exposition of the vital principles underlying modern scientific advertising. This lecture contains matter full of interest and value to not only the advertiser but to all people who desire to keep in touch with the commercial progress of the present day.

### 3. Our Six Leaflets

The "Follow-up" System. How a Constructive Force removes

The Value of an Inquiry. Modern Business Methods.

Turning Inquiries into Orders. The Advertising of the Future.

To stimulate broader thought and discussion, specialists have been retained to prepare articles which will be absolutely exclusive to

### MAHIN'S MAGAZINE.

Professor Walter Dill Scott, Director of the Psychological Laboratory of Northwestern University, will treat of the Psychological Element in Advertising. The first article of his series, entitled " Association of Ideas," appeared in the April issue. The second article, entitled "Suggestion," appears in the May issue.

Professor Herbert L. Willett, Dean of the Disciples' Divinity House, the University of Chicago, will treat of the Ethical Element in Advertising. The first article of his series, entitled "Do the Teachings of Jesus Countenance Advertising?" appears in the May issue.

Mr. George B. Waldron, the eminent statistician, will treat of the Statistical Element in Advertising. The first article of his series, entitled "The Drift of Population, Exhibited with Reference to General Movements, Territory, Age, Sex, Nationality, etc.," appears in the May issue.

Moreover, these articles do not comprehend all the contents, for there are to be many of those pertinent paragraphs which are often not less worthy, even if somewhat less pretentious. MAHIN'S MAGAZINE in short, is to be brimful of everything calculated to throw light on advertising in its various phases, whether newspaper, magazine, street-car, out-door, window display or follow-up, Send a dollar now for a year's subscription and get the benefit of the discussions while they are most timely.

# READY!

THE EAGERLY AWAITED BOOK MICHAEL DAVITT'S History of

# HF ROFR FIGHT for

Fullest, Most Graphic, Most Reliable, Iost Ardent History of the War from the Boer side; Authoritative, Final

Written by the Man Best Qualified Michael Davitt, one of the most ardent of the Boer supporters, went to Africa during the heat of the early fighting to gather his material. There he became acquainted with Steyn, Botha, De la Rey, and other prominent Boer leaders, whose strong personality as well as heroic acts, are sividly described by his trained journalistic pei, he gives a most graphic description of the stege of Ladysmith, the crossing of the Tugela River, the Battle of Spion Kop, General Methuen's campaign, and of the subsequent events right up to the cap-ture of Lord Methuen and the death of Cool Rhodes.

# WHAT THE BOOK CONTAINS

603 pages of original research and description, much of which is the result of Mr. Davitts per-sonal observation in South Africa during the war. More than 100 illustrations of Boer Generals, hattles, camp-scenes, etc., many of which are from photographs taken by Mr. Davitt himself. 7 maps, which localize the victories of Boths, De la Rey, and the other great Boer generals, as clearly as tho they occurred in your own country. # TOPICS OF THE DAY.

# EFFECT OF THE BEEF TRUST INJUNCTION.

N OW that the beef-packers named in the Government's bill have been temporarily enjoined by a federal court from 'doing all these acts in restraint of trade that were supposed to be keeping up the price of meat. some are wondering why the price doesn't come down! The Chicago Tribums says on this point:

"There may be persons who look for a decided fall in the price of meat as the immediate result of the issuance of the tempornry injunction. If prices are not affected by it at once they will be much disapplied and will demand further and more energetic proceedings. There should be no impatience. All should be willing to wait a few weeks to ascertain the effect of the restraining order. The packers, knowing that a sudden fall in prices will confirm the public in the belief that they have been in a conspiracy, will manage somehow to prevent an immediate drop in the price of meat."

The attorney for the packers has a different explanation. He says that the packers were not guilty of the acts alleged by the Government, and that the injunction restraining them from doing those nets, therefore, is superfluons. He gave that as his own reason for not opposing the request for injunction. The absence of opposition by the packers, thinks the New York Commercial Advertiser, "certainly indicated that they are not affined of an investigation," and the Chicago Exeming Perla notes that, in submitting to this temporary injunction, "the defense that, in submitting to this temporary injunction, the diefuse has admitted nothing, either as regards the facts or as to the legal theory upon which the bill is based." The injunction is temporary, and the packers have until August 4 to make reply to the complaint. In the mean time they must not act in combination or conspiracy to restrain trade, and the Buffalo News regards that as a decided victory. It says:

"The beef barons thought they were above the law. Now they know they were mistaken. They must answer for their deeds like others. The moral effect of this injunction is in the highest

degree important. It will encourage other efforts to restrain the greed of combinations. It will raise respect for the courts as protectors of popular rights. It is a great battle that has been begun. There is but one end for such n fight, and when ended it will teach a salutary lesson long to be remembered by every greedy combination that seeks gain by oppression and robbery thinly veiled under other names."

The plea is still heard for nn abolition or reduction of the tariff on meat. Thus the New York American and Journal says:

"Now let President Roosevelt come to the relief of the American people.
"Let him send to Congress a special message urging the re-

moval of the tariff duties on meats, and Congress swill respond as obediently as it did to his appeal in behalf of the hapless islanders in the Caribbean sea.

"This Republican Congress would not dare to side with the

food trust and against a Republican President when public feeling is so inflamed by a monopoly which preys upon people through their daily necessities.

"Prices of meats, especially of the meats used by the poor, go

rrices or meats, especially of the meats used by the poor, grup and up despite the popular outcry against the food trust.

"And Congress stands between the people and relief, refusing

to pass the bills which would tear down the tariff fence that protects the food trust from competition.

"President Roosevelt sent to Congress a special message urg-

ing relief for the people of Cuba.
"President Roosevelt sent to Congress a special message pre-

ing relief for the people of Martinique,
"Why not now a special message from President Roosevelt
urging relief for the people of the United States?

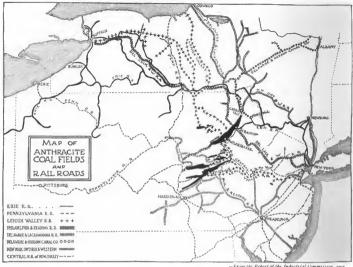

"Do it, Mr. Roosevelt, and prove beyond question your sincerity as a foe of monopoly.

"HIT THE FOOD TRUST THROUGH THE TARIFF!"

A Year of Disasters.—Wellingh 100,000 souls have been swept into termity since the beginning of the present year by a remarkable series of disasters, according to the Chicago Tribnae, which keeps a record of such things. The list covered by The Tribnae in the paragraphs quoted below includes only those disasters occurring before May 20. Before its issue of that any wast twelve hours old a waterspout devastated the suburbs to Covington, Ky., claiming six victims. Since then two mining disasters have claimed 200 more. To quote:

"One wo doth tread upon another's heel, so fast they follow," Public interest in the revent disasters among the West Instantistands has hardly begun to abate before reports come of others which, but for the exceptional magnitude of the former, would be regarded as unusual in their fatality. The cyclone which struck the little town of Golial, Tesaa, on Stunday not only nearly deastroyed the place but left in the wake ninety dead and over one hundred injuried—an unusual cyclone record for a single locality. The mine explosion at Coal Creek, Tenn., is the worst of the year, not one of the one hundred and fifty men employed in the nine of previous the control of the control of the one hundred and fifty men employed in the nine of previous hurricane which swept over the Province of Sciude, in British India, carrying away bouses, bridges, and embankments, and washing away miles of railroad tracks. The few words, "many lives were lost," are significant.

"The prophets who predicted that 1902 would be a year of disasters were correct. They have been in the habit of uttering these prophecies year after year without result, but this year they have been verified, the but five months have passed. If

-From the Report of the Industrial Commission, 1902.

one only prophesies patiently and persistently, he will assuredly be right, as the almanac in the country which had the legend, 'About this time expect rain,' Nature has not been so busy with her forces of devastation for many years past as she has been during the first five months of the present year. Volcanic eruptions and earthquakes have destroyed 48,450 lives, storms 704, tornadoes 416, cyclones 220, floods 333, avalanches 228, tidal waves 103, snow-slides 39, and watersponts 12, a total of 50,505 lives destroyed by nature's elemental disturbances. If to this were added the lives lost by agencies over which man has more or less control, such as fires, mine disasters, explosions, railroad accidents, and vessel wrecks, it would be increased to over to .-000, and this takes no account of individual lives lost in this country, which would bring the grand total up to about 100,000 lives lost in the short period of five months.

"In the presence of these great natural convulsions man is powerless and probably always will be. As to the disasters occasioned by human ignorance or carelessness or neglect, the despair of the situation is that the catastrophe of to-day is a sensation for the day, and to-morrow is generally forgotten. It has its lessons, but it is not often read. Even if read it is rarely heeded."

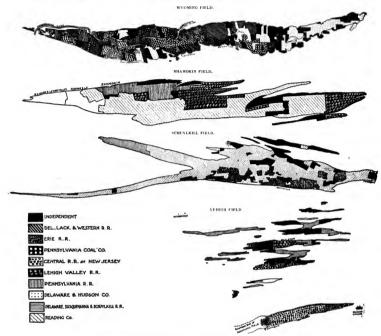

A RUINOUS TUG OF WAR. - The Brooklyn Eagle.

### COAL TRUST AND LABOR UNION.

ATHEN the coal-miners offered to submit their demands to arbitration and the operators refused, the card was played that brought over to the miners' side a large share of the sympathy of the press. When any large strike is declared, the first remedy urged by the newspapers is generally arbitration, and in the present case such an appeal puts the responsibility upon those who have refused to arbitrate. A typical comment is the following one from the Pittsburg Post, published in the heart of the soft-coal region :

"Whether the demands of the miners for better wages, shorter hours, and other changes in work were right and just, no one at a distance, not personally conversant with the situation, can say with any degree of certainty. But it is a certainty that the peutions of 145,000 workingmen for redress of grievances deserved to be treated with greater consideration than was extended by the coal trust, which rejected all propositions for compromise and arbitration in the most peremptory and galling way. It is really believed that this soulless combination desires a strike, in the

### OWNERSHIP OF THE ANTHRACITE COAL FIELDS-1896.

-From the Report of the Industrial Commission, 1902.

expectation that it can soon be broken, and that in the mean time coal can be advanced in price by a short supply, to the great profit of the trust. Be this as it may, the appeals of the Civie Federation in its efforts to prevent a strike were not met in a kindly spirit by the trust. On the other hand the miners seem to have been willing to accept arbitration."

It is reported that the independent operators have offered to grant the demands of the men, but that the coal roads have threatened to refuse to carry the independents' coal if they begin work, and that the miners' union has declined the offer, through fear of demoralizing the strikers who would still be out. But the offer of the independents (whose holdings are shown in black on the accompanying diagrams) has led some papers to believe that the operators in the "trust" could also afford to give the miners what they want. A number of demands are being heard for government proceedings against the "coal trust." The Springfield Republican says:

"While the Government is vigorously prosecuting an alleged beef trust, no steps have been taken, so far as known, to call the operators of a coal trust to account under the national anti-trust law. There is no question about the existence of this trust. It is one of the most perfectly organized combinations in the country. Under it the hard-coal mines are worked as by one maagement, and the yearly production and the prices at which it is to be sold are definitely fixed in advance. For example, the organized of business for the past year limited production to \$5,000,000 tous, which was allored to the various corporations as follows:

	Per cent.	Tons.
Reading Company	32.20	17,719,000
Lehigh Valley	15.65	8,607,500
Lackawanna	. 13-35	7,347,500
New Jersey Central	19.70	6,9%,000
Pennsylvania	11:40	6,270,000
Erie Lines	7.20	3,950,000
Outsiders	. 7.90	4.175,000
	200.00	22,000,000

The prices at which the coal was to be sold to dealers in the various markets were also fixed, with the monthly variations, and other terms upon which the dealers must buy were specified.

"To the coal-dealer and the consumer there is practically but one seller of coal, and they must come up to his terms or go withont. It would be difficult to conceive of a monopoly more perfectly established or operated than this monopoly which holds complete possession of a great store of nature most necessary to the life of the day; and the attitude of the combination in resisting a union among employees and refusing to recognize it in the hope of breaking it down, only serves to hold up the coal monopoly as all the more insufferable. Still no writ of injunction issues against it, and there is no indication that the Government will pray in the United States courts for the issuance of such a writ,

Quite likely this is because the futility of such a proceeding is recognized. The breaking up of the coal combination and the restoration of competitive operations are practically out of the question. The supply of anthracite coal is limited, and becoming more so every year. The railroad corporations which own nearly the whole supply are interlocked to a large extent through n common ownership, which can not be broken up. There is but

one way to deal with this monopoly, and that is the way in which railrond monopoly is to be dealt with-through public control or ownership."

It seems likely, however, from the tone of the newspaper comment, that the strikers would forfeit a good deal of this sympathy if they should call out the pump-men and flood the mines, or should bring on a widespread sympathetic strike, or should resort to violence. The New York Sun says:

"American industry is to-day chilled by a rise in the price of anthracite coal caused by n strike. In case the supply of coal should be cut off for a much greater length of time, the situation that is now troublesome would become disastrous.

"Yesterday the Delaware and Hudson Company was endeavoring to get coal to market, when a gang of strikers attacked the company's employees so that work had to be stonned.

"So far us this affair goes it shows that the public is suffering not because the companies can't get laborers, but because the strikers intend, by threats of bod;ly harm if need be, to monopolize the work themselves and on their own terms,

'If the strikers marched to the railroad company's strong-box and forced it, their action would be less objectionable. While it would not be less lawless, it would be less paralyzing to industry.

"Violence, invariably the confession of defeat, has come in connection with this strike sooner than usual. It must be put down promptly and firmly, first, because it is insufferable in itself, and, secondly, because it violates the fundamental principle that

The National Labor Tribune (Pittsburg) says of the contemplated sympathetic strike:

a mau has the right to work at a job that offers."

"It is proposed in some quarters that the bituminous miners be called out, thus ticing up the coal-mining industry of the entire United States.

"Mr. Mitchell has not been quoted in favor of this move, and in fact it is hard to tell inst where, and with whom, it originated. As a rule, the best representatives of organized labor discourage sympathy strikes. That is the whole modern tendency. They have been found to produce intense dissatisfaction among the men called out to fight the grievances of some other trade, and in the end it is certain that the cause of trades-unionism is weakened rather than promoted. The suggestion that the men in the bituminous fields be involved in the present trouble will therefore be looked upon askance in many quarters. In this city the bituminous miners are very strong, and the officers of the local division of the United Mine Workers fraukly declare that the bituminous miners are satisfied and mean to keep at work. The truth is, that they would be in better shape to support their anthracite brethren, it need be, by so doing. What the inithracite men will require most, in the event of a long strike, is funds. It would appear to be the part of wisdom to allow the bituminous miners to continue digging, so that there shall be somewhere a source of financial income,

### EDWIN LAWRENCE GODKIN.

ITTLE is heard now of the charges of hitterness, egotism, and treason that were, at one time or another, brought against Mr. Godkin by his journalistic opponents while he was editor of the New York Evening Post. Now that he is gone. the daily press unite in tributes to the trenchant vigor of his pen. He was "the most effective editorial writer of his generation in this country," says the Boston Herald, and the Boston Transcript refers to him as a figure in American journalism "as truly unique in its way as the figures of Horace Greeley and James Gordon Bennett were in theirs." Says the Brooklyn Times ;

"There are few editors since Horace Greeley died who impressed their own personality so strongly and deeply upon the

history of the United States as did Edwin Lawrence Godkin, with perhaps the exception of his arch-enemy, who had just enough of resemblance to himself to compel antagonism, Churles A. Dana. Perhaps, however, the greatest service that Mr. Godkin rendered to his adopted country was that which he wrought for the newspaper press, in compelling to a measurable extent the habit of thinking in the editorial rooms."

The New York Sun, which exchanged many a hot shot with Mr, Godkin's paper while he was in charge, says:

"The two great achievements of Mr. Godkin's public life were the formation of the Mugwump party or force in American politics, and the building up of The Evening Post newspaper into an efficient or-

their own minds more deeply upon a particular cult." Mr. Godkin's service to the South in the "reconstruction" days

is recalled by the Baltimore Sun, which observes:

"He, more than any other one man, through The Nation and otherwise, revived the conscience of the North to a feeling of the wrong done the South by the scalawag and carpet-bag régime. The scandals of the period from 1865 to 1876 were mercilessly exposed by him, and with such ability that they at length became unbearable and the South was freed from the violent interferences of federal troops and office-holders. Mr. Godkin was identitled with other great reforms, but he will be remembered in the South chiefly for his services in securing to that section the restoration of a large proportion of its constitutional rights,

His own paper, The Evening Post, says that it is "proud and thankful for the inseparable linking of its name with his," and adde.

"To work with him was of itself a liberal education. His praise was a sufficient guerdon; his own brilliant method at once the spur and the despair of others. As Emerson spoke of Carlyle's descending to the drudging details of his Life of Frederick from a superior height of 'cosmic' knowledge, so Mr. Godkin appeared to apply himself to the politics of the hour, laden with the wisdom of the ages. And to garnered knowledge and wide experience he added a moral judgment which pierced even to the dividing asunder of soul and spirit; so that to no man could better be applied the epitaph of Thirlwall: "Cor supiens et intelligens ad discernendum judicium." To every one privi-leged to observe or to share his work as an editor, his very personality was a thrilling summons. His inexhaustible fertility, his ever-renewed freshness, his indomitable spirit, falling to rise, and baffled to fight better-these were among the qualities which perpetually astonished and delighted those who were with

E. L. GODEIN

him in daily association. Sally broken in health as he came to be, and well stricken in years, death was wedome to him, the has gone where, as his great countryman wrote of himself, servaindigentia is injustice and oppression—above all, at what he considered recreancy to American principlus—will no longer tear his heart."

### CONNECTICUT'S PROPOSED CONSTITUTION.

A FTER four and a half months of deliberation, the Connecticut Constitutional Convention has presented for the approval of the voters of the State a constitution that seems to meet with pretty general disapproval, to judge from the newspaper comment. The proposed constitution continues the present dominance of the small towns in the lower house of the legislature, and the cities object to that; but it gives the cities a slightly larger representation than now, and that the small towns object to. At present about 85 small towns have one representative each, and the other 85 towns and cities, little and big, two each, Under the present plan, one-sixth of the State's population, scattered through many little towns, control a majority of the votes in the legislature; under the new plan the fraction may be somewhat increased; but one-half the population of the State gathered in fourteen cities, will still control only one-eighth of

the lower house. The state senate, however, will be elected on the basis of population, and will be controlled by the cities, as at present. Thus there is presented at Hartford the reverse of the condition found in Washington; in Washington the House is chosen on the basis of population and the Senate on a State basis; in Connecticut the Senate is chosen on a basis of population and the House on a town basis. The proposed constitution allows one representative for towns up to 2,000 population, two for towns between 2,000 and 50,000, and then one additional for each additional 50,000 or fraction thereof.

The Hartford Courant and Post and a

few other papers think the proposed constitution the best that can be had at present, all things considered, but the prevailing note of the papers of the State is one of dissatisfaction. A "small-town" view is seen in the following comment by the Winsted Citizen:

"We believe that when the constitution comes to be voted upon by the people it will be voted down, and it ought to be. While there is not much change in the total result it throws the principle for which the small towns have been fighting so long and loyally to the winds, and it should not have the vote of any elector who has the welfare of the small town and State at heart. It will please the politicians in a measure, for it is an entering wedge in their attempt to wrest the controlling power of the legsistature from the small town.

A city view may be seen in these paragraphs from the New London Par:

"The Constitutional Convention of Connecticut, held in the year 1922, is no more. Peace to lts ashes. It lived too long and died in ignominy, and will go thundering down the ages as the most stupendous example of littleness in big things that ever was dignified by the attention of a commonwealth for four and one-latif weary months. Called for the purpose of recognizing a principle; for the purpose of reforming the outrageously unfair representation in the Connecticut legislature, the convention has

shown itself from the outset to be wholly without intent to grant simple justice to the great majority of the people of this State. Intrenched in a position of power justified by nothing in the world but its own existence for many years, the small towns of the State have stubbornly refused to yield any portion of the undue influence they exert upon the affairs of the important interests of the State. Their delegates have pretended to an heroic devotion to the principle of town representation-to the theory that government in this State is for the benefit of the woodchucks and moles of barren bill townships rather than for the masses of human beings who populate the busy cities and manufacturing centers of the State. What has really animated them has been vanity; the paltry pride of officialism; the

-The Brooklyn Eagle

YOUR UNCLE SAMUEL LEADS AN USUAL.

The Pittsburg Gazette.

YOU CAN'T TELL WHAT MIGHT HAPPEN TO THAT NICK IN THE ROOF.

- The St. Paul Proneer Press.

determination to mix their fingers in the affairs of state in a wholly unjustifiable degree—not because it was right that the few should dominate the great body of the people, but because they could.

"Never has a constitutional convention or any other supposedly representative body in an American commonweal his outterly failed to grasp the gravity of its obligations; never has narrow provincialism more flagrantly advertised its inequality to recognize manhood rights. From the beginning the only ambition of the majority has been not to do anything to imperflit the dominance of the woodchuck hole over the factory. The patry consists which has been made at the eleventh hour—the sum-total of the result of nearly five months' misplaced effort on the part of the misority—is the most puriful sop ever thrown to an intelligent electorate. The fate of the document formulated under the guise of a constitution for this State needs no forecasting."

### PROSPECTS OF ALFONSO XIII.

MANY papers, in commenting on the accession of King Alfonso XIII. to the Spanish throne, seem to think that the King is really too young to exercise his full powers, and than the former Queen, Christina, will still play an active part in the ruling of Spain. He "may be considered as over-young for the

-The Chicago Inter Ocean.

trying position," says the Pittsburg Times, but he will have for advisers his mother, who, for more than sixteen years, has held practically the same position he will now assume, and the members of the eabinet. The Hartfort Ciurant thinks the Government will continue in substantially the same hands as those that have been conducting it during recent years, for it "will run in the name of the boy king, lunt the judgment and experience involved in determining the position of the Government from day to day will be those of the retired Queen Regent and the Spanish gentlemen who have served with her as ministers and in the Corties."

The fear that the King will die young is expressed by a few papers. "He is a sickly youth, whose father died of consumption, and whose frail hody seems to tell of the sins of his ancestors," says the Nashville Banner. The San Francisco Coll says that tho the King may be sickly, if the provere that "theratened men live long" be true "his reign will be one of the longest and hanoises in history." The New York Press Says.

"The gallant, nervous, high-strung boy who was a king when he was born, and who has been if anything over-educated for the part, is too young to have had a chance of showing much of his character. But from a certain general agreement in the little revealing stories of him that have become current, one surms that he is keenly anxious to be of some real use to Spain; that, in spite of a conservatism ingrained by herefully and transing; that, has individuality and will not be content to be mirely a figure head; and, best of all, that he has shown some signs of realizing that an infusion of the American spirit is the one medicine by which Spain may be restored to health.

"It is a hard case, tho! If it had not been for the national tendency to be easy-going, it is as sure as fate that Spain would have produced a rival to the French Revolution. With an overtaxed country seething with discontent; with Socialists, Anarchists, Carlists, Republicans, all plotting and struggling; with General Weyler always looming up, strong and crafty enough to seize the reins of power unless he is kept well disposed; with a navy department that went on costing as much after a navy had been wiped out as it did before, and with many other departments to match; with a useless army that can not be disbanded for fear that the soldiers, unfitted for other pursuits, would turn and rend the Government-with all these political ailments, plus the personal ailment of an inherited tendency to consumption, no free-born American will envy the frail, narrowchested boy who takes the oath of office and begins his actual reign this week."

The Spanish-American war has done Spans some good, in the opinion of many papers, for, as the Hartford Courant says, "Spanin is really stronger to-day than when she had Cuba and Porto Riev and the l'illippine Islands on her hands. These colies not only brought little money into Spain and took a great deal out, but they were also a permanent source of corruption in Spanish administration."

### THE ROCHAMBEAU STATUE, AND OTHERS.

A NEW interest in international exchanges of statues of great men appears to have been aroused by France's eight to the United States of the statue of Rochambeau. Emperor William is planning to give us a statue of Frederick the Great, and Die Nation (Berlin) suggests that "in the same way the Germans would appreciate

monuments of Washington and Lincoln in Berlin," The unveiling of the Rochambeau statue has revealed the fact that many have forgotten the French general who disembarked at Newport in July, 1780, with 6,000 men, and, in the opinion of many, made possible the victory at Yorktown that ended the war. The Louisville Commercial contrasts the quiet reception to the Count and Countess de Rochambeau and the Count de Lafayette,

JOHN BULL: "I ought to get into this presentation business. I wonder how a statue of George III. would please Jonathan?"

—The Columbus Diseasch.

who came over to the unveiling, with the reception Prince Henry received. It remarks:

"What had Henry or his ancestors ever done for 118? Nothing! And yet the American people fairly went mad over him, and people are asking. Who was Rochambeau? We know who Lafayette was; but we are not wildly enthusiastic over the rep-

resentative of his family, who is here. What is the difference? Only this, that Prince Henry stands nearer to a throne that on the Lafayettes and Rochambeaus of republican France; and we republican; you know, do dearly love a lord, and we fairly not a lord or a real prince; what we would do if a reigning mountch were to come amongst his may not be set forth in policy company."

The report that the Kaiser may come over to the unveiling of the statue of Frederick adds interest to the above comment.

The Philadelphia Press says of Rochambeau:

"We have never, and can never, repay the French for the men-of-war, the troops, the money, and the heroic souls who made it a surety that the surrender of Burgoyne on October 17, 1777, was but the preliminary to the surrender of Cornwallis four years later. The recognition of the independence of the United States by France on February 6, 1778, preveled and followed as it was by a chivairous enthusiasm for service in America, that brought us Ladarjette, just out of the teem, jet inevitably to the when he salled from France in May, 1780, with 5,500 troups for America it was the beginning of the end of British domination.

"Rochambeau was not a stripling as was Lafayette, but a man of 55, trained to arms since he was 17, a leader of men and a general of rare ability. It was his deveton to the American cause that prevented all the discouragements a ter his arrival in the rebellious colonies having any effect but to make him the more determined that the colonies should win with French aid, Without him on the shore at Yorktown and without the French feet of twenty-eight ships of the liue under Admiral de Grasse in the Chesapeake there would have been no battle of Yorktown and no surrender, And what would have become of the American cause under such circumstances it is not pleasant to dwell upon."

### PERMANENCY OF THE CUBAN REPUBLIC.

THE blare of brass bands, booming of big guns, cheers, fireworks, and parades in Havana and throughout Chab have had their counterpart in this country in the sounding of newspaper trumpets, great and small, from Maine to California, over the accomplishment of Cuban independence. The general tone of the newspaper editorials is best represented, perhaps, by a paragraph which is not an editorial, but a despatch written by Representative de Armond, of Missouri, "special commissioner in Cuba" for the New York American and Journal. He says:

"As the years and the ages go by, only here and there arising out of the great plain of human selfishness, avariciousness, and meanness, will stand till eternity a few towering peaks of national generosity and nobility. In freeing Cuba, first from the Spantard and next from our own grasp, the people of the United States of America have pierced the upper air of imperishable glory with one of these peaks. To-day it seems not less blessed in us to give than in the Cubans to receive the priceless boon of national freedom."

Nearly every paper in the country expresses a hearty wish that the new republic may prove permanent; but it is equally noticeable that few actually predict such a result. The Washington Poirt says trankly: "We expect little, but hope everyting." The Hartford Times this its belief that the island will soon become a part of the United States, and the Brooklyn Eagle says:

"In Cuba there are Spaniards, Cubans of Spanish descent, Indians, negroes, and crosses or mixtures of all these races. They never had a government of their own. They were never kindly or honestly governed by Spain. Government to them has, therefore, meant cruelty and corruption. Their only experience of a different kind has been at the hands of the United States, and that only for a short time and admittedly for the purpose of setting up a system for the people themselves. We may, therefore, look for difficulties, awkwardness, and at points for failure in Cuba. The world should be patient with Cuba long enough to find out whether endurable government can there be secured, or the conditions to render it difficult and hazardous can there be destroyed or reformed.

"Time will be required to find this out, and with time will work two forces: The instinct of the United States and of the other great Powers, to put capacity and civilization on top in Cuba, will be strong. The disposition of thinkers, propertyowners, and order-lovers in Cuba to secure the advantages assured by capacity and civilization will be strong. Both these forces will work for the annexation of Cuba to the United States, not as a State, but as a Territory, for the determination of the United States that neither Cuba, nor Hawaii, nor the Philippines shall ever be States is absolute. The sooner Cuba, with the exercise of good faith, can be annexed as a Territory to the United States, the better. And the hope of annexation to the United States, with the fact that the United States can and will check wrongdoing in Cuba, will be, we are convinced, the best influence that can be invoked to make tolerable the temporary experiment at self-government, set going with the best wishes of the world, in Cuba to-day."

A similar opinion is held by the St. Louis Globe-Democrat, which observes:

"Probably the United States will never go into another war tied up by itself in advance as to territorial adjustments in the eventual treaty of peace. The antebellum resolution of Congress

YOU MUST GIVE HIM A LIVING CHANCE TOO, UNCLE.

- The New York World,

touching Cuba's government after the war is regarded by many as a sentimentalism. At any rate, it assumed more than any nation has a right to take for granted at the verge of a serious conflict. Treates are shaped after a war, not before, and sometimes the side most confident of victory meets with ampleasant surprise. After the war with Spain we found it absolutely necessary to take territory far beyond the bounds of what was originally contemplated, while, as far as Cuba was concerned, Congress amonunced the infactable intention before the first gun was freed. Business and other considerations will some day make freed, Business and other considerations will some day make freed, Business that the total, and that they may progress toward it in peace and rower, the content of the content of the peace and the content of th

Despair of reciprocity for Cuba is beginning to take hold of the friends of that policy as the weeks pass without decisive action by Congress. Friends and foes of the measure continue their efforts; but the New York Mail and Express, a reciprocity advocate, remarks:

"Nevertheless, not to annex Cuha commercially by an indulgent trade arrangement is to help to put the on her own legs in every way. The American republic did not ask France in 1982 for annexation to French markets. The Americans were very poor then. They had a less quickly producing country than Cuha. They were content to be left poor but independent, to work out their own salvation, and they became rich by developing their proper resources.

'The Cubans' hard discipline in the last twenty years has possibly given them some good qualities that are lacking in Venezuelans, Colombians, and Argentines. Perhaps a little hunger now, in a hard battle to get their bread and meat out of their own soil, will do them further good. For the sake of the Americans as well as the Cubans, we wish they had their tariff concessions. But if they do not get it, they will have no right to complain of our treatment. We shall go away from them tomorrow and leave them to work out their own salvation, too. If they have the right stuff in them, they will work it out, in the long run, all the better for a little wholesome neglect."

### MARK TWAIN'S OPINION OF GENERAL FUNSTON.

\*ENERAL FUNSTON is considered an expert in matters 

The General professes to consider his capture of Aguinaldo a good joke the humorist fails to see it in that light. Before the General was silenced by the President, he related to approving audiences the various ruses employed in the capture. All save one of these are accepted by Mr. Clemens as sanctioned by the usages of war. That one was the request made upon Aguiualdo for food, and the subsequent attack on him. Says Mr. ·Clemens (in The North American Review):

"Some of the cuspleasant to the civilian; hut ages upon ages of training have reconciled us to them as being justifiable, and we accept them and make no demur, even when they give us an extra twinge. Every detail of Funston's scheme - but one-has been employed in war in the past and stands acquitted of blame by history. By the custom of war, it is permissible, in the interest of an enterprise like the one un-

Copyrighted by the Funk & Wagnalla Company. der consideration, for a brigadier-general (if he be of the sort that can so choose) to persuade or bribe a courier to betray his trust; to remove the badges of his honorable rank and disguise himself; to lie, to practise treachery, to forge; to associate with himself persons properly fitted by training and instinct for the work; to accept of courteous welcome, and assassinate the welcomers while their hands are still warm from the friendly handshake. "By the custom of war, all these things are innocent, none of

them is blameworthy, all of them are justifiable; none of them is new, all of them have been done before, altho not by a brigadier-general. But there is one detail which is new, absolutely new. It has never been resorted to before in any age of the world, in any country, among any people, savage or civilized. It was the one meant by Aguinaldo when he said that 'by no other means' would be have been taken alive. When a man is exhausted by hunger to the point where he is 'too weak to move, ' he has a right to make supplication to his enemy to save his failing life; but if he take so much as one taste of that food -which is holy, by the precept of all ages and all nations-he is barred from lifting his hand against that enemy from that

"It was left to a brigadier-general of volunteers in the Ameriean army to put shame upon a custom which even the degraded Spanish friars had respected. We promoted him for it!

Our unsuspecting President was in the act of taking his murderer by the hand when the man shot him down. The amazed world dwelt upon that damning fact, brooded over it, discussed it, blushed for it, said it put a blot and a shame upon our race. Yet, bad as he was, he had not-dying of starvation-begged food of the President to strengthen his failing forces for his

> treacherous work; be did not proceed against the life of a benefactor who had just saved his own,"

### LETTERS AND ART.

### WHAT IS THE FUNCTION OF CRITICISM?

Is it the business of the literary critic to judge, or merely to expound? Is he justified in confining himself to the permanent past, or must he consider the fleeting present? Prof. Branch and the properties of the properties of

"It may be an obligation upon the critic of science to tear the mask from off the impostor; but this can never be a chief duty for the critic of art. In so far as literature touches science—in biography, for example, and in the other departments of history—the utmost exactness of statement must be insisted upon. But in so far as literature is an art, in pure belief—states, in poetry, in the drama, in prose-fiction, there are no standards of scientific scatterists of scientific scatterists. When the critic is unfortunately sciend with the belief that there are such standards and that these standards are in his possession, to be applied at will, the result is Jeffrey's famous condemnation of Wordsworth and the infamous assault on Keats—two instances without much encouragement for the critic who may feel moved to volunteer for police work."

Professor Matthews admits that this may seem "a hazardous contention," but he maintain that it is borne out by the facts of literary history. The critics have ever "put their trust in ead-deut standards, as becomes the custodians of tradition." The plain people took to heart the "Pilgrim's Progress," "Don Quixote," "Hamlet," and the "Cid" hong before the "cultivated casts" discovered their work. Professor Matthews says further;

"The reputation of the great poets has not been made by the scholarly critics chiefly, but ruther by the plan people of their own time or of the years immediately following. Almost every one of the commanding names in literature belongs to a man who enjoyed a wide popularity while he was alive. Sophocles was not only the most powerful but also the most applauded of Greek dramatists. Shakespeare was the favorite of the groundlings who flocked to the Globe Theater; and Moiler's plays drew larger audiences oftener than those of any of his rivals. Goethe's lyries were on the lips of the young nea and maidens of Germany while it was a superior of the command of the comtained the command of the command of the command of the comtained the command of the command of the command of the comtained the command of the command of the command of the comtained the command of the command of the command of the comtained the command of the command of the command of the comtained the command of the command of the command of the comtained of the command of the command of the command of the comtained of the command of the command of the command of the comtained of the command of the command

The writer comes to the conclusion that we have been too ant

to confuse the distinctions between criticism and book-reviewing. On this point he says:

"When we note that no one of the leading critics of the nineteenth century-Sainte-Beuve, Arnold, or Lowell-cared keenly for the discussion of contemporary literature, we are led to remark that there is a necessary distinction to be made between criticism, as they practised it, and mere book-reviewing. Criticism, in their hands and in the hands of those who follow them, is a department of literature, while book-reviewing is a branch of journalism. To 'get the best' is the aim of literature, while the object of journalism is rather to 'get the news.' The critic, concerning himself especially with what is most worthy of his inquiry, is led most often to discuss the picked works bequeathed to us by the past, while the book-reviewer, writing for a periodical, has perforce to deal with the average product of the present. Criticism is the art of 'seeing the object as in itself it really is, so Matthew Arnold told us; and it 'obeys an instinct prompting it to try to know the best that is known and thought in the Book-reviewing, however useful it may be, hus a far humbler function; it may be defined as the art of informing readers just what the latest volume is, in kind, in character, and in quality.

A vigorous protest against Professor Matthews's view of the censorial office of the critic is voiced by Mr. Percival Pollard, 'Mr. Matthews,' he says,' would put us in thrall to the ladylike in books and criticism." He continues (in the St. Louis Mirror):

"If this theory were to be general in practise, we would have an even more terrifying spectacle than at present obtains in our newspapers. Is there not already too much of mere exploitation of plot, mere repetition of what the publishers with preacted? How many pages are there in the daily, the weekly, the monthly prints of Ameroa, wherein you may expect and find book criticism. The present of the prints of the prints of Ameroa, wherein you may expect and find book criticism? Where shall you look for criticism that as not on it the taint of ignorance, carelessness, or advertisement? Where shall you look for criticism that has not on it the taint of ignorance, carelessness, or advertisement? Where shall you turn without finding that the advertising columns have obviously given the text for the so-called 'review'? Yet, in this condition of things critical, Nr. Matthews would bring out his theory that mere exposition, not judgment, is the full duty of the critic?

"The impersonal standards can never again be successfully employed critically in America. Criticisan, to my mind, must always, at its best, its most impressive, be the expression of a purely personal opinion. For that opinion to gain currency beyond its author, the public must first have made sure of the fact that the personality behind the opinion is one properly downer.

for judgeship. Then will begin the battle against such dainty duennas in letturs as Mr. Matthews. Despite the increasing hysteria in the American temperament, I still think there is sturdiness enough left to insure victory in this intellectual contest to the cruces who judge rather than to the critics who eche the publishers' wishes."

### THE "DEGRADATION" OF THE PROFESSOR.

PROF. GEORGE TRUMBULL LADD, of Yale University, contributes to the current issue of *The Forum* an article in which he laments with much feeling and considerable view of expression what he terms "the degradation of the professorial office." He writes:

"On the whole, there is probably no body of men more competent for their appointed work, more disinterested in the discharge of duty, or more honorable in their views as to the relation of their efforts toward

PROF. GEORGE T. LADD.

the professors in our higher institutions of education. I do not even except the clergy from this comparative estimate; and I have been a clergymnn and know thoroughly well what the motives and the offices of that professional class are, both in theory and in fact. At the same time, it seems to me perfectly apparent that the motives. character, and culture of the average

their constituency

and teward all

mankind, than are

or undergoing a species of decline. The average man of this professional class is not so much of a man, not so much of a memberan, not so influential a member of society or of the commonwealth, and not so much respected and looked up to by the general public, as he was one generation or two generations ago.

In past generations, the professor was an "especially respected and revered man." Nowadnys, "the application of a too exclasively commercial standard to the wilnes of the higher education inevitably results in a depreciated estimate of the office of the teacher." Professor Ladd proceeds to emphasize "the lack of appreciation and reward which is shown by the quite madequate stakes a whole day's pay from the professor's salary for a shigh burr of heatth work, and that "the plumber is as well rewarded." He cites also "the light-hearted, serio-comic, or contemptous way in which the press and the public esteem the profer of services and trent the opinious of the professed experts in our higher institutions of learning." He continues:

"The teachers in our higher institutions of learning—including of course, the professional schools—are always better fitted by far to be the counselors and leaders of the nation than is any other class of eitizens. University professors onghit always to form an important and influential element in the control of opinion and administration in the manicipality, the State, and the nation. They should constitute an important and influential portion of our boards of aldermen, of our state legislatures, and entirely of the constitution of the state legislatures, and service afford for the adequate expression of this obligation? Imagine a congressional committee on the tariff, foreign relations, finance, etc., summoring for respectful consultation all

those toolers whose researches have made their views best worth serious consideration, in the interests of the entire nation? Picture the immederate merriment which would follow the first surprise if any member of the board of aldermen in one of our worst-governed eithes were to propose giving over the diseased condition of its public affairs to the diagnosis and prescription of a committee of college professors!"

Professor Ladd suggests that the "Oriental peoples have something of no small value, still left to them from their past, which England and America need not be ashamed to learn." He recalls the fact that the Chinese people "put scholars in the first rank and merchants in the last," and that "the teacher, as he enters his lecture-hall in the enpiral city of Japan, sees the entire audience—perhaps including noble gentlemen and ladles and the highest efficers of the government—rise to their feet, bow, and remain thus until he is seated." Professor Ladd concludes

"In the long run, the teachers of any nation will surely have their day. They always constitute the most important professional class. Next to the parents, who have in this country so largely abandoned to others their natural rights and inalienable duties toward their children as respects discipline and instruction, the teachers stand wearest to the springs of national life. The degradation of the teachers of any nation, whether by the lowering of appreciation, of care in selection, of grateful recognition, or of more substantial reward, is an exceedingly dangerous thing. It is more dangerous than even the degradation of the clerky."

Professor Ladd's article calls forth many remenstrances in the press. The New York Commercial Advertiser styles it "a cry of defeat," indienting that the writer "is not of touch with his colleagues and his times "and that "he is not willing to adjust himself to new conditions." The New York Press saw.

"As a matter of fact, there never was a time when so much was being done for learning in the United States as is being done to-day; there never was a time when learning was more highly esteemed and was so widely spread; when so great means were placed to the use of college professors and so great opportunities afforded them. If the respect for the teachers of learning has not kept pace with the great and growing respect for learning itself, it must be the fault of the teachers. If the people refuse to trust them or in public office to take them for goides in affairs of state and finance, it is because as a class they have displayed a conspicuous and sensational unfitness for those occupations. A college professor who exhibits qualities entitling him to recognition in public affairs is almost eagerly seized on for office. In recent years high and important offices have been held by such. But the attempt to elevate the professorial body into a sacrosanct cult, possessed of prescriptive rights in the management of public affairs, must remnin a dream of philosophy as taught at Yale."

### MARION CRAWFORD'S DRAMATIZATION OF THE PAOLO-FRANCESCA STORY.

CARAH EERNHARDT has successfully produced at her own Paris theater a drama specially written for her by F. Marien Crawford on the theme of the ill-fated love of Paolo and Francesca. Mr. Grawford had accepted the commission to write this play several years ago, and was not aware at the time that Stephen Phillips and D'Annunrio were at work on the same theme. The drama was written in English, and has been translated into French fer Mmc. Bernhardt by Marcel Schwab, a stylist and eminent poet.

According to the critics, and to the admissions of Mr. Crawford himself, his "Francesca da Rininii" is wholly unlike any of the plays ever based on the immortal Dante page. It is "realistic" and "historical." It ignores the Dante legend entirely and follows tradition and ascertained fact. It is is five acts, one of which is a prolog concerned with events which take place fourteen years earlier than the events of the drama proper.

In Le Journal, that leading critic and playwright Catulle

Mendès summarizes the plot and points out the merits and the weakness of the drama. The development of the plot is as follows:

The prolog shows us the scene ofter the marriage of Francesca to Giovanni, but had been told that he resembled greatly Paolo the handsome, his brother and his prosy. She was half disposed to love Paolo, but consoled herself with the thought that her husband was not utilke him. She had been taken to the nuptial chamber, and she had prayed to the Madonna. All the lights but one are extinguished, and suddenly a side door is opened and Giovanni enters—the cripple, the hunchback, the physical monster! "Who are you?" asks Francesca, trembling and horror-stricken. "Your husband."

When the next acts opens, Princesea has been married fourteen years, and Paulo has been her lover all this time. She has a child, a girl named Concordia, and there is some doubt as to whether Glosseam or Paulo is her real father. The child is voluble and indiscrect; she is given to prying and habbling, and, some of her chatter excites Giovanni's suspicions. Paulo, is one of the relater excites Giovanni's suspicions. Paulo, is in married and a father of children by his legitimate spouse. This woman, while Paulo is hastily preparing to leaver Plorese for his command in the army, accuses him of treachery and threatens him with exposure. She is about to be tried by Giovanni, but she commits suicide—or is strangled by the Jailer at a sign from Paulo.

Paolo departs, but in a few weeks he secretly returns and tries to climb into Francesca's apartments. Giovanni, by this time thoroughly suspicious and watchful, appears in the garden. His spies had informed him of Paolo's presence. He mounts to the window, looks into the chamber, and convinces himself. The lovers are reading the story of Gninevere and Lancelot. He descends, makes his way into the room, and stales the guilty pair.

Mendes, in reviewing what he calls a "melodrama" pure and simple, says that the play is not devoid of artistic merit; that it has intensely interesting moments, and that the prolog lightly effective and poignant. But he adds that no deep impression, no true comotion was moduced by it, saving further:

"Were the play the most ndroit and exciting ever written, who would not see at once that it had but a remote relation to the subject chosen by the suthor, and that ho spoiled it, made it banal? That the amounts of Paolo and Francesca in reality continued for fourteen years; that Francesca had a big girl, and a most awkward chatterer and basybody; that Paolo was a married man and a person capable of sanctioning the mercher of his wife; that came an Othello or Cain, is possible, even historic, I admit; but it is different from the legend, which is the true account for the purpose of the poetic drama."

Mendàs concludes by saying that the lovers are presented as modern, circumspect, discreet, polito personages, and passion, ecsasy, irresistible attraction, such as Dante indicated, are wanting from the scenes in which Crawford makes then talk of their love. Yet, had the play remained unwritten, we shull have lost an elegant, woll-constructed and at times pathetic work.

In an interview with a correspondent of The Path Math Gazette, Mr. Crawford says that he deliberately rejected the "legend" and followed history. Paolo and Francesca, he says, were flesh-and-blood people. It is interesting to know that Mr. Crawford is greatly pleased with the treatment of his play by the critics, and that Mende's's notice (which mmy seem rather severe) he declares to be "most conscientious and fair-mindel." In passing, Mr. Crawford makes this announcement: "I have been working on a novel for years which will bring in Dante's people, and Dante himself, most likely."—Translation made for This LITEMARY DIEST,

### EDWARD GRIEG: A MASTER OF THE MUSI-CAL LYRIC.

THE place of Edward Grieg, the greatest of Norwegian composers, in the musical Puntheon has hardly as yet been determined. Perhaps, as is intimated by the more conservative musical critics, his name will never rank with those of the "great musters"; but for will deep yithat his work is peculiarly penetrative and strikingly original. "It is, of a truth, music in which merit and failing are curiously mingled," declares Mr. Daniel Gregory Mason: "its delicate beauty is unique, its limitations

FOWARD GRIEG

extreme. It is as fair as a flower, and as fragile." He continues (in the New York Outlook, May 3)

"Grieg is of the nervous, sensitive temperament, the temperament of Keats and Stevenson, quick and ardent in feeling, and in art notable for subjective, intimate work rather than for the wide objective point of view. Grieg's music is of value, indeed, just because it is the artistic expression of delicate personal feeling. We shall find that his whole development tended

toward a singularly individual, or at most national, utterance; that his efforts toward a complexer or more universal style, such as in poetry we call epic, were unsuccessful; and that his real and inimitable achievement is all in the domain of the pure lyric."

It was Nordraak, a young Norwegian musician of magnetic personality, who first aroused frieg's enthusism for the Norse folk-songs, and fired him with an ambition to found on them a finished art. The two men solemnly took an oath of musical allegiance to their fatherland. "It was as the the scales fell from my eyes," writes Grieg: "for the first time I learned... to understand my own nature. We abjured the Gade-Mendelssolin insipid and diluted Scandinavianism, and bound ourselves with enthusiasm to the new path which the modern school in tow following." The result of Grieg's efforts in his chosen field was romantic music—sonatas, songs, dances, "tone-pictures"—of an "indescribably delicate" nature. Says Mr. Mason:

"It is like the poetry of Mr. Henley in its exclusive concern with moods, with personal emotions of the subtlest, most elusivo sort. It is intimato, suggestive, intangible. It voices the gentlest feelings of the heart, or summons up the airiest visions of the imagination. It is whimsical, too, changes its hoes like tho chamcleon, and often surprises us with a sudden flight to some unexpected shade of expression. Again, its finesse is striking. The phrases are polished like gems, the melodies charm as with their perfect proportions, the cadences are as consummate as they are novel. Then, again, the rhythm is most delightfully frank and straightforward; there is no ninundering or uncertainty, but always a vigorous dancing progress, as caudid as childhood. It is hard to keep one's feet still through some of tho Norwegian Dauces. And the in the Lyric Pieces rhythm is idealized, it is always definite and clear, so that they are at the opposite pole from all that formless sentimentality which abandons accent in order to wail. Again, one must notice the curious exotic flavor of this music, a flavor not Oriental but Northern, a half-wild, half-tender pathos, outlandish a little, but not turgid on the contrary, perfectly pellucid."

There are, however, grave defects in Grieg's music, if ? r.

Mason's judgment be accepted. No other composer, he remarks, has had so many "mannerisms," so many "little tricks and idiosyncrasics"; and "neulting menaces thought more than affectations and whimsical-ties of style." Moreover, Mr. Mason thinks that severely critical standards compel the admission that Grieg's personality was "graceful without strength, romantic without the sense of trigody, highly gifted with all genile qualtites of nature, but lacking in the more virile powers, in broad wision, epic magnanimity, and massive force." He concludes:

"When all is said. Grieg has in his early works made a contribution to music which our sense of his fater shortcomings must not make us forget. His Piano Sonata and his Violin Sonatas supply chamber-music with a note of pure lyric enthusiasm, of fresh unthinking animation, not elsewhere to be found. His Peer Gynt Suite fills a similar place among orchestral works. His best piano pieces, and, above all, his lovely and too little known songs, are unique in their delicate voicing of the tenderest, most elusive personal feeling, as well as in their consummate finesse of workmanship. It is a Lilipatian world, if you will, but a fair one. That art of the future which Grieg predicts in his essay on Mozart, which 'will unite lines and colors in marriage, and show that it has its roots in all the past, that it draws sustenance from old as well as from new masters,' will acknowledge in Grieg himself the source of one indispensable element-the element of nalve and spontaneous romance."

#### "CYRANO DE BERGERAC" AS A CHICAGO PRODUCT.

A LITERARY situation as unexpected as it is unique is created by the decision of Judge C. C. Kohlsåatz of the United States district court of Chieago, granting Capt. Samuel Eberly Gross, of Chieago, the author of "The Merchant Prince Of Cornville," a Cornville," a

CAPT, SAMUEL E. GROSS.

perpetual injunetion against further performance of "Cyrano de Hergerac," on the ground that M. Rostand's play contains plagiarized situations. The court in its order ruled that Captain Gross was also entitled to an accounting of the profits from the play, but Captain Gross waived this right and accepted \$1 as satisfaction. He announces, however, his inten-

Grossdale Park, Chicago "the most distinctive theater in the country," in which to present his play, "To think," exclaims the New York Naw, "that Edmond Rostand, of Paris, should have been caught, in the opinion of a Western master in chancery, appropriating the play plan invented by Mr. Eberly Gross, of Chicago, and that 'Cyrano de Bergerae' should be the result of

the appropriation! America seems to be becoming the true home of the Muses as well as the world center of industry and finance." The history of this remarkable case is told in the New York Times as follows:

"Subsequently to the production of 'Cyrano de Bergerac' in this country, Samuel Eberty Gross, a Cheagoan of wealth, filed a bill in the United States circuit court to restrain A. M. Palmer and Richard Mansfeld from producing Rostand's play in this country or England. Mr. Gross asserted that 'Cyrano de Bergerae' was an infringement upon 'The Merchant Prince of Cornville,' a comedy written by himself before M. Rostaud's work was produced.

"It appeared that some twenty years previously Mr. Gross, who was a man of some leisure and literary aspirations, wrote a comerly which he protected both by American and English copyrights. For years the play reposed in a safe-deposit vault, but in 1850 it was staged at the Novethy Theatre, London. Its memory in the theatrical words.

"Thror to the London production, Mr. Gross claims, he sub-"Thror to the London production, Mr. Gross claims, he subther the play to a decrease the L. Casauran, who was there Mr. Standon and the London the Company of the mended its production. The play remained in manuscript until 1895, when it was published in a handsome edition by Stone & Kimball and circulated by Mr. Gross amone his friends.

1895, when it was published in a handsome edition by Stone & Kimball and circulated by Mr. Gross among his friends.

"Rosand's 'Cyrano de Bergerac' was first produced in Paris"

"Rosand's 'Cyrano de Bergerac' was first produced in Paris"

"Rosand's bear brought out at the Garden 'Rheater in this rick; It will be observed that the date of its first production in Paris was a year later than the advent of 'The Merchant Prince of Cornwille' in London. When Mr. Mansfield produced 'Cyrano'. In Chicago, Mr. Gross witnessed the first performance, and in his work. He decided to bring suit and called attention to similarities in plot, dialogue, and characters.

"Mr. Mansfield continued to play 'Cyrano' with great success throughout the country, and it was artistically and financially one of his greatest successes."

The lending character of Captain Gross's drama is distinguished by the big nose that made Cyrano famous. An even more striking point of similarity in both plays is the wooing by proxy in a balcony scene, "There is no escape," remarks the Boston Transzeript, "from the proposition that, in this country at least, the celebrated nose of Cyrano de Bergerac is very much out of joint." It continues:

"The decision of the district court is subject to review by the full bench, and possibly it was in view of this fact that Mr. Gross chose not to press any claim for a share in the profits from the play. But until reversed, Mr. Rostand stands convicted in Chicago of plagiarism, the moral effect of which can hardly fail of this simple composition. The opinions of those who have read both plays with care, that there is no similarity except what is practically investibable where there is common historical basis, must of course have been duly weighed before the ruling of the court. The possible injury of this injunction to the Peench play weight as reversal of judgment. So far as Messes, Mansfield and Palmer are concerned, their case is very simple. Their interest is confined to the place of the process of the process of the play of the court.

Mr. Mansfield, when questioned regarding the possible results of the decision, replied (as quoted in the press despatches):

"The decision of Judge Kohlsant in the Gross case at Chicago, can have no effect on the presentation of 'Cyrano de Bergerac' beyone the Cyrano de Bergerac' beyone the Gross of Cyrano de Bergerac' instead of M. Rostand. What effect it will have in France is an enirely different matter, but it may probably result in the Théâtre Français and the great American and European artists overwhelming Mr. Gross with orders for plays, and Chicago in future may be the center of another industry.

The case has attracted much interest in France. M. Rostand is at present in his Pyrenean château, but one of his intimate friends, M. Pierre Véber, assured the New York Herald's Paris correspondent that the charge of plagiarism was ridiculous:

"I know Rostand too well to have the slightest doubt on the subject. Rostand was quite ignorant of American literature on the subject and the production of the piece at the time he wrote his play, and he is much too honest to have ever piffered another man's ideas.

"As for the claim made by Mr. Grosa that his here's big nose inspired 'Cyrano' and the famous balcony scene. I can only say that such a personage as Cyrano did really have a big nose, so why should M. Rostand have dipped into the 'Merchant Prince of Cornville'?

"The balcony scene is not a novelty either. The idea of the unhappy lover impersonating a fortunate rival with the latter's consent and in his presence has been staged many a time before, Indeed, I may say that there are not more than a score and a half situations known on the stage, and Mr. Gross has not added to the number.

"Might it not be possible to effect a compromise," suggests the Chicago Tribune, "by calling the play "Cyrano de Cornville"?"

### SCIENCE AND INVENTION.

### CAUSE OF VOLCANIC ERUPTIONS.

A LTHO the recent cruptions in the West Indies have been disastrous on account of their proximity to thickly inhabited districts, they appear to have been small in intensity in comparison to many other similar occurrence which have taken place. This would hardly be gathered from newspaper accounts, yet it is made clear by Prof. Israel C. Russell in an article witten for the New York Tribune (May 14). Says Professor Russell

"There have been times in the history of the carth when outwellings of molten rock have occurred throughout the extent of many long fassiers, and vast inundations of lava have resulted, as, for example, when the lava plains crossed by the Columbia River were formed. These plains, some 200,000 square miles in area, are underlain by sheets of once molten rock, which have an average thickness of something like 4,000 feet. Between outpourings of veritable floods of lava, as in the instance cited, and the cruption of the smallest volcano there is a complete gradation, showing that all volcanoes have essentially the same mode of origin.

"Local eruptions, or volcanoes, in distinction from 'fassure eruptions,' present two leading characteristics—in one class the lava is poured out quietly, frequently in vast quantity, but without explosions; and in the other class the matter extraded is generally comparatively small in amount, but accompanied by

explosions, frequently of great violence.

"During eruptions of the quiet type, the lava comes to the surface in a highly liquid condition—that is, it is thoroughly fused, and flows with almost the freedom of water. . . There is an absence of fragmental material, such as explosive volcanoes hurlinto the air, and a person may stand within a few yards of a trushing stream of molten rock, or examine closely the opening from which it is being poured out, without danger or serious inconvenience.

"The quiet volcanie eruptions are attended by the escape of a steam and gases from the molten rock, but the lava being in a highly liquid state, the steam and gases dissolved in it escape is quietly and without explosions. If, however, the molten rock lesse completely fluid, or in a viscous condition, the vapors and gases contained in it find difficulty in escaping, and may be retained until, becoming concentrated in large volume, they break their way to the surface, producing violent explosions. Volcanoes in which the lava extraded is viscous, and the escape of steam and gases is retarded entil the pent-up energy bursts all bounds, are of the explosive type. One characteristic example is Vessuvius.

"In extreme examples of explosive volcanoes, the summit portion of a crater, perhaps several miles in circumference and several thousand feet high, is blown away. Such an occurrence is recorded in the case of the volcano Caseguina, Nicaragna, in 1855. Or an entire mountain may disappear, being reduced to lapilli and dust and blown into the air, as in the case of Kraka-

toa, in the Strait of Sunda, 1883.

"The essential feature of a volcano... is a tube or conduit, leading from the highly heated subernst portion of the earth to the surface, through which molten rock is forced upward to the surface, through which molten rock is forced upward to the surface. The most marked variations in the process depend on the quantity of molten rock extruded, and on the freedom of escape of the steam and gases contained in the laws.

"The cause of the rise of the molten rock in a volcano is still a matter of discussion. Certain geologists contend that steam is the sole motive power; while others consider that the law is forced to the surface owing to pressure on the reservoir from which it comes. The view perlaps most favorably entertained at present, in reference to the general nature of volcanic eruptions, is that the rigid onter portion of the earth becomes fractured, owing principally to movements resulting from the shirnking of the cooling inner mass, and that the intensely hot material reached by the fissures, previously solid owing to pressure, becomes liquid when pressure is relieved, and is forced to the surface. As the molten material rises it invades the water-charged rocks near the surface and acquires steam, or the gases-resulting from the decomposition of water, and a new force is added which

produces the most conspicuous and at times the most terr,ble phenomena accompanying eruptions.

"The recent volcanic outbreaks on Martinique and St. Vincent were cruptions of the explosions that have occurred from time to time in Vesavius. The volcances have been dormant for pears, and the lava in the summit portion of their conduits was cold and hard; movements in the earth's crust canset al fresh ascent of lava from deep below the surface; the molten material came in contact with water in the rocks; it invaded, and steam explosions resultted.

"These explosions were similar to what would happen if water should be poured on a mass of molten slag such as comes from an iron furnace."

### NEW METHOD OF COOKING CEREALS.

THE discovery of a dry process of cooking starchy products, such as grains, which hitherto have required large quantities of water for cocking, has been announced by Dr. A. P. Anderson, curator of the Celumbia University herbarium. Dr. Anderson says in a paper on the subject, quoted in the New York Sun (May 10):

"To prepare starches for human foods it is essential that the granules should be looken up, in order to be more easily argunules whould be looken up, in order to be more easily argunules are especially active in converting starch into sugar, but starch, in which the granules are intact, is very slowly acted apon and is not changed even after hours of contact with the salive.

"On the other hand, when the starch granules are previously broken up by heating in water the enzymotic action is almost instantaneous, and the starch is converted into sugar, in which form it is soluble and easily assimilated......

"In the course of my experiments and study of the theoretical structure of the starch granule I have discovered a method by means of which starch granules of all kinds as well as starchy seeds and products can be expanded and broken up without the use of water from the outside, which is customary in the conversion of starches into pastes in the ordinary cooking processes with water.

"Instead of adding water, I am able to effect the complete swelling of the starch granule by means of dry heat. This I do by subjecting the starch granule, grain, or starchy mass to a rapid heat in a saturated atmosphere.

"At the end of the process I find the starch grannles broken up late an innumerable number of particles or fragments. The resulting products after the expansion are drier than before, on account of the loss of water which escapes at the time of the expansion.

"I find that I can in this way swell or expand any starchy product, and especially the cercal grains. When the grains are swelled the resulting products are from four to sisteen times greater in volume than the original kernel. The expanded kernels are only enlarged, otherwise exact cooles of the original.

"At the time of the expansion they become white, porous, and bread-like, and on account of the rapid heating and comparatively low temperature the greater proportion of the starch remains unchanged, excepting in that it is broken up into fragments as before explained, not being altered to any extenchemically. Some destrin is formed, especially when the heating is proloneed and at hitcher temperatures.

"When air-dry powdered starches, like own starch, taploca four, sage four, or starchy preparations like pearl sage and pearl taploca, are treated, the resulting swelled dry white massesbecome enlarged copies of the original, which increases in volume from six to nine times. When pure starches are thus treated and expanded, and the resulting dry products afterward placed in water, they go into suspension, forming a starch paste similar in every respect to one formed by boiling starch in water.

"The only difference between starch paste or starchy food products prepared by the ordinary methods of boiling or cooking with water and the dry method of expanding them is that the resulting products expanded when dry can be kept indefinitely in their dry condition, while the products prepared with weter easily spoil and ferment when not afterward sterilized and kept in closed vessels."

It is stated by the writer of the account in The Sun that at the

scientific meeting at which Dr. Anderson's puper was read, specimeus of the products treated by his process, including whent, rice, buckwheat, penrl barley, pearl sago, and tapioca, were presented for inspection and tasting. All these products, while greatly expanded, retained their original shape, and all quickly dissolved in the mouth. Pearl sago, especially, simply melted away. Wheat and buckwheat gave a little opportunity for mastication, and had a pleasing flavor. Says the writer:

"A suggestion was made by one of Dr. Anderson's hearers that the discovery was likely to go a long way toward solving the vexed question of concentrated food in emergency rations for soldiers. It is said that the products could be put upon the market cheaply, the expense of the process being less than that of the ordinary methods of cooking."

#### TWIN CANNON.

ON vessels of war heavy guns have long been mounted in couples, no this arrangement has enabled them to be sheltered in a single turret; but such cannon are independent and must be aimed and mainteuvered separately. On land single guns have generally been used. Lately, lowever, heavy guns for land batteries have been mounted together in pairs so that the two form practically a single unit. This arrangement has many

SCHNEIDER TWIN AUNCH GUYS

advantages, we are told by Lientenant-Colonel Delauney of the French army, who writes of it in La Nature (May 3). After noting the use of guns in pairs on board men-of-war, he goes on to say:

"Going n little further in this direction, the Messrs, Schneider
., have established a system that enables two cannon to be
mounted on one carriage; thus the two pieces occupy the minimum space and can consequently be contained in neutret of minimum size, or may be used behind a simple slield. This means
economy in weight and in space at the same time.

"But these advantages are not all; there is another whose immanages are not considerable. The two guns are, in fact, mounted on a single steel support, and being thus solidly connected need not be nimed separately; thus the rapidity of fire is increased as well as its accuracy."

The two guns may be fired either both at once or separately and either by percussion or electrically. They have, of course, nll the lasest appliances. The system including the twin cannon, their support, and all the mechanism for aiming them is supported on a cast-steel base that turns on n ball-bearing. Says Colonel Delauncy in closing:

"This invention, which is characterized by so great simplicity, has, ns we have seen, inestimable ndvantages, realizing reaccommy of weight, and enabling us to make the fire more effective in a notable degree. Presumably the arrangement, which has been already applied to cannon of 0.15 meter caliber for inches) will in future be used for even larger pieces. The power of the properties of the properties.

of naval artillery will make a giant stride on the day when such progress shall be realized on shipboard."—Translation made for The Literary Digest.

### HAVE PLANTS NERVES?

I Thus been said that the only real difference between a plant and an animal is that the former can not move about. Even this does not hold universally, for some of the lower water-plants swim about quite freely. But it is certain that many organs that we are accustomed to regard as distinctively animal exist, at least in a rudimentary form, in plants. This would appear to be the case with the nerves, for recent experiment seems to show that plants have a nervous system, altho it is of the most primitive kind. A recent investigator, M. Nemec, has just published an account of some researches along this line, which is reviewed in the Return Schneidson (April 26). Says the writer:

"It has long been known that certain parts of plants may be irritated by various means, and that the excitation can be transmitted across a zone that has no power of reaction, to n more less distant point where it produces motion. From this it is only a step to the assertion that plants have at least a rudimentary nervous system. Some believe that the propagation is accomplished by successive dehydration of the protoplasm; others think that as the protoplasm is continuous from cell to cell, it may serve in some other way no the agent of a transmission analogous to thut which takes place in the nervous system.

"M. Nemec tries to throw some light on the question by experiments on the effect of wounds on the protoplasm. He proves that when roots and other organs are wounded in the course of his investigations, two results follow. The first is an accumulation of protoplasm, and perhaps also n nucleus, at the cut or wounded surface, and this movement is propagated with decreasing velocity from the wounded part to the healthy parts. The speed varies in different tissues. It is a curious fact that if the wave of condensation (if we may call it so for simplicity) meets a cell which is in process of division it does not affect this cellit seems to disappear, so far as the cell is concerned, and reappears in the following cell. . . . Just after the cell content is modified (and this is the second phenomenon), it returns to its previous state. But this return is of short duration; a second modification takes place in which the protoplasm assumes a somewhat gelatinous appearance,

"This second plenomeson is more local than the former; it is propagated less quickly and not so far as the other; and M. Nemce thinks that the first may be due to a disturbance of hydrostnic balinnee in the cells, while the second is rather caused by the febrile condition that is provoked by the wound. Messrs. Locb and Mathews would say that it was a coagulation due to rupture of equilibrium of the ions."

An important fact in connection with the possibility of a rudimentary nervous system in plants is a discovery by M. Nemec that the cells are traversed by fibrils which may possibly even pass from one cell to another. These fibrils, which can be seen only by cureful staining with an appropriate liquid, are seen most frequently in the excitable and mobile parts of the plant, and so they would seem to be the agents of excitation and motion. In the genus l'icia, the fibrils run along the axis of the root, and M. Nemee found that when a ring-shaped incision was made around the outside, so as not to touch them, the root kept its power of receiving and transmitting stimulation, while if the axis of the root was pierced, so as to wound the fibrils, all excitability was lost. When the point of the root was cut off, sensitiveness to gravity was also lost, since it resides only in the tip of the root; but when the tip had regrown, the sensitiveness did not reappear. In this case M. Nemee found that the continuity of the fibrils was lost; the new ones did not join the old ones, so that the tip of the root was like the end of a finger whose nerves have been severed by a cut. It could not transmit its message to the rest of the plant. The reviewer goes on to say, in conclu-

"It may be seen that M. Nemec brings facts and arguments to

support his thesis; he has opened an interesting field to exploration, and it is desirable that other investigators should follow him in it. The study of organs of transmission more reulimentary than nerves, in inferior animal organisms and in plants, will perhaps assist us to understand the working of the more complex organs that wo know under the name of nerves."— Translation made for The LITERARY DIGGS.

#### THE CHANCES OF LONG LIFE.

X E should be afraid of the fear of death -not of death itself. If we follow this rule, there is no reason why we should not all become centenarians-so we are told in the Revue d' Economie Politique by M. Jean Finot. This author begins an article on the limitations of life by mentioning some traditional long lives. Among these cases are those of a resident of Goa, who is said to have reached his four-hundredth year in the enjoyment of all his intellectual faculties, a Scotchman who lived to be over 200 years old, and various monks of Mont Athos who have reached 150 years. He asserts that Servian statistics for 1807 show three persons between 135 and 140 years old, 18 from 126 to 135, 123 from 115 to 125, and 290 from 105 to 115. In 1890 there were, he says, in the United States, 3.981 persons over 100 years old and 21 in London. M. Finot cites a mathematical formula. which he credits to Dr. Richardson, by which any our may get an idea of his probable longth of life. It is only necessary to add the ages of one's father and mother to those of one's two grandfathers and two grandmothers, and the total divided by six indicates the exact number of years one should live. M. Finot does not believe that the average length of human life has been reduced. On the contrary, he believes that it is constantly increasing, owing to the progress of hygiene. Why do we grow old at all? The writer answers:

"For three reasons: 1st, want of physical exercise in the open air: ad, poisoning by microbes which the phageoyete have not succeeded in destroying; 3d, fear of death. It is hard to impact in the importance of this last element. If a man fears death, it will carry him away. And yet it is quite pleasant to die; no sensation could be compared to it."

To prove this assertion, M. Finot quotes Heim, who related the sensations he experienced while falling with his companions from the summit of one of the Alps to a death which he miraculously escaped:

"At first a sense of beatitude, then complete insensibility to touch and pain; finally an extrome rapidity of thought and of imagination which in a few seconds enabled him to recollect the events of his whole life. Therefore it is not death we should fear, but the fear it inspires in us. We are wrong, says Socrates, to fear death, as it is our greatest possession on earth, and Sence adds that it is the best of the inventions of life, while Montesquieu concludes that we should shed tears for men when they are born and not when tievy die."

M. Henry de Varigny examines the question of longevity in L'illustration from another point of view. He asks: Has the mnn of to-day a chance to live longer than the mnn of 3,000 years ago? He bases his conclusions upon charts and statistics published by Prof. Karl Pearson in Biometrike and upon the researches mado by W. Spiegellierg, of Strassburg, on the age of Egyptian nummies. These conclusions are that an Egyptian who 2,000 years ago lived to be 68 years old was likely to live longer than a modern Englishman of the same age. M. de Varigny gives the following explanation:

"Evidently there was among the Egyptians a natural selection, a resulting from environment, that does not take place today at least to the same degree, among civilized people. The Egyptians who reached the age of 68 years had robust constitution and therefore their chances of longevity were exceptional. More taility was higher among the children and the adults, and there was a kind of selection by death. The man of to-day is not stronger; he is possibly weaker. But the majority of the pole live under conditions more favorable to longevity, because we know what conditions to promote. In other words, the greater expectation of neverage life is the result of the progress of sanitary science in the fullest sense, and not the result of an increase of vitality. It is the consequence of the evolution of man's intellect rather than of the evolution of his body.

For these reasons M. de Varigny asserts that altho the chances of life have increased for infancy; youth, and the prime of life, they have not increased for old age.—Translation made for THE LITERARY DIGEST.

### ENGLISH INSTRUCTION IN TECHNICAL SCHOOLS.

That the teaching of languages, English included, has been asily neglected in technical and scientific institutions, especially in the United States, is asserted by an editorial wirer in The Electrical Review (May 10). We are expert, he says, in many branches of science without being able to tell what we know clearly and simply. In an editorial entitled "A Neglected Branch of Study," the writer asys, in part:

"A man may have the most comprehensive and complete knowledge of his subject and may be very expert in it, but without the ability to express himself clearly and distinctly and unmistakably he suffers a lunnlicay so severe that only a great genius can overcome it. . . . The value of an engineering report does not depend so much upon the crudition and the familiarity with the subject exhibited by the engineer making it, as it does upon his ability to make clear and explicit his reasons, to show logically the origin of his deductions, and to impress others with his conclusions. It is precisely this art which has been neglected, this training in riterior and logic.

"We are a careless people. Perhaps more than any others we are willing to condone faults of expression if we are sure that the man committing them is correct in his general principles. We do not ask for correct grammar so long as the facts and the statements concerning them are correct; but the habit of slips and and displand mental attitude. The man who can not express hismelf im a straightforward and concise way is apt not to be able to think straightfy and clearly. Training, then, in the art of expression is of a twofold value, in that it also trains the mind of expression is of a twofold value, in that it also trains the mind of expression is of a twofold value, in that it also trains the mind capture of the control of the cont

The writer points out that the systematic study of English is of especial value to engineering students, whose standing in their profession depends upon their ability to make clear and accurate statements. He says:

"They will have observations to make and conclusions to draw from them, and a very large proportion of the value of these conclusions and observations will be dependent upon the language in which they are stated. . . . . . .

"To show the value of the art of expression, one has only to mote that Darwin's 'Origin of Species,' for example, has found thousands and perhaps millions of popular readers, and has impressed upon the whole period a belief in the author's conclusions—largely on account of the fact that the work is a master-piece of pure and limpid English. If it had been written in the style of some of the papers read during the last few years before American engineering societies and printed in our technical portunals, it is doubtful whether or not it would have attracted even passing public attention."

Telephonic Privacy.—The daily papers announce that U. S. Jackson, of Boston, has invented a device by which privacy is assured in telephonic conversations. By this arrangemont, says a correspondent of the New York Herald, "so long

as two persons are talking over the circuit every other telephone on the same line is locked, that is, the bell will not ring."

"The attachment may be placed upon any ordinary telephone, and its introduction may become general without the construction of a special line. Its effect is to transform the line between the two persons using it into a private were. The current is directed only through the two instruments in use, and it is controlled absolutely by those who are using the instruments. By its operation it is declared that there is a great saving in electric energy, since the force being this concentrated can not be diverted. An examination of the experimental line has been made phoning. Electricians assert that they see no reason why, with this attachment, It will not be possible to talk between long-distance points with a short-distance instrument.

"The simplicity of the attachment and the consequent ease of understanding and operating it are among the features that commend it, and which, doubtless, may add to its popularity."

#### THE NARCOTIC HABIT.

THE increasing use of all sorts of narcotics by persons who, if not actually in health, have as yet no perceptible disease other than a craving for some stimulant or sedative, is ascribed by a writer in The Hospital (April 20) to the fact that "we have largely abused the good gift so finature by employing, as daily inxuries, and in time as artificially created necessaries, things which, if kept in their right places, would have been reserved as resources in emergency or in distress." The writer goes on to say.

"We are told by those who take it that tobacco is an eminently tranquilizing and soothing agent, capable of softening down many of the asperities of life; but it is manifest that it can no longer exert this influence, or fulfil this purpose, in the case of a consumer who is never long without it, even when the ways which he is called upon to traverse are entirely smooth. If difficulties come to him the tobacco fails of its effect, and something more powerful, or to which he is less habituated, must be-or at least too often is-resorted to. We are strongly inclined to the belief that the excessive smoking of our time, under conditions which do not seem to afford any sufficient justification for it, must to some extent be blamed for the manifestly increasing prevalence of 'habits,' and that, if the comparatively mild and harmless drug were used discreetly and in moderation, the necessity or fancied necessity for the stronger and more harmful one would be far less likely to assert itself. As a matter of fact, the absolute need for either one or the other can only seldom arise in the conditions of modern life, and the daily use of the narcotic can hardly be looked upon in any other light than as a piece of unnecessary self-indulgence. That this is so is abundantly shown by the example of women, who smoke but rarely, and whose want of a panacea against the smaller ills of life, the worries of a household, the cares incidental to the possession of children and servants, is certainly far greater than that of their husbands. Possibly many women who have now fallen into 'habits' might have been preserved from them if they had smoked; and it seems certain that many men would have been preserved from them if they had used tobacco without abusing it."

Intellect and Size of Skull.—The opinion is widely held that intelligence is connected with eranial capacity, or, in other words, with the size of the head. "The question," says from the words, with the size of the head. "The question," says from level prought up by scientists, but their evestigations have resulted in nothing conclusive, and this has been generally regarded as due to the fact that these two magnitudes are incommensurable. We may, it is true, measure the length and breath for a head, but now shall we express degree of intellect in figures? However this may be, these difficulties have not frightened Prof. Karl Pearson, who has made a serie of experiments that he describes in a, recent paper before the London Royal Society. To eliminate as far as possible the errors that might be introduced into comparative measurements on a large number of persons by differences of age, education, and

nourishmeut. Professor Pearson devoted his attention to a homeomeous group of individuals of the same social euvironment—the students of the University of Cambridge. The Anthropological Society of Cambridge trinsited him with a series of measurements on students whose university standing could be obtained from the records. The results deduced from these measurements by a method invented by Professor Pearson... proves that the intelligence of a student, so far as it can be measured by his success as a scholar, has no sensible relation to the size of his bead. Other experiments in different colegos of the United kingdom confirm this result."—Translation made for The Litterary Digest.

The Potato as a Medicine.-The good results of administering potatoes in certain forms of diabetes are affirmed by a French physician, Dr. Mossé, who states that he has effected cures by this means. "M. Mossé thinks," says the Revue Scientifique, "that this treatment probably acts by alkalinization of the humors, in the same way as the treatment by the alkaline mineral waters of Vichy; besides this, potatoes contain oxydases, and bring to the tissues ferments favorable to those exidations that are habitually retarded in diabetic patients. The quantity of potatoes that should be taken by the invalid varies from two and one-half to three times that of the bread eaten. . . . But altered potatoes should not be employed; when jellied, they contain sugar; in too warm a medium they begin to sprout and their germination also develops sugar, as well as solanin." The writer remarks that in the spring, when potatoes are scarce and not very good, potato-bread may be used to advantage, altho little known. This is prepared by mixing, in proportions varying from one-quarter to one-third, wheat flour with mashed potatoes. This food tastes enough like ordinary bread to make it palatable to persons who feel that they must have plenty of the latter. The use of the potato instead of bread deprives the body of certain useful phosphates that are contained in the latter; but this objection may be removed, we are told, by adding eggs to the diet, especially the yolks .- Translation made for THE LITERARY DI-

#### SCIENCE BREVITIES.

"By taking a globe, and stretching a thread from the month of the Columba River to the port of Manila, in the Philippines, it will be seen," says The Biguneering Magazing," that the shortest or great-circle ronte passes through the Advistmi Islands, and close to the Japanese coast, leaving the compared with Honolois, is thus clearly seen, and the advantages of the northern route, with its short attreches and important commercial connections for a Pacific cable, are apparent. . . An examination of a globe will make the importance of the Alaskan coal deposits much more readily will make the importance of the Alaskan coal deposits much more readily

"Tits visit of an earnest British economiat and student of industry to this country, to prepare for an extended four of inspection by two considerable parties representing British industrial interests, is significant of an aspect of British character which is too little appreciated by American competitors," says The Engineering Magazine (May). British is allow to genering plants a split and a movement of recognization and reequipment which is splendld in its conrage and startling in its activity. The great technical schools at Manchester, Birmingham, and Sheffield are crowded to doubtle their capacity with stodents—and dilettant, but working lads, eager even after a day's work in the shops to spend the evening on over-considence leaf American manufacturers to belittle her foture importance as an industrial rival."

BRITISH soldiers are to be provided with boiled water for drinking, say the Internal Nature 1 and the Internal Nature 1 and the Internal Nature 1 and Inte

#### THE RELIGIOUS WORLD.

### THE PRESBYTERIAN GENERAL ASSEMBLY.

THE one hundred and fourteenth General Assembly of the Presbyterian Church in the United States, representing 32 synods and 232 presbyteries, opened its sessions on May 15 in the Fifth Aeeune Presbyterian Church, New York. On the same day also the Assemblies of the Presbyterian Church state of the General Assembly and the Cumberland Presbyterian Church were opened, the former in Jackson, Missa, and the latter in Springfield, Mo. The meetings of the General Assembly have been heraided by a wealth of comment and speculation in religious and secular papers throughout the country, and wide interest is manifested in the results of its deliberations.

The first act of the Assembly, the election of the Rev. Dr. Henry Van Dyke, of Princeton, N. J., as moderator, occasioned Francisco, preacted the customary sermon at the opening session, taking as his subject, "The Enduring Mission of Presbyterianism." He said in part:

"Any consideration of the mission of Presbyterianism would be incomplete if, in the first place, it did not note the fact as of greatest prominence, that the Presbyterian Church has always held forth to the world a confessional testimony to what it believes to be the truth of God. It has not said, with Newman, that all there is in religion is dogman, nor has it said, with Sehleiermacher, that religion is all feeling or life. It has characterisically approached men on their rational side, and assuming that conviction shapes conduct, it has almed to enlighten the intellect of confession of the plant presentation of the truth of God.

"It is idle to deny that strong counter-currents have set in against this position. Doctrine is belittled and creed is decried, and many ecloses are sounding out that the function of a church in these last days is to cultivate piety and to quicken the generously ethical impulse of men—and to stor there. #### MEMBERS OF THE PRESBYTERIAN CREED REVISION COMMITTEE.

some surprise, and was at once accepted as evidence of the strength of the "liberal" element. The New York Evening Post said:

"Dr. Van Dyke's election as moderator of the Presbyterian General Assembly is an award of that highest honor of the denomination almost unexampled. It has usually gone to some father of the church, some great ecclesiastical administrator, or some profound theologian with a reputation as malleus hereticorum. Its bestowal upon a clergyman who, the unquestionably a fine preacher, has had his widest vogue as a writer and lecturer, and who has given up the pulpit for the professor's chair, must be taken, we suppose, as a graceful triinte to literature and to personal charm. Certainly it enn not be inferred that a conservative assembly, with the burning question of creed revision to come before it, should have chosen Dr. Van Dyke to mark its approval of his liberal theology. He himself lightly put away any such significance by intimating that he suspected that many of the commissioners who voted for him thought they were really voting for his father-one of the most rigidly orthodox Presbyterians that ever lived."

The retiring moderator, the Rev. Dr. Henry C. Minton, of San

hand, we devoutly believe that the call is made all the louder by this very tendency, for the witnessing work of a confessional church. Let us not deceive ourselves; this is a theological age; not profoundly so, but predominantly so, even the it may think otherwise of itself."

The secoud day's session was marked by the presentation to the Assembly of the report of the committee on creed revision. The report was read by Dr. Minton, the committee's chairman, and was for the most part unanimous, a single member, Dr. De Witt, expressing dissent on two points. It covers the three tasks set for the committee, furnishing a "declaratory state-ment" as a supplement to the Westimister Confession, two additional chapters on "The Holy Spirit" and "The Love of God and Missions," and a "Brief Statement of the Reformed Faith. The nature of the "declaratory statement" has already been made public (see Time Lurreanx Disuxy, March 1), and is chiefly motable for its repudiation of the doctrine of infant damaton, and its explanation of the doctrine of infant damaton, and its explanation of the doctrine of or predestination as in harmony with God's lave for all mankind and His condemnation of none except for sin. The passage in the Westminster

Confession in which the Pope is described as "Antichrist, that man of sin and son of perdition," is changed to read:

"The Lord Jesus Christ is the only head of the church, and the claim of any man to be the vicar of Christ and the head of the church is unscriptural, without warrant in fact, and is a usurpation dishonoring to the Lord Jesus Christ,"

The "brief statement" is composed of sixteen articles; on God, Revelation, the Eternal Purpose, the Creation, the Sin of Man, the Grace of God, Election, Jesus Christ, Faith and Repentance, the Holy Spirit, the New Birth and the New Life, the Resurrection and the Life to Come, the Law of God, the Church and the Sacraments, the Last Judgment, and, lastly, Christian Service and the Final Triumph. The second article is considered the most important of all by the New York Independent, in view of the discussions on biblical criticism. It is as follows.

"We believe that God is revealed in nature, in history, and In the heart of man; that He has made gracious and clearer revelations of Himself to men of God who spoke as they were moved by the Holy Spirit; and that Jesus Christ; the Word match flesh, is the brightness of the Father's glory and the express image of His person. We gratefully receive the Holy Scriptures, given by inspiration, to be the faithful record of God's gracious revelations and the sure witness to Christ, as the Word of God, the only infailible rule of faith and life."

Mention of Adam is omitted from Article V., "Of the Sin of ...
Man":

"We believe that our first parents, being tempted, chose evil, and so fell away from God and came under the power of sin penalty of which is eternal death; and we confess that, by reason of this dissobetience, we am all men are bern with a niture, that we have broken God's law, and that no man can be saved but by His grace."

The question of creed revision came before the Assembly for definite action on May 23, and was disposed of in less than two hours. After a discussion that was more congratulatory than polemic, the report of the committee was adopted by only two less than a manimous vote.

By the press at large the changes proposed seem to be, for the most part, favorably regarded. The Minneapolis Times halls the report as a "triumph of the new and sweeter, if not so stately, modern spirit of theology." The Indianapolis Avez thinks that "the proposed statement is to be commended because it makes for greater freedom and liberality." The Detroit Free Press says:

"Naturally, a report of this kind must be in the nature of a compromise. It must be sufficiently elastic to admit a certain latitude of individual interpretation, and at the same time sufficiently rigid to hold the church together to certain definite principles of faith. The report, however, reveals the extreme caution of the theological mind in approaching a question of great moment to the church, a caution that in this case is readily understood. The Westminster Confession is so logical that its conclusions, from its premises of God's sovereignty and the infallibility and sufficiency of the Bible, have been termed 'wholly irresistible.' So logical a structure is not to be dealt with rashly. Modifications are to be considered thoughtfully, lest in making changes that seem slight in themselves the whole fabric of the confession be destroyed. And this seems to have been the thought that the committee had constantly in mind. It is trying to reconcile the old Calvinism to the new century, and to do it in such a manner that nobody will be startled or terrified by the transformation."

On the other hand, the New York Sun maintains that the committee's "laborious attempt to smother the harsh voice of the Confession under the flannel of smooth speech" is not very successful. The New York Independent says:

"We hold that a church is best off when it has no binding creed-system of theology, but is left to the instruction of the Holy Spirit and is allowed to take advantage of every modification of belief which careful study, human sympathy, and divine guidance can supply. We much fear a new creed unanimously recommended. It will put a fresh burden on the church just as the old burden was being lifted. To be sure the burden may not be as heavy, but it will bear too heavily on some consciences.

The sessions of the Assembly on May so and 21 were devoted by the celebration of the centennial of home missions. Among the speakers were the Rev. Dr. Charles L. Thompson, secretary of the Presbyterian Board of Home Missions; the Rev. Dr. Richard S. Holmes, of Pittsburg; the Rev. Dr. S. Hall Young and the Rev. Dr. M. E. Koonce, of Alaska; the Rev. Milton E. Caldwell, of Porto Ricci, the Rev. Charles F. Richardson, of Montana; and the Rev. Dr. S. E. Wishard, of Utah. The crowning event of the Assembly was the public meeting held on the evening of May 20 in Carragie Hall. President Roseovelt was the speaker of honor, the keynote of his speech being struck in the following words:

"The century that has closed has seen the conquest of this continent by our people. To conquer a continent is rough work....!t is because of the spirit that underlies the missionary work, that the pioneers are prevented from sinking perilously near the level of the savagery against which they contend. Without it the conquest of this continent would have had little but an animal side. Without it the ploneer's fierce and rude virtues and somber faults would have been left unlit by the flame of pure and loving a spiration.

"Without it the life of this country would have been a life of inconceivably hard and barren materialism. Because of it depelement and through the national character there runs that power of firm adherence to a lofty ideal upon which the safety of the nation will ultimately expand. Honor, thrice honor, to those who for three generations, during the period of this people's great expansion, have seen that the force of the living truth expanded as the nation expanded."

### AMERICAN CHAMPIONS OF TOLSTOY'S

N OTWITHSTANDING the almost unanimous indorsement of the view taken by those critics who have branded Tolstoy's teaching in regard to sexual relations as "insanc" (see The Literary Dicest, May 3). It appears that Tolstoy's opinions on this subject are shared by quite a number of people in this country. In a recent issue of one of the "New-Thought" papers, The Nauthine (Holyock, Mass.), is found the following: "Before peace can be realized, birth and death in the sense in which we use those words must cease. . . . Physical parentage will cease to be idealized and exalted." Mr. Sydney Flower, writing in New Thought (Chicago), declared.

"The aim of existence should be to express this love-force, this sex-energy, this vitality in some way that shall advance or spiritual growth. It is necessary at first that we make use of the physical expression. It will not always be necessary that we should do so. It is not to our highest good that we should continue to live on the physical plane when we know how to reach the spiritual."

Similar sentiments are expressed in The Christian (Denver,

"Motherhood and fatherhood on the mortal plane is a sham. There is no reality in it. It is one great delusion. It is the mystery of iniquity. It belongs to the tadpole period of unfoldment."

Commenting on the above. Helen Wilmans says in Freedows (Sea Breeze, Fla.): "Childhood is but the extension of love of self. Generation will have to be merged in regeneration before death is conquered in the world..... In this respect I am certain that these teachers are on the right track."

Many Theosophical writings are pervaded with the same

spirit. From "Fragments of Forgotten History," by one of this school, may be quoted:

"Increased practise of celibacy is the only means for any real advancement of the race; the celibney which is not the result of restraint, but the outgrowth of a spiritual growth, producing deep conviction and general elevation of character.

"The commonest objection taken against celibacy is that if practised by all it will bring the world to nn end; but this objection can only have importance with those who attach an exaggerated importance to the present objective life. The termination of the world, by which is merely meant the end of the present transitory state of our consciousness, is by no means a very drendful calamity. And ugain the objection is worthless because the apprehended danger would never occur, as there will nlways be found a sufficient number to carry on the work of perpetuating the race. Some urge it is only the noblest and most unselfish of men who will be moved by the highest instincts of their nature to adopt ceiibacy and thus leave the least worthy to propagate. This line of argument entirely ignores the dynamic power of thought which the celibates will bring to bear upon those desirous of issue; and thus the general average of humanity, far from deteriorating, will be likely to improve,"

### GOVERNOR TAFT'S MISSION TO THE VATICAN.

SOME disquietnde has been aroused in Protestant circles by the fact that President Roosevelt is sending an official deputation to the Vatient to confer with Lee XIII. In regard to religious problems in the Philippine Islands. The commission consists of Gowenor-General Taff, Judge James P. Smith, of the Supreme Court of the Philippines, Major John B. Porter, of the Judge Advocate's Office, and the Komma Catholic Bishop O'Gorman, of South Dasiota. "However defensible the measure taken by the President may be," remarks the Boston Watchman (Baptist), "it indicates, in the most unmistable way, the new influence which Rome is acquiring in the United States." And Bishop J. M. Thoburn, the missionary bishop of the Methodist Episcopal Church for Southern Asia, writes as follows in the Chicago Nertheastern Christian Advocates.

"All this may turn out well in the end, but in seuding Governor Taft to Rome it certainly looks as if President Roosevelt has overlooked some very important features of the case. In the first place, the Vatican is the party obligated, and both right and courtesy demand that the commission should be sent from Rome to Manila, and not from Manila to Rome. In the next place, it certainly looks like a sacrifice of official dignity to send Governor Taft on a mission of this kind. He occupies one of the most prominent positions in the Oriental world. He is a governorgeneral and his official person represents the President of the United States, very much in the same way that Lord Curzon, as governor-general of India, represents the king of England. If it were proposed to send the governor-general of India to Constautinople to settle a semi-religious question with the Sultan, as the head of the Mohammedun community, the very idea would be scouted as preposterous. In such a case the Sultan would be required to go to India in person, or to send a commission with full power to act for him. American prestige stands very high in the East at the present day, and it is much to be desired that nothing should be done to lower it; and yet, if Governor Taft actually goes to Rome as has been announced, the impression made throughout all Eastern lands can hardly fail to be unfavorable.

"Every possible concessions should be mude to the feelings and wishes of the venerable point fat Rome, but surely something is due to the high official who represents the President of the United States. How the plan proposed is viewed in Rome itself may be inferred in some measure from ne exuberant letter written from Rome and published in the New York Sow. In this letter 'Mr. Taft' is spoken of without any token of respect, while the writer is almost beside himself with joy over the victory which has been secured by the church. Governor Taft is a man who cures

nothing for petty personal amenities, but the American people regard with puper jealousy the treatment within is accorded to those who represent them in the high places of the earth. In Jupan and Chim and throughout all Southern Asia, to any nothing of the Philippines, it is vitally important that the United States should keep fully abreast of the most forward mations; but it is greatly to be feared the sending of this commission to Rome will not contribute to that end."

Secretary Root made an official statement a few dnys previous to the departure of the commission, declaring that Governor Taft's journey to Rome, on his way back to Manila, is made simply "for the purpose of reaching, if possible, a friendly understanding with the authorities having control of the disposition of the property of religious orders and other church property in the Philippines." His errand, adds Mr. Root, "is not in any sense a diplomatic missoft; it is simply a business transaction with the owners of the property."

The Roman Cutholic papers are disposed to make light of the whole affirir. The Chicingo Aver World finds Secretary Root's statement an "nmusing" one, since "every one knows that it is specially addressed to those who pretend to have a mortal dread of papial encreachments, to satisfy them that there is no immediate danger looming up, nor any intention on the part of the United States to recognise the Pope as a sovereign with whom diplomntic communications may be curried on." The San Prancisco Mentior says:

"Some of our sectarian contemporaries are grieved to the soul that Unels Sam should actually venture to have dealings with the tyrant of the Ther for the arrangement of church matters in the Philippines. They appear to be afraid that the head of the aged pontiff will be turned by such recognition of his ecclesiactical state, and that he may attempt to enslave the republic Orfriends are needlessly alarmed. Both Rome and America will probably survive the orleat."

### The Philadelphia Catholic Standard and Times comments:

"Secretary Root has informed Congress that Governor Taft. with Judge Smith and Major Porter, are going to Rome, not asa 'commission,' but simply to confer with the Roman authorities. with the object of securing 'separation between church and state' in the Philippines. Still further explaining, he says the matter is simply a business transaction with the owners of prop-These two propositions do not seem either to fit the facts or to agree with each other. It has to be shown where the connection between church and state exists; the hoisting of the American flag in the Philippines swept that connection away. It is the friars' lands that are in question, and these have nothing to do with either church or state. It is a distinct departure from this principle of separation, as set forth in the American Constitution, for the Government to intermeddle in the real estate of any religious corporation. It has no more power to do so than in the case of any private citizeu. Tho the friars may be willing to dispose of the property they have held for three lumdred years, and the the Roman authorities may be willing tofacilitate the arrangement, these circumstances do not ulter the extra-constitutional character of the proceeding-a proceeding in its spirit as much opposed to the principle of religious freedom asthe principle of the written law,'

A Plea for the Abolition of the Funeral Sermon.

—Dr. Emil G. Hirsch, of the Temple Israel, Chicago, has announced to his congregation that he will hereafter deliver no
inneral sermons, altho he will as herefore consent to read a
ritual service at the house of mourning. The rabbi's utterance
has aroused considerable interest in the Jewish press, and is in
agreement with the policy that is more und more frequently
being adopted by ministers outside of his own denomination.
'Generally we do not agree with the radical utterances of Dr.
Hirsch, 'remarks The Irsch' Voice (St. Louis), 'but we can
not help conceding to him a measure of our approval in this case.

We preach and speech and orate too much in the sad hours of death." The Jewish American (Detroit) says:

"The funeral sermon has become a bugbear to the minister. Not only is he compelled frequently to look for virtues with a microscope before delivering a eulogy over a deceased member, but it does happen sometimes that through the representations of over-sealous friends and relatives of the dead he is led to say things which he believes to be true, but which are in fact the very reverse of true."

Then, too, the minister is constantly called upon to speak in praise of those dead who in life never cared enough for him or his position to attend church service; and "how can a minister speak with sincere feeling about one whom he never knew—perhaps never even saw, or of whose existence he was totally unaware?" The same paper continues:

"We heartily advocate a uniform ritual service for all funerals, to be followed in special instances and where the deceased was worthy of it by a memorial service at which a fitting eulogy mass worthy of it by a memorial service at which a fitting eulogy may be spoken. . . We know, of course, that an attempt to introduce this theory into practise would meet with a storm of opposition in almost every community, for people are weak enough care to have the virtues of their loved ones sounded, even tho they themselves have to direct the utterance.

### WAS GEORGE WASHINGTON A CHRISTIAN?

I N a recent publication regarding the proposed Protestant Episcopal cathedral at Washington, Bishop Satterlee makes the
statement that George Washington, the first President of the
United States, was a communicant of the Episcopal church. Not
long ago the Rev. Dr. R. II. McKim made a similar observation
in a sermon preached before the "Sons of the Revolution," declaring that Washington was a communicant, constant attendant
at church, and a strict observer of the Sabbath. Mr. Archibath
(Ibayins, of Washington, in a letter to the New York Tribane
(May 19), calls in question both of these statements, and produces some interesting evidence in support of his contention
that Washington was not a Christian at all, but a Deist. His
first biese of testimony is from Thomas lefferson's "Memoirs":

"February 1, 1800, Dr. Rush tells me that he had it from Asa Green, that when the clergy addressed General Washington on his departure from the Government, it was observed in their consultation that he had never on any occasion said a word to the public which showed a belief in the Christian religion, and they thought they should so pen their address as to force him at length to declare publicly whether he was a Christian or not. They did so. However, he observed, the old fox was too cunning for them. He answered every article of their address particularly except that, which he passed over without notice. Rush observes he never did say a word on the subject in any of his public papers, except in his valedictory letter to the governors of the States, when he resigned his commission in the army, wherein he speaks of 'the benign influence of the Christian religion.' I know that Gouverneur Morris, who pretended to be in his secrets, and believed himself to be so, has often told me that General Washington believed no more of that system than he himself did."

Bishop White, whose church in Philadelphia Washington attended part of the time while there, wrote to a correspondent in 1855; "In regard to the subject of your inquiry, truth requires me to say that General Washington never received the communion in the churches of which I am the parochial minister. Mrs. Washington was an habitual communicant." And, again, in a letter to the Rev. B. C. C. Parker, reproduced in Bishop White's "Memoirs," he said: "I do not believe that any degree of recollection will bring to my mind any fact which would prove General Washington to have been a believer in the Christian revelation further than as may be hoped from his constant attendance upon Christian worship, in connection with the general reserve of his character."

When not an attendant at Bishop White's church, Washington

generally attended the Rev. James Abercrombie's church in the same city. Dr. Abercrombie's recorded utterances on the subject of Washington's religion are of much the same character as Bishop White's. Indeed, it is stated (in the "Aunals of the American Pulpi'," vol. v., p. 301 that on one occasion Dr. Abercrombie administered a public rebuke to Washington on account of his attitude toward religious observances. "I considered it my duty," says the preacher, "In a sermon on public worship to state the unhappy tendency of example, particularly of those in elevated stations, who uniformly turned their backs upon the celebration of the Lord's Supper. I acknowledge the remark was intended for the President, and as such he received it." Dr. Abercrombie is also reported as saying emphatically to the Rev. Dr. Wilson of Ahany: "Sir, Washington was a Deist."

General Greely, in an article on "Washington's Domestic and Religious Life," writes:

"It is, however, somewhat striking that in several thousand letters the name of Jesus Christ never appears, and it is notably absent from his last will.

"His services as a vestryman had no special significance from a religious standpoint. The political affairs of a Virginia county were then directed by the vestry, which, having the power to elect its own members, was an important instrument of the obgarchy of Virginia.

"He was not regular in attendance at church, save, possibly, at home. While present at the First Provincial Congress, in Philadelphia, he went once to the Roman Catholic and once to the Episcopal church. He spent four months in the Constituoal Convention, going six times to church, one each to the Romish high mass, to the Friends, to the Presbyterian, and thrice to the Episcopal service.

"From his childhood he traveled on Sunday whenever occasion required. He considered it proper for his negroes to fish, and on that day made at least one contract. During his official busy life Sunday was largely given to his home correspondence, being, as he says, the most convenient day in which to spare time from his public burdens to look after his impaired fortune and estates."

Robert Dale Owen and Monenre D. Conway both take the view that Washington was a Peist; and the Rev. Dr. Miller, of Birmingham, England, who devoted much time to an investigation of this subject, says in London Notes and Queries:

"My researches do not enable me to affirm that Washington, on his deathbed, gave evidence of Christian belief. . . . . . .

"In the last bour of the day, on the last day of the week, in the last month of the year, in the last year of the century, at the end of a long and illustrious career, with the simple words. I am not afraid to go," the hero of a dozen battle-fields surrendered."

The only evidence that Mr. Hopkins has been able to discover on the other side of this question is contained in a letter from Mrs. Washington's granddaughter. Nellie Custis, to the historias Sparks. She says that she had leard her mother say "that General Washington always received the sacrament with my grad-mother before the Revolution." There is also a tradition that be communed at a Presbyterian Church at Morristown in the course of the Revolution. On the other hand, we have Washington's own statement, repeated second-hand by Dr. Abercrombie, that "the had never been a communicant."

In view of this testimony, observes Mr. Hopkins, "can there be any doubt that Washington shared the beliefs of Franklin, Jefferson, Marshall, Adams, and Lincoln?"

Title eighty-sixth annual report of the American Bible Society shows that a, pay, proposed of the Bible were distributed at home and abroad tax year. Thus is an increase of sicolog over the issues of the previous varior of these deep year was distributed in both the size of the previous varior of the proposed varior va

### FOREIGN TOPICS.

#### AMERICANISMUS.

W HAT is Americanismus? Briefly stated, it is the ineessant, exclusive, and ruthless strife after property and wealth. With this question and this answer the Conservative Kreuz Zeitung (Berlin) enters at length upon a subject which it pronounces of far-reaching importance. Its salient conclusions are these.

"The European acquires in order to live; the North American lives in order to acquire. The race for wealth overwhelms all other striving. Millionaires are admired. The measure of social attainment is purely and simply money. Even in the Librarian and Radical camps such an Americanization of the Old World and especially of Germany would not be deemed an advance, but an actual backward step in civilization. The desire of again is sufficiently developed in Germany as it is. The strife for money and wealth is found, moreover, almost exclusively on the stock exchange and in allied circles. In general the German is contented, each in his calling or condition—the higher official, the

DUIFFINO

JOHN BULL (humming drowsily): "Rule Britannia, Britannia ru-"
PATHIER NEPTUNE: "Wake up, John, wake up!" Judy (London).

officer, the lower official, the business man, even the workingman, at least with his prospects so far as each may find subsistence. There certainly prevails in Germany a not always justifiable or even sympathetic caste spirit. But in what county is there no caste spirit? And is not the easte spirit, as it has developed in Germany, more endurable and for flotter than a standveloped in Germany. The endurable may be a standspirit under whose bas the million-dollarer looks screenly down upon the neighbor who has only \$60,000 worth of property?"

Even more serious would be an Americanization of the old world, especially of Germany, in the political sphere:

"Much as political conditions and arrangements in the German empire may need reform, they are absolute models in comparison with those of North America. Shall we give up our splendid administration, with its honest, self-sacrificing, and capable officials, as gradually developed by the Hohencollerns, to create, on the North American plan of democratic foundation, a new officialdom, new every four years according to the result of the voting, without professional training, without character, without devotion to duty, endowed with the one with to get rich, cere at the expense of the service, even at the expense of the service, even at the expense of the service, even at the expense of the surface of the expense of the service, even at the expense of the even at the expense of the expe

of representative bodies and their members, that brings the plutocracy in to rule with the aid of dollars at the polls, after the press and public opinion have been brought under their influence, as the North American Union shows?

The Americanization of the world is a topic to which the Hamburger Nachrichten devotes an elaborate editorial extending over several columns, its conclusion being that the notion is fantastic and fanciful, the product, indeed, of W. T. Stead's imaginative mind. The Daily News (London) puts the situation thus:

"The industrial world is being Americanized. The United States has quickened the pace, just as we set it. It has governed the specially new industries-electrical lighting and engineering, the organization of transit, the supersession of the hand tool by the machine tool. The old countries have seen the effect of introducing a quicker, more adaptable, brain than Europe commands into the business of yoking up natural forces with man's material needs. Everywhere the effects of this process are seen. They are, perhaps, even more perceptible in small nations, like the Scandinavian group, than in our own. This is not simply a tribute to the Anglo-Saxon race. It rather represents the wonderful way in which America has been able to attract the nimble and adventurous types of character-Irish, German, English, Polish, Hungarian, and lewish-and graft them on to the earlier Puritan and Dutch stocks. However, the fact remains that the institutions, the language, and the ruling class in this marvelous state, whose free life dates back a little more than a hundred years, are English."

It is grossly erroneous, however, to assume that the United States has a wholly material civilitation, according to the Correspondant (Paris). This organ of a certain element in the Roman Catholie Church in France prints a long article on the Americanization of the world, from the pen of Augustin Leger. Among other things we read:

"To declaim against the wholly material civilization of the Americans is unwittingly to avow imperfect acquaintance with it. Like all peoples, they enrich themselves before thinking of refining themselves. But they have supplied more than one glorious name to poetry, to fiction, to philosophy, to criticism. Painting and sculpture are indehted to them for works of merit. A competent German predicts that the young people sent to our conservatories will shortly create an American school of music, and in certain kinds of researches one can not find them emulated except on the other side of the Rhine. But most admirable is that which they have accomplished in the domain of religion. with the ardor and intensity peculiar to Anglo-Saxons the moment they concern themselves with being mystical. After having given an extraordinary development to Methodism, they inspired that revival of faith which in England manifests itself through the Salvation Army. Their theologians and their preachers are the daily bread of the Nonconformists of the United Kingdom, The crusades in favor of temperance, the vast array of societies of Christian Endeavor, which aim at strict observance of the moral law by young people of both sexes, and hence throughout public life in general, have likewise their starting-point among them."-Translations made for THE LITERARY DIGEST.

The international Traffic in Women.—The degradation of wo.nen has assumed a commercial aspect of such threat-ening import that the international conference called by the French Government to deal with the subject is felt to be of the highest interest. "At present," says the fournal des Débasts (Paris), "the various conspirators in this traffic lababit one this country, the other that, the authorities of each state having before it hat a portion of the guilt':

"The projected conference [to meet June 16 next] is designed to put an end to this commerce, by securing the enaetment of international measures that will legalize the suppression of it... Let us fill up the gaps and we shall have done much. Such is the state of the problem. The conference of next June being

international, there is grent likelihood of a radical solution being adopted if one comes under discussion. It would find, perhaps, a less favorable reception in certain legislative bodies which do not apparently put their radicalism at the disposal of public morality. In any case, however, progress can be made.

Credit for this forward movement must be given to the Czar, according to the following from the London Times:

"It is understood that all the European governments have accepted the invitation, and have prepared reports containing a great mass of material to be used in the deliberations. . . . Great accretif for this important step is due to the Russian Government, which has throughout manifested a keen interest in the efforts to put an end to this disgraceful traffic. The Cazn, it is well known, is a strong supporter of the efforts which are being made to attain this end. The Russian Government has just given a practical proof of its sympathy with the movement by raising of the minimum age of girls who may be kept in fiscensed housed in lichane from 16 to 21 years. This regulation will be strictly enforced."

The success of the conference is cornestly to be hoped for, remarks the Westliche Post (St. Louis):

"May? is succeed in putting a final period to this most frightful species of slave trade! The governments, however, have a serious undertaking before them. The sellers of souls have two powerful allies—man's lightness, and the suffering of life which leads so many young maidens into the way of destruction."—Translation made for Thu LUTRANY DIESS.

#### RENEWAL OF THE TRIPLE ALLIANCE.

THE impending renewal of the Triple Alliance (which under existing compacts affecting Italy, Austria-Hungary, and Germany, would expire in May, 1991) has been formally announced by Count Golubowski, Austro-Hungarian Muister of Foreign Affairs. The announcement is official in every sense of the word, and

has occasioned the widest possible press comment throughout Europe. The ministerial newspapers of Austria - Hungary hnithe news with enthusiasm. the Pester Lloyd (Budapest) saying:

"The relation of the Austro-Hungarian] monarchy to Germany and Italy is firmly rooted in public ophnion. He who does not believe in his own capacity to wrench oaks and palms from the earth with his undied hand may

COUNT GOLUCHOWSKI.

contemplate with equanimity the attempts to shatter the alliance. To be sure, the Triple Alliance has been declarined against in former meetings of the [Austro-Hungarian] delegations. In the Austrian portion the Czechs and in the Hungarian protion certain uncompromising extremists have played the part of devil's advocate; but they have accomplished nothing and have not compromised the alliance. The compact can easily withstand such onslangitist, and we speak so unreserved by of the Triple Alliance and not merconducted the alliance. The compact can easily withstand such on the control of the triple and the control of the control

has so commended itself not only to its inmates but also to all Europeau forces that the pettiest political interests as well as the familiarity and custom of years cooperated in its maintenance with the vigor of yere."

Of course, the entire Austro-Hungarian press is not satisfied. The Vienna organ of the military, the Reichswehr, says: "The

Triple Alliance was formed as a defense union, and since it scens agreed that there remains nothing to defend, as everybody kisses everybody else, the alliance loses all political worth," As for Italian newspapers, they show, even in the ease of official sheets, a tendency to consider French susceptibilities, Thus the ministerial Tribuna (Rome) says the renewal is purely "peaceful and defensive." It even adds that there will be modifications in the trenty to this end. German official press opinion is inevitably perfunctory. The democratic Frankfurter Zeitung, however,

"If the renewal of the Triple Allingce becomes an accomplished fact, then the present bases of European peace will endure. These bases have, indeed, been newly strengthened. For the first time Count Goluchowski has ascribed to the Franco-Russian Dual Alliance the same purpose as that of the Triple Alliance. In the Dual Alhauce, said Count Goluchowski, the Triple Alliance must behold a very valuable rounding out and advancement of its task." It might be asked if the Triple Alliance does not lose some of its significance for peace if the Dual Albance exactly meets it and thus no danger remains to justify a defensive union of the central European Powers, Count Goluchowski did not put this question to himself. He sees rather in the Dual Alliance a strength-

THE TRIPLE ALLIANCE.
Billow's Traveling Bag.
-Ult.

in the Dual Alliance a strengthening of the peace policy of the Triple Alliance and welcomes it as such."

French comment has, on the whole, aroused more interest than any other. The *Temps* (Paris), organ of the French Ministry of Foreign Affairs, observes:

"Italy, which was especially considered in the meution of eventual modifications of the existing treaty, seems not at all disposed to weaken, by stipulating reservations, the force of the obligations that the Alliance imposes on Austria with reference to herself, for instance, in the Adriatic. To throw off the curb on the side of Austria would in effect throw off the curb on Austria herself and leave her too free a hand. Consider for a moment this definition of the very nature of the Alliance: 'Which consists, for each participant, not only in a guarantee of its state of possession, but which aims at neutralizing the injurious counter-effects of events which may happen in other countries,' that is, outside the present boundaries of the three allied Powers. Translated from diplomatic language, this phrase is a key which fits the complicated lock of the Triple Alliance. It betrays the secret of it. It is for a time a mutual guarantee especially against competing aspirations to the succession that is neither open nor closed in Eastern Europe. Revision of the treaty would risk a weakening of this precious guarantee. It will remain as it is or it will not last at all."

It did not necessarily follow, because there was a better under-

standing between France and Italy, that the Triple Alliance would not be renewed, says the *Journal des Debats* (Paris). In fact France was in no doubt on the point and knew all along that renewal was a certainty.—*Translations made for THE LITTEREY DIOSES*.

### PORTUGAL UPSET.

STUDENT demonstrations in Commra, resulting in a death and various casualties and the closing of the university there, have spread to Lisbon. The Clericals and the hill to settle with Portugal's foreign creditors are held responsible for the uprising, which has alarmed the capital. Newspapers which oppose the foreign creditors bill are censored or suppressed, notwithstanding the law, and all news despatches are edited by the authorities. The Kolinizche Zettung says:

"The bill for settlement with the foreign creditors, that has already raised such a dust in the land, has been adopted on its first reading by the Chamber of Deputies. Nothing else was to be expected, as the Government controls the majority, and the government parties vote bildnily for whatever the Government brings in, while the opposition parties do just the reverse. The result is always the same, a little more or less talk back and forth comprising the only variation. In the Upper House things are in the same position."

According to the Humburger Nachrichten, the most serious feature of the Portuguese situation is the fact that the army makes common eause with those who resist the hill of settlement with the foreign creditors. The higher army officers prepared a memorial to King Carlos, which he declined to receive, where upon they threatened to "issue a proclamation." The assertion that a regiment in Oporto was disarmed is not confirmed. The Hudephadance Relize (Brussels) comments:

"It is impossible to determine the true importance of the agitation in Portugal which assers itself at Coimbra and elsewhere in sanguinary conflicts between students and police. All that its known is that the movement has the character of a protest against the agreement with the bulders of the foreign debt, and that the liberal elements of the nation will not sanction the alienation of a portion of Portugal's enstoms revenue. It is, in truth, a humilation which nations whose financial situation is difficult never accept willingly. The organizers of the present against one does not against the monarchy, evidently (as has been alleged because the ery of 'Long live the republic' was raised at Coimbra), but against the manner in which public affairs are administered in Portugal. One can not be surprised at it, when it is known that each party attaining power looks to

its own interests and not to those of the country. However, it is doubtful if the present movement is strong enough to go so far as an attempt at revolution. It is not apparent from the despatches and the correspondence reaching us that the working classes have participated seriously in the agitation, and, after all, it is thus element alone that could impart a really serious character to the situation."

Finally, it is necessary to discount all Portuguese news that comes by way of Spain, or so our authority thinks:

"The Spaniards are always glad to exaggerate whatever can prejudice Portugal. Spain's minister at Lisbon has arrived in Madrid to give his Government verbal explanations of the situation and these explanations must be pessimistic, since it is announced that Spain will reinforce her garrisons on the Portuguese frontier. "Translations under for Tile LITERARY DEBEST.

### AN IMPENDING CRISIS IN RUSSIA.

THERE is little comment in the Russian press on the troubles, local uprisings, peasant assaults on the land-owing nobility, student demonstrations, and industrial conflicts. Even in the news columns the reference to these various, tho not unconnected, disorders are vague and purely "official." The newspapers print no reperts of their own on these outbreaks; after a certain interval the government organ publishes a summary of the facts, and this summary the papers are allowed. If not directed, to reproduce. No exception has been made of the Finland complications. Editorially, the only political incident that has been discussed freely is the assassination of the Minister of the Interior, which followed upon the heels of the "removal" of another minister, that of education.

One of the most conservative papers, the Moscow Vietdomesti, ventured to refer to the strikes and other evidences of ungest among factory workmen and to advocate government supervision, protective legislation, and a species of organization of this labor under official auspieces, pointing out that, unless this policy was pursued, Socialist agitators and other self-elected leaders would proceed to organize the workmen in trades-unions hostile to the Government. For this suggestion the paper received a "warning" and strong expression of displeasure.

The utterances on the assassinations have been adverted to in the London Times and other foreign papers as peculiarly significant. Correspondents have stated that the educated classes, if they did not openly rejoice at the killing of Spiiaguine, manifested no sorrow and no disapproval. It may be well to give here salient extracts from editorials on the assassination in the two

leading St. Petersburg papers.

The Novoye Vremya wrote in an extremely abstract way on the futility of murder as a political weapon and virtually argued against capital punishment with or without the sanction of law. It said in part:

"As in the previous case [the killing of Minister Bogoleip-off], so now, we can not but express horror at the shedding of blood. Public opinion throughout the civilized world has long striven to do away.

A TRIP TO UNCLE NICHOLAS.
"Be very good in St. Petersburg, and if Uncle
asks you for anything don't forget to thank

by legislation, with capital panishment, with the responsibility for blood. But what society has tried to obtain from the law, it has so far failed to obtain from its own constituents, and there are still individuals in it to whom the prohibition of taking life does not exist. Life, a gift of Provvience, should be placed above all human judgments, estimates, and attempts. The possible collisions among men should stop abort of attacks burbarriam, to the inquisition of the dark age, to lynch law. Society must take human life under special protection. It is only a moral judge, and must remain such."

This was the only comment on the event in the first political paper of Russia—a Conservative, intensely particit and nationalist journal. The tenor of the article excited much surprise among foreign correspondents. The leading Liberal organ, the Newsort, compared the attempt to the Anarchistic deeds of other countries, and moralized on the causes of political crime, and traced them to general social conditions. It wrote:

"In view of the fact that these political crimes have occurred not only in certain countries, but also where there is full freedom of political activity

THE CZAR OF RUSSIA.

the ministry of education should unceasingly labor."

and opportunity for legal partizan warfare, we must conclude that they are not a product of special revolutionary tendencies, but the result of general psychological conditions prevailing in socicty. The phenomenon unquestionably calls for resistance, but it appears to us that the measures against it should be mainly educational and not repressive and restrictive, affecting society at large, . . . The

Russian univer-

be held responsible for the crimes of a few recruits from their ranks, but even these few will disappear with the change of the conditions tending to produce tiem. Toward these changes

In other papers there were general disquisitions on the reaction that follows assassination and defeats the purpose of the revolutionists, making things even worse than before from their point of view. The rumors of a constitution for Russia, or a modification of absolutism, find no warrant in anything published in Russia. Oitside of Russia all serts of opinions as to the outcome of what scens to be an impending crisis continue to be expressed. Very forcibly does the Polish Zeoda (Chicago)

"We do not think that the present renewal of the tactics of conlargations and pillage is practical. Already do we read in the English papers that the majority of the governors treat this matter with strange indifference. Europeans and Americans, ignorant of Russian conditions, interpret this indifference as a revolutionary disposition of the officials, and they predict thence the downfall of the Czar. No, gentlemen, you cr. If a governor winks at the disturbances of the people, he knows well what he is doing and why he does it. He disperses the laborers and setdents in the city with Changle, can be won over. But it is different with the ignorant peasantry; they are allowed to folion in the expense of the factories and estates, and when they have froilected enough they are uppressed as of yore. The Russian Government is just as a indifferent to everything except itself as the Turkish, Persian, and Chinese governments are. It has no predilections. As long as the pleasants are ignorant and drug, the Government will flatter them and lean on them, even if it should come to the slaughter of all the nobles. Hence holds conclusions should not be drawn from the conflagrations and seasilis. We must observe closely the behavior of the higher generations and seronized and the season of the conflagration and seronized the conflagration and seronized the season of the

Speaking of the circulation among the peasants of the spurious proclamation in the Cars' amnet, sating that Cars Alexander II. tast given them all the land possessed by the magnates, but that the latter, by bribing the officials, had succeeded in keeping the greater part of it for themselves, and that the Cars now permits and orders the peasants to recover by force that which was given them, the  $Z_{g}$ -of a observes that the taction of Russian revolutionists, depending on the deception of the populace in the name of the Government, are very preactions and hazardons.

"In the first moment, the peasants here and there will rise under the impression of the forged manifesto. But when the truth is discovered, which must inevitably happen, those same peasants will feel offended and wronged. The hearts of the populace will then turn away from the enemies of the Government and to the Government. Besides, it is impossible to create any serious revolution with a populace which must be caught with such coarse and improbable lies. A popular revolution in Russia would have to be aided by an enlightened and sober populace, capable of understanding that the present governmental system is destructive to the whole nation. With an ignorant and drunken populace, there can be made only brawls, but not a serious revolution, . . . The most probable way out of the present difficulty for the Russian Government will be a war. The last great war, the Turkish, as we remember, broke out in 1877. that is, a year after the first great revolutionary manifestation in St. Petersburg on Kazan Place."- Translations made for THE LITERARY DIGEST.

### POINTS OF VIEW.

HOUN ZOLLERN AGAINS: HAPSENGE. The cry of "Long live the Hehencollerns," Traised by the Pan-Germans in the Austrian Reclavanth, has created an editorial sensation. "We are below the level of the Artosta Kicker and the cowboys of the wild West of America," says the Frendres, Main (Vienna). The fournal der Dibats (Paris) says the incident merely shows that the Pan-Germans in Austria comprise a "party of treason."

GERMANY AND AMERICAN CONFESTION.—Germany is not in a positive to compete, in the long run, with the United States in the production of raw materials and crude factory products, according to an article by Alfed Weber in the Zell.—If we mean to make good Germany's position in the world market we can only do II by coloring upon such manufacturies a will regable us to utilize the treasure of efficient human labor that we

### The Truth About the Horseshoe Mining Company

By E. M. HOLBROOK, Vice-President and General Manager.

A GOOD DEAL has been spoken and written about the Horseshoe Mining Company of late, much of which has our approval, but as is often the case in presenting the features of an absolutely legitimate investment proposition, some of the really essential points are insufficiently stated if not omitted altogether.

Tales of mines where ore of bonanza richness is found strike the imagination more forcibly, no doubt, than the narration of the plain truth concerning a conservative, low-grade proposition. like the Horseshoe. Low-grade ore is certainly not romantic stuff. It is not beautiful, nor is it studded with flakes of virgin gold. On the contrary, you wouldn't know it was gold ore at ail, unless you were experienced in such matters. The point is that on the Horseshoe properties there are literally mountains of this homely, dividend-producing ore. You have read of wonderfully rich finds, but how long do these fabulously valuable pockets hold out? Compare the records of such mines with the history of the Homestake-twenty-four years of nuinterrupted dividends.

The Horseshoe Mining Company was organized to consolidate seventeen different properties in the Black Hills, near Lead and Deadwood, South Dakota. These properties were extensively developed and very completely equipped by their former owners, and while the mines were always worked at a profit, the situation called for a larger scale of operations if the best possible results were to be obtained. Canadian capitalists formerly owned this group of mines, but the Horseshoe Mining Company, organized under the favorable laws of Wyoming, is officered and controlled by well-known business men of both the United States and Canada.

Something should be said of the personnel of the Horseslagen Company's directory, Mr. D. E. Merphy is the general agen of the Northwestern Mutual Life Insurance Company of Milwan-kee. Mr. John Johnston is vice-president of the Marine National states of the Marine National Action of the Marine National ada, president of the Montreal Harbor Buard, vice-president of the Hell Telephone Company of Capada, and director in two of the largest and strongest banks in Montreal. Senator Mackay was the founder of the Horseshoe Mining Company. Mr. Chas. Allis is president of the Allis-Chalmers Company of New York, and Milwawkee, one of the largest manufacturers of electrical appliances in the United States. Mr. W. B. Frisbie is the Chicago manager and Mr. W. K. Murphy secretary of the Company. This Company owns 1,821 acres of the most valuable mineral

land in the world. Its mines have in the past been noted as producers of smelting ore, which is still shipped in large quantities, and it has from the first been the plan of the present management to make the low-grade as well as the smelling ore a source of large revenue. As an authority on mining says: "The advantage of low-grade over high-grade ore lies particularly in the fact that the low-grade ore invariably occurs in much larger deposits and the values are more regular."

There is in sight upon the property of the Horseshoe Mining Company about eight million tons of high-grade ore; that is, ore worth from \$10 to \$20 per ton when handled through smelters. But over and above this are millions upon millions of tons, an almost inexhaustible supply, of the low-grade ore to which the cyanid process is best suited. By cyaniding, ore that was once considered valueless is now made to yield a large profit.

To treat this wealth of low-grade ore the Horseshoe Company is building at Pluma, S. D., where it owns the great Kildonan mill, the largest crushing cyanid plant in the world. This plant will have a capacity of 1,250 tons a day.

The Company has already provided facilities at its Kildonan mill for cyaniding 100 tons a day, and the first 1,000 tons run through this plant resulted in a "clean up" of about \$10,000 twice as much as the Company estimated before the plant was

Altho its resources in smelting and cyaniding ores are very great, the llorseshoe Company has other ore reserves which in themselves would make this property remarkable among the great mines of the country. A site has been caused in the min-ing world by the development in the lower level of the Mogul workings (one of the Horseshoe mines) of a gigantic free milling lode. Of this lode, 300 feet wide and of a proven length of 3,500 feet, the Lead City Daily Call of April 19 said that it "approaches the great Homestake belt in magnitude and prospective value.

Where such a vast quantity of ore is available, a small profit per ton will aggregate large annual dividends. On this point the Lead Daily Call observes that the "Deadwood-Terra mine, the Lead Daily Call Observes that the "Deadwood-Terra mine, mow of the Homestake system, has handled many thomsand tons of rock at a fair profit which yielded in gold values around the \$8 mark—sometimes below and again a fraction above \$8 per ton. The Alaska Treadwell Mining Company, operating a large ton. The Alaska Treadwell Mining Company, which and milled, operating \$40 stamps, in the month of November, 1904—60,000 not of ore which have a gross yield of \$97,035. Expenses for the month were \$34,000. Profits, \$95,033. The gross yield of the ore was \$4.65 per ton. The Homestake Mining Company pays the wearing species of the month of \$9.000 as years, the wearing species of the month of \$9.000 as years, the wearing species of the profit of the ore for month or \$9.000 as years, the wearing species of the profit of the ore for month or \$9.000 as years, the wearing species of the profit of the ore for month or \$9.000 as years, the wearing species of the profit of the ore for month or \$9.000 as years, the wearing and the profit of the ore for month or \$9.000 as years, the wearing and the profit of the ore for month or \$9.000 as years, the wearing and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$9.0000 as years, and the profit of the ore for month or \$ June 1, 1901, as shown by the official report was \$3.88 per ton.

The Horseshoe Company's cyaniding ores, which are abundant enough to keep a 1,250 ton plant running for many years,

show values of \$6,\$8, and \$10 per ton.

While giving so much attention to the low-grade ore and the introduction of the cyanid process, the officers of the Horseshoe Company have at the same time increased the output of smelting Company have at the same time increased the output of smelling ore. From 300 to 500 tons are handled every day, and the daily cient to warrant the payment of a dividend of 7 per cent. With the installation of the larger cyaniding system, however, the profits will so far increase as to make possible the payment, after September 1, of dividends of at least 12 per cent. Per annum.

In financing the new Horseshoe Company the directors have decided to offer for sale to the public at large, a block of one million shares of the capital stock, at its par value of \$\frac{1}{2}\$ per share. The shares are full-paid and non-assessable. There is no preferred stock, and no bonds.

Mining has never been a subject of monopoly and its strength has come from the fact that the masses of the people have been permitted to participate in its fruits. Every share of stock sold to members of the middle class creates an influence in a comto minimize the market cases creates an infinitate in a Community which sends back strength through a thousand arteries. In recognition of this fact the Horseshoe stock is divided into shares of but §§ each. It is a subject of pride with many persons to feel that they have some interest, however small, in a great enterprise. This was recognized by the treasurer of the great enterprise. Into was recognized by the tenants of United States Government during the Spanish-American War, when he offered 3 per cent, bonds, with the condition that only a limited number could be purchased by any one individual

If you desire to visit the Horseshoe mines, arrangements to that effect can be made under certain conduions, which will be made known by the Company on request. Any intending investor will find the trip to Deadwood and Lead City both profitable and interesting. The Company will also be pleased to answer any inquiries that may be suggested by its published announcements inquiries that may be siggested by its published announcements and will take pleasure in submitting records of ore shipments, smelter returns, etc. If a safe investment attracts you, if you are willing to be content with 1 percent, monthly dividends for a while, until the volume of ore treated makes it possible to pay more, we have something to offer you.

### CURRENT POETRY.

The Three Best Things,

By HENRY VAN DYKE. WORK

Let me but do my work from day to day, in field or forest, at the deak or loom, in roaring market-place, or tranquil room; in roaring market-place, or tranquil room; When vagrant wishes betken me astray—"This is my work; my blessing, not my doom; off all who live, I am the one by whom This work can best be done, in the right way:"

Then shall I see it not too great, nor small, To suit niv spirit and to prove my powers;
To suit niv spirit and to prove my powers;
Then shall I cheerful great the laboring hours
And cheerful turn, when the long shadows fall
At evenside, to play and love and rest,
Because I know for me my work is beat.

LIFE

Let me but live my life from year to year,
With forward face and unrelocitant soul,
Not mourning for the things that disapped soul;
Not mourning for the things that disapped soul;
Not mourning for the things that disapped soul;
From what the future yetle; but with a whole
And happy heart, that pays its toil
To Youth and Age, and travels on with cheer:

let the way wind up the hill or down, Through rough or amouth, the journey will be Infough rough or smooth, the posting was 51(1); Stilly; Stilly

### Drawn Games.

The scoring of Draws in a Tournament has always been a troublesome matter. It is unquestionably, the fact that some players play for a Draw from the vary beginning, and several methods have been devised to disconrage this. The method tried in the recent Monte Carlo Tonrney, tys., a braw to count 3 of a point, and the game to be pinyed over, has been proved a future. Now, the Rev. Royer, J. Wright, in TA-T. C. I., proposes what we think is the near just. In the second of the result in the second of the He writes. If the way that a Draw represents a and equally denotes a game Adf fort, and there-fore a Draw is represented logically and maties. This, we see that drawn games should be suited almost they are considered to the con-traction of the second of the second of the termined by his number of row games who the Key James Manon ways. This way are seed when a New James Manon ways. This way are seed when a any way, as winn, is to invite complication, and sayutage, as winn, is to invite complication, and sayutage, as winn, is to invite complication, and the game to be played over, has been proved a

A CORRESPONDENCE MATCH between Brooklyn and Chicago, with no players on a side, is the lat-ext big thing in Chess. W. P. Shipley, the Phila-delpina expert, is the referee.

Napier won see france for his Evans Gambit against Tachigorin, in the Monte Carlo Tootney, and Eisenburg got see france for winning from Pilisbury.

The more purely negative soap is, the nearer does it approach perfection.

Unless you have used Pears' soap you probably do not know what we mean by a soap with no free fat or alkali in it-nothing but soap.

Established over 100 years.

### A Substitute for Stimulants

A well-known minister, a close student, found in the course of his work that Nature would not supply ideas to the brain and digest food at the same time. Justead of relying on alcohol and drugs to force stimulation, he discovered that a certain food, prepared in a certain way, would refresh him almost at once. For years afterwards, whenever he felt the need of nourishment or stimulation he would use this little bit of

keeping up his strength so well that at 85 he could outwalk most men of thirty. He filled the pulpit for 53 years without once having to take a vacation.

The secret of this food, called ENERGY is now, after seven years' practical experimentation, given to the world in cheap and convenient form.

12 cubes in a box-half of which are an instant meal for the weary: taken on an empty stomach gives the same strength as a good meal. Takes no time to digest. It is a quick food tonic for the fagged out business man, lawyer, student, housewife. It strengthens the muscles, soothes the nerves and invigorates the brain.

As yet "STORED ENERGY" can be obtained in only a few stores. Soon every store will be keeping it, but for the present send soc. (postage stamps will do) and you will receive a sample box by mail postpaid. Buy another or keep from buying one if you can.

#### HIGHEST PRAISE FROM CRITICS THE WORLD OVER

The New York Herald: "The Funk & Wag-nalls Standard Dictionary is the most complete and satisfactory dictionary published."

Frof. A. G. Wilkinson, U. S. Patent Office: "It is the most perfect dictionary ever made."

Prof. A. H. Sayer, L.L. D., Oxford University; "It is certain to supersede all other dictionaries."

The Journal of Education, Boston: "In thoroughness, completeness, accuracy, typog-raphy, style, and illustration it challenges criti-cism and commands admiration."

Cardinal Faughan, Archbishop of Westmin-ster: "Well may this be called the admiration of literary England, and the pride of literary America."

Revue Scientifique, Paris, France: "Its success in English-speaking countries is undoubted and the foreigner resuling English and having some experience with other dictionaries will certainly prefer the Standard Dictionary."

The Atlas, Algiers: "Its authority and undisputed intrinsic merit class it at once as a work of the highest order of scholarship." The India Journal of Education, Madras, andia: "It reflects the whole scholarship of the India: "It present age.

The Natal Witness, Pietermaritzburg, Natal, South Africa: "It is, in fact, impossible to tril where its riches end."

Prof. Doseden, University of Dublin, Ireland:
"It is a vast storehouse of exact and well-ordered information."

Prof. William Clark, Trinity College, Toron-to, Canada: "I have compared many articles with the corresponding ones in the best diction-aries 1 possess, and find them in almost every case fuller, clearer, and more satisfactory."

Prof. Emil J. Trechmann, University of Sydney, Australia: "Wonderfully complete and concise; a distinct advance in lexicography."

The Ginspose Times, Glasgow, Scotland; "It is impossible to speak of this dictionary in other than the highest terms of praise."

Kir Henry M. Stanicy, the African Explorer: "It comes nearest to my idea of a first-class dictionary."

Edmand C, Stedman, Poet and Critic: "It is the most inclusive and scholarly of recent English dictionaries."

# Grape-Nuts

# Cooked Food.

A Great Convenience for Housekeepers.

It is a known fact that many people fall to digest the starchy part of bread and other food. Grape-Nuts (a delightful breakfast food) is made of the grape sugar which results from premade of the grape sugar which results from pre-paring the startly parts of the cervals, in the same way artificially as the body should do by matiral processes. Therefore, Grape-Nutz furnish food all ready for Juneal the assimilation into blood and idease. They are made by the Postum Co., at Battle Creek, Bloba, and are ready prepared; require no cooking whatever and will be food most vahable by athlete,

SOLD BY GROCERS.

Mail orders have prompt attention.

James McCutcheon & Co. "The Linen Store," 14 West 23d St., N. Y.

A well-known physician, Professor in the Medical Dept. University of Pennsylvania, Phila., Pa., says:

"I am surprised to find the pronounced value of Tartarlithine and Sulphur. All of the cases have been markedly benefited by the Tartarlithing treatment, after the failure of other treatment extending over long periods. One case, a man who for eighteen months suffered from a lumbago which nearly disabled him, is so much improved after using one bottle of Tartarlithine that he considers himself well."

Send for our Free Pamphlot, telling you how to cure lumbage, rheumatism, etc.

Send notice at least two weeks in advance, statisting the date when the change is to go into effect. Similar notice should be given when subscribers are returning to being permanent address.

#### TOPICS OF THE DAY.

#### WHAT PEACE BRINGS TO SOUTH AFRICA.

TINGES of partizan feeling in favor of Boer or Briton mark the American comment on the Boer surrender. The British sympathisers think that South Africa is to be congratulated upon coming under the rule of a great civilizing power like Great Britatu, while the Boer sympathisers look for long-continued bitterness, tyranny, and suffering in the conquered territory. "The cause of freedom and progress lass conquered," says the New York Journal of Commercie, "and we have reason to hope that in the South Africa of the future Boer and British will merge in a common prosperity and a progressive civilization." Another paper with pro-British leanings, the New York Tribune, says:

"We may fittingly congratulate our sister nation across the sea. The borders of the British empire are enlarged. The power of the British empire for strengthening itself and for advancing the welfare of civilitation is increased. The King will presently assume his crown amid universal peace throughout his world-encircling dominions. It is a great day for England and for the British empire. It is not unduly optimistic to hope it may prove a day of blessing for all the world.

The overwhelming majority of the American press are proboer, however, and while they are glad that the fighting and bloodshed are ended, they are not congratulating South Africa on the result. The Philadelphia Ledger is not even congratulating England. It says:

"The war, instead of being a 'pig-shooting picnic,' lasted for two years and nearly eight months; brought mourning into nearly every household in Great Britain, and cost the people more than a thousand million dollars. For this sacrifice the nation gets possession of the gold and diamond fields, and can turn them over to speculators, who will proceed to fleece the gullible public of whatever the tax collector may have left them. That is the glorious outcome of the war, so far as Great Britain is concerned."

W. T. Stead says, in a despatch to the New York American and Journal;

"What will be the result at home? It secures the retirement of Salibury at the close of the session; it will enormously reinforce the popular opposition to the corn duty and correspondingly strengthen the Liberal leaders, who will maintain that settlement had been secured by the adoption of the policy so frequently insisted upon by Campbell-Bannerman.

"In South Africa the struggle will recommence. The Borrs have reluctantly abandoned the much-prized independence of the republics. The Dutch as a race will now work steadily for the independence of South Africa. So far is it from their spirit being crushed that the British in Cape Colony are clamoring for the suspension of the constitution and the establishment of an absolute government in order to checkmate the political designs of the Africandre bund.

"We can therefore sum up the profit and loss of the war.

"It has cost us 24,000 men dead and 75,000 wounded and invalided and \$1,000,000,000, "We've had to send out 300,000 British troops to overcome the

"We have designed the samples and boys from the farm.

"We have destroyed two republics and have created two states despotically governed from London.

"Before the war we maintained the authority of Britain with ease by a small garrison of 5,000 soldiers. We shall now have to garrison South Africa for years to come with an army of 50,-000 men.
"We have only bought peace by a promise to rebuild the

"We have only bought peace by a promise to rebuild the homesteads we have destroyed and restock the farms which we have devastated, and by the assurances that the Boers shall have political rights and privileges which will enable them to make South Africa as free from British control as is Australia.

"Add to this that we have intensified the racial difficulties in South Africa and have excited against Britain the bitter animosity of Europe and it will be evident even to the dullest observer that the war has been a bitter bad business for John Bull.

"All these humiliations and sacrifices would have been avoided if the Government in September, 1890, had sent out Lord Paucefote to settle the dispute on the principles of the Hague convention. Pauncefore was eager to go and was confident of success, but Milner was bent on war at any price and to-day we can form some estimate of the cost."

The terms of peace are substantially as follows:

The burgher forces lay down their arms and hand over all their rifles, guns, and ammunition of war in their possession, or under their control.

All prisoners are to be taken back so soon as possible to South Africa, without loss of liberty or property.

No action to be taken against prisoners, except where they are guilty of breaches of the rules of war,

Dutch is to be taught in the schools, if desired by the parents, and used in the courts, if necessary.

Rifles are allowed for protection.

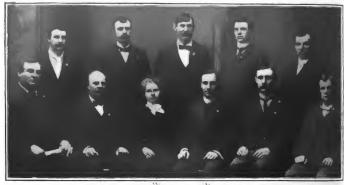

life. The death penalty will not be inflicted.

Military occupation is to be withdrawn so soon as possible and self-government (not independence) substituted. There is to be no tax on the Transvaal to pay the cost of the

war.
The sum of three million sterling (\$15,000,000) is to be pro-

vided for restocking the Boers' farms.

Rebels are liable to trial, according to the law of the colony to which they belong. The rank and file will be disfranchised for

PRESIDENT MITCHELL (x), HIS SECRETARY (XX), AND THE INSTRICT PRESIDENTS OF THE UNITED MINE WORKERS

# RADICAL AND LABOR PAPERS ON THE COAL STRIKE.

IT is interesting to note the comments on the coal-miner's strike that appear in the papers that circulate almost exclusively among workingmen. The Socialist papers sympathize heartily with the strikers, altho not one in a hundred of the strikers—so one of the Socialist journals reckons—sympathizes with the Socialists. The Socialist argument is that the miner owners did not put the coal in the earth, and it is the miners who are taking it out, yet "this handful of useless capitalists," as the New York Worker puts it, "control the whole industry for their own profit." The moral drawn is that the public should own the mines. Says the San Francisco, (McGonce:

"'We own the mines,' say the handful, backed by the authority of the miltions, and the lundreds of thousands are forced to toll like slaves for a pittance which barely supports a miserable existence. But if the hundreds of thousands of miners should say to the millions of the people of the United States, 'You give the power of life and death over us into the hands of a few tyrants who starve and enslave us,' and the people should an analyse, 'The mines are the property of all and every man that mines coal shall receive the full value of that coal as reward for his labor,' the miners would not need to slave and starve. Their labor would seeme them plenty and leisure. And peace would replace the present war."

Turning from the Socialist to the labor-union papers, The United Mine Worker's Journal (Indianapolis), organ of the striking miners, avers that the coal "trust" exosts in defiance of the Sherman anti-trust law, and "in open conflict with the constitution of Pennsylvanla, the provisions of which make it a virtual outlaw in that State." Then it proceeds to make this inter-scring comparison.

"Suppose the cases were reversed. Suppose that the United Mine Workers were under the ban of the common, statue, and fundamental laws. Supposing that the coal trust had an un questioned lawful standing. Supposing that the trust asked the mine workers to make conversions necessary for it to live; that it first sought interview's with President Mitchell Raid-the refused to see it. Suppose that the Urivie Federation brought them together, but President Mitchell steadfastly refused to concede a thing. Suppose the coal trust had offered to submit its side to arbitration and the nine workers peremptorily and discourterously refused to orbitrate. And, finally, during all these nego-

tiations the coal trust had used good temper, calm language, and manifested a desire to it ontiling but justice. The labor leaders would have by this course so contraged all sense of public patter that they would be hunted as outlawes. Well, that is exactly the that they would be hunted as outlawes. Well, that is exactly the that they would be hunted as outlawes. Well, that is exactly the thin the sense of the sense o

Eugene V. Debs, who led the ill-starred Chicago railroad strike in 1894, gives his advice to the strikers through the columns of the Milwaukee Sociai-Democratic Herald. Here it is:

"Pennsylvania, where hell is active as Mt, Pelee, and slavery in full blast, has a Republican majority of three hundred thousand, made up quite largely of the poor devils now on strike.

"The governor is already making active preparation to return builet for ballot in accordance with the invariable program of the capitalist class, whom the miners and other workingmen have made the ruling class of the country.

"President Mateliell will do the beet he can in a trying point. He has issued a request that miners abstain from the use of liquor during the strike, and, acting upon his advice, they througed the churches on Smuday last and look the cant botal abstinence and the pletige to entirely keep out of saloons till the strike is settled.

"As for the Civic Federation, it has already done its worst. It has delayed and dallied six weeks, taken the heart out of many of the strikers, and set them by the ears among themselves. Had the miners struck April 1, as they intended, they would have been far stronger than they are to-day.

"My advice to you, striking miners, is to keep away from the capitalistic partnership of press and politician, to cut hose from the Civic Federation, and to stand together to a man and fight it out yourselves. If you can't win, no one else enn win for you, and if in the end you find that the corporations can beat you at the game of famine, you may, and it shoped that you will, have your eyes opened to the fact that your vote is your best weapon, and that if the 120,000 miners of Pennylvania will cast a soid you tell you will have to the fact that you will have to the of Secilation, they will soon drive the robbers from the State and take possession of the mines and make themselves the masters of their industry, and the workingment the rulers of the

"As for the army of coal police already marshaled and armed

by the governor to shoot the strikers upon the assumption that they are criminals, I advise that the miners in convention assembled unanimously resolve that, while they propose to keep within the law, they also propose to exercise all the rights and privileges the law grants them; and, furthermore, that the monstrous crime of Latimer shall not be repeated, and if any striker is shot down without good cause the first shot shall be the signal for war and the miners will shoot back; and if killing must be the program of the coal barons, let it be an operator for a miner instead of miners only, as in the past."

#### THE HANNA PRESIDENTIAL "BOOM."

"HE feeling is spreading in Washington," reports the Washington correspondent of the New York Times, "that Mr. Hanna is far more likely to be nominated for the Presidency in the next Republican convention than Mr. Roosevelt." The politicians, we are further informed, do not like Mr. Roosevelt. He is not a man they can "tie to," as they could to Mr. McKinley. Mr. Hanna, on the other hand, possesses this valuable political quality in unusual measure. This winning power of Mr. Hanna's personality was strikingly shown, as the newspapers remark, in his control of the Ohio Republican convention last week. The Columbus Dispatch (Ind.) says: "If there is any doubt in the minds of his opponents that he is still the leader of the Republican party, and that he still is the controlling spirit of his party in his own State, the complexion of the present convention ought to dispel such doubt. Never was there gathered a convention more fully in sympathy with Mr. Hanna." So. too, thinks the Cleveland Plain Dealer (Ind.), as evidenced by the following paragraph:

"If the outside Republicans have been in doubt as to whether Senator Hanna controls the Republican party in Obio they are respectfully referred to the doings of yesterday's State convention for evidence to dissipate their doubts. The convention was 'Hanna's own.' So is the party in the State. . . . Now, if Obio in November ratifies the work of the Republican convention in May, a good start will have been made for the 1904 race. 'Hanna's own 'will go to the national convention with the order, 'Teddy, go 'way back and sit down!' The Rough Rider may hock and rear, but it is Senator Hanna's pride that be 'geta what he goes for.' He has not said that he is going for the Presidential somination—yes.

The straight Republican papers are saying extremely little on this topic, but the Boston Transcript (Rep.) observes:

"Senator Hanna's position before the public is that of a man who is waiting for the Presidential office to seek him. In his public speeches he says nothing that can be construed as claiming or intending to claim a place in the eligible list for 1904. Still he undoubtedly does a lot of thinking, and it is not to be denied that there is a considerable element of the Republican party which will acquiesce in the nomination of Roosevelt rather than welcome it. With this element Mr. Hanna holds first place, and its calculation is that he can enter the nominating convention, if he decides to make the running, with a powerful body of Southern Republican delegates that may win to it support from other sections. But this depends on events, for Mr. Hanna is not a man who goes into a fight for fighting's sake. He is not likely to make himself one of the conspicuously defeated, and it may be taken for granted that if there is a great popular boom for President Roosevelt Mr. Hanna will be simply a spectator.

A critical view of the Hanna "boom" is taken by the New York Times (Ind.), which opposes the Republican tariff policy, and deplores the belief expressed in the Ohio Republican platform that the tariff should be let alone. Says The Times:

"If Senator Hanna has it in mind to make a try for the Presidential nomination of his party in roya he ought by all means to take his stand upon the platform adopted by the Ohlo Republicans at Cleveland on Wednesday. It is a thoroughly false and bad platform, and if any group or clique of the Republican party has a less desirable candidate to present than Mark Hanna party has a less desirable candidate to present than Mark Hanna

the public has yet to be informed of it. Both the platform and the man are steeped in those political vices which have made the voting of the Republican ticket a repugnant and almost impossible task for the sound-mouey Democrats and Independents who have given the party its victories in the last two Presidential elections. In the popular opinion Senator Hanna is the embodiment of that subservience to corporate interests and that encouragement of the abuse of corporate privilege which has for years been characteristic of Republicau policy. He is looked upon as the friend of every tariff-fed trust and the protector of every illicit combination in restraint of trade. The notorious alliance between the Republican party and the protected and favored corporations by the terms of which the party campaign chest has been kept filled to overflowing in return for the privilege of dictating tariff rates is a policy which finds its highest public representative in the person of Mr. Hanna. . . . . . .

"It would be a very risky venture in the present temper of the people for the Republican party to make Mark Hanna a candidate in 1904."

#### DANGEROUS SPEED OF AUTOMOBILES.

A NUMBER of fatal accidents recently, in which automobiles have played prominent parts, are calling out editorial protests against the dangerous rate of speed at which these machines are sometimes run. The following editorial in the Philadelphia Record bit typical of many similar ones in other journals.

"The communities in New Jersey within twenty or thirty miles of New York and those which are so unfortunate as to be of highway between the metropolis and Atlantic City, are justly exasperated because of the reckless speed with which autobiles are driven within their limits. It is common for these machines to dash along at the rate of forty or fifty miles an hour to the great danger of all persons in the streets. In case of a casualty the automobile is pushed to greater speed in order that

SUGGESTED SUBSTITUTE FOR BULL-FIGHTING IN SPAIN.

- The New York American and Journal.

lawless drivers may escape the penalty of their offense. All sorts of expedients have been proposed, such as a gute which may be lowered on the approach of an automobile, and at one place there are threats of a battering ram to be used on any machine which may injure citizens by unlawful speeding.

"How to deal with the rich owners of the horseless carriage is not clear. Fines, of course, mean nothing. Indeed, on the payment of a fino(the amount of which he considers insignificant) the milltionaire chausfleur seems to think he has bought the right to break records along the public thoroughfares regardless of all regulations. An indignant legislator has proposed that every man who drives his engine at a higher speed than is authorized shall be sent to prison for a long term. To this a magistrate replies that the penalty would be visited on the hired and innocent chauffeur, who is made the scapegoat for his rich employer. The only method which the French could devise was to make it bear its number in figures so large as to be authorized should bear its number in figures a large as to be cautionoidie should be the box fast the pace, in order that the owner might be prosecuted in event of a casualty.

"This and all other suggestions virtually mean that by paying money enough the millionaire may go tearing down the streets at a dangerous rate, overturning anybody who may be unable to Thus the privilege of doing things prohibited by the law is allowed to the man who is rich enough to pay for it. This is drawing a distinction between an aristocracy of wealth and the common people in less than a century and a half after the establishment of the republic which was designed to prevent the erection of legal barriers between the rich and the poor. In Now York an attempt will be made to deal directly with the offending owners who drive their automobiles at lawless speed by equipping a part of the police force with light and fast machines which may overtake almost anything of the kind on the road. It is absurd to say, as they do in France, that there is no way to prevent That would be to admit the failure of republican inthis abuse. stitutions. The automobile has come to stay-it is a logical result of modern development of motive powers; but should any number of its drivers continue to show their contempt for the law, they must be treated with whatever degree of severity may be necessary to make them respect the law.

The other side of the case is given in a letter written to the New York Sun by Angus Sinclair, of New York, in reply to an editorial in that paper. He says:

"From a somewhat extensive acquaintance with automobiles. I believe that the mass of owners of these carriages deplore the reckless practises of a few automobilists which tend to bring the sport into disrepute; but surely automobilists have the right to run their vehicles upon the public highways so long as they obey the law. The spirit of your article Death by Automobile in this morning's Sun is that the owner of an automobile which frightens horses ought to be punished, and therefore the logical result, according to your dictum, must be that no automobiles are under indictinent for frightenings aboves which led to a men being killed, and imply that they deserve punishment. Does frightening a horse always deserve punishment?

A horse is popularly supposed to be a highly intelligent animal, but those who are not blindly prejudiced in the auimal's favor find it difficult to conceive of any animal being endowed with less 'horse sense,' which is a bad misnomer. I have been a rider of bicycles and my memory goes back to the time when some horses acted crazy at the sight of a harmless wheel, and many serious accidents happened from the horses bolting into frantic speed at the sight of a bicycle. People are going through the same experience to-day with automobiles that they had to endure with hicycles, and I think most of the grievances are on the side of the automobilists. I operate a gentle-looking steam runabout, and I am as careful as possible not to frighten nervous horses, but I find some horses so senseless that it is useless trying to conciliate them. Not long ago I saw a very restive horse and a carriage approaching me and I moved my machine into the ditch behind some brush to make the machine as inconspicuous as possible, but the hrute had seen me go into hiding and when he came near the place he reared and plunged at a frightful rate, and it took three men to hold him while I moved the automobile past.

"From such experiences it has become a question in my mind whether it is bast to stop for a nervous, horse or to keep maging along at legal speed. The possibilities are that the automobilist who fatally frightened the horse at Hackensack was running at legal speed, and was within his rights. The question comes up. Has the owner of an idiotically skittish horse the right to keep at working where it may be frightened into destructive violence at the sight of a strange wheelbarrow?"

#### IS THE KAISER'S GIFT IN GOOD TASTE?

GOME quostionings are being heard in this country in regard to the propriety of Emperor William's proposed gift to the United States of a statue of Frederick the Great. Mr. Siephens, of Texas, has introduced into the House a resolution declaring that the United States "should not accept from any foreign nation or erect in any public place any statue of any king, emperor, prince, or potentiate who has ruled or is now ruling any narron by the supposed divine right of kings." as such an act would be a "repudation" of the "basic principles" of our Government, and would be "an insult to the memories of our revolutionary fathers." A number of papers are asking what Frederick ever did for this country, and the Pittsburg Chronicle Telegraph suggests that "if the Kaiser is anxious to honor a Gernan who really did something for the United States, there is Baron Steuben." The President, however, has signified his acceptance of the gift, and it is remarked that the objectors are too late.

One of the Kaiser's critics is the Charleston News and Courser, which says:

"With every deference to the views of those who think differently, we confess to an inability to appreciate or perceive either the appositeness or significance of the donation which the German Kaiser is bent upon making to this nation. Even having made the most generous allowance for recent changes in the spirit and purposes of this Government, we fail to understand just why a statue of Frederick the Great should be regarded as a fitting ornament for the public grounds at the national Capital. We do not happen to recall just now anything in the life or conduct of the great Emperor which placed him even remotely in touch with our national purposes. It is very nice and gracious of the Kaiser to desire to give us something, and far be it from us to look either a gift horse or a gift Emperor ungraciously in the mouth. But with the wealth of men and things which German history offered for his selection, it does appear that His Majesty might have hit upon a present less out of sympathy with the general scheme of our nationalism. It is possible, of course, that the presentation of the statue of Frederick the Great to us just at this time is a gentle piece of irony upon his part. In that case the joke is surely not without some merit."

The New York Sun quotes a number of utterances of Frederick that seem to show that he was not unfriendly to the colonists in the struggle for independence, but it fails to find that he ever did them any real service. It observes:

"It is true that he forbade German troops destined for service under the English flag in America to traverse any part of his domlinions on their way to the seacoast. This ho did because the deteated the practice of selling German blood for money. We add that his prohibition did not prevent German mercenaries from reaching the seacoast by other routes. What the American colonies wanted, and what would have been of great moral benefit to them in their struggle for liberty, was a formal acknowledgment of their independence by the court of Berlin. This concession they were never able to obtain from Frederick the Great. Ho had an opportunity to earn our gratitude, but he never turned it to account. He never acknowledged the independence of the United States until Great Britain herself had done so, when, of course, his acknowledgment was superfluous.

"We have uever yet erected a memorial to Louis XVI., altho that unfortunate sovereign did everything in his power to aid the United States at the cost of ruin to himself and to his dynasty. Under the circumstances, a statue of Frederick the Great

at the national capital can not help looking always somewhat Otterr

The Philadelphia Record, however, thinks the gift eminently proper, and the great majority of the press either make no objection or consider the matter of small importance. The Washington Star takes a humorous view of it, and would prod Congressman Stephens on to attack all symbols and signs of royalty. It asks

"Why reject statues and accept paintings of kings? And why not blot out such names as St. Louis, Louisville, and Maryland, and others, recalling royalty? And why not censure Washington for fighting alongside of 'king's men' for American independence, and Lincoln for his willingness to accept a Czar's aid when the Union was in danger? While we are about it, why not round up, after the Texas fashion, statues, paintings, names, everything recalling royalty and clap the hot brand of our disapproval on them? Let no guilty king escape!"

The Poles, however, have not forgotten Frederick's part in the partition of Poland. The historian Askenazy writes to Caas, a Polish paper in Vienna, entering a violent protest in the name of Kosciusko, Pulaski, and other Poles who fought for American independence, against our acceptance of the gift. The Zgoda, a Polish paper of Chicago, says:

"The United States is a real nurseum of statues of the great men of all nations. In the parks and squares of America we meet with statues of great Englishmen, Frenchmen, Spaniards, Germans, Italians, Hollanders, Poles, beside the statues of great Americans. There are statues bere of Lafavette and Rochambean, of Garibaldi and Shakespeare, of Humboldt and Goethe, of Kosciusko and Columbus, beside the statues of Lincoln, Washington, Grant, and others. But nowhere do we meet with the statues of despots, of tyrants, of shameless cynics, even the they were able commanders and statesmen. There is no statue here of Peter I., nor of Catherine II., nor of Philip II., nor of Louis XIV. There is none, we believe, even of Napoleon, who, tho indeed a despot of his kind, fulfilled a great and useful historic mission, and who, after his fall, dreamed of becoming a citizen of the United States. The society of our bronze guests is a very select one, therefore. What will such a Frederick II, do in that society? Emperor William may make us presents of statues, if he pleases, but let him consider his choice. There are Lessing, Goethe, Schiller, Kant, Lassalle, Liebknecht-let him choose any one of those and come over to attend the unveiling, and it

CARTOON GLIMPSES OF CUBA'S TROUBLES.

will be hard to say anything against that. The Government of the United States ought to consider this matter seriously in order not to offend the nation. It is a hundred times better for every Government to displease a neighbor, especially one across the ocean, than to affront its own country."

In conclusion, the Zzoda says that even the Germans here should regard a statue of Frederick II. on American soil as an indignity to the German people. The Zzoda reminds them that Fredrick II. was no German, but a Prussian who did not acknowledge the unity of Germany, which was and is so dear to all German patriots. He fought Austrians, Saxons, Bavarians, just as he did other nations, working only for the aggrandisement of Prussia. He spoke and wrote in French, and in his works he mercliessly derided the simplicity and honesty of the German people. His moral poison, poured slowly by Prussia into the veins of the great German nation, has vitiated it to blood and converted the Germans into Prussians.—Translation mode for The Letraexy Dicks;

# NEW PHASE OF THE SOUTHERN REPUBLICAN

THE series of attempts to break the "solid South" that have been made by various Republican Administrations since the Civil War have all eventuated in failure, and in the appointment to federal office of the particular Southern leader whose efforts have proved futile. The most striking example of this was the appointment of General Longstreet; the latest example, the anticipated appointment of Senator John L. McLaurin. It is reported from Washington that the President has decided to appoint Senator McLaurin to the vacancy on the bench of the United States court of claims, caused by the death of Judge John Davis. The Charleston News and Courier, the Columbia State, and some other South Carolina papers think that Senator Tillman would not hesitate to invoke senatorial courtesy to prevent his confirmation; but others believe that Mr. Tillman will be glad to get rid of his rival in this way. The Washington correspondent of the New York Times says:

"This is the end of the McLauria movement in South Carolina, and it also probably marks the end of President McKinley's great plan for the formation of a progressive party in the South. South Carolina was to be the starting-point of a movement which Mr. McKinley hoped would spread from State to State. "He began by taking the federal patronage away from the Republican politicians and turning it over to expansion and protection Democrats. It was one of the things which lay closest to Mr. Mccorats, the start of the state of the state of the start o

"Mr. McLaurin was the chosen instrument of the plan in South Carolina, and his 'Commercial Democracy' watchword seemed to promise a better showing for the new movement than could be secured in any other Southern State. After the death of President McKinley, however, there was an evident disintegration of the movement in many Southern States. Even before he died it was evident that Mr. McLaurin was not going to be much of a success in leading the South away from the old lines. One of his strongest assets was the personality and the support of President McKinley, but even with that he did not make much headway. Since he has lost that his downfall as a leader has been readed.

"He has conceded that his political career in South Carolina is at an end, and to make his fall as soft as possible, a life position on the bench has been provided for him. It is the judgment of well-informed Southerners here that Seuator Tillman's blod on his State has never been so pronounced and so complete as it is now. It has been visibly growing in the hast ix months. When Tillman last ran for reelection, he placed the issue before the people, declaring that he would abide by the result of the principles and if they decided against him, he would not go before the legislature as a candidate.

"The primaries voted for him, altho he did, not poll as large a vote as some other Democrats who were running for office at the same time. It is now seriously believed that if he were to go before the people at this time he would poll a bigger vote than he ever did before. He has niterly extinguished McLauriu and 'Commercial Democracy.'"

#### THE PRESIDENT'S SPEECH AND ITS CRITICS.

DRESIDENT ROOSEVELT'S words on tynching and his reference to Civil War controversies in his Memorial-Day address are deplored by some as lacking in that tact, taste, and courtesy expected in an address by the President. The New York Herald considers his speech "indiscreet" and "unfortunate," and the New York World thinks it "regrettable." One Southern Senator is quoted as expressing the belief that the President's remarks show him to be "an erratic and unsafe man to be President of the United States," and another is quoted as saying: "That was a very unwise address. It will serve no useful purpose. Its effect will be to arouse sectional feeling. I can not imagine a level-headed man saying such things. How differently Mr. McKinley would have spoken on such an occasion! In fact, it would never have entered Mr. McKinley's head to make such a charge as Mr. Roosevelt made to-day. I do not think the South will care much for Mr. Roosevelt after this. He is dead so far as my section is concerned."

The Raleigh News and Observer says:

"Mr. Roosevelt's attempt to excuse the brutality in the Philippines by comparing it with lynchings in the South was a profanation of Memorial Day. The lynchings in the South and in the North are done by lawless mobs; making a wilderness in Sanar and killing every male child over ten years old was done by reason of an official order. The President ought to see this direction. He will not do anything to prevent the butchery in the Philippines by any such unfair arguments."

After dwelling upon the courage and devotion of the men who fought in the Civil War, the President directed his remarks to the war in the Philippines, and went on to say:

"These younger contrades of yours have fought under terrible difficulties, and have received terrible provocation from a very cruel and very treacherous enemy. Under the strain of these provocations I deeply deplore to say that some among them have so far forgotten themselves as to counsel and commit, in retaliation, acts of reculty. The fact that for every guilty act committed by one of our troops a hundred acts of far greater strocity have been committed by the bostlie natives upon our troops, or upon the peaceable and law-abiding natives who are friendly to upon the peaceable and law-abiding natives who are friendly to to find out every instance of barbarity on the part of our troops, to punish those guilty of it, and to take, if possible, comparison of the peaceable was a freedly been taken to minimize or prevent the occurrence of all such instances to the future.

"Is it only in the army of the Philippines that Americans sometimes do acts that cause the rest of America regret?

sometimes do acts that cause the rest of America regret?

"From time to time there occur in our country, to the deep and lasting shame of our people, lyachings carried on under circumsances of inhuman cruelty and barbarity—a cruelty infinitely worse than any that has ever been committed by our troops in the Philippines; worse to the victims, and far more brutalizing to those guilty of it. The men who fail to condenn these lyachpines, are indeed guilty of neglecting the beam in their own eye while taunting their brother about the mote in his. Understand me. These lyachings afford us no excuse for failure to stop cruelty in the Philippines. Every effort is being made, and will be made, to minimize the chances of cruelty cocurring.

"It behooves us to keep a vigilant watch to prevent these abuses and to punish those who commit them, but if because of them we flinch from finishing the task on which we have entered, we show ourselves cravens and weaklings, unworthy of the sires from whose loins we sprang. There were abuses and to spare in the Civil War. Your false friends then called Grant a 'butcher' and spoke of you who are listening to me as mercenaries, as 'Lincoln's hirelings.' Your open foes-as in the resolution passed by the Confederate Congress in October, 1862-accused you, at great length, and with much particularity, of 'contemptuous disregard of the asages of civilized war,' of subjecting women and children to 'banishment, imprisonment, and death' of 'murder,' of 'rapine,' of 'outrages on women,' of 'lawless cruelty, of perpetrating arrocities which would be disgraceful to savages'; and Abraham Lincoln was singled out for especial attack because of his 'spirit of barbarous ferocity.' Verily, these men who thus foully slandered you have their heirs to-day in those who traduce our armies in the Philippines, who fix their eyes on individual deeds of wrong so keenly that at last they become blind to the great work of peace and freedom that has already been accomplished."

The critics of the President are themselves criticized by the Philadelphia Press, which says:

"On the first blush the President's pointed reference to the lynchings will provoke resentment in some quarters. But look out, critics, that you understand his logic and see where your own leads. The fact of lynchings is unchallenged. Does their existence brand the communities in which they are perpetrated? The President doesn't say so. On the contrary, his argument is that you have no more right to condemn a whole section because of some lynchings than you have to condemn a whole army or a whole campaign because of some cruelties. Is this true or not? What fault can be found except upon the plea that a reference to lynchings is an indictment of a section? And do not those who offer such a plea themselves imply precisely what the President does not?"

Return of the "Star Car" to Louislana,-Louislana proposes to return to the use of the old "star car," or separate cars for pegroes, which were in use in the early sixties and were called in, according to the Washington Post, in 1868, when the Republican Government was installed, with "little if any manifestation of public disapproval." The Post says;

"For some years past, however, there has been a steadily increasing demand for separate cars. The advocates of the measure claim that the negroes, as a race, are reverting to hoodlumism, if not to actual barbarity; that their street manners have been rapidly deteriorating under the dispensation of freedom: that it is no longer safe to permit all colored men to enter cars in which there are ladies and children, and that since it would be unsafe to intrust conductors with the right or the duty of dis-

criminating, the taboo must be drawn against them all. They show that the blacks have been actually free more than thirtyfive years; that they have had every opportunity of education and advancement; that for nearly a decade they held control in politics and government. And now, as the argument runs, they find the neuro lower in the social scale than he was during the era of slavery. His morals are lower, his criminal record infinitely more discouraging, his condition from every point of view deplorable. They can not legislate him into frugality, self-respect, good behavior, or civilization, but they declare that they will endeavor to contract the field of his objectionable activity.

"The proposed law as outlined in the New Orleans papers is very carefully drawn and promises a most effective operation, It provides for the arrest and punishment of any and every one who attempts to violate it, and it imposes heavy penalties on street-car companies whose officials neglect the least of its injunctions. The spectacle of New Orleans resurrecting after a generation of disuse the old, half-forgotten star cars of 1866 contains much food for disturbing thought. It proves, at least that the community is convinced of the necessity of the expedient."

#### LETTERS AND ART.

#### THE AMERICAN ACADEMY IN ROME.

A BILL is before Congress providing for the incorporation and official recognition of an "American Academy in Rome." The persons named as incorporators include the Secretaries of State and War, the Librarian of Congress, and the Supervising Architect, several college presidents, and many of the leading architects, painters, and sculptors of the country. Seaator McMillan, of Michigan, who writes of the project in the May issue of The North American Review, regards it as of the first importance to American art and prophesics for it a function somewhat similar to that of the French Academy, "which since the days of Louis XIV, has trained for France the men who have given direction, unity, and lasting distinction to the art of that nation." The Academy had its genesis in the Chicago "World's Fair," and was organized in Rome in 1894 under the name, "The American School of Architecture in Rome," the object being "to enable American students of architecture to develop their powers under the most favorable couditions, as to both instruction and surroundings." Three years after the foundation of the school, the promoters enlarged its scope to include the allied arts of sculpture and painting. Senator McMillan con-

"The first home of the American Academy was in the Palazzo Torlonia, and its first director was Mr. Austin W. Lord, of New York City, a member of the firm that has recently won the competition for the new building for the Department of Agriculture in Washington. In 1895, the Academy removed to the Villa dell' Aurora, once a part of the famous Villa Ludovisi, on the Pincian IIill overlooking the Villa Medici, the extensive and commanding quarters of the French Academy. Rising from a terrace elevated some twenty feet above the surrounding streets, the villa stands in the midst of a garden planted with trees after designs by the most celebrated of all landscape architects, Lenôtre.

"During the years since its opening, the Academy has been supported by the voluntary gifts of its founders, and the money raised has represented, in the main, the self-sacrifice and devotion of men in the active pursuit of their professions."

Of the appropriateness of the location of the Academy the Senator says:

"It is the general opinion that, for monumental work, Greece

and Rome furnish the styles of architecture best adapted to serve the manifold wants of to-day, not only as to beauty and dignity, but also as to utility. Therefore, a school located at Rome, with the requirement that students shall spend a portion of each year in travel in Greece and Italy, offers the studeat an opportunity to make a thorough acquaintance with both classical models and also with the module which mark the revival of classicism known as the Renaissance.

"In the judgment of the founders of the Academy, it is

CHARLES NORWOOD OREIG. Editor of Prarson's Magazine.

of the highest importance that the student of art, before starting on his professional career, should study thoroughly in Italy, Sicily, and Greece the typical monuments of antiquity, and such works of the Italian Renaissance as are worthy to be ranked with them. Greece produced the greatest artists of the ancient world : but Rome, during her supremacy, became, and after her fall remained, the great reservoir of Greek art. Furthermore, Rome herself, as a powerful and far-reaching empire, adapted to her varied needs the art she had borrowed, so that the modifications of Greek art have a value to the student only second to that art ia its original development." Senator McMillan expresses the belief that there will be in this country an ever-growing demand for just the kind of talent that the Academy has been called into being to encourage. New

government buildings are urgently needed, and the field for painters and sculptors is only less wide than that for architects:

Among the projects now before Congress are the extension of the east front of the Capitol; the construction of an office building for the members of the House of Representatives; a new building for the Departments of State and of Justice, and another for the Department of Agriculture; a Hall of Records; new buildings for the National Museum and the Geological Survey; and an independent home for the Supreme Court of the United States, which always has occupied quarters in the Capitol. . . . There is universal agreement in Washington that, in the great revival of building about to begin at the national capital, the universal or classical type of architecture shall prevail. It is, therefore, necessary that opportunity be offered to American students to study in detail the architecture of Greece and Rome."

"With so much interest, both in this country and in Rome." concludes Senator McMillan, "and with such a strong demand for mea of the widest and deepest training, the future of the American Academy in Rome would seem to be assured,"

#### HOW TOLSTOY'S BOOKS ARE PUBLISHED.

"HE intimate friends and literary confidents of Count Tolstoy, M. and Mme. Tchertkov, are now engaged, at Christchurch, Eagland, in publishing a complete collection of the works of the Illustrious Russian writer. The difficulties that have attended the publication of Tolstoy's works in their entirety are not unknown. While the Russian version of his works is almost always incomplete, the foreign translations, removed from

persoaal supervision or even any control on the part of the author are for the most part, altered or mutilated. The edition of Tchertkov will give a complete Tolstov with all the different readings that the author has employed in his works since their appearance. It will be composed of thirteen large volumes and a supplement containing about sixty small books and pamphlets. The first volume entitled "The Confessions," has already appeared. This edi-

tion will also contain a large number of letters, thoughts, and motes of Tolstoy that have never been published. "No writer of the present day enjoys greater respect or admiration that Léon Tolstoy," writes M. W. J. Bienstock, in La Rérue (Paria, "The slightest article from his pen, his opinion upon any question whatsoever, soon make the tour of the world's press and are commented upon as a literary event of considerable importance. But while every one knows the writings of Léon Tolstoy, few know how they reach the public in their integrity and are disseminated beyond the frontier in spite of the Russian censure. The names of the de-

wroted men who have consecrated their talents, fortune, and life to the difficult task of making known and spreading abroad throughout the entire world the works of their master and prophet "are unknown." The writer continues as follows:

"Fifteen years ago there was founded in Moscow n publishing house under the name of 'Posrednick' (Intermediate), directed by M. Paul Birkov. M. V. Tehertkov, and Mme. A. Tchertkov. The 'Posrednick' soon ranked in Russia among the first publishing houses: its success was primarily due to the great and energetic collaboration of Léon Tolstoy, a connection of the Tehertkov family. (The sister of Mmc. V. Tchertkov, née Didrichs, is married to a son of Léon Tolstoy, André.) All the popular editions of the works of Tolstoy, his tales and popular narratives, appeared at the 'Posrednick,' the chief gim of which was to disseminate among the people the liberal ideas of the writer, Thanks to its great development, the 'Posrednick' issued hundreds of thousands of copies of each work at a price cheaper than had ever been known.

"The pamphlets were sold for five, three, two, one, and even half a kopeck (from about a quarter of a cent to two and a half cents). Besides these popular editions, the 'Postenick' undertook others for 'the intellectuals,' which included the greater part of the

masterpieces of Russian literature, and were also sold at a relatively low prace. The Russian ensures for several years opposed few obstacles to these publications, but finally between thought themselves that the ideas propagated by these books were not altogether in unison with the governmental reference Russia, and from that moment the aunoparess of the censors became more numerous with each day. Under these conditions, to be care the streeney difficult to outnine the work begun; it was necessary to limit the choice of works to be published, to cut out passages, and in spite of everythis to be published, to cut out the properties of the properties of

authorized, were later interdicted. The religious censure forbade even the fragments of the works of Tekhone Zadonsky, honored by the Orthodox Chrorch as a saint, and, finally, to exp the climax, the publication of the 'Sermon on the Mount'—that is to say, according to the conceptions of the church, the words of God Himself—found dangerous for the people by the censors, was interdicted.

"In the face of these difficulties Tchertkov and Birkov considered the advisability of moving their publishing house to a foreign country. Their decision was lastened by events. In 1896 the Russian Government began to take extreme measures against

to submit to the military service. Passing over the diverse phases and results of this struggle, there is only need of recalling that Léon Tolstoy and his friends took great part in it in behalf of the perscutted people. For this participation, after a series of annoyaixes on the part of the police, Teherstov, Birakov, Boulanaixes on the part of the police, Teherstov, Birakov, Boulanditiven from Russia and took refuge in England. In the beginning of 1608 they estab-

lished a Russian printing-of-

fice. The Tcherthous first took

up their quarters at Purleigh.

near London, but by reason of

material and personal considerations they transferred their establishment to Christchurch

on the south coast of England.

where they are now living."

the Donkhobors who refused

At first, proceeds M. Bienstock, owing to lack of pecuniary means the publications of V. Tchertkov appeared most irregularly. But no strong was the need of learing free speech in Russia that England's guests received aid from every point of the Russian empire and from all classes of society. The present condition of this colony is thus described by M. Bienestrek:

"At Christchurch, connected with the Tchertkov publishing house, lives quite a small colony of friends and disciples of Count Tolstoy. The head of the house, V. Tchertkov, is well seconded in his enterprise by his wife, Mnie, A. Tchertkov, . . . Altho always suffering, Mnre. Tchertkov passes

her days in correcting proofs, drawing up bills, casting accounts, and takes charge of almost all the correspondence, which is considerable. Indeed, since M, and Mine, Tohertkow have become known as the sole depositaries of the writings of Léon Tolstoy, they have been overwhelmed with a delinge of solicitations from till parts of the world; they sometimes receive from publishers the most famtastic pecuniary propositions for the first editions of Tolstoy's works. But as the great Russian writer remains fainful to the principle of non-recognition of literary property, his maudatories, the Tehertkows, positively refuse every offer of money, and confine themselves to giving the advance sheets of their publications to a few firends in diverse countries.

"This little colony, of about fifteen persons, dwell in the hospitable Tuckton House, situated a little apart from the main road between the old English town of Christchurch and the popular

seaside resort of Bonrnemouth. There they lead the simplest and nost brotherly of lives, in accordance with the doctries and nost brotherly of lives, in accordance with the doctries. Tolstoy. Each member of the colony takes part in the common own work according to the measure of his ability; some occupt planting to the measure of his polity; some occupt planting, some with the garden and the politry, otherwise res with the housekeeping. At meal-times all assemble with distinction of master and servant around the kitchen table, where the hill of fare is solely vegetarian.

"When the Russian colony first settled at Christchurch—M. Tcherthov told me—the most extraordinary rumors were current concerning the newcomers. One of the most widespread opin-tions represented them as nanchists, engaged in preparing dynamite and bombs at their house; an English interviewer, attracted by these rumors, went one day to Tuckton House and asked Tcherthov if he might visit the storehouses of powder and nitroglycerin. However, little by little, the truth came to light and the noise of the printing-press catassed it to be understood that the control of the co

The following paragraph from a recent issue of The Academy and Literature (London) indicates how great is the interest in Tolstoy literature in England:

"The publication of Mr. I. C. Kenworthy's 'Tolstoy, His Life and Works,' reminds us that, if the great Russian writer is not yet well known and understood in this country, it is not from lack of literature on the subject. So recently as 1900, Mr. Kenworthy gave us his account of a 'Pilgrimage to Tolstoy,' ear we had from Mr. Aylmer Maude a book on Tolstoy, His Problems,' and from an anonymous writer a volume on his 'Life and Teaching.\* In 1900 appeared 'Tolstoy, the Man of Peace. by A. Stockham; in 1899, "Tolstoy, How He Lives and Works," by P. A. Sergyeenko; in 1898, 'Tolstoy, a Study,' hy G. H. Perris; in 1897, 'In the Land of Tolstoy,' by J. Stadling; and in 1895, 'Tolstoy as Preacher,' by T. Harrison. How, hy way of exposition, this is not so bad. But it is not all. In 1888, a 'Life' of Tolstoy, translated by Isabel Hapgood from the Russian, was published in New York and circulated in England. Tolstoy's antobiographical writings have also been freely circulated among us. A volume called 'Reminiscences' appeared here in 1586, when another named 'What I Believe' came over from New York, to be reprinted in 1895. From New York came also 'My Confession' (1887), and the 'Childhood, Boyhood, and Youth' of Tolstoy, published here in 1848, was reprinted in 1890."-Translations made for THE LIVERARY DIGEST.

#### A PLEA FOR THE SILENCE OF THE NOVELIST.

MANY are the voices that have been raised in protest against the prevailing "over-production" of the novel, and various are the remedies proposed to cope with this latter-day problem. "Maxwell Gray." of London, the well-known English movelist, seriously states it as her opinion that "it would be a matter of small moment if no more novels were written for the next fifty years." If that seems an excessive term of silence, she adds, it would be a boon if there were no more novels. "say for twenty years, during which a generation might be reared with a taste for something nobler than novels, or at all events for the fine works of fiction that already exist and are so seldom read; or even for ten

"It is not that all the tales have been told; they laid all been told many times over long before letters were invented. They always will be told in some form or other in prose or in verse, in speech or in writing, till the end of time, and they will always, these same old tales, be pleasant to tell and pleasant to hear till the end of time, because they tell of things that can never grow old, of the relation of man to man, and of the relation of man to of the relation of man to be told the relation of the relation to his time is constant. No, the tales may be told and recold from every point of view and in

every variety of detail and amplification, with every embroidery of thought and fancy and manifold beauty of setting, and never fail to charm, nor, if rightly told, to edify and instruct; tho anusement and not edification is the novelist's proper aim.

The root trouble is rather that the majority of those who essay fiction are either unable or unwilling to write novels that are entitled to rank as true literary productions. And so we have "novelettes, newspaper-corner serials made by the yard, and magazine stories with nothing to recommend them beyond a knack of putting together what arrests the flaccid attention of vaccous and brainless indolence, unable to endore a second without external diversion from inward monotony. It is weariness to think of these productions; the sight of the empty stuff piled on railway bookstalls produces moral and mental nausea." The writer declares.

"It was a sad moment for literature when the notion that novel-writing was a lucrative craft first got about, thanks partly

to papers by James Payn, suggesting the training of average middle-class youth for this simple, inexpensive, and well-paid profession; partly to the genial and large - hearted Sir Walter Besant, who never tired of representing the literary profession and especially fiction, as profession, like any other, to be learnt and practised as an exclusive means of gaining a livelihood by the moderately endowed, such as swell the lower ranks of the medical, legal, and clerical professions. A man with no marked

aptitude for his special profession and of general ability even beneath the average, may still be a respectable and useful lawyer, doctor, soldier, or clergygman, great numbers of which are needed to carry on the ordinary affairs of life, the exceptional power and even genius is requisite in the higher walks of these occations. But, while the rank and file of most callings can do very well with industry, training, and moderate intelligence, no enewants a medioren novel, peem. or picture; unlike the hardworking doctor in a difficulty, the hard-working novel-writer can be a modern to the control of the profession to disentangle a function of the profession of the profession to disentangle a music to a dull and dragging style. And a feeble novel is a serious evil."

What a blessing it would be, exclaims the writer, if it were ouly possible for the world to escape for a while from the present deluge of third-rate fiction! She goes on to say:

"In the event of this hastily desired temporary silence of the novelist becoming a reality, the novel manufacturer would probably disappear and betake himself to more remunerative trades, while the creator of claranter, the master of style, the builders of well-balanced story and harmoniously linked incident, the true magician, under whose subtly woven spells enchanted palaces and gardens of exquisite delight arise unbidden—that is to say the maker or inventor as distinguished from the manufacturer—would take breath and recover waning strength after undue toil. No longer forced, his conceptions would nature silently, his humor mellow, his wit brighten, his imagination recover elasticity and strength of wing. The pageant of life, whether in tragic

Vol. XXIV., No. 23]

robe or comic mask, would unfold itself before eyes at leisure to observe and enjoy, and, preserved in memory, would silently impregnate brains that in due time would unconsciously reproduce the slowly developed pictures. There would be leisure not only to study but to assimilate the life of the past and of other countries and classes, time to enrich overwrought minds by learning and meditation. Even the reviewer might be made something of. Relieved from the necessity of noticing ten novels a day in paragraphs of three lines each, he might be introduced to classic works of fiction and instructed in the elements of literature and first principles of criticism. People with views might convey them to mankind by some more suitable channel than that of fiction, the present conduit for everything, and this would be equally good for the views and the fiction. Readers would have time to discriminate and select from the enormous mass already before them, and many of the best works, at present hurried through or altogether passed over in the headlong gallop down the serried ranks of fresh publications now necessary, might emerge from undeserved and undesirable obscurity. The newly risen generation might be introduced to the immortals: to Scott, Jane Austen, Thuckeray, Dickens, Charlotte Bronté, George Eliot, all of whom, it is said, are strange to the young goddesses who cycle and play hockey and tennis and wear such an astonishing variety of hats and gowns, and to the young mortals, cigarette in mouth, who earn opprobrious epithets at wickets and goals, many hurts at polo and much satisfaction on golf-links, and who wear hats and coats of no variety at all. Even poetry might once more form part of the reading of the better educated classes in the vast spaces of leisure created by a few years' suspension of novel-writing, and in that ease poetry might once more be produced by some 'mute, inglorious' Tennysons and Keats, now keenly aware that little but preciosity, brutality, slang, and doggerel charms the public."

In short, "there might be a literary renascence"; and reading would become a real means of popular education because it would give men the power to enjoy literature.

#### THE DECLINE OF HISTORICAL WRITING.

M ORE than one recent writer has taken occasion to lament the decline in the literary value of historical writing. The question has been raised as to why we have no great historians

nowadays. Says Mr. Frederic Austin Ogg (in the Chicago Dial):

"That there has been a decline in historical writing, as judged by the canons of great literature, some might possibly deny, but the most of us would readily concede. One has but to mention Herodotus, Thucydides, and Tacitus, among the ancients, Caryle. Macaulay, Gibbon, and Green, in days nearer our own, to bring to mind some of the world's greatest masterpieces of prose writing. With

SAMUEL RAWSON GARDINER.

these, the works of history produced during the last quartercentury, while almost legion in number, are in but very few cases even comparable as pieces of literary art. They may be, and without doubt frequently are, better histories; but they are certainly not so good literature."

John Richard Green, whose newly published "Letters," edited by Leslie Stephen, have attracted wide notice on both sides of the Atlantic, is credited with being the last of the "literary" historians. His "Short History of the English People," which has sold to the extent of hundreds of thousands of copies, is quite as no-

table for its luminous style as for its wide outlook. It was an eminently successful attempt, as is pointed out by a writer in the current issue of the London Quarterly Review, to make history interesting. Mr. Bryce said that "it was philosophical enough for scholars and popular enough for schoolboys," The late Bishop Stubbs, himself one of the greatest of English historians, declares: "Green combined a complete and firm grasp of the subject in its unity and in-

JOHN RICHARD GREEN, Courtesy of The Macmillan Co., New York.

tegrity, with a wonderful command of details and a thorough sense of perspective and proportion. All his work was real and original work: few people besides those who knew him well would see, under the charming ease and vivacity of his style, the deep research and sustained industry of the laborious student. And yet Green was criticised by Freeman and others of the conservative school because he rejected what he termed "the merely external political view of human affairs" and insisted that "political history, to be intelligible and just, must be based on social history in its largest sense." The writer in The Quarterly Review adds.

"Green's 'Short History of the English People' is not the book of a doctrinatic, but of a fair-mided man with strong opinions, trying to judge justly in matters that touch him nearly. There is no bigotry altout it. It remains the best general history of England, and, when it comes to be superseded, It will be ya history on the lines of Gener rather than on the lines of his critics. The new book will have to be a constructive history also, not merely an uncoordinated array of facts."

The methods of Samuel Rawson Gardiner, the ensinent English historian who died about three months ago, were very different from those employed by John Richard Green. His name is linked with that of Stubbs as an exponent of the "scientific school" of history, and his writings betray the fact that "schol-arship, and not literary art, has been the primary consideration." Mr. James Ford Rhodes, an American historian of repute, pays a warm tribute to Gardiner in the May Allantic Monthly, characterizing him, in words that Lowell once applied to Darwin, as "almost the only perfectly disinterested lover of truth" he ever encountered. "We know the history of England from 1603 to 1656 better than we do that of any other period in the world," observes Mr. Rhodes, "and for this we are indebted mainly to Samuel Rawson Gardiner,"

The historical standards of the future seem likely to demand a combination of the distinguishing qualities of such natures as those of Green and Gardiner. We quote again from Mr. Ogg's article in The Dial:

"Some day there will set in a movement to coordinate the results of our specialized effort, and then may be expected to appear once more the literary historian. Scholarship will not be less valued, nor truth less highly regarded; but the art of pre-

senting truth will be given more attention. Nothing short of a transcendent genins, however, can ever again fill the place of the genuine literary historian. From our conscientious devotion to truth in the minute we shall never wholly recover; and of all historical writing we shall continue to demand absolute accuracy of detail-a standard which was unknown to Herodotus, Livy, Carlyle, and Macaulay. Thus the necessities which the literary historian of the future will have to meet grow greater with every passing day."

#### THE DEATH-MOTIVE IN LITERATURE.

FROM the earliest ages of human thought and experience men have pondered over the mystery of death, and its grim presence shadows the literature and folk-lore of the world. A writer in The Edinburgh Review (April), searching the mythology of the oldest European countries, finds the thought of death "systematically exteriorized" in the principal legends. "Around the most nacompromising, iron-wrought actuality of earth," he says, "series upon series of the most fantastic imaginations ever devised by the brain of man have arisen, and whether the person of death be conceived of as single or multiple, as one death or many deaths, the legends encircling it are numerous enough to form a deeply rooted tradition."

Dora M. Jones, taking up the same subject in The Westminster Review (April), points out that the poets have loved to dwell, sometimes almost morbidly, on the thought of death, "the great reconciler," which comes as "the natural rounding of the mortal day to sleep and forgetfulness, the evening that is ordained to follow the morning, summing up and closing all." She con-

"That persistent sense of the survival of human personality after death, which is found in the early traditions of almost all races, seems to have been rather a source of pain than of comfort. The Hebrew Sheel, the Greek Hades, was a dim. comfortless region, a 'kingdom of shadows,' a feeble simulacrum of life, bearing the same relation to common daylight existence as the phantoms of a sick dream. But side by side with this conception we find the gracious vision of the genius of death, the twin brother of sleep, whose kiss on the fevered lips of the anguished and the dying charmed them into a repose forever undisturbed.

Until the Christian era we find these parallel trains of thought about death; the belief, alarmed, or at least aneasy, in a possible survival of consciousness in the disembodied ghost, and the sense that, after all, the order of nature was right, and that a painless death at the close of a full life was, indeed, the last, best gift of a beneficent fate. Such was the outhanasia of Cleon and Bito, such the end of Pheidippides, who fell dead in the market-place of Athens, after he had run afoot from the battle-field of Marathon, crying 'Victory' with his last breath."

Shakespeare makes us think of death as the last inviolable refuge of the brave man driven to extremity, in the lines:

> That part of tyraony that I do bear I can shake off at pleasure.

Thus exclaims Brutus, and his friend replies:

So every bondsman in his own hand bears

The power to cancel his captivity.

The feeling of weariness, discouragement, impatience of life, is voiced by Edmund Spenser [whose name is spelled "Spencer" every time it appears in this article | in what the writer describes as "the tenderest lines ever written in the English tongue":

> He there doth now enjoy eternal rest And happy ease which thou dust want and crave And further from it daily wanderest . What the some little pain the passage hav That makes frail flesh to dread the bitter wave? Is not short pain well borne that brings long case And lavs the soul to sleep in quiet grave? Sleep after toil, port after stormy seas Kase after war, death after life, doth greatly please.

There is a "love of death," declares the writer, which only in

our own days has attained to self-consciousness, tho it permeates all tragedy from the beginning; it is "the close connection between sublimated sexual passion and death." On this subject she says:

"Maeterlinck has lately told the story of the nuptial flight of the bee, and how the bridegroom perishes in the ardor of the supreme embrace. Is not that the quintessence of every tragedy that deals with lovers? In spite of the demand for 'a happy ending,' there is an instinctive feeling that the story of heroic love should not end with the descent to the C major of this life, implied by the common formula. Can we imagine Romeo and Juliet 'marrying and living happily ever after'? Lancelot. Tristau, Antony, are the typical lovers, and all through the ecstasies of passion they are conscious that death waits his turn.

"It was Schopenhauer who formalized this instinctive sentiment with his dogma of sexual love as the most intense expression of the human will, the triumph of personality. It is the act of life calling forth fresh life, and so winding up its mission on this earth. Nature teaches the same lesson by the rose and the butterfly. The hour of death waits close on the hour of love, and they who have lived greatly, loved passionately, have nothing more to do but to die.

The greatest work of the greatest musician of our day, the 'Tristan and Isolde' of Wagner, is entirely devoted to the expression of this idea. The scheme is very simple, it is love yearning and denied, love triumphant, then death. All through the first act death threatens, but his hour is not yet. In the great duet of the second act, in which the love of man and woman finds such transcendent expression as music never gave before, the thought of death is constantly called up, wooed, and dallied with: the lovers call upon night to enfold them and hide them. They have lived: let the rest be silence."

Yet, after all, "the world is for the living," and such philosophy as this can never be pleasing to the average healthy mind, nor is it conducive to strenuous and worthy living. The writer concludes:

"But, even for the strenuous and the worthy, there is comfort in the thought of the gray stones and long grass of the village churchyard, of the warfare accomplished, and the long task done. The more gallant and arduous the labor, the more natural and soothing is the thought of the rest that remains. It was not for some disappointed sybarite, some self-willed young lover, that Walt Whitman wrote his magnificent praise of death; but for Abraham Lincoln, the noble, selfless, much-enduring, sternly laboring man:

Praised be the fathomiess universe

For life and for inv and for objects and knowledge curious. And for love, sweet love, -but praise, praise, praise,

For the sure-enwinding arms of cool-enfolding Death

The oight in silence under many a star.

The ocean shore and the husky whispering wave whose voice I hear. And the sool turning to thee, O vast and well-veiled Death.

And the body gratefully nestling close to thee."

#### NOTES.

MR. BEERROHM TREE has effected what is described as the dramatic conp of the English theatrical world in a generation." He will revive on June 10 "The Merry Wives of Windsor," and has succeeded in engaging Virs. Kendal and Miss Elleo Terry to appear respectively as "Mrs. Ford" and "Mrs. Page."

THE six most popular books of the past month, as given in the list cor piled by the New York Bookman, are as follows: (i) "The Hound of the Baskervilles." Boyle: (a) "Audrey," Johnston; (b) "Dorathy Verson." Major: (4) "Mrs. Wiggs of the Cabbage Paich," Hegan; (5) "The Conqueror," Atherton; (6) "The Lady Paramount," Harland, and "The ard's Spots," Dixon. The usual monthly lists compiled by The World's Work do not appear in the June issue of that magazine.

"THERE appear to be indications of a Carlyle boom this year," remarks the London Academy Messrs. Chapman & Hall have a new edition, to be called the 'Edinburgh Edition,' in preparation, which is to be printed on ladia paper and to be completed in fourteen volumes. There are rumors, also, of other issues. It is obvious the Carlyle still sells largely, for Mesars also, of other resules. It is obvious the Cartyle still sells largely, for Meests Chapman & Hall, during the past three years, have sold on an average thirty thousand copies of his works a year. But he so largely read! We suspect he is amongst the 'prescolation authors' who occupy a good deal of shelf from. Yet the appeal of 'Sartor Resarriss' and 'Heroes and Hero Worship', can hardly, to he young at least, ever fail. The correct issue of the London Hookman is almost exclusively devoted to picturial and literary matter bearing on Carlyle.

### SCIENCE AND INVENTION.

#### BACTERIA ON MONT BLANC.

BRIEF note on the recent successful search for disease germs in the snow and ice of Mont Blanc has already been printed in these columns. We are now able to give a somewhat detailed account of this interesting investigation, contributed to La Nature (Paris, May 10) by the scientist who entried it out, Dr. Jean Binot, who is at the head of the Pasteur Institute laboratory. The summit of an Alpine peak would seem about as unlikely a place for germs as could be well selected; but purity of air or water is a relative quality, and M. Janssen, whose now celebrated observatory crowns the summit of Mont Blanc, sug-

JANSSEN'S OBSERVATORY, MONT BLANC,

gested to Dr. Binot the search for microbes that he describes in the present article. Says Dr. Binot -"The germs found

on the top of Mont Blane have been transplanted thither by the wind from adjacent wooded mountains and valleys. Some of the germs so brought adhere to the surface of the ice over

which they sweep. These sink into ice or the old snow, which contains one or two to the cubic centimeter on the average fabout 10 to 25 per cubic inchl. In the fresh snow, on the contrary, the number is infinitely small. Three times I collected 8 cubic centimeters of freshly fallen snow without discovering a single microbe in it.

'The sun is one of the most powerful natural agents in the destruction of germs. These analyses give a new proof of this fact by showing that in any given place a vertical wall sheltered from the sun generally contains more microbes than one that is in full sunlight.

"If we examine the results of the analyses of the annual layers, we see that the first layer contains fewer germs than the surface. The surface microbes, sporcless and of slight resistance, have in great part disappeared in this adjacent stratum, destroyed by natural physical agents. In the lower strata the spore-bearing bacteria, the yeasts, the streptothrices and some mucedines with re-

sisting spores are dominant. In an analysis of the older layers the number of germs was seen to decrease regularly

"At the foot of the glaciers the number of surface germs is much more considerable: 6 to 65 per cubic centimeter at the Mer de Glace; 9 to 27 at the Glacier des Bossons, etc.

"The glacier streams are very pure: their purity is in proportion to the number of germs in the ice that gives rise to them. . .

INTERIOR OF ORSERVATORY, DR. BINOT AND M. HANSKY.

"The air on the summit of Mont Blanc contains a very small

number of germs. I have analyzed 100 liters of air without finding a single microbe, and the number has varied from 4 to 11 per cubic meter.

"On the contrary, in the interior of M, Janssen's observatory

on the topmost peak of the mountain, where I passed six days. two analyses made in two different rooms gave 540 and 260 germs. It is evident that these numerous microbes had been imported by the temporary guests of the observatory. This is

why I took my specimens of air as far as possible from the observatory, taking care to place myself to windward of it, Speaking generally, the number of germs is larger as we approach the valley. . .

"I preserved more than 300 microbian species that are either new or difficult to determine. Onethird of these I have since identified; the others are still umler investigation.

This collection furnishes very interesting types from the biologic and morphologic points of view, and even from that of pathology.

"In the ice of the summit I isolated a virulent type of pyocyanic bacillus. A vibrio that I found in the streams was exceptionally pathogenic for the laboratory animals. In the crystalline and admirably pure water of a spring on the trail from Montanyert, I found 12 colonies of virulent colon bacillus in ope cubic centimeter. The presence of these germs is certainly due to insufficient filtration of the water through the thin layers of soil that cover the granite rocks of this mountain, on which herds live."-Translation made for THE LITERARY DIGEST,

#### WHY VOLCANOES ERUPT.

N an article on the West Indian disaster, the following brief statement of the various opinions held by scientific men 10garding the causes of volcanic phenomena is given by The Setentific American (May 24) :

"Volcanic eruptions are generally attributed to the expansion of moisture in the heated subterranean rocks. The original theory that the earth is a liquid mass, covered by a thin crust of solid matter, is now entirely discarded by scientists. Such conditions would seriously interfere with the rotation of the earth and the stability of the crust. We know the effect of the moon's and sun's attraction on the thin skin of ocean that covers the surface of our globe. Tidal waves are continually sweeping around the earth in a direction contrary to the earth's rotation. In comparison with this we can easily see what a tremendous drag to the rotation of the earth would result were the entire earth a liquid mass covered by a mere shell of solid matter. Scientists tell us that the wave produced would be so powerful as to make even a solid steel crust of 300 miles of thickness yield like india-rubber to its deforming influences. The theory of a molten interior was based on the observation of volcanoes and on the fact that the temperature of the earth increases on the average one degree for every fifty feet of descent from the surface. Following this theory come others, in which the earth is supposed to have a solid core and an outer crust between which is a layer of liquid material. Any displacement of the crust covering this liquid layer, whether resulting from contraction of the earth or other causes, would force the lava to the surface through the weakest spot. In refutation of this argument the conditions at Hawaii might be considered. The crater of Mauna Loa is 13,650 feet above the sea-level, and that of Kilanea is 4,040 feet. These mountains are not over 35 miles apart and yet both are filled with lava. How could such varying levels be maintained, if both craters were fed from the same source? This query has forced many to believe that the liquid matter was contained in local, vesicular spaces beneath the crust. Both of these theories were brought forth to reconcile the requirements of physics with those of geology, which called for the existence of fluid matter at a small depth from the surface of the earth. At present geolo-

gists have pretty generally discarded these theories as unnecessary; for it is claimed that the powerful pressure due to the enrth's contraction would prevent material from attaining a liquid form. Immediately on release of this powerful pressure, however, the matter would become fluid and pour out of the mountain in the form of lavn. As stated above, the power which causes the upheaval is attributed to the expansion of imprisoned vapor. From the fact that volcanoes are usually found near the sea, it was at first argued that the water oozed down into the heated regions, either of its own weight or by capillary attraction. Many scientists think this theory to be absurd, for they argue that it would be impossible for the water to enter n region under such compression, also that long before reaching a sufficient depth it would be turned into steam and forced back through the very channels by which it entered. The most plausible theory, and one now pretty generally accepted, accounts for the presence of water in heated rocks as having occurred during their crystallization period. These rocks, in the course of time, were deposited in the sea by the action of rivers. After many ages, the water-bearing rocks are covered to a great depth under layers or 'blankets' of deposited matter, and the heat there encountered finally brings the water to a sufficient tension to cause nn explosion,"

#### A NEW SOURCE OF OXYGEN.

I N a new method of producing oxygen invented by M. Jaubert, a French chemist, the gas is generated simply by pouring water on a new chemical compound devised by him. It is claimed that the new substance can be produced cheaply, and

JAUBERT OXYGEN APPARATUS. Small size for calcium lights, etc.

physician or chemist and have fresh and pure oxygen as he wants it instead of purchasing it compressed to a dangerous tension in heavy cylinders. M. Jaubert's method is described in La Nature (Paris, April 26) by M. J. F. Gall, who says:

"Certain metals, like sodium, potassium, and their alloys . . . possess the property, when heated in a current of air, of fixing the oxygen of the

later without combining with the nitrogen. Oxide of very different properties are thus obtained, some dissolve in cold water without any other phenomenon than that of simple bywater without any other phenomenon than that of simple bythe cold water with a violent disengagement of pure oxygen. These bodies M. Jaubert has named "oxygin's (oxygen-stones), and for their manufacture the Electrochemical Company has recently installed a factor of soxo borse-rower.

"The oxylith is a substance resembling calcium carbid [such ns is used for the generation of neetylene]; it comes in small pieces, but its color is white.

"When water is poured on a lump of it, it immediately gives off oxygen; but if we stop pouring, the oxygen ceases to be given off, so there is no overproduction."

This property makes it possible to construct a generator which shall give us a current of oxygen at ordinary pressure whenever we want it, on the same principle as the acetylene generators now in use, of which the smallest may be seen on an acetylene cycle-lamp; all that is needed is a supply of oxylith and of water and an arrangement for bringing the latter into contact with the former. The inventor has devised several forms of apparatus for this purpose, of which the illustration shows one, which is intended to furnish small quantities of the gns. It is on the principle of the laboratory apparatus for the generation of hydrogen. Blocks of oxylith are placed in a perforated vessel and the water attacks them from below. The writer goes on to say:

"Oxylith has considerable advantages over compressed oxygen. In the first place, the oxygen set free is chemically pure, and then the dead weight is four or five times smaller, and the liquid residue, which is chemically pure caustic, can be sold or utilized in other ways. The pressure of the oxygen thus obtained keeps rigorously constant, whatever the use may be and without the employment of any device for the purpose. Finally, there is no trouble in transportation: the apparatus can be packed in a box and the rullivadis will carry the oxylith at the same price as other chemical products. We can see how grently the production of oxygen is facilitated by the use of his new substance."

The inventor, we are told, was led to his study of the subject by nn endeavor to device a renewer of the air in submarine beats. When thus used, his apparatus disposes of the carbonic acid in the foul air by absorption in the caustic, which, as has been noted above, forms the residue of the process. Experiments show that a few onness of oxylith are sufficient to sustain the respiration of a man for an hour, and that a pint or so of the substance will keep the air of a submarine boat in respirable condition during the same period. M. Jaubert believes also that the gas from his apparatus may be used to actuate the motors that drive the boats, thus avoiding danger from the weight of electrical storage-batteries and from the gases that they give off. — Translation made for Tus LITERARY DIOSES.

#### THE BRITON AND THE AMERICAN INVASION.

M OST English observers seem to be divided between abject fear that the scepter of industrial supremacy has been permanently snached from their grasp, and an attitude of contempt for or indifference to American competition. Henry Labouchere rather assumes the part of the moralling onlooker with no personal interest in the matter. In his paper, Truth. London, under the leading "Morganeering and the Moral," he tells the British mation that its supremacy in trade and commerce is downed, and that the best efforts will scarcely prevent a retrograde movement, the caves.

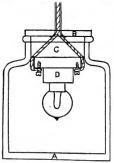

"To the impartial observer it is a trifle amusing to watch the perturbation of John Bull at the march of the American capitalist. For a generation or two past the gospel of salvation of mankind by the ngency of British capital has been preached with sincere conviction by British politicians. British men of business and almost every British man in every British street, whether it was a dying nation in Europe or Asia, a rickety republic in South America, an unreclaimed region of Africa, peopled by idolators and cannibals, or even a poverty-stricken British colony, said that the means of regeneration were the samelet British capital and enterprise exploit the patient thoroughly and there would be an end to all his diseases political, economic, and social. Americans, in their turn, now aspire to regenerate the world by American capital and American enterprise. They practise upon as the doctrine which we so long applied to the rest of mankind. They acquire our underground railways with the kindly view of showing us how to work those antiquated undertakings profitably. They propose to provide poor old London with tramways and tubes which its people are too poor or too stupid to construct themselves. They acquire half the tobacco trade of these islands to confermion us the benefits of being supplied with American goods and American principles. Lastlyfor the present-they laid sacrilegious hands on the shipping, by means of which 'Britaunia rules the waves.' No wonder John Bull is in a comie state of consternation. The world, from his point of view, is being turned completely upside down. He is no longer

on top, 'but underseath. Instead of the exploiter he is becoming exploited. Yet by utilising to the best advantage our resources in raw material, capital and labor we can hold our own, even if we are forced to see Germany and America increase their output faster than we can. At the present crisis of our economic history, what are the objects which cliently occupy our minds? They are the regeneration of South Africa by the introduction into that accursed land of British capital and labor; the expansion of our army at the expense of the labor market; squaudering time, money, and energy on the empty sotentation of the coronation ceremony, which will snapend industry, dislocate trade, and divert public thought from matters of pressing and vital import."

#### FISHING BY ELECTRIC LIGHT.

A N electric-light equipment that will add to the interest of an evening's fishing, as well as to the length of the resulting string of fish, is described by a correspondent of Amateur Work (May). He says:

"The necessary materials are: a small incandescent electric globe and porcelain base of about three-candle power and three volts; a dry battery

voits; a dry battery for same, of the kind used in bicycle or night lamps; several yards of two-way flexible covered wire of small diameter, some rubber tubing to cover the flexible wire, a glass bottle wire and rubber cement.

"The neck of the bottle should be large enough to easily admit the porcelain base. Cut a circular piece of wood, F, from a cigar-box, large enough to cover the top of the bottle, and in the center bore a hole to admit the rabber tubing with a tight fit. The porcelain base, P, is

screwed to the cork, C, with two screws which should be long enough to reach into the wooden piece R. The firstille wire is then covered with the rubber tabing. An easy way to do this is to take a nail which will easily pass through the tabing, tie to it a strong thread, and from an upper window lower the nail into the tubing and it comes out at the other end. With the thread, a string is then palled through, and with the string the wire in the same way. Firmly statch the string to the wire in the same way. Firmly statch the string to the wire without any large knots, and also see that the ends of the wire are not likely to catch on the tubing. The wire not lampend should extend about three inches to allow for connections in the bottle.

"Through the cork, bore two holes from the center of the top side to the edges of the porcelain base. The wire and tubing are then put through the hole in the wooden piece B, the end of the tubing being attached with bicycle or other cement to the underside of this piece. The two strands of the wire are then put through the holes in the cork and connected with the terminals of the lamp. The upper side of the cork is then covered with cement and pressed firmly against the piece B. When dry, the water will not reach the wire when the cork has been inserted in the bottle. The other ends of the wire are, when ready to use, connected to the battery, and the lamp will then light. The battery is kept in the boat. The wire not in the water does not require to be covered with tubing. In use, the bottle is weighted so that it will sink to the required depth. The hattery is then connected to light the lamp. The light will attract many kinds of fish. The fisher and a properly baited line will do the rest."

#### ANOTHER NEW EXPLOSIVE.

A SUBSTANCE named Masurite, described in Cassier's Magazine (May), is said in that magazine to be the latest high explosive on the market. "It appears to be in every sense a safe explosive, failing to detonate under the most trying conditions that are ever likely to be brought about accidentally, and yet affording admirable evidence of great destructive power at the right time." Recent tests are said to have demonstrated satisfactorily that it is insensible to shock, concussion, heat, or cold, as far as its liability to explode by any of these means is conserned, and that it can be exploded in the proper manner only by means of a double-strength exploder. Says the writer in Cassier's:

"One of the tests consisted in striking a quantity of the explosive with a hammer and a 16-pound sledge, both on stone and an auvil, and in allowing a 50-pound weight to fall 25 feet upon a masurite cartridge-all without other effect than brenking up the cartridge and scattering the explosive. Masurite in cans was shot through with both steel-jacketed and mushroom bullets, and even heated by burning coal and then shot through without exploding. Red-hot irons were run through the powder, both loose and in cartridge form, the result being simply to fuse and burn it while in direct contact with the heated surface, the powder going out upon removal of the iron. A bundle of parlor matches ignited in masurite had their flame immediately extinguished. Black and smokeless powder were set off on top and below a heap of masurite, and merely blackened it. Electric sparks were made to play in contact with the material, and no explosion resulted. For friction tests masurite was rubbed to dust between sandpaper and emery cloth. In a series of detonation tests it was found that a masurite cartridge on exploding would explode another one placed in contact with it, but when it was 12 inches distant the unprimed cartridge was simply torn and the contents scattered. With a 40-per-cent, dynamite cartridge exploded at a distance of 12 inches from a masurite cartridge, the latter did not go off : but with reversed conditions an unprimed dynamite cartridge readily exploded. To show that masurite does not freeze at low temperature, a cartridge of masurite was placed in a freezing mixture at 6" below the Fahrenheit zero for three hours. When taken out, it was found to be entirely loose, and was immediately exploded with great violence by means of an electric fuse. To show the relative force of masurite for rock work, a large boulder, in which were placed twelve cartridges in two bore-holes, was blown to pieces. The masurite used in all these tests had a strength equal to 40-per-cent, dynamite, and this can be increased or decreased, as desired, in making the explosive. A notable feature of masurite is the flameless character of its explosion. This was particularly evident when dynamite and masurite were exploded together, the former giving off a vivid flare of light."

In this absence of flame it is claimed, lies the great value of masurite for coal-mine work, as it will not ignite coal-gas or dust in the neighborhood of a blast,

A Lump of Smoke .- "Of late years," says The Scientific American (May 101, "a great deal of attention has been drawn to the question of London smoke, and during the recent great fors in that city, a number of experiments were conducted by Sir William Thistleton-Dyer, which showed that solid matter, consisting of soot and tarry hydrocarbons, was deposited during the worst fogs at the rate of so many tons to the square mile every week. The fogs of the Thames Valley can, of course, never be avoided; but that particular quality of fog which takes its distinctive name from the great city itself could be prevented if its citizens were willing to use smokeless coal in place of the highly bituminous coal which they favor at the present time. There is a society in London known as the Coal-Smoke Abatement Society that has strenuously grappled since 1898 with the problem, and with the very best results. At a recent meeting of the society, Prof. A. H. Church exhibited a specimen of a remarkable atmospheric deposit, which had been taken from the cornice below the dome of St. Paul's Cathedral. It is believed that this specimen, which is herewith illustrated, had taken about two hundred years to form. According to The Illustrated London Actes, to which we are inducted for our illustration, the mass contains one grain of earbon per 100 grains, and about half a grain of tary matter in the same weight of deposit. The chief constituent is gypsum or crystallized sulfate of lime, produced by the action of the suffuric acid of the city atmosphere on the

SMOKE DEPOSIT FROM ST. PAUL'S CATHEDRAL.

The size of the mass is shown in comparison with the thimble.

Courtes of The S. tentific American.

carbonate of lime of the stone of which St. Paul's is built. This sulfate of lime is first dissolved by, and then deposited from, the rain-water. During the formation of the coral-like mass, the tarry particles of soon are enclosed within it. In order to give an idea of the size of the piece, an ordinary thimble is shown beside it in the illustration."

More Missing Links Found.—The portions of a skeleton discovered by a Dutch army surgeon in Java and asserted by him to belong to a hitherto unknown creature, intermediate between monkey and man, have not yet been taken at their discoverer's valuation by all geologists, aitho there are plenty of scientific men who agree with him that in them we have the long-sought "missing link." But the "pithecanthropus erectus" (erect ape-man), as Dr. Dubois named his find, is now threatened with quite a number of rivals, we are told in The British Medical Journal. Says the writer:

Whether this particular skeleton link is maintaining its full original interest and reputation after the repeated examinations and criticisms to which it has been subjected is a little doubtful, and for the present also it would not do to dogmatize when speaking of the newest discoveries. Four sets of huntau remains have already been discovered in the grottos near Mentone during the researches lately ordered by the Prince of Monaco. They are stated to have belonged to the quaternary period, and they were found at no great distance from the surface. . . . The race they represent is believed to have had low-pointed features. The arms were long and distinctly negroid. The summary of the examination so far by Dr. Verneau seems to favor the idea that these human remains belonged to creatures holding a place between the baboons and negroes. The paleolithic age, geologically speaking, is not so very far away from the existing period, and Quatrefages believed that man had seen the miocene period; but he goes further than this. In his 'Human Species,' he says: 'We know that, as far as his body is concerned, man is a mammal and nothing more. The conditions of existence which are sufficient for these animals ought to have been sufficient for him also; where they lived he could live. He may then have been contemporaneous with the earliest mammalia, and go back as far as the secondary period." "

Is Obesity a Disease?—The conclusion that obesity does not depend allogether upon the quantity or quality of food or water absorbed—in other words, that it is not a matter of tegimen only, is reached by Dr. Gabriel Leven in a recent thesis, published in Paris (1971) and noticed in Modern Medicine (May). "He considers it a nervous disorder, and clies the influence of various nervous effects upon the deposit of fat. He regards obesity not as a disease, but as a symptom which may appear in a great variety of conditions, having, however, for a general foundation of most of depositions of the deposition of the deposition

goes on to say, "seems rather extreme; nevertheless it contains a sufficient amount of truth to make it worth while to keep in mind, when dealing with cases of this sort, the possible existence of gastric disorder."

The Deadly Oyster.—That the oyster often contains the germs of typhoid and that therefore it should not be eaten raw unless its origin is well known, are facts recognized by all medical men. Now we are told in addition by an Italian physician, Dr. Zardo, who writes in Le Sperimentale, that the oyster has its own pet germ which it nearly always contains, and which he has named the bacillus of Mytilus. Says Modern Medicine (Marv), in a brief abstract of Dr. Zardo's article:

"This germ apparently produces no harmful effect if the stomach and intestines are in a normal state, but if the gastric juice is not normal, in other words, if it is lacking in germicide properties, and especially if the intestine is not in a perfect condition, gastro-enteritis and general infection occur, which may result in death. In experiments upon guinea pigs, it was shown that the injection of this germ beneath the skin or into the peritoneal cavity gave rise to general infection, the germ being found everywhere in the body, even in the blood. The poison produced by this germ, when introducted into the body of a guinea pig in any way whatever, gave rise to interstitial hemorrhage, fatty degeneration of the liver, and necrosis. From these facts, it is plainly evident that the ovster is a very masafe article of diet, especially when eaten raw or imperfectly cooked, and that no person can safely swallow one of these bivalves unless assured that his stomach and intestines are in a thoroughly sound state. Even thoroughly cooked oysters may give rise to serious symptoms if there happens to be present a considerable number of poison substances previously formed by the germ, for while cooking destroys the germ, it does not destroy the poison produced by it."

#### SCIENCE BREVITIES.

WE are warred by The Laurer (London) not to open letters at the breakfast-table. They are nearly lades with gream which it is not well to mix with food. The envelope flaps and stamps that have been moistened by the human tonger may be bristing; with contamination. The envelope itself may have picked up injection while on the way, and if it has dropped in the mud. It probably is loaded with all sorts of contagion.

This solar temperature is lowestigated anew, in the light of the latest observations, by Proteoser Wilson in a memoir presented to the Loudon Royal Socialy. Says the Reme Soundiffying. "Researches made with a different solar production of the solar production of the solar production of the solar production of the solar solar production and ender new conditions devised for the purpose of remedying certain made under new conditions devised for the purpose of remedying certain decirc in earlier methods gave a mean temperature of \$775', using Roderist new conditions and the solar production of the solar

#### THE RELIGIOUS WORLD.

# RELIGIOUS VIEWS OF THE MARTINIQUE CALAMITY.

H OW can the horrible catastrophes by which tens of thousands of lives have been destroyed in the West Indian Islands be reconciled with the thought of a loving God? This question, which is being seriously discussed by several of the religious papers, raises anew a problem of some importance. The New York Truth Secker, the organ of the Free-Thinkers, has the following to say on the subject:

"It was the Lisbon earthquake which shook Voltaire's faith in a God who governs, who pervades all places and ages, and who has established a direct relation between himself and mankind. He was compelled to ask, What was my God doing? Why did the Universal Father crush to shapelessness thousands of his poor children, even at the moment when they were upon three knees returning thanks to him? The tragedy of St. Pierre ought to drive a sincere Theist insale.

"How the Christians can reconcile such an appalling calamity as this volcanic eruption with the conception of a good God who cares for his children, and without whose watchful supervision not even a sparrow falls to the ground, is one of those things which astonishes men who think. The inhabitants of St. Pierre were literally burned up and buried in the white-hot mad brite hot made from the crater and dropped upon the town. Such an act occurring through personal volition of any being would stand put the thing as a demon of infinite cruelty. Nothing could equal it except the creation of a hell in which billions instead of thou-sands are to burn forever. There are no words in any language which can describe such a being."

The calamity at St. Plerre is viewed by many of the inhabitnats of neighboring islands as a judgment of God. "While in St. Lucia," declares an officer of the British steamship Horace (as reported in the New York Herafa), "I heard several of the residents telling one another that they believed the destruction of St. Plerre was a terrible punishment sent by the Almighty on account of the wickedness of the city." A New York clergyman, the Rev. Dr. J. B. Remensnyder, has not hesitated to draw a similar conclusion. In a recent sermon on "Providence and Biblical and Recent Catastrophes," he compared the calamity Martinique to the destruction of Sodom and Gomorrah. He said further:

"A whole land is often saved from terrible calamities on account of the churches and praying people, and this world ties is but saved from flames that to-day would lick the very heavens and wrap the very highest mountain-tops in tongues of fine account of the little band of God's elect who are in it, and who fear His name, and whom He wills not to harm."

Such views as this, however, are prominent because of their very isolation, and are anything but representative. Yet all of the religious papers seem ready to admit that there is a grave problem involved. Says the Boston *Pilot* (Rom. Cath.):

"Why, oh, why, asks some troubled Christian, should these joyous, simple, believing people meet the fate of the godless and unspeakably wicked Pompeii and Herculaneum of old? Why is darkest London spared, while St. Pierre perishes? There is no better answer than that implied in the question of our estcemed contemporary, The Catholic Citizen, of Milwankee . 'Why do cities seat themselves in these volcanic valleys? Why do men expose their lives and the lives of their families to the dangers of such location?" As the rain falleth upon the just and unjust, so will the deluge of fire and lava overwhelm impartially saint and sinner in its progress. Christiau faith finds its comfort, iu such calamity, in the thought of life everlasting; the conviction that God's mercy overshadowed all the horror; and that the innocent and the penitent souls entering into the place of refreshment, light, and peace, through that awful trial by fire, say now with the apostle: 'The sufferings of this life are not worthy to be compared with the glory to come."

The Boston Watchman (Baptist) says:

"This problem baffles the author of the Book of Job, and all the discoveries of science and the light of the Christian revelation do not resolve the thick darkness that settles about it. When trouble comes for which we can see no moral autecedent and no good result, the irrepressible cry bursts from every human heart, 'Why'. And there is no answer but the answer of Job: 'Tho he slaw me, yet will I trust in him.'

"From our point of view the events of life are often wholly irreconcilable with our faith in the divine goodness. And yet we do not lose our faith. We believe that God is working out for us and for the race purposes of goodness that we annot understand. That, it seems to us, is the Christian attitude toward this problem. Christianity does not resolve it, while it makes many other solutions of it untenable. But Christianity, in its revealation of the Father, inspires a confidence in Him that is not shaken by our inability to understand His way."

The Pittsburg Methodist Recorder insists that great good follows even in the footsteps of the worst calamities. "With the carthquake's shock," it declares, "human nature asserts itself and a thrill of sympathy moves all hearts. The nation is richer because of the wealth of affection and charity which it poured out for these cities sitting desolate and in distress." And so disaster, while it is to be deprecated, yet "shows the better side of human nature and makes us respect ourselves and our humanity more." The Church Advocate, an organ of the "Church of God." published at Harrisburg, Pa., takes a decidedly original view of the "wholesome moral effect" produced by cataclysms. It says:

"They teach us how insecure are the most stable earthly things. The everlasting hills shall be removed. The earth itself shall perish, but the word of the Lord endureth forever. They remind us of the approaching end. And they may suggest how the final conflagration may originate. True, we do not positively know how. Yet it is our conviction that the fire for which the heavens and the earth which are now are kept in store, and by which the earth also and the works that are therein shall be burned up, is of natural, and not supernatural, origin. For there are allusions to volcanic fires as a mode of final destruction in certain very striking expressions in Revelation, Isaiah, Jeremiah, and even in Luke. And even the very nature of the soil of Italy, and of some of the groups of islands south of the Philippines and the Lesser Antilles has forced on many a mind in different ages the thought of physical preparedness almost for such a catastrophe. 'Be ye also ready, for in such an hour as ye think not the Son of Man cometh.' These events are not any less of God because between him and them are natural causes of whose existence the divine will is the cause."

# HIGHER CRITICISM IN THE ROMAN CATHOLIC CHURCH.

THAT the "time-spirit," which has compelled a restatement of the Presbyterian faith and a readjustment, among religious thinkers everywhere, of so much of the theological doctrine that was once accepted as fundamental, is also penetrating the Roman Catholic Church, has been apparent for some time to close observers. The cases of Dr. St. George Mivart and of Dr. Zahm are taken as indications, at least, of serious unrest, and the recent appointment of the Roman Biblical commission is construed to mean that the Pope finds it no longer advisable to resist the demand for a thorough investigation of the claims of the higher criticism. In the oninion of "Austin West," which nomde-plume is believed to cover the real name of one prominent in the councils of the Roman Catholic Church, the full significance of this papal commission is hardly as yet understood. To comprehend its true meaning, he declares, it is essential that we should be acquainted with the present condition of religious thought in the French Church, and with the record of the Abbé Alfred Loisy, who has been for some time the recognized intellectual leader of the radical school among the French Roman Catholics. In the opening sentences of an article in The Contemperary Review (April), this writer states:

"For nearly sighteen mouths past there has been pending in Rome before the Congregation of the Index and that of the Inquisition—commonly known as 'The Holy Office'—a case of exceptional interest, fraught with weighty consequences for the future of Biblical criticism within the Roman communion. Abbé Alfred Loisy, D.D., of Paris, who for some years has figured among the front rank of living exegetes in the Roman Catholic Church, and whose scholarly attainments in every branch of Senitic lore have won bim more than European fame, has been eacused before the Roman tribunals by Cardinal Kishard, as one who by his active sympathies with modern critical science is a troubler of the Catholic Israel.

For twelve years Dr. Loisy held the chair of Biblical exegesis in the Institut Catholique in Paris; but he was compelled to withdraw from that institution on account of the objection of its board of managers to his views on Biblical Inspiration. On his territement from professorial work Dr. Lossy was offered a chaplaincy at a numery in Neully-sur-Seine, which he accepted. During this period of comparative seclusion he redoubled his intellectual activities, contributing essays and articles to the leading ecclessicaled reviews of France. About eighteen mouths ago the Abbé was appointed lecturer on the comparative history of religions at the "Ecole Pratique des Hautes Studes" in Paris, and he still holds this influential position. Dr. Loisy's consistency since it is negard to Biblical criticism are summed up by the writer in The Contemporary Review as follows:

"(1) That the Pentateuch, as we now possess it, can not be the work of Moses.

"(2) That the early chapters of Genesis—probably the first eleven—do not contain an exact and real history of the origins of the world or of man; but rather the religious philosophy of that history. At the same time, these chapters may contain traditional memories of historical significance,

"(3) That the whole of the Old Testament literature (and various parts of single blooks does not possess a uniform historial character, all the historical books—even those of the New Testament—having been edited on free principles than those not no vogite in historical composition. Hence, as a legitimate result of therty in the composition, a corresponding blierty in the interpretation. The form of an inspired document being historical does not involve necessarily a real historical character; e.g., Our Lord's Gospel parables of the Good Samaritan, Dires and Lazarus, etc. It is the nature and content which determine the character of inspired records; it is the character which should guide soond excepts in its interpretation.

"(4) The history of religious discrine as set forth in the Bible bespeaks a vital development, in all its component parts, of the doctrine itself; e.g., the Idea of God, of human destiny, of moral

"(3) The Sacred Books, in all that pertains to natural science, present no contrast to the quasi-scientific conceptions which prevaled in the ancient world; and these conceptions, moreover, have left their traces not in Bible literature only, but likewise in Bible beliefs."

Dr. Loisy's writings have been severely censured not only by Cardinal Richard, but by other prominent French Ronan Catholic thinkers, including Fere Fontaine, S. J., Pére Charles Maigen, and the editor of the Dominican Revue Theoniste. On the other hand, at least one French Jesuit review has opened its pages to an indorsement of his views; the new Roman Catholic critical review in Italy—Studi Religiosis—has maintained a sympathetic attitude; and the English—that the Studies of the Catholic Scholar, Prof. V. McNablo, O. P., has supported the Abbé's conclusions in articles contributed to The American Excitation of Review.

It was this "case of Abbé Loisy," more than any other single influence, maintains the writer in *The Contemporary Review*, that impelled the Pope to appoint a Biblical commission, whose personnel represents the most broad-minded thought in the Roman Catholic Church. The writer concludes:

Be its future what it may, the international Biblical commission is of memorable importance in the third longest pontificate of history. It serves to mark a new epoch in the history of Roman Catholicism. It owes much to the loyalty and persevering labors of the Abbe Loisy, of whose denunciation to Rome it is the immediate sequel. Already there are omens of a coming agitation against the commission by adversaries scarcely yet recovered from their astonishment. But the Catholic savant finds his consolations in history, as Boethius found them in divine philosophy. He can have no misgivings whatever as to ultimate results. The modern scientific movement within the Roman communion has come to stay and to increase; and the mature decision of Leo XIII. can not but be regarded as a providential check upon that blind theological fanaticism, within even as without the church, which, with Canute-like arrogance, elects to sit by the shore with its face to the sea, cursing the inevitable incoming tide."

#### "THE GREATEST MISSIONARY SINCE THE DAYS OF ST. PAUL."

SUCH is the proud title bestowed upon Bishop William Taylor, of the Methodist Episcopal Church, who died in Palo
Alto, Cal., on May 18. "He was the greatest and most successful of all the Methodist evangelists," declares the Chicago Tribune, and "ranks with Francis Xavier and Adoniram Judson in
the pioneer character

RISHOP WILLIAM TAYLOR.

and wide area of his work." "His heroism," adds the Atlanta Constitution, "while not that of battle and blood, or of shipwreck and earthquake, was none the less splendid because it was that which calmly defied death in myriad forms and chances to make Christ known around the circuit of the world." Says the Springfield Republican:

"Taylor was a man of superb presence, tall, strong of frame,

and when his great genius of evangelism was certified by his appointment as bishop he was so splended of eye, so gray of head, and so profuse of beard, that many noted his striking resemblance to John Brown. He believed in Brown and had many points of likeness in character; but he was more often compared to Paul, the great apostle to the Gentiles-tho be certainly differed as much as possible from Paul physically, seeing that the apostle's lealily presence 'was weak and contemptible.' was an enthusiast. He never lost a particle of his fire from the time when as a youth of 20 he heard a voice in a dream saving: William, God has a great work for you to do, and if you will not confer with flesh and blood, turn neither to the right hand nor to the left, but follow the leading of the Holy Spirit, your wisdom will increase like a continual dripping into a bucket.' He was then a raw Virginia country boy; but the echo of that voice never faded from his consciousness.

Bishop Taylor began his Gospel work as a street preacher in San Francisco. In the fall of 1856 he conducted an evangeletic campaign in Canada. Later he spent seven months in Ireland and England, and visited Australia. "The work in Australia was continued two years and a half," declares The California Christian Advocate, San Francisco (Meth, Episc.), "and over six thousand souls were converted under his ministry," We quote further from the same paper:

"In 1865 he went to South Africa. Here the same divine power attended his ministry. In Queenstown District, Natal, Cape Colony, and among the Kaffes, his success was such as to awaken the entire misson-field. This was his first grapple with heathenism. Over seven thousand Kaffes were converted. He did not spend much time specialiting about how best to proceed, but simply and sublimely went at his task. He padd no attention where night overtrock him, in the jungles, among savages. The very wild beasts of prey, as in the case of Daniel, seemed to recognize that the hand of God was upon him.

"In 1877 he opened work in South America. Here he came in direct contact with the Roman Cathole Church in its most conservative form. He took a new tack. He began by opening schools. The whole country was densely ignorant. The English people who had settled in that country became at once his

apport,

"He revisited India and spent the early eighties strengthening his missions in India. In 188, he was a member of the general conference at Philadelphia. The general conference had decided to elect a missionary bishop for Africa. . . . Bishop Taylor was elected with great enthissism and, tho he was 6 y years of age, he put in twelve great years of service. He took hold of the dark continent with the grip of a giant. . . . .

"Bishop Taylor had a remarkable personality. He was not only tall and powerfully framed, but he had an eye as dauntess and penetrating as that of an eagle. He had self-concentration, self-reliance, and almost military control over himself. There was nothing difficult to him. He would seize his ax and whip-saw and put off into the Mendocino redwoods and come back in three months with a barge of humber. He would earry a steamer over the Stanley Falls on the Kongo. His faith and energy were alike indomitable.

"Bishop Taylor has been a sort of an embodiment of the great world-wide mussionary spirit and impulse of the church. Methodism has given to the world a Simpson, the greatest preacher of the century; she has also given the world the greatest missionary evangelist, William Taylor."

# AN ENGLISH WESLEYAN SCHOLAR'S "HERESY."

W IDESPREAD surprise has been created in English religions circles by the initial steps that have been taken to remove Prof. Joseph Agar Beet, D.D., from the position he has held for seventeen years as principal of Richmond College. This is the most important theological training-school of the Wesleyan Methodists in England, and Professor Beet, who has betured in this country at the University of Chicago and the Chatanqua Summer Schools, is generally regarded as one of the leading representatives of his denomination. The following view of the facts in the case is taken from The Christian Commonwealth (London, nonconfornists):

"The general committee which governs the four Wesleyan colleges, and periodically nominates the teaching-staff for election by the annual conference, has taken the extraordinary course of pominating some one else in place of Dr. Beet. He was appointed to his present chair in 1885, and in accordance with the rules of the church a fresh election takes place every six years. Dr. Beet has twice been reappointed, as a matter of course; but an attempt is now being made to depose him from his important office. This proceeding is the more inexplicable and lamentable in view of the great services Dr. Beet has rendered to Methodism and the church universal. Coming of an old and honorable family, whose devoted attachment to Weslevanism dates back to the time of the founder of the Connection, Dr. Beet has proved himself an exact, profound, and conscientious scholar, a brilliant and successful teacher, and a true friend and helper of young men preparing for the ministry. If Dr. Beet was old and infirm, the action of the committee might be understood, tho even then their method of procedure would be deplorable; but, as a matter of fact, the learned and devout principal was never so well fitted for his important position as he is roday, in his sixty-second year. His faculties are at their rijest, his experience is rich and varied, his enthusiasm for his church and the cause of Christ generally is unabated, and his physical health is excellent. Why, then, seek to depose and supersede so honorable, distinguished, and equable a servint of Christ?"

The answer to this last question is probably found in an interview in the same paper, in which Dr. Beet girse what he believes to be the cause of the hostile action taken against him. The objection made to his teaching, he affirms, is doctrinal, and is based on his views of the future punishment of sine expressed in his two books, "The Last Things" and "The Immortality of the Soul." We quote from the interview.

"'What are the views to which you refer?"

"'I am not prepared to assert the endless suffering of the lost, nor do I assert the ultimate extinction of the lost, I do not think that the Bible au-

thorizes us to teach dogmatically either of these two views,"

"'Do you hold any more positive views than these on questions of eschatology?"

"'I protest against the doctrine of the necessarily endless permanence of the soul—that is, the inherent immortality of every individual."
"On what

"'On w

"The absence of evidence in the Bible. The natural immortality of every individual is not taught in the Scriptures, and I can not

AUT. JUSTINI A. BEET.

find any evidence outside of the Bible to justify the assertion."

"What kind of immortality, then, do you believe in?"
"Eternal and blessed life for the righteous through Jesus

"'What do you think will be the fate of those who die impenitent in this world?'

"'What their ultimate fate will be I do not know. I am convinced that they will be punished, but I can not say how long the punishment will last, because the Bible does not tell me."

"How do you interpret such passages as those which say that the wicked shall be east into a furnace of fire, where there shall be wailing and gnashing of teeth?"

"That phrase occurs seven times, but in not one place is any-

thing said about duration.'

"'You are, of course, familiar with the argument that as the same word is applied to the duration of the felicity of the blessed as to the duration of the condition of the lost, a time limit in the latter case would, inferentially, involve a possible time limit in the other case?'

"'Yes; but I do not see that punishment necessarily involves consciousness. The loss of eternal life would itself be eternal punishment."

Dr. Beet maintains that these views are not inconsistent with the standards of the Wesleyam Methodist Church. Two Anglican bishops, the Bishop of Derry and Raphoe, Dr. Chadwick, and the Bishop of Worcester, Dr. Gore, have "publicly arowed the same belief": and Mr. Gladstone, in his "Studies Subsidiary to Butler," assumed "precisely the same attitude." It is true that in two of Wesley's sermions the endless torment of the lost is taught, but neither of them is included in the Fifty-three Sermons which Wesley limped selected as an embodiment of his teaching. The real issue at stake in this whole controversy, declares Dr. Beet, is "whether the Wesleyan Church shall permit or forbid its ministers to discuss those mitor doctrines about which they differ." The latter alternative, if accepted, saddles the Wesleyan Church with a policy that is "Romanist, not Protestant; Russian, not English." He says further (in a letter to The British Wesley):

"Whatever success I have gained is due to the fact that my whole life has been devoted, with the best aids within my reach. to study the Bible, as the only safe method of learning the truth revealed in Christ; that, whatever I have thus learnt, I have stated in plain and clear language, without fear and without reserve. This method, applied to eschatology, has roused the antagonism which now threatens to cut short my work at Richmond. But I can not disayow principles which a life of study declares to be sound; and therefore I shall not shrink from their consequences. Altho the evening of life is approaching, I am well able to continue the work I have done so long; but am not able to begin a new kind of work. If, in consequence of my loyalty to that I believe to be true, that work be interrupted and this eventide be overcast, I shall accept whatever may come, and lay it with joy as a lowly sacrifice on the altar of Him who, in order to bear witness to the truth, laid down His life.

The final decision in this case will not be reached until July, when the nominations for Richmond College will be submitted to the 600 ministers and laymen composing the representative session of the Weslevan Conference.

# "WAS GEORGE WASHINGTON A CHRISTIAN?" —THE CASE FOR THE AFFIRMATIVE.

In Nast week's issue of The Lyerary Digest we presented the argument made by Mr. Archibald Hopkins, clerk of the court of claims in Washington, in support of his contention that George Washington was a Deist, but not a Christian. The New York Tribure, which gave publicity to his statement, has simply the several interesting rejoinders. The first is from Senator Henry Cabot Lodge, himself the author of a biography of George Washington. He regards the following facts in regard to Washington's relicions life as bevond question

"Washington had a profound belief in God and in an overriling Providence. This is manifested throughout his letters in utterances so numerous that it is not necessary to cite them, Even those who dispute his Christianity admit that he was a Deist.

"He was a regular and constant attendant on the Episcopal Church.

"He was a vestryman for many years of his parish church, and it is at least unlikely that he would have held such a position in that church unless he had been regularly admitted to the communion and was in good and regular standing.

"He not only went to the church regularly, but he fasted on appointed days, as is proved by at least one entry in his diary.

"He believed in the efficacy of prayer, for he prayed regularly, and the proof is abundant that he would retire for prayer in times of stress and trial.

"He was generally believed by his contemporaries, with few exceptions, to be a Christian. Chief Justice Marshall, who was an accurate man, both in observation and statement, explicitly says that Washington was a Christian, and any one who will take the truble to examine the orations and addresses at the time of Washington's death will find that such was the general opinion of mea who knew him."

There is also evidence, continues Senator Lodge, which is "absolutely conclusive" as to Washington's belief in the divinity of Christ. On this point he says.

"In his circular letter to the governors of the States, dated June 5, 1783, à stute paper of the first importance, and prepared with the utmost care, Washington uses these words (Vol. X. of Ford's edition of Washington's Writings, page 256). The pure and benign light of Revelation." and on page 265 he uses this

phrase: 'The divine author of our blessed religion.' These last words are as distinct a declaration of belief in the divinity of Christ as any man could make, and they are deliberately used in a state paper of great moment."

Charlotte Morrell Brackett, of New York, supplements Senator Lodge's arguments with an account of General Washington's communion at Morristown, N. J., during the war. This is not a matter of "tradition," she declares, but of authentic history, preserved in the annals of the First Preshyterian Church of Morristown. The record runs as follows:

"While the American army, under the command of Washington, lay encamped in the environs of Morristown, N. I., it occurred that the service of the communion, then observed semiannually only, was to be administered in the Presbyterian Church of that village. In a morning of the previous week the General, after his accustomed inspection of the camp, visited the house of the Rev. Dr. Johnes, then pastor of that church, and, after the usual preliminaries, thus accosted him: "Doctor, I understand that the Lord's Supper is to be celebrated with you next Sunday. I would learn if it accords with the canons of your church to admit communicants of another denomination? The doctor rejoined, 'Most certainly, Ours is not the Presbyterian table. General, but the Lord's table, and we hence give the Lord's invitation to all his followers, of whatever name. General replied: 'I am glad of it; that is as it ought to be; but as I was not quite sure of the fact, I thought I would ascertain it from yourself, as I propose to join with you on that occasion. Tho a member of the Church of England, I have no exclusive partialities.

"The doctor reassured him of a cordial welcome, and the General was found seated with the communicants the next Sabbath."

Finally, the Rev. Dr. R. H. McKim, rector of the Church of the Epiphany in Washington, adds his testimony in support of the view that George Washington was a communicant of the Protestant Episcopal Church. He declares:

"Major Popham was a Revolutionary officer with Washington, and his high character is attested by Bishop Meade and Dr. Berrien, of Trinity Church, New York. In a letter to Mrs. John A. Washington, of Mount Vernon, he affirms that he attended the samechurch (in New York) as Washington during his Presidency.

"'I sat in Judge Morria's pew, and I am as confident as a memory now laboring under the pressure of eighty-seven years will serve that the President often communed, and I have had the privilege of kneeling with him. Myelderd analyther distant remembers hearing her grandmother, Mrs. Morris, mention the fact with pleasure."

"Dr. Berrien states that Major Popham's mind and memory at the time that he wrote these words were not impaired,"

General Porterfield testifies directly to the same effect, but the report of what he said comes through a third person. Dr. Mc-Kim quotes, in addition, from Baneroft, Sparks, Washington Irving, Lossing, Chief Justice Marshall, President Madison, Bishop Meade, Dr. McGuire, and Robert C. Winthrop, to sustain his conclusion that Washington was a Christian. He addi-

"The alternative is clear and unavoidable either Washington believed in the Christian religion as a revelation from God, and in Jesus Christ as its divine author, or he counterfeited that belief and is convicted a deceiver and a hypocrite.

"It is safe to say that the world will never believe that the latter alternative represents 'the true George Washington,'"

#### RELIGIOUS NOTES.

AT last week's session of Methodist Episcopal clergymen, held in Pitts burg, Bishop J. W. Hamilton announced that the annual reports of the Methodist Church show an increase of 90.000 members for the year just closed. This growth has largely been registered west of the Mississippi.

THE Federation of American Zionisis held its annual convention its para in lossion. Over the delegates participated in the deliberations, which were marked by considerable disorder. Rabbi Gothell, of New York, which was a survival to the constant of the Control of the Control

#### FOREIGN TOPICS.

#### EMPEROR WILLIAM'S BAD COMPANY.

THE German Emperor will associate with almost any one who has plenty of money, even the the man who has the money made it bimself,—such is the accusation brought against William II. by influential organs of German conservative opinion, which are asking if the monarchical principle can survive when millionaires are treated as if they were as good as Prussian barons. Says the Kédiniche Velkisztifung:

"It would be irrelevant to say that the Emperor can pick his company where he pleases. Certainly, he can do that. On the other hand, the people are at liberty to draw their own conclusions from such associations. Let us even assume that representatives of capitalism are accepted in court society. No German citizen would be entitled to utter censure on this account. Nevertheless, it is undeniable that politically such a thing must be of the most far-reaching import. The next thing in order is that aristocrats by birth and aristocrats of finance shall stand on the same level. In the end, however, the nobility would be borne down by the money princes, for in such a competition the former can not survive. The liberal press would hail such a 'rejuvenation' of court society with hymns of great praise, and inform every 'citizen' he had thereby himself won a victory and could feel individually flattered by it. . . . Above all things, however, let it not be forgotten that the money aristocracy, through its capital-without court favor or high influence-has already great power. If now it is placed above the German aristocracy, it will have everything. In this way would we really come to that Americanization of the world which Mr. Stead has set before us. For what is the fundamental idea of this American system? That the man who adds most to the national wealth and accumulates the greatest fortune is to be most honored."

If, therefore, it is really the case that the conservative agrarians are to be thrust to the rear while those are to be brought forward who have written industry and commerce, world politics and world trade on their banners, then Germany is on the eve of the greatest internal revolution that history can show. Thus the Kölmische Volkszeitung. To which the Humburger Nachrickten teotis:

"How would this transformation continue if the German Emperor had to grasp the sword and perhaps find himself obliged to march the German army columns both East and West in defense of the fatherland? Would the new aristocracy in such an event prove as strong a bulwark as the old?"

The welcome given by Emperor William to the newly rich is "one of the most noteworthy symptoms of the new time," says the Neueste Nachrichten (Leipsic), adding:

"It looks as if the tremendous uphaevals of modern life would overwhelm what is known in the haronial hall and ou the paternal acres as the old Prussian tradition. The Anglo-Savon conception of life, which sees its goal only it commercial undertakings and disparages every other pursuit, is throwing its shadow more and more over our people. . . . Many signs show that the Emperor's interest is most shown in the politico-commercial sphere, and in that mental energy which takes the direction of capitalism. It is guests [on his yacht] were not the heads of the old conservative noble families, not even representatives of the stringuished German citizenship, nor men who can be deemed guardians of the spirit of national idealism. Herein is a certain peril. For years, the representatives of the old Prussian tradition have had to stand asside.

The gloomy upshot of it all, according to this exponent of the good old times, is that "the conservative elements, those especially of the Prussian state, feel themselves placed more and more on the defensive, that in the hard battle they are fighting for the traditions of the past and for their own existence, they see diminishing the sympathy of him who has styled himself the first nobleman of Prussia." The pass to which things have come prompts the Social-Democratic *Corwarts* (Berlin) to offer its condolences with much ironical solemnity:

"Such is the new court society. Meantime the country squires in their rural seats raise the cry of fatherland, and as the countercial treaty combination steams northward with the Emperor, the tariff commission in Berlin imposes one hunger tax after another."

The "Emperor's friends" and the way they are to be treated are considered in a different spirit, however, by the Schleistche Zeitlung, which is indignant at what it seems to consider an attempt to raise dissension between the throne and the nobility. It adds this warning:

"Nothing is so dangerous to monarchy and so subversive of it as servilism and Byzantinism. The most disastrous results may conceivably ensue upon the popular mind if the notion is disseminated among the masses that they have no place even in the slightest thought of those in high position [that is, the Emperor himself], and that the people's most pressing needs are not to be taken into account...! It can only be deemed insulting to the wearer of the crown, and an attempt at subversion of the monarchical principle to convey the idea that those in high position may be affected by insinuations of the nature alluded to."—Translations namele for The LITERARY DIOSE.

# THE "AUSGLEICH" DIFFICULTY BETWEEN AUSTRIA AND HUNGARY.

THE act of union between Austria and Hungary is called the Ausgleich. A crisis lass asserted itself with reference to the renewal of this instrument and all the press organs pronounce it graw. Mr. Srell, the Hungarian premier, and Dr. von Kürber, the Austrian premier, have had fruitless consultations in Budapest. The trouble is due mainly to economic questions which the allied monarchies regard from opposite points of view. The commercial union of the two divisions of the monarchy seems about to be modified, and this is taken to portend ultimate political severance. In fact, the leader of the party of Hungarian independence, Frank South soon of the great Kossuth, set himself boldly against any concession to Austria. The Newe Freit Press (Vienna) says;

"In Hungary hitherto the insistence of the Austrian Goverument upon a hastening of the Austrian Hongottations, and the support which the ministry receives throughout Austria have been regarded with equable indifference or at least with the time of the properties of the properties of the time of the time has spoken, and that, too, in the most emphatic manner, Herr Franz Kossuth alleges that he hears a rumor that the crown has taken the side of Austria in the economic strife between that Power and Hungary. With a logic peculiar to Hungarian minds, he finds a confirmation of this rumor in the circumstance that Austrian parties which have bitherto fought one another are now united in the economic struggle with Hungary."

The paper then proceeds to deny that there is any foundation for the "rumor" reaching Franz Kossuth, either as regards the crown or as regards the significance of Austrian political unification. It concludes:

"From the fact that Herr Kossuth, altho warning the independence party against Austria's 'exorbitant' demands, can alege nothing more definite than these rumors so laughable to the well informed, it is clear that Austria contemplates no injury to Hungary and asks nothing but what is indispensable to her exonomic existence. To us over there it sounds, in view of all that has happened, like a mockery of Austria when anything is said of Austria's exorbitant demands."

Notwithstanding the repudiation of the rumors referred to in the above almost official interance, the well-informed correspondent of the London *Times* in the Dual Monarchy says:

"There is reason to believe that the Emperor-King is using the full weight of his influence with a view to promoting a compro-

miss between the two governments. In urging the two prime ministers to settle the question involved in a sense favorable to the renewal of the \*Installation\* the sworreign is said to have obserred that he would have lived all these years in vain if at the end of his reign the two halves of the monarchy should fall saunder. What hope remains of an agreement, and there is still some hope, is centered entirely in the great influence which the value and the said of the said of the said of the said of the said value and the said of the said of the said of the said of the said value and the said of the value and the said of the value and said of the value and the said of th

The Petter Lloyd (Badapest) insists that all the difficulties come from the Austrian side, and it warns the von Körber ministry not to insist upon impossible conditions. It also alludes to vague threats against Hungary which it says will have no effect. —Translation made for Tus Literakey Dusar.

#### THE TASK OF YOUNG KING ALPHONSO.

THE press of Spain has practically ceased to be taken seriously as a means of gaining information respecting the state of young Alphonso's realm. The ministerial newspapers are either hopelessly perfunctory in their comments or absolutely unilluminating. The opposition papers are apt to reflect the

KING ALPHONSO KID

personal views of some politician or they are in a state of censorship. Hence the samest views of the outlook, now that the young King has taken the oath and the regency has ended, are to be gleamed in the non-Syanish press. Interesting, as coming from a Clerical source, is this from the Correspondant (Paris)

"Alphonso XIII. may have a mission to fulhi in the great game of life of death that the Latin race is about to play on the shores of the Mediterranean. For many reasons, that the voice of the Vaticau has uttered time and again, it is the duty of the Con-ervative elements of the Pennusala to refrain from destroying one another with internecine strife. The peril is pressing cough to make harmony possible around this new name. If monarchies can not be restored everywhere, republics can not be acclimatered everywhere either, and the particularism of Spain requires a tie that can bind without compressing her union. The Catabolies, among whom Caftist loyalism has found its best recruits, remain the hope of their disturbed country. They can do nothing better than defend prunciples of public order, among which is respect for the constituted authorities. . . What has been the strength of Spain? I he popular costancy of her relig-

ious feeling, inspired, animated by the priest, wholly of the people in his good and bad qualities, the friar, the monk."

The education of the young King has been of such a nature as to make, him peculiarly a victim of his own inexperience, according to the Neue Freie Presse (Vienna):

"The youthful monarch has thus far come not at all into coutact with the people. He does not even know the men who

HON. J. L. M. CURRY. Representing our State Department at the Spanish Coronation.

hereafter may be called upon to conduct the affairs of the state. Tho he has occasionally left the protecting walls of the royal palace, no journey has taken him abroad. He assumes authority at a serious juncture, when his country, after many a riot, strike, and political crisis, is rent by Carlist and Clerical uprisings, and

the specter of Anarchy haunts Spanish soil. In the middle of these extremes, in a chaos of opinions and tendencies, appears the royal youth and takes in hand the reins of royal power."

Unless the newly sworn King shows unexpected strength, stormy times are at hand, observes the London Spectator:

"The reorganization of the army with the view of reducing the excessive number of officers is inevitable and it will be most difficult to postpone the question of the tenure much longer. Much of Southern Spain is held on the old latifundia plan, that is, in great estates, which are not let out in smaller blocks as in this country and Northern Italy, but are worked direct by the and laborers. Thus the

A PATENT THRONE FOR ALPHONSO XIII
OF SPAIN.

owners through bailiffs C an also be used as a trunk marked "Exile" and laborers. Thus the peasants are not peas-

ants in any true sense at all, having no rights, and living in villages often at a great distance from their work. They are therefore angrily discontented, and Señor Canalejas, tho a member of the ministry, has just publicly declared that the agricul-

tural problem must be solved, especially in Andalusia and Estemadurn, if there is to be peace. This ministry will not attempt that task, and before the year is over Spain, if she is to be kept quiet, will need a very strong hand."—Translations made for THE LITERARY DIGEST.

#### DICTATORSHIP IN ALSACE-LORRAINE.

THE dictatorship established by the German imperial Government in Alsace-Lorraine, the provinces wrested from France a generation or so ago, has been modified by Emperor William. The step is deemed radical by the European press, which seems to have been unperparted for the imperial order for the repeal of the so-called "dictatorship paragraph" in the conquered provincess. Says the London Times.

"The history of the paragraph in question may be briefly summarised. It was taken over into the new constitution of Alsace-Lorraine in July, 1879, from the law of December, 1871, which invested the Chief President, as he was called in those days, with powers 'to adopt without delay in the event of danger to he public safety all measures which he considered requisite' in order to deal with the crisis. . . In its practical aspects the exsistence of the dictatorship paragraph amounted to what has becalled a latent state of siege. The Statthalter, if he regarded the Alsace-Lorrainer or any German from the Recibaland, and be could suppress any newspaper appearing in that territory. On several occasions these powers were actually exercised."

The action of the German Emperor in directing the repeal of this paragraph is a gracious concession to the people of Alsace-Lorraine, and an indication that their loyalty to the German empire is appreciated, says the Conservative Kreuz-Zeitung (Berlio):

"The dictatorship paragraph has always been regarded as a weapon only for an energency, or, as the late inperial Chancellor, Prince von Hohenhohe, observed, as a waraing against anti-German agaitation. Indeed, the present Secretary of State, von Koeller, said in the Reichstag a few years ago that he had been four years in office in Alasce-Loranie as Under-Secretary of State without having read the dictatorship paragraph. That certainly shows that the exceptional provision had no practical significance. The matter remained completely ignored for years. Only recently has it been brought forward, since it was apparent that the thing could be magnified as a means of agitation, to in a begot rid of without thereby sarrendering any powers or diminishing them, the step can only be approved.

The measure shows that Alsace-Jouraine is firmly minted to the German fatherland, says that middle class organ, the Vossicke Zeitung (Berlin), a view which is echoed by the pro-German Post (Strusburg). The Humburger Nachrichten calls the imperial action one of "conciliation politics," which it does not wholly trust. The Newste Nachrichten (Berlin) is somewhat disgusted with the proceedings:

"The Emperor's generous act is not without its serious side. The French influences and tendencies have by no means caed in the imperial territory. Not until a critical period arrives with its threats of war and revolution will it be possible to decide whether Emperor William's act, which doubtless makes him popular in Alsace-Lorraine, was justified."

The French papers express delight at the news for the sake of the people of Alsace-Lorraine, but they seem unwilling to enter into its larger aspects. The fournal des Débats (Paris) says:

"The people of Alsace-Lorraine must alone he thought of by congratulating them upon a measure of elemency which makes life more endurable to them. And if it happened that William II. was inspired on this occasion, tho only slightly, by his often expressed wish to establish better relations with our own country, he has shown a consideration which can not be disregarded."

There is another side to the picture of Alsace-Lorraine, and it is given in *The Fortnigktly Review* (London), by the writer signing himself "Calchas," in an article entitled "The Revival of France." He wrote, of course, before the Emperor had issued his order.

"She [France] will not challenge war on her side, because of Alsace-Lorraine, but if war is to be faced, she will wage it for Alsace-Lorraine. Her bright temperament will never lose the touch of corrosion, which has eaten into it since 1870, until her pride of honor is restored. Her screnity is troubled, the verve of all her purposes is disturbed, there is an injury to all the luster of her past, a doubt as to the future, a doubt as to herself. Germany has not assimilated her annexations. France has not forgotten. The Alsatian conscript speaks German in the army. but French to the girl he weds. A generation after the conquest. provinces which would be two of the leading departments under the French republic are governed under the dictatorship paragraph, not like Bavaria or Baden but like Togoland and the Cameroons. Than the recently appointed State Secretary, Herr von Koeller, there has, at Strasburg, been no more despotic and vehement type of the Prussian bureancrat. The immigration from across the Rhine, of which so much has been made, is considerably smaller than is frequently imagined, and it would take several generations more, if reliance were placed upon that movement alone, to erente a German-minded majority."-Translations made for THE LITERARY DIGEST.

#### REACTION AND REFORM IN RUSSIA.

I N a guarded way the Russian papers are now discussing the significance and probable results of the new ministerial aport of the place of the assassunated Sipiaguine, Minister of Internal Affairs, has been given to V. K. Plehve, who was

never identified with Liberalism. There has been talk of the granting of a constitution by the Czar, and the papers, without referring directly to these foreign reports, show their cognizance of them hy recalling the projects of Loris-Melikoff, the dictator under Alexander II., who was known to favor a relaxation of autocracy. It is admitted that the Czar was about to yield to Loris Melikoff, and at the last

G. E. ZENGER, New Russian Minister of Education.

moment changed his mind and definitely joined the reactionary wing of his ministerial council. According to Prince Mestcherky, the Czar, in accepting the minister's resignation, expressed displeasure at his lack of sympathy with the principle of absolutism.

Plehve is declared to be a Conservative and bureaucratic official, and his task is to restore order and suppress peasant and factory-labor agitation. The new minister of education. G. E. Zenger, is suspected to be even more reactionary, even more opposed to the reform spirit. He has been teacher, professor, and associate minister, but he is a "classicist." He has adopted and translated Latin classics and written many monographs on classical subjects

The great problem in Russia, in education, is the modernization of the secondary institutions, the gymnasia. Vannovski, the minister who has resigned because, it is said, his reforms were not approved by the Czar, believed in eliminating Latin

V. K. PLEBYL New Russian Minister of Internal Affairs.

curriculum of the gynmasia and in making it liberal, progressive, and in harmony with the trend of education in the world at large. His successor is suspected of hostility to those ideas. and no one knows what the fate of the Vannovski pro-

burg Novosti says that Zenger is not an old - fashioned classicist, and that he will support the cause of freedom in

university life and liberalism in education. The Acrege Preorra, also auti-classicist, agrees with this view and expresses the hope that the reforms embodied in the Vannovski projects will not be shelved as the result of the change. The Moscow Vicdomosti, ultra-conservative, resents this veiled suggestion and says

"Minister Zenger is in need of no advice as to his policy; he knows perfectly well what he is to do under present circumstances, and all loyal subjects will pray that he may not encounter any obstacles to the restoration of order in our schools."

Assosti replies to this by saying that no munister is entitled to scorn proper advice, and that there are councils and committees whose special duty it is to disense, correct, and revise ministerial projects. Are not these committees desirous of knowing what the public and press think of current questions and needs? it asks. But the tone of all comment is nucertain. - Translations made for THE LITERARY DIGEST.

#### THE COLONIAL CONFERENCE AFTER THE CORONATION.

COMETHING important, as affecting the destines of the S British empire, is expected to occur at the conference of colonial premiers in London, immediately after the coronation of King Edward VII. The entire British press is taking up the topic. The Saturday Review (London) remarking

"Opinion concerning the colonial conferences which are to follow the coronation is rapidly crystallizing. The whole empire is awakening to consciousness that great issues hang upon the deliberations of Mr. Chamberlain and the colonial premiers. Mr. Deakin, the attorney-general of Australia, said in Melbourne on Monday that Mr. Barton was leaving on the greatest mission that had ever gone from Australia and Mr. Barton himself assured the eathering that the conferences will be no more appendix to a series of festivities. In 1897 the colonial representatives undertook to do all in their power to further the cause of imperial solidarity; much has happened since, and 1902 will show how far we have drawn nearer to the reality of federation. There will no doubt be some straight talk on the part of the colonial premiers whilst they are in touch with Mr. Chamberlain. They are coming to London in a very business-like mood if we may judge from their various utterances. Sir Wilfrid Laurier especially will have the opportunity, if he cares to seize it, of informing Mr. Chamberlain of the real sentiments of Canada toward the United States. The anti-Canadian and therefore anti-British action of the great republic has developed with the quickening of Canadian loyalty."

Nothing so very important, however, will be done at the conference, says The Weekly Scotsman (Edinburgh) :

"It would be unwise to look for any immediate great and defi-nite results. But if the other members of the Colonial Conference go into it in the same generous and untrammeled spirit as the Australian premier, seeking the general welfare rather than local advantage, we may be sure that the fruits of this imperial family council will be a blessing and a profit to the empire and to its every member."

A Canadian view of the matter is ufforded in an editorial utterance in The Herald (Montreal) which considers the Australian premier the most important factor in the situation. But

"We shall have the Canadian ministers attending the conference desirous only of conferring on matters of trade, and the Australian ministers unfavorable to military or political changes, and probably not desirous of any new trade arrangement other than neight be secured by the operation of new steamship lines the reduction of cable charges, and the like. If Canada and Australia are represented at the conference by statesmen who take that view of the matter, there is little likelihood of other projects of any magnitude being evolved by it, whether the meetings are held in private, as they probably will be, or whether they are held in public, as Earl Grey thinks they ought to be, so that in all parts of the empire the proceedings might be com-

mented upon from day to day, and pressure be brought to bear if the ministers do not rise to the occasion.

Meanwhile Austrahan public opinion would like to know how the new commonwealth is to be governed in the premier's absence. Says The Argus (Melbourne) :

"All are agreed at Mr. Barton that ought to attend the coronation. It will be an imperial event at which the Commonwealth should be representmost fittingly rep-resented by its first minister. . . . There is no trouble about the temporary leadership except the trouble of an embarrassing chaice. No criticism on pub-

#### NOTABLE BOOKS OF THE DAY.

#### SOME CLEAN FRENCH EMOTIONS.

MONICA AND OTHER STORIES. By Paul Bourget. Cloth, of a of inches. 18q pp. Price, \$1.50. Charles Scribner's Sons, New York

TAUL BOURGET has long since won his place as one of the foremost of those literary craftsmen of France who are grateful purveyors of beautifully written fiction to the reading world and who rouse the admiration of his brothers in art of whatever nationality. He is a Frenchman with a cosmopolitan training. The French language not only lends itself peculiarly to style; it almost coerces a writer to it. Paul Bourget's accords well with his personality and his mental and moral characteristics. It is suave, polished, graceful, and

stamped with gentleman's strength. But it is not as a stylist that he most commands attention and rewards it. It is the adequacy of psychological analysis, the assured insight with which he lays bare an emotion, the art with which he discovers the filaments of human passion, and coordinates them. He rarely takes a great crisis of the soul, some tragic force which is in

itself rending. His skill and individuality as a writer are more concerned in treating a situation not in itself especially striking or unusual, with a

model themselves on the French. Bourget is the French. of them is great, but, of the three, Bourget has the most finished excellence

The first of the stories, "Monica," is an admirable example of M. Bourget's merit. Even when he takes as his theme the sexual passion so constantly chosen by French writers, he refines it. In these stories, there is not a trace of that. "Monica" is refreshingly pure. Hippo-lyte Franquetot is a restorer of the chefoed ourse of the master cabinetmakers who contributed to the artistic glory of the reigns of the Louis. He is an artisan, un elerriste with a passionate love of the beauties of line, color, form, and workmanship which Bouile, Riesener, Cressent, Oeben, and others wrought into their pieces of furniture. A sturdy peasant type, as are his wife and daughter, Franquetot is elevated by this passion far above his class.

Monica is a foundling, whom Franquetot found in a basket, brought home and adopted. She develops the same tastes which distinguish him, and his love for her breeds jealousy in his wife and daughter. The latter tries to undo the gentle girl by imputing to her a theft, Bourget shows the nobility of Monica's character in the most tender fashion. The rugged bed-rock quality of the peasant nature in Franquetot and his wife is also spiendidly portrayed. In this sketch, so simple in motif and dealing with the humblest material, the artistic touch of Bourget is finely felt.

The other stories are " Attitudes," " Gratitude," and three slight incidents of war told with dramatic feeling. In "Attitudes," a widow, who has been married to a man master of every grade of simulation. discovers in her growing daughter the same aptitude and passion for pose. She also sees that an estimable young man is victim to these simulations, and frees him by a, to her, heroic measure, which lets him see her daughter as she is.

The book is interesting, as are all of Bourget's, by reason of his perfect technique, and the first story has a nobility which would commend it even if inartistically presented. It is not time lost to read them all-

#### A FIRST BOOK IN GORKY.

Tales from Gorgy, Translated from the Russian by R. Nisbet Bain, Ctoth, \$2.7% inches, 285 pp. Price, \$1.20 net. Funk & Wagnalls Company, New York.

TASTE for the "bitter," whether in English ale or in Russian literature, must be acquired. Maksim Gorky (Maximus the Bitter) is the apt pseudonym of the latest, and, in many respects. the most typical of Russian novelists, Aleksyel Maksimovich Pyeshkov. He was introduced to the American public less than a year ago through a translation of his first, and at that time only novel, " Fomá Gordyeef," which was reviewed in The LITERARY DIGEST under the heading, "A Jeremiad in Fiction."

And truly, with its caustic satire and mordant invective, it was a bitter book for the American public to begin on; nor did it turn, like St. John's book, to honey-sweetness when swallowed. We wanted to like Gorky, we felt that we ought to like him, but we couldn't.

England had a better introduction. It was R. Nisbet Bain, translator of the present collection of stories, who, almost two years ago, in The Pilot, of London, first called the

attention of English readers to the "strange history of a Russian tramp of genius," and, in other magazines, began publishing, from time to time, translations of Gorky's shorter tales. These were the works by which the author acquired his sudden and overwhelming popularity in Russia, and, with due allowance for national diference in literary taste, it is only natural that these were the works which would prove most palatable to non-Russian readers. Mr. Bain, by coilecting his translations into one volnme for publication in America, as well as in England, has therefore rendered excellent service both to the author and the Anglo-Savon public

MAKERN CORKY

Of the nine tales in the book, "Chelis the most noteworthy. On its appearance it was immediately halled by the Russian critics as a masterpiece. It will be so recognized by the American reader, and, therefore, is the tale to begin on, especially as it contains the germ of Gorky's social philosophy, which he developed in less artistic but fuller form in "Foma Gordyceff." As an exposition of the distorted "ethics of the tramp," the writings of Gorky will strangely startle and beneficently disturb the most complacent of bourgeois souls.

#### CONCERNING THE NICARAGUA CANAL.

FROM OCEAN TO OCEAN, AN ACCOUNT PERSONAL AND HISTORICAL OF NICARAGUA AND ITS PROPILE. By. J. W. G. Walker, U. S. N. Illussitated by original photographs and map. Cloth, 5% x 8½ inches, 3 9 pp. Price, \$1.21. A. C. McClurg & Co., Chicago.

IEUT. J. W. G. WALKER, U. S. N., has produced a rather valuable "handy-book" of the regions to be traversed by the Nicaragua canal. He sets forth the main points in the political history of the country and also in the history of previous canal projects, and explains the present plans, and in the course of a narrative of his experiences as a surveyor along the route of the canal, during which experiences he passed from the Atlantic to the Pacific, he presents a fairly vivid picture of the country and its inhabitants. It is rather difficult to ascertain whether the book is intended as a special plea for the Nicaragua canai route or not. The author says in his preface that, in making the inevitable comparison between the Nicaragua route and the Panama route, "the construction of a canal at either location is perfectly practical," and "the cost of completing the channels would be practically the same"; but the Nicaragua route would cost about \$1,300,000 more to operate than the Panama route. To offset this excess of eost, the hygienic conditions in Nicaragua are superior to those in Panama; the canal would be the means of establishing valuable commercial relations with Nicaragua and developing the country; and the sailing-vessels from the United States would save time by the more northern route. He passes over rather lightly some of the objections which have been made by geologists to this route, and, among others, the very important objection that the country is liable to disturbances from earthquakes and volcanoes. In this he follows the course of reasoning adopted by the government reports. canic activity," says Lieuterant Walker, " near the canal line is in a state of decadence." He acknowledges, however, that near this line there was a slight eruption as late as 1881. A prediction similar to Lieutenant Walker's was made by the advocates of a previous route in Nicaragua, who pointed out that the cathedral at Leon, near which the route was to pass, had withstood earthquake shocks for centuries. Presently thereafter an earthquake came which marred the cathedral at Leon and completely destroyed another church in the town. Geologists who can have no personal preferences in the matter of route are still not convinced that there is no danger of volcanic disturbances which might imperil a Nicaragua canal. There are other objections, such as the danger that Lake Nicaragua will not maintain its present height (statistics seem to show that it has fallen consider. ably within the last half-century), which Lieutenant Walker does not treat, and the reader would do well to consult other sources before making up his mind definitely that the Nicaragua route is best. But the history of the various canal projects, the history of the country, particularly of the fascinating passage which includes the exploits of Walker the filibuster, are very neatly presented by the author. His style is clear and pleasant.

#### DRIED LAVENDER AND CUPID'S DART.

THE WESTCOTES. Be A. T. Quiller-Couch. Cloth, 5 x 7% inches, 269 pp. Price, \$1 00. Henry T. Courses & Co., Philadelphia

T is long enough since the last novel of Mr. Quiller-Couch appeared to make the public glad for this modest volume. "Q" has his clientile of appreciative readers on both sides of the Atlantic, for

he has a literary flavor of his own which one can not leat relish. In "The Westcotes" he has taken a small canvas, but the conscientious, enameled elegance of his technique is well in evidence in the picture he has painted on it. Quiller-Couch is better at the short-story than at the novel, resembling Rudyard Kipling in this. "Naughts and Crosses," the collection of short stories by which he became well known, has some excellent specimens of this dainty branch of literary craftman-

In "The Westcotes, "there is little plot, but despite its staid, non-committal title, the love interest is quite marked and decidedly unusual.

A. T. QUILLER-COUCH Countries of Care at 1 Heartune

her, it does not appear on the surface.

As The Saturday Reviete said of it : " The Westcotes' is an episode treated with minite delicacy," and the episode is a love passage between Dorothea Westerde and Charles Raoul, French prisoner on parele in Axcester, a small town in Devonshire, But the lady in question is thirtyseven years of age, while the fascinating Gaul is a boy about twenty-one!

Here is a situation that calls for all of "O's" excellent judiciousness of touch to escape being ridiculous. It does escape that, and the denoument is quite in Quiller-Couch's manner. In his stories you get that most de-lightful, as it is also the rarest, thing In a story, a surprise. He swims smoothly along the limpid stream of his narration, and suddenly the unexpected rises, as suddenly as a trout

to a fly. The shock is exhibitating as a douche, tho sometimes, as in "The Westcotes," it has a shiver in it. The atmosphere of the story is vivid and true: this quiet, country town with its aristocratic county family of the three Westcotes-En dymion, forty-five; Narcissus, forty-two; and Dorothea, their halfsister. The time is about 1810, and a number of French prisoners taken in the war with Napoleon make an odd element in the sweet little village. General Rochambeau, the Vicomte de Toqueville, and old Rear-Admiral Wallly-Duchemin are among the more prominent ones; but the young Raoul is the figure of the story. Everything is with the soft pedal down, and altho Dorothea's love-affair is a tremendous thing for

### A BRILLIANT ROMANCE BY A NEW WRITER.

THE MISSISSIPPI BUBBLE. By Emerson Hough. Illustrated by Henry Hutt. Cloth, 5½ x75 inches, 45r pp. Price, \$1 50. The Bowen Merrill Company, Indianapolis.

T would be an easy matter to pick flaws in this as a work of fiction; the very reins which the author gives his imagination, together with the supernormal achievements of his hero. John Law of Lauriston, are enough to quicken cheap wittleism into motion. And yet it is the rapid flow of the author's creative Imagination that gives his story dis tinction and lifts it far above the dreary level of the average historical romance now issued. No new ground has been broken, for the territory covered has been fairly well traveled by other romancers. The scenes are laid shortly before the opening of the eighteenth century, when William and Mary ruled Britannia, Louis XIV, was on his death-bed, and Philippe of Orleans was looking to become Regent of France. London, the American wilderness, and brilliant Paris, each in turn tax the author's resources, and at no turn in the changeful route does his pen falter.

John Law, a hitherto unknown Scotchman, of Highland blood, comes up to London to press his fortunes. In the street one day with his younger brother, they notice Lady Catherine Knolleys drive past in her earriage. Law at once makes up his mind that she is to be his wife, and with no aid save that of ready wit and audacious will be forces himself upon her acquaintance and lays siege to her heart. The adroitness with which the love passages are handled displays at once the work of a born romancer; and between Law's success in love and winnings at the gaming-table, amid the highest London society, the reader's interest is kept agog. While we watch Law's tactics as master in the art of gambling, we are conscious the while of the masterly handling of his story through which Law's creator makes us know that his hero's success is no mere trickery, but the result of an inherent genius for finance. We are, in a way, prepared for the startling rôle which this young Scotchman plays several years later in floating the "Mississippi Bubble" in Paris, after fate, in the shape of an intriguing woman, has come between him and his true love and fooled him through his weakness of

Neither Dumas nor Balgae, in their different ways, has ever worked

EMERSON HOUGH.

out more successfully a love passage on the lower human plane than that in which we see Lady Catherine Knolleys's unprincipled friend come between her and Law, when the latter is in trouble, and wreck their love epic. How Law escapes to America with the woman who makes his luck a mockery, the separate rôles which he and she play in Virginia and New France, their separation and return to France (each under differ-ent auspices), and how Law's finaneial genius makes him practically master of Paris, must be left to the reader to discover.

The scenes at the French court are masterly in brilliancy of detail and audacity of fancy. In Law's final rescue, through the womanly mercy of Lady Catherine, the suscentible reader will be likely to close the book with a sigh of content; for

Law is the type of hero he could not brook to see go under, even tho his sins were tenfold what they are,

#### A NOVEL OF THE PHILIPPINES.

DANIEL EVERTON, VOLUNIFER-REGULAR. A Romance of the Philippines, By Byrael Putnam. Hustrations by Sewell Collins. Cloth, 12mo. Price, \$\frac{1}{2}\to met. Funk & Wagnaths Co., New York and London.

7 EGROS, Panay, Hollo, Manila,-have not these very swiftly become American sounds? Five years ago, following Daniel Everton across these lands and the purple straits that lie and wind among the tropic islands, we should have pronounced " Abracadabra" with as much significance. Since then we have learned the topography, and are half at home at the rich hacienda of Seftor Paris, and find the dim outline of Corregidor almost familiar, as we look out with Constance to watch the smoke pillars of the steamers entering the bay. Altogether the best touches in this book are the scenic suggestions, of which the reader even wishes there were more, and that some we have might have been extended. To have exchanged some of the less important dialogs for more scenery might have considerably strengthened the work.

The writer, however, has told an exceptionally good story. dramatic progress is well organized, and the fortune of the central characters is not buried under side issues. When Daniel has married a mestiza to realize the means of saving his father's honor, a less humane author might have bound him to his wheel as a mere matter of cold realism. But Mr. Putnam is an exponent of the "romantic" school, and so he considerately connives at the elopement and tragic death of the "half-caste" wife, and a triumphant reinstatement of the hero in the love and confidence of the heroine.

There is a glimpse in this book of a problem that is likely to be of more future interest than the political status in the Philippines. What are to be the social relations between Americans and Filipinos? Is there a society in the islands with which Americans can mingle on terms of social equality? Mr. Putnam has not discussed this question at

length, but he has raised it with considerable acuteness and force. It is possible that public interest in his novel will chiefly concern this question. The significance of it will inerease with the progress of our plan of "benevolent assimilation." king this story as expressing the views of an honest and intelligent writer who has personally observed the conditions of which he writes, it would appear that the task of social assimilation is about as hopeless as a similar effort would be in Mississlppi; while the repute of our democracy presages a shock of disappointment with a people who are proud enough-some of them-to constitute a local aristocracy, and who are tolerably cer-

tain to resent an American claim to

ISHAFL PUTRAM

social superiority. What will be the effect of our social and racial as sumptions, when it comes to an actual assimilative process, as yet not fairly begun? As a novel that raises these questions, and hints at some of the vast difficulties in the way, this book may certainly claim to be timely.

he did so is shown by the following anecdote related by the stenographer :

Gambetta went to Berlin with his valet and engaged the best suite of rooms in a fashionable hotel. He had shaved off his beard and would not have been recognized on a Parls boulevard. He took his meals in a private room adjoining the public dining-room, with which it communicated by a curtained window.

On two or three occasions Gembetta saw this curtain move and inferred that he was being watched. Finally, one day, instead of his nwn valet who usually waited upon him, a botel waiter appeared and said, in good French :

"Monsienr, I am sure that you are M. Gambetta."

"Nothing of the sort. Who said so? I don't even know the man.

"I can not be mistaken, monsleur. Frenchman and I have waited on you in a Paris café. I tought for my country in 1870 and I feel compelled to wern you that Rismarck is having you watched and that the police are at your "I thenk you very much, my man," said Gam-

betta. "Another word, M. Gambette," the waiter con-

tinued. "When you declare war again, I will come back and fight for the flag." Gambetta pressed the man's hand, enjoined

silence, and left Berlin by the next train .- Translation made for THE LIVERARY DIGEST. Senator Frye and Agassiz, - Senator William

P. Frye, author of the Ship Subsidy bill, is an ardent lover of the sport of fishing. On one occusion, says The Saturday Evening Post (Philadelphia), after his return from his summer onting to the Penobscot woods of Maine, he met the celebrated naturalist, Agassiz, to whom he described his experiences.

"Among the triumphs," said he, "was the capture of a speckled trout that weighed fully eight

Doctor Agessiz smiled, and said : "Reserve that for the credulous and convivial circles of rod and reel celebrants, but spare the feelings of a sober scientist."

"This is not a campaign whopper I'm telling : I weighed that trout carefully, and it was an eightponnder."

"My dear Mr. Prye," remonstrated Doctor Agassiz, "permit on to inform you that the salvalinus fontinalis pover ettains that extraordinary weight. The creature you caught could not have been a speckled trout. All the authorities on ichthyology would disprove your claim."

"All I can say to that," replied Senator Free, "is that there are, then, bigger fish in Meine than are dreamed of in your noble science." parted, Mr. Frye added, marrily : "If you will established a sammer school somewhere under the shadows of Mount Katabdin, I'll wager that It will not be long before you will have occasion to alter your text-books."

The pext season found the statesmen at his usual avocation in the Meine words. One day be caught a speckled tront that weighed nine pounds. He packed it in ice and sent it to Doctor Agaselz.

A few days later be tramped to the station where he received his mail and telegrams. One of the latter was an epigrammatic measure from the great scientist, which Senator Prye cherishes to this day. It reads :

"The science of a lifetime kicked to death by a fact.

Price of a Shave, - A man walking through the suburbs of a certain large town poticed a barber's pole to which was attached a signboard with

the inscription, "Shaving One Halfpenny. His chin being rough and his funds low he promptly entered the shop, seated himself in tha chair, and asked to be shaved.

The knight of the razor carefully lathered and scraped away at one side of the customer's face sponged it, and drew the cloth away with the usual flourish.

"But you don't call this finished?" expostulated his victim, kneping his seat. "Beg pardon, sir, do you want the other side

done as well?" said the burber with a halr-olly amile. "Cert'nly I do. Do you think I can go out in

the street half-shaved?" replied the other. And the barber proceeded to operate on the other aide of his customer.

When the job was finished the man, who began to amell a rat, fumbled in his pockets and fished out a halfpenny, which ha tendered to the barber. GOUNTRY ENAME EXCLUSIVELY

#### A Hint to New Solvers

We receive almost every day attempted solution of problems published in THE LITERARY DI-(41.81, with the key-move a "capture" or a "check." You may be certain that you are wrong if you attempt to solve our problems by taking a piece or by giving check, on the first move. We do not entlish that kind of problems if we know it. The Chess-editor :s too husy to write to every person who attampts to solve problems in this way. You may be sure of this fact : the solution published in Tits Digest is the only solution. If you tried it any other way you are wrong,

#### The Franklin-Manhattan Match.

A match was played on Memorial Day, between is of the mambers of the Franklin Chess-Club of Philadelphia, and an equal number of the Manhattan Chess-Club of New York, at the rooms of the latter club. Result, 9 to 6 in favor of the Manhattan Club.

#### From the Monte Carlo Tourney.

PHIABILBY OF IPLAYS MASON

Irregular Opening. PILLSBURY.

Notes by Emil Kemeny.

(a) Which turns the game into a Queen's Gam-bit Declined. (b) The position now shows an even development, but Black has gained a move.

(c) Preferable, perhaps, was Kt-Kt a. (d) Q-R 8 was hardly better.

(e) To guard against Q -B 7. Better was P-Kt 3 (f) An important move; Black now obtains a decided advantage.

(g) An exchange of Queens would prove disas-trous, since the Black King would quickly enter the Queen's wing, capturing the Pawns (h) White might have played K-B sq. followed eventually by K-K sq. bringing his King into play. The text-move wins the game.

(i) Q. Kt 6 at onea could have been played. The test-move invites the P-Kt 3 play, which will make Black's Q-K 3 move more formidable.

(k) Q x P ch, would have lost speedily, since llack wins the Pawns on the King's side,

#### Cooking Made Easy.

The growing denand for a cooking apparatus that would be a monty-aving device and of great convenience has constraint and a state cooker in four sections; in a closed at the dishes of a meal can be cooked together, without misping of odors. A finely distanted catalogue, telling all about the Ideal Steam Cooker as a convenient household article will be sent free upon request. Readers of THE LITERARY DIORST are asked to mention the publication when writing to advertisers.

# Five Hundred Dollars Cash Given for **Common Sense Advertising Suggestions**

An Hour or Two of Your Vacation Time May Earn You More than Enough to Pay for Your Whole Summer Outing : : :

#### IT WILL TAKE COMMON SENSE, NOTHING MORE

WHAT IS WANTED—We want suggestions in the way of "points" to be used in advertising the historical novel of Bible Times, "TARRY THOU TILL I COME." We want only suggestions—not finished advertisements; we care nothing for your rhetoric, or even for your grammar; we care only for your suggestive ideas, these in the rough; in writing advertisements we try to put ourselves in the place of the possible buyers. Now we want the possible buyers to change places with us and tell us what kind of thoughts would be likely to influence them to buy.

Outsiders give often the best suggestions. The inventor of the "Cotton Gin" had nothing to do with the cotton business. He was a clergyman, Bessemer, the inventor of the Bessemer Steel, was not even an ironmonger. A man in a business is apt to get into ruts; What is controls him. He is bound by his habits of mind. An outsider will often see at a glance great faults, and the remedy for them.

A professional writer of advertisements is almost sure to fall into ruts, and

get too far from the people, hence we make this offer. Lawyers, preachers, teachers, business men-anybody with common sense -who can think what would be apt to lead them to buy a book, can join in this

#### BRAIN BOUT FOR VACATION TIME

Will not this be pleasant recreation for you during your vacation? It will be a novel thing to measure yourself along new lines. Why not try it? Fathers, have your boys and girls try it.

School teachers, 'mid your fun, jot down advertising suggestions.

### CASH PRIZES FOR THE BEST SUGGESTIONS FOR ADVERTISING THE BOOK "TARRY THOU TILL I COME"

1st Prize, \$250 2nd Prize, \$100 3rd Prize, \$50

4th Prize, \$30 5th Prize, \$20 6th to 10th Prizes, \$10 each

In all \$500

CONDITIONS (t) As it is heipful suggestions which we want and are willing to pay for, it is natural to approve that the best results can only be obtained from a fairly large field of contestants. The larger the number of ourgestions received. and accordingly the more diversified and valuable will be the total from which the winners are to be chosen. Therefore-This contest is contingent upon a sufficient number of persons

signing and returning to us on or before July 15, 1902, the coupon below (or a copy of it) to make us certain of receiving a reasonably large number of suggestions make us certain or receiving a reasonatory large nature or suggestions.

(2) After notification by us, in no Instance before July 15, 1902, you are to send us 80 cents (half the regular price of "Tarry Thou Till I Come," about cost, inclusive of postage) and we will send you, postpald, a copy of the book. Each contestant is thus placed on the same footing to learn the strong features of the book, the reading of which alone may offer a

winning suggestion. (3) Contestants may send in as

many suggestions as they please.

(4) Where more than one contestant sends in the same suggestion, which is afterwards declared a winner, the contestant mailing his letter first will receive award. Postmark of mailing to be taken as a basis.

(5) Awards to be decided upon by a committee chosen from the business staff of the LITERARY DIGEST.

(6) Contest closes on October 1, 1902. All entries must reach us on or before that date.

Remember "Tarry Thon Till 1
Come" Is the book of which tien.

## BODY HEAT

#### Reduced 20 Degrees in Summer.

Never eat heavy carbonaceous foods for the morning meal, for these foods should follow and not precede hard work

The best morning foundation is Grape-Nuts and cream, a little fruit, a cup of l'ostum Food Coffee and possibly a couple of eggs prepared to suit the taste this breakfast is sufficient to satisfy the hardest work-

er, either of brain or muscle, until the noonday meal Particularly is this true at the present season of the year, when meat and other fatty foods increase the internal heat of the body and make the summer

day still more disagreeable.

Grape-Nuts come to you from the grocer ready to serve, having been fully cooked at the factory by food experts, and this saving in time and exertion is appreciated by the housewife as well as the economy, for being a concentrated food, four teaspoonfuls is sufficient for the cereal part of a meal for one person and costs only one cent.

A booklet of excellent recipes is found in each package of Grape-Nuts from which many easy and delicious warm weather dishes can be made for lunchcon and supper that are not only nutritious but pleas-

ing to the palate.

A trial of the above selection of food for ten days will prove to anyone that health and vigor, an active mind and a keen enjoyment of the pleasures of summer will take the place of poor digestion, a dull brain and that heavy draggy feeling caused by improper food during the hot weather. THE

# POSSESSORS. 49,762 PURCHASERS, or HEIRS Wanted.

TO THE OWNERS OF THE COPIES of the Genuine, Complete, and Authorized Ninth Edition of the ENCYCLOPÆDIA BRITANNICA imported into the U. S.

All persons who have bought or inherited genuine sets of the ENCYCLOPÆDIA BRITANNICA will learn something very greatly to their advantage if they will at once communicate with us. We do not wish the names and addresses of those persons who bought sets of us, for such names we already have. Nor do we wish the names of those who have bought pirated, garbled, imperfect, and mutilated sets, and we therefore state that the imported and authorized copies bear the imprint on the title-page of Adam & Charles Black, of Edinburgh and London; or Charles Scribner & Sons, of New York; or of Samuel H. Hall, of New York. Undoubtedly many owners of the garbled and imperfect sets will write us for what we are prepared to send you, and in order to secure ourselves against them, we ask you to look on the final page of any one of your volumes, and state in your letter the name and address of the printers which you will find there. We shall then know from that name and address whether the writer has one of the genuine or one of the imperfect and pirated copies.

All persons who have the authorized ENCYCLOPÆDIA BRITANNICA, and will communicate with us at once, will learn something of great profit to themselves.

70 Lafayette Place, New York. 44 Fleet Street, London. Kntered at New York Post-Office as Second-Class Matter.

### TERMS OF SUBSCRIPTIO

PRICE.- Per year, in advance, \$1.00; four months, on trial, \$1.00; single copies, se cents. Poreign postage, \$1.50 per year.

RECEIPT and credit of payment la shown in about two weeks by the date on the address label, which includes the month named.

POST-OFFICE ADDRESS.—Instructions concerning renewal, discontinuance, or change of address should be sent two weeks prior to the date they are to go into effect. The exact post-office address to which we are directing paper at time of writing must always be given.

PRESENTATION COPIES.—Many persons subscribe for friends, intending that the paper shall stop at the end of the year. If instructions are given to this effect, they will receive attention at the proper time.

### VACATION NOTICE TO SUBSCRIBERS

Subscribers desiring to receive THE LITERARY DRIEST at their variation addresses will oblige us and save themselves annoyance by complying very carefully with the augustion made in the third paragraph above concerning "post-office address." Send notice at least two weeks in advance, attaining the date when the change is to go into effect. Similar notice should be given when subscribers are returning to their permanent addresses.

# TOPICS OF THE DAY.

# PEPUBLICAN ATTITUDE TOWARD ULTIMATE PHILIPPINE INDEPENDENCE.

A NY one who reads the papers carefully has noticed a slight but perceptible change of helm lately by a number of Republican journals in their course of thought on the Philippier problem. During the last few weeks, while the achievement of Colain independence has been such a prominent topic, the idea has gained currency that some time the Filiphos may be given their independence in the same way. The President himself, in his Memorial-Day address, said a few words on this matter that have aroused comment. He remarked:

"We believe that we can rapidly teach the people of the Phillippine islands not only low to enjoy but how to make good not of their freedom; and with their growing knowledge, their growth in self-government shall keep steady pnee. When they have thus shown their capacity for real freedom by their power of self-government, then, and not till then, will it be possible to decide whether they are to exist independently of us or be knit to us by ties of common friendship and interest."

Such a possibility, that the Filipinos may some time "exist independently of us," has not heretofore been openly considered by the journals that support the Republican Philippine policy, and their indorsement of it is a new position. Whether it is the beginning of a general movement toward treating the Philippines as Cuba has been treated or is only a passing phase of popular thought, it is too early to say.

A number of influential Republican journals have been strong and consistent advocates of ultimate Philippine independence were since the discussion began. Among them may be named the Philadelphia Ledger and North American, the Boston Advertier, the Buffulo Express, the Pittsburg Dispatch, and the San Francisco Call. There is no change in their attitude. But

it is something new for the Cleveland Leader (Rep.) to say that "what the United States has done for Cubn may be done some day for the Philippines," and for the Brooklyn Times (Rep.) to remark that "in time the United States will produce in the Philippines the same miracle which was wrought yeaterday in Cuba." The Kansas City Journal (Rep.) admits that "perhaps independence may be granted some day," and the Chicago Tribune believes that if the Filipinos "ine a progressive race, as the Japanese have shown themselves to be, the future will see the independent if they desire independence." And it is predicted by the Boston Kecord (Rep.) that "before September 15, 1944. Theotore Rooseveit will have taken the first official steps looking to the establishment of self-government in the Philippines along much the same lines as those laid down in Cuba." The New York Tribune (Rep.) says:

"At every stage the Republicans have kept the ultimate disposition of the islands an open question. Ultimate independence may be the solution, but nobody can say that is the wise solution till pence is established and the capacity for independence tested. It is not a thing to be promised blindly, even to disard urmed to the encouragement of those enemies to persist in war till they can extort the independence which their advocates here tell them they ought to have. First must come peace, bringing to the Filiphions civil government and personal freedom according to our bill of rights. Then our Government and the Filiphions can consider how best their happiness can be subserved.

Another equally loyal Republican paper, the Philadelphia \*\*Press, also makes the Cuba-Philippines comparison and urges that the Filipinos be made "free and self-governing as are the renlly free peoples." To quote:

"The United States has brought Cuba to a point where it was best for Cuba to withdraw, and the United States has withdrawn.

"As this promise has been kept—tho all the world doubted—so our promises in the Philippines will be kept. The task is harder. The problem is more complex. Mixed races and an Asiatic environment render progress slow. But the work will be done. Peace has come. Order will be created. The reign of law will begin. Self-government will succeed. Antonomy in due season will be possible. Whatever is then best for the Philippines and the Asiatic problem, of which it is a part, will be done, whatever may be done, exactly as now we are doing what is best for Cuba and the American problem, of which it is a part.

"The Cuban promise has been kept. The Philippine pledge, will be kept. The American people can be trusted. It seekes no conquest. It desires no alien territory. But where the American flag is put it will 'stay put' while it has work to do, as it has in Cuba and as it will in the Philippines—the final solution being dictated by the purpose and determination to make its people free and self-governing, as are the really free peoples."

The Indianapolis fournal (Rep.) says:

"It appears that the only difference between the avowed poicty of the Democrats in the Senate and of the Republicans is that the former would promise the Filipinos Independence without condition except to protect them against foreign interference, while the latter would make it conditional upon their capacity and purpose to maintain an independent government. If the long and aimless discussion has had any influence whatever, it has been to drive the Democrats in Washington to practically abandon the policy of 'scuttle' and adopt the more honorable one of occupying the islands with the promise of independence when the inhabitants are able to maintain stable and free government.

The declarations in favor of Philippine independence made by President Schurman of the first Philippine commission and by ex-Secretary Long should also be noticed here. None of the anti-expansionist papers seems to be coming over to the expansionist side, but a number of the leading Democratic papers, such as the New York Journal, the Atlanta Constitution, the Louisville Courier-Journal, the Nashville American, and the Memphis Commercial Appeal, have favored the expansionist policy from the beginning, and show no signs of shifting the rudder now. Nor have the rank and file of the Republican press experienced the change of thought indicated in the above quotations. The leading organ, perhaps, of those who are determined that the flug shall "stay put" is the St. Louis tilobe-Democrat (Rep.). It says:

"The flag which is up in the Philippine islands will stay up. . . . Two or three years hence when all the Filipinos will be shouting for the retention of American sway in the archipelago, the present flag-furlers will be either denying that they ever proposed to sneak out of the Philippines, or will be acknowledging that their course, if followed, would have been disgraceful for the country and fatal to all chances for the regeneration of the islands. The Republican party, the party which does things, is as united, as harmonious, and as enthusiastic to-day as it was during the canvasses in which it elected

# EFFECTS OF THE BOER SURRENDER.

HIS country and the world at large, so several papers remark, will soon find some phases of the South African peace decidedly interesting. Great Britain's visible loss of commercial prestige has been coincident with her expenditure of nearly \$500,000,000 a year in war and the withdrawal of nearly 200,000 men from productive occupations. Now that peace has come, this expenditure will cease, this force of men will be returned to industrial activities, the Boer forces will line up in the British industrial ranks, and the gold-mines of the Rand will nour from \$100,000,000 to \$150,000,000 a year into the world's money market. What the result of all this will be upon the currents of trade, the conditions of prosperity, and the level of prices here and abroad is a question the answer to which is awaited with considerable interest and concern.

That the terms of peace will make for the prosperity of South Africa is pretty generally conceded. The Chicago Evening Post calls the terms "surprisingly generous," and the Richmond Disbatch considers them "exceedingly liberal," Some of the British war party, indeed, it is reported, think them entirely too liberal. Secretary Chamberlain, who, the Boston Journal remarks, "hase been kept in the background "during the present negotiations, is said to be of the opinion that the King's desire for the consummation of peace before the coronation has resulted in a had blun-

> der, and that "the empire has been sold for a circus." King Edward has exerted a surprisingly strong influence over the Government, it is said, and his efforts have been ably seconded by General Kitchener and Lord Milner, the British high commissioner in South Africa. The terms are far better than those offered to the Boers a year ago, and the Detroit News and other papers remark that the seemingly useless fight that the Boers have kept up has brought them very substantial returns in favorable peace conditions.

The pro-Boer papers in this country

ANGEL OF PEACE: "Come, Uncle Sam, stop chasing that Filipine boy, and join the choir ! - The New York American and Journal

THE SURRENDER IN QUIP AND CARTOON.

seem to accept the peace terms as cheerfully as do the burghers in South Africa. Thus the Philadelphia North American says:

"The Borrs have forfeited their independence, which they must have done in any probable event; but their long struggle againt overwhelming odds has not been truitless. The more closely the terms of peace are studied the more clear; it must appear that they are surprisingly favorable to the Borrs. The Borrs have been forced to abandon their demand for annesty for all British subjects who took up arms in the Borr cause; but on the other hand they have secured from General Kitchener the assurance that while all Cape and Natal rebels are to be disfranchised, in so case shall the death penalty be infitted.

"In other respects the Boers have gained practically all the conditions Botha previously offered to accept. All burghers outside the limits of the Transvaal and Orange River Colony, including prisoners of war, who declarer themselves British subjects, will be returned to their homes without loss of liberty or property, and the British Government will make a grant of \$15. 00,000 for the restocking of the Boer farms and inaugurate iliberal system of land loans. Furthermore, no special tax will be imposed on landed property to defray the expenses of the

VISCOUNT KITCHENER.

war, so that in a material way the Boers will not fare badly. The distinct pledge is given that a civil government will be established at the earliest possible date, and, following that, representative institutions and self-government, when circumstances permit, will be introduced. The Dutch language is to be taught in the school where desired, and allowed in the courts. This again violates the precedent which Chamberlain set himself in Malta.

"On the whole, the settlement promises well for the future of the annexed territory. The chief danger will lie in Cape Colony, where the continual presence of a large body of Dutch, who are barred from the framehies for life, will tend to embitter all of Dutch descent and leanings against the Government. In all probability, if events progress satisfactorily, the British Government in due time will find it expedient to remit the penalty of armed rebellion. Ow imposed upon subjects who have been in armed rebellion.

A less optimistic view, however, is taken by the Chicago Tribune, which says:

"The Boer republies have been blotted from the map, but the Boers remain. The Boers have ceased their fight for independence, but they still cherish the thought of independence. So long as they do that and have the superiority in numbers in South Africa, so long will the South African question remain un-

A NEW PORTRAIT OF KING EDWARD

settled. The wonads of a civil war are soon healed. The Whigs and Tories of the revolution soon forgot their animosities. The North and the South are at peace. Where civilized men of one race are subjugated by eivilized men of another race a spirit of undving hostility appears.

"The Irish are unreconciled still. The Polish provinces of Prussia have been a part of the kingdom for more than a een-

SIR ALFRED MH.NEH, British High Commissioner of South Africa,

tury, yet Prussia finds it necessary now to take steps to strengthers the German element in the Polish provinces. It is proposed to spend over \$50,000,000 in colonizing German farmers in East Prassis and Posen. If Great Britain can colonize South Africa with men whose children will not imbibe the sentiments of the Boers when they grow up and can send enough of them there to outsumber the Boers, then there will be an English South Africa. Otherwise at some future day the Boers will seek independen and a great Boer republic may succeed the two small ones which have been extignished.

"Great Britain has disposed of the first great problem, that of compelling the Boers to lay down their arms. There now axis compelling the Boers to lay down their arms. There now axis it the second great problem, that of governing the men whome only the direct need has driven to submission. It is a problem the solution of which calls for the greatest tact, delicater, gentle firmness, and many other qualities needed for the successful goverment of an unwilling people. There have been occasions when the British Government or its agents have been lacking in these qualities. Until it shall have been demonstrated that the English are able to Anglicies Bouth Africa it will not be expelled in assume that Boer independence is dead. It may be merely aleeping."

The end of the war brings into greater prominence than before the general who brought it to a successful close. Says the New York Tribune:

"Another name is added to the roll of Great Britain's national heroes. For some years Kitchener of Khartoum has been a marked man. To-day he is in the foremost rank of those whom the British, from King to commoner, delight to honor. The King promotes him from the rank of a baron to that of a viscount, and her flouse of Commons by a practically unamonus vote—for the Irish opposition was a perfunctory matter, of course—votes him the British army to-day that ranks with his, and disparty of age and the sure processes of time will presently leave that of 'good old Kitchener' supreme.

"From the American, and therefore democratic, point of view the career of Lord Kitchener is full of sympathetic interest. It is a noteworthy instance of rising from the ranks by sheer force of merit. Born a commoner, without family influence or political 'pull,' Horatio Herbert Kitchener has attained such success as only a handful of men of his generation in England have In his time he has played many parts, and he has played them all well. Volunteer in the Franco-German War, surveyor and mapmaker of Palestine and of Cyprus, planuer of the one practical scheme for the rescue of Gordon at Khartoum. which failed only because it was negatived by the crass folly of political superiors; Sirdar of the Egyptian army, redeemer of the fellaheen, destroyer of Mahdist deviltry, and avenger of that Gordon of whom he was not permitted to be the rescuer; author and founder of the Gordon Memorial College at Khartoum, organizer of victory in South Africa and preserver of the British empire in that quarter of the globe, and henceforth destined to be at the head of the Indian army, and doubtless commander-inchief of the British army, he is a fine example of what may be done by one of humble origin, even in a land of hereditary privilege and aristocratic pride."

# SIGNIFICANCE OF THE OREGON ELECTIONS.

THE result of the elections in Oregon on June 2 has elicited considerable press comment. Outside the fact that it was the first state election of the year, it also shows, according to the Republican and a few independent papers, that the policy of the Present Administration is upheld by the Republicans in Oregon. The Chicago Post (Ind.) thinks that the election "indicates that there is no disastifaction among Oregon Republicans and Independents with the policy of the Reosevelt Administration and of the party now in power," and the New York Sun (Rep.) says it "indicates no reaction on the Pacific coast against the Administration and present the Administration and present the Administration and present the Administration and republican policy in national affairs." The Hartford Times, which is an anti-expansionist paper, believes that "with odimination of the Republican amjorities for members of Congress it may be argued that Oregon says, 'Hold on to the Philippoines.' We admit that this election result means just that, and

it also means 'never mind the wishes or the hopes of the people of the Philippines,"

The Democratic candidate for governor, George Chamberlain, was elected by a small plurality, but all the rest of the state ticket was elected by the Republicans with about 10,000 plurality. It is stated that the election of Mr. Chamberlain was due to a split in the Republican ranks, and that the trouble was due to the fact that Pernish, the Republican rankindidate for governor, was a gold Democrat, who went over to the Republicans after 1500.

The Indianapolis Sentinel (Dem.), however, looks upon the election of Chamberlain as a significant Democratic victory. It says:

"The result of the Oregon election is the greater surprise because it has been commonly believed that the Pacific slope enenthusiastically in favor of expansion in the direction of Asia, and would give an emphatic indorsement of the Administration." Philippine policy. Instead of that the Republicans are congraulating themselves on what they saved out of the wreck.

"The Oregon election comes as a message of good cheer to Democrats everywhere. Like the town elections a few months ago, it indicates that the people are weary of Republican misgovernment, and are really to make a change. And certainly it is time that they should do sake a change that certainly it is time that they should do sake a country being placed more rapidly in the control of privileged classes than this one is."

# FINANCIAL FAILURE OF THE CHARLESTON EXPOSITION.

THE Charleston Exposition, which closed May 31, is reported to have been a financial failure. The amount of the deficit has not been ascertained. "The Exposition was not a financial success, but its losses were not overwhelming by any means," says the Charleston Pest, for "they should not be considered otherwise than as investments, just as advertising is." The Columbia (S. C.) Yaste says:

"The successful expositions that have been held in this country have been held in large cities, with many suburban towns and planted in thickly populated areas. They were easy of access to millions of people, and the attendance of millions was secured by quick transportation at low rates. How different it was with Charleston! The white people of that city number only about 24,000, and outside the city the white population is very sparse until a distance of about 100 miles from the coast is reached. The negroes constitute a negligible quantity in exposition attendance, so the abounding black population of the coast region did not count for the success of the big fair. And there were not as many white people within 75 miles of Charleston as within 25 miles of Nashville or Atlanta. Thus, most of the visitors to the exposition had to be drawn from the middle and upcountry of South Carolina and from other States, and the time and money required for these long trips kept the number of such visitors down to a minimum. .

"There can be little doubt that the exposition, difficult as it was to draw crowds to it, did pay the people of Charleston-owns to make the work of the control of the cont

"The people of this country are tired of expositions," says the Cheago Tribbare, for "since the World's Fair at Chicago, exposition has followed exposition in rapid succession, and nearly all, if not all, have been reproductions of the Columbian Exposition in the leading features, but on a smaller scale." The postponment of the Louisiana Purchase Exposition at St. Louis for a year was wisely determined upon, says the same paper, for "had it been given in 1903, the time originally fixed, it would certainly have invited the fate which overtook Omaha and Buffalo and has visited Charleston."

# FAMOUS AND UNKNOWN AMBASSADORS.

SOME remarks on the kind of men the United States sends to the Court of St. James and Great Britain sends to Washington have been called out by the appointment of Nichael Henry Herbert to succeed the late Lord Pauncefote as mnbassador. Nothing but good words are heard for Ambassador Herbert, but it is noted that he is

MICHAEL HENRY HERBERT, New British Ambassador to the United States.

comparatively unknown beyond the British Foreign Office. The same was true of Lord Pauncefore, who made his reputation here. The press despatches from London speak of Mr. Herbert as being comparatively unknown there also He was Secretary of Legation in Washington in 1888-89 and 1892-93. and married an American wife, Miss Leila Wilson, daughter of R. T. Wilson of New York, and sister of

Mrs. Cornelius Vanderbilt, Jr.; but he does not seem to be known outside of the diplomatic and social circles of Washington and New York. The New York Time; notes these facts "with a sense of regret, a feeting akin to humiliation." and contrasts the names of the menwe have sent to the Court of St. James—Lowell, Phelps, Bayard, Hav, and Choate.

No reflection upon the worth or ability of the new ambassador seems to be intended in these comments, but rather a wish that Great Britain would adopt the American plan of sending prominent public mea abroad as representatives at foreign capitals. There is no expectation that Great Britain will reform its diplomatic service along this line, but it is reported that the British Government will do the next best filing—place their embassy at Washington on a level with their embassies to the other great Powers. The Boston Transcript says:

"The announcement that with Mr. Herbert's accession to office the British embasy to this country will be raised to the first rank, in standing, pay, and emoluments, if correct, means that the British Government has with its slow conservations at last come to the conclusion that the United States is as important a Power to it as France or Russia. Herefore the salary of the British ambassador at Washington has been little more than two thirds that of his colleague at Paris. Since the United States has become a "world power" the necessity foreign governments are under of being represented at Washington by men in touch with the world will work for the improvement of the diplomatic corps at Washington.

"The diplomats at Washington representing the great Powers as a rule men of good standing in their own countries, but within the memory of Washingtonians not old that city was the refuge of some who were but the 'vagron men' of diplomacy. Some of this class were sent to Washington because they had to

be 'taken care of ' and were not regarded as able enough for European service; others were banished for blunders in Europe, and some resided in Amerien because their residence in their own country was inconvenient to some of its political leaders. Two of these 'vagroni men' received polite hints from our Government that their room was better than their conjuany, one because he was detected in intrigues with American politicians, and another because only his diplomatic immunities prevented his being arrested for debts due the butcher and baker.

"There is no member of the diplomatic corps in Washington now, we believe, who comes within the category of bad characters, at least as far as the public knows, but there are one or two to whom our Government would express only purely consentional regrets on the occasion of their departure from the United States."

### TWENTY YEARS OF STRIKES.

T was in 1880 that the era of strikes began in this country, and in the twenty years from 1881 to 1900 there were about 23,000 of these industrial wars, or more than a thousand a year, These interesting figures are given by Carroll D. Wright, United States Commissioner of Labor, in The North American Review. and he adds the still more interesting fact that nearly fifty-one per cent, of all these strikes were successful. Thirteen per centspecceded partly, while 36 per cent, failed. The strikes lasted an average of about 24 days, and more than 6,000,000 employees, all told, were out of work for a loager or shorter period. This idleness resulted in a wage loss to them of nearly \$255,000,000, while the loss of their employers was about \$123,000,000, or less than half the loss of the strikers. Most of the strikes were caused by disputes about wages and hours. "The "sympathetic" strikes and strikes based entirely on demands for recognition of umons failed in the great majority of cases. Six lines of industry scem particularly liable to strike-the building trades, the coal and coke industry, the manufacture of metals and metallic goods, and the clothing, tobacco, and transportation industries. Of the total number of strikes in the twenty years, 59 per cent. were in these six industries, including 77 per cent, of the total number of establishments affected and 72 per cent, of the total number of employees involved.

What of the geography of strikes? Mr. Wright says on this point:

"The distribution of strikes offers occasion for some very serious reflections. During the twenty years included in the report, New York shows the largest number of strikes as well as the largest number of establishments affected, that State having 8.5 sper cent. of the total number of strikes in the country during the whole period, and 32.00 per cent. of the total number of establishments involved. Pennsylvania follows, with 12.45 per cent. of the total number of establishments involved. Illinois had 17.55 per cent. of the strikes and 17.65 per cent. of the strikes and 17.65 per cent. of the establishments involved. Illinois had 17.55 per cent. of the strikes and 17.65 per cent. of the establishments affected.

"In a group of States consisting of Illinois, Massachusetts, New York, Ohio, and Pennsylvania, there were 8,878 establishments under strike during the period, out of a total of 117,509 inthe whole country; that is, in this group of States the establishments involved were 74,78 per cent. of all involved. These States contained 45.0 per cent. of the manufacturing establishments and employed 5,15 per cent. of the capital invested in the mechanical industries of the United States."

Strikes indicate intelligence, says the commissioner, but arbitration indicates more intelligence. To quote:

"Whatever the exact truth, the approximate statements are sufficient to convince any right-minded person that every effort that can be made to adjust differences and deal with grievances in such a way as to prevent an open outbreak should be encouraged. Such attempts, where honestly and faithfully made, are leading everywhere whether in the United States or in other countries devoted to manufacturing industries to satisfactory results. The organization of private boards of arbitration now being resorted to in this country, following the long-successful example in the industries of Great Britain, is meeting with success. It is recognized now that labor conflicts grow out of increasing intelligence. The avoidance or adjustment of such conlicts must be the result of increased intelligence. Fools do not strike; it is only men who have intelligence enough to recognize their condition that make use of this last resort. With increased intelligence they will look back upon the strike period as one of development; and when they shall have accommodated themselves to the new conditions, and when employers shall have receives by the new conditions, and when employers shall have receives will be handled in such a way as to prevent in the father a repetition of incidents like those which are chronicled in the statistical history of the strikes of the last twenty years.

### STRIKE RIOTS IN CHICAGO.

THE most serious rioting that had occurred in Chicago since the railroad strike in 1894, so the despatches say, was seen there last week in connection with the teamsters' strike. And the strikers woo, in spite of the now accepted principle that strikers who riot lose. The striking teamsters were in the em-

"ONE NEVER KNOWS WHAT ONE CAN DO UNTIL ONE HAS TO,"

- The St. Paul Proper Press.

ploy of the big meat-packing firms, and while the strike lasted little meat could be delivered, and Chicngo faced the prospect of becoming vegetarian. After three days of disorder, the governor and the state board of arbitration came to the rescue, most of the strikers' demands were granted, and business in the Western metropolis was resumed. The Philadelphia Press thinks that the success of the strike was not due to the riots, but was attained in splic of them. It says:

"The success of the strike, if such it can be called, was due to to the mob violence which marked its progress, but to the fact that public sentiment was found to be overwhelmingly against the meat packers. It was this force which determined the issue of the strike. Without it all the missile throwing and lawlessuess which disgraced the ten days of trouble would have been in vain. The meat packers had alienated public sentiment by showing a callous indifference toward it and by using a tem-

porary scarcity of cattle as an opportunity to advance the pine of meat much beyond the figure that conditions authorized. As a consequence, when their employees struck and demanded share of the enormous profits the packers were making, the public looked on with amused indirectnee or sympathized with the

"The result is a victory for public sentiment and not for moviolence. It demonstrates the fact that a corporation can not run counter to public interests and look for support from the people when it is in trouble. The bricks and stones throw and the lawless acts committed in Chicago were probably by sympathizers and not by the strikers themselves. But they would have accomplished little had not the great public shown plainly on which side its sympathies lay. This makes public options the determining factor on such occasions, a fact which should lead all labor organizations to seek its support by making their cause justs and by discarding all violence as a means to success."

Says the Buffalo Express:

"It is disgraceful that the husiness interests of a city should be interfered with the way they have been in Chicago in the Las few days. Such occurrences are the strongest possible arguments for compulsory arbitration. The general sentiment of the country does not as yet favor this method for settling labor disputes, but every such outbreak as has taken place in Chicago must make new converts to the plan. The ideal method for settling disagreements between employees and employers is seggested in the policy of the National Civic Federation, but if capital and labor will not enter into voluntary disension. In State and the computer of the computer

# WHAT CONGRESS IS DOING FOR THE PHILIPPINES.

WHATEVER may be the form of government for the Philippine Islands in the distant future, the form of government now is a matter of more pressing importance, and it is this matter that is engaging the present attention of Congress. The Senate has one plan and the House another; and while it is not yet certain which will prevail, it seems to be the general impression among the newspapers that the main features of the Senate bill, which passed that body last week, will become law. According to the Senate bill the Philippine government will be administered by a civil governor, vice-governor, and commission, appointed by the President, with a system of courts whose judges shall be appointed by the American authorities in Washington and Manila. The municipal and provincial governments, however, are to be popularly representative so far as the commission deems the people fit for such government; and when the insurrection is over, the commission is to take a census and advise the President and Congress" whether or not all or certain of the Philippine islands are capable, fit, and ready for the establishment of a permanent, popular, representative government." The Senate bill also provided for the free coinage of Philippine silver dollars to pass at about 50 cents' value in our money; pro vides for the acquisition by the Government of the land new held by religious orders, and provides for franchises and concessions for railroads, mining, timber-cutting, etc. The people are declared to be citizens of the Philippine Islands and under the protection of the United States.

The Philadelphia Evening Telegraph (Rep.) declares the measure "as libera, as generous, and as just as the most existing friend of the Filipino people could demand," and the Baltmore Herald (Ind.) asyst: "Compared with the Spanish last under which the Filipinos were taxed and builted for ecenture, the present bill is freedom itself, and beyond this is the certainty that the American laws will be administered by clean hands."

In opposition to the measure, the Buffalo Express (Ind. Rep.)
deplores the features of the bill which throw the forest and mi-

ning lands and the railroad franchises open to American exploitation; and the Philadelphia Record (Ind.) says in similar vein:

"Nor have the Senators lost sight of the real object of their bill, which is the exappropriation by aliens of the mineral resources of the archipelage. While the bill requires all money obtained from the lease of any portion of the insular public domain to be covered into the Philippine treasury, care has been taken to relieve the mining syndicate from the payment of any rent to the Philippine Government. The mineral lands are not to be leased, but granted outright under letters-patent; and nothing is to be paid for the metals, oil, or coal taken out of the land of the Filipinos by persons bearing to them the relation of foreigners.

"The Senate evidently agrees with Senator Stewart, who characterized the Flippinos as 'pirates and barbatans who would of course, resist the march of civilization." It would not do for course, resist the march of civilization." It would not do for course, remit such riff-arfi to stand in its path when there is a lot of gold, silver, tin, oil, and coal to be rescued from their pirate and barbarlan hands. The considerations that these toes to civilization have a prior title and should at least receive a fair remuneration for what may be taken from them weigh as nothing. Americaus (syndicated) must first be given opportunities to make money out of the Philipipnes, to quote the classic phrase of Senator Lodge. When the Philipipne orange shall have been squeezed dry the Filipinos can have it and welcome."

The free-silver colunge feature of the bill is strongly opposed by the Manila Freedom and Volcano, the New York Journal of Commerce and The Bankers' Magazine, and it is not favored by the silver organs in this country. Says The Bankers' Magazine.

"It is difficult to understand the purpose of the proposition that the United States shall open its mints to the free coinage of any form of silver dollar. This is the proposition of the Senate committee on the Philippines, however, in providing the monetary system of the islands. The committee is not content with substituting an American silver dollar for the Mexican dollar now in use, but proposes that this dollar shall be coined on private account, and that the mint at San Prancisco as well as the mint at Manila shall be open for this coinage. The project affords an

WORSE THAN THE WATER CURE.

Senator Hoar would have the Filipino come to America and testify before the Senate Committee of Inquiry.

- The Denter Republican.

opportunity for the holders of all the surplus silver bullion of the United States to convert it into legal-tender money and unload it on the Philippines.

"There are serious objections to this proposition, even if the silver standard is to be perpetuated in the Philippines. The Senate committee seems to have been strangely careless in its definition of the new coin. It is called a dollar without qualifcation. Traders in the East who recognize the American dollare, whatever its material may be, as the equivalent of one hundred cents in gold, are likely to be puzzled, if they are not swindled, by the appearance of a dollar worth less than forty cents. This dollar is made legal tender for debts in the Philippines. Under operation of this proposed measure Americans accustomed to make contracts in dollars would be compelled to specify the kind of dollar intended, unless they desired to become involved in serious losses and prolonged litigation. The issue of silver certificates in terms of the new dollars would only add to the confusion and compel every one who received American paper in the Orient to subject it to a careful examination to determine whether it

represented dollars of one hundred cents or dollars of forty cents. "In addition to this source of confusion in the colnage of the Philippines, there is grave danger that the new silver coins would become a source of trouble in the domestic circulation of the United States. They would not, of course, circulate in large quantities, but they might be worked off here and there upon the careless and the ignorant as the equivalent or nearly the equivalent of the corresponding denomination of American money. This happened with the 'trade dollar,' and every one old enough to remember its history knows that it was a source of infinite confusion and annoyance. The trade dollar was availed of by mascrupulous persons to make the difference of about the cents between its bullion value and its face value, by passing it upon the public. The tendency to prepetrate this fraul would be multiplied many times when the profit upon the bublic. The tendency to prepetrate this fraul would be multiplied many times when the profit upon the bublion employed was 150 per cent. instead of 100 r 12 per cent.

"American laborers and tradesmen ought to make their protest heard in Congress against any renewal of the annoyances and frauds connected with the trade dollar."

# CHILD LABOR IN THE SOUTH.

TWENTY thossand little children are "toiling out their lives in the textile mills of the South," says a recent magazine writer; and she blames, not the Southern people, but the New England capitalists who own the mills. She is Mrs. Irene Ashby-MacKayden, who has been heard from before on this subject, and her present article (in The American Federationit), Washington) is the frint of a recent trip through the South. Many of these little toilers work for ten cents a day, and she knows "of babies working for five and six cents a day." The "day" is often from 6 a.m. to 6 p.m., or, worse, from 6 p.m. to 6 h.m., when she found "little children working from dark until long past dawn, kept awake by cold water being dashed into their faces." She says, on the subject of night-work:

"Without regulation of hours there is no reason to prevent the mills working at night, and when they can do so profately they avail themselves of this permission. I have talked with a little boy of seven years who worked for so nights, in Alabama, and another child not nine years old, who at six years old had been on the night shift it months.

"A clerk in a cotton-mill told me that little boys turned out at two in the morning for some trivial fault, afraid to go home, would beg him to allow them to go to sleep on the office floor.

"In Georgia it is a common sight to see the children of cotton operatives stretched on the bed dressed as they came from the mills in the morning, too weary to do anything but fling themselves down for rest.

"In South Carolina Miss Jane Addams, of Chicago, found a child of five working at night in the fine, large, new mills. Only a few weeks ago I stood at 10:30 at night in a mill in Columbia, S. C., controlled and owned by Northern capital, where children who did not know their own ages were working from 6 r.m. to 6.m. without a moment for rest or food or a single cessation of the maddening rack of the machinery, in an atmosphere meaning and ordered with humidity and lint."

The health of the children is not improved by this treatment. She says, in fact:

"The physical, mental, and moral effect of these long hours of toil and confinement on the children is indescribably sad. Mill children are so stunted that every foreman, as you enter the mill. will tell you that you can not judge their ages. Children may look, he says, to be 10 or 11, and be in reality 14 or 15.

"A borrible form of dropsy occurs among the children. A doctor in a city mill, who has made a special study of the subject, tells me that ten per cent, of the children who go to work before 12 years of age, after the years contract active consumption. The lint forms in their lungs a perfect cultivating medium for tuberculosis, while the change from the hot atmosphere of the mill to the chill night or morning air often brings on pneumonia, which frequently, if not the cause of death, is a forerunner of consumption.

"How sternly the 'pound of flesh' is justisted on by the various employers is illustrated by the case of two little boys of and 11, who had to walk three miles to work on the night shift for 12 hours. One night they were five minutes late and were shut out, having to tramp the whole three miles back again. The number of accidents to those poor little ones who do not know the dangers of machinery, is appulling.

"In Huntsville, Ala., in January, just before 1 was there, a child of eight years, who had been a few weeks in the mills, lost the index and middle finger of her right hand. A child of seven had lost her thimb a year previously.

"In one mill city in the South a doctor told a friend that he personally amputated more than a hundred babies' fingers mangled in the mill. A cotton-merchant in Atlanta told me he had frequently seen mill-children without fingers or thumb and sometimes without the whole hand.

"So frequent are these accidents that in some mills applicants for employment have to sign a contract that in case of injury in the mill the company will not be held responsible, and patents or guardians sign for minors.

"No mill-children look healthy. Any one that does by chance, you are sure to find out has lost recently begun work. They are characterized by extreme pallor and an aged, worn expression infinitely pitting and incongruous in a child's face. The dull eyes raised by the little ones inured to toll before they ever learned to play, shut unt by this damnable system of child slavery from liberty and the purvait of happiness, often to be early to be a compared to the purpose of the control of the probabel of life itself, are not those of a child but of an imprisoned proach. There is unfortunately no question as to the physical debasement of the mill-child.

Elbert Hubbard has also been making a trip through the Southland; and the condition of the children in the mills impressed him so deeply that he writes a feeling article in *The Philistine* about it. He says:

"I know the sweatshops of Hester Street. New York: I am familiar with the vice, deprayin, and degradation of the Whiechapel district; I have visited the Ghetto of Venice; I know the lot of the cod-miners of Pennsylvania and I know somether of Siberian atrocities; but for misery, wo, and hopeless suffering. I have never seen anything to equal the cotton mill salvery of South Carolina—this in my own America—the land of the free and the home of the brave!"

He goes on to describe one of the little fellows in the mills as follows:

"I thought to lift one of the little toilers to ascertain his weight. Straightway through his hitty-five pounds of skin and bones there ran a tremor of fear, and he struggled forward to it as broken thread. I attracted his attention by a touch, and of ferrel him a silver dime. He looked at me dumbly, from a face that might have belonged to a man of sixty, so farrowed, lightly drawn, and full of pain it was. He did not reach for the money he did not know what it was. . . . There were ducens of just such children in this particular mil. A physician who was with their places filled with others—there were plenty more. Pueumonia carries off most of them. Their systems are ripe for disease, and when it comes there is no rebound—no response. Medicine simply does not act—nature is whipped, beaten, discorraged, and the child sinks into a sutpor, and dies.

Mrs, Ashby-Macfayden says that there is hope that the legislatures of Alabama, Georgia, and South Carolina may, at their next sessions, pass laws prohibiting the employment of children under twelve, altho the efforts in that direction thus far have met uniform failure.

On the other side, The Manufacturers' Record (Baltimore) says that Mrs. Ashby-Macfayden "and others of that class" "should bear in mind that the South is slowly but surely working out its own salvation in labor matters as in others, and that interference on the part of theorists and sentimentalists with eyes on one point alone can only complicate the conditions and bring disaster and suffering njoin the very class they would benefit." So, too, thinks the Galveston Arore, which says:

Women and children who work in factories are made up largely of those who have no other opportunities. The main question is not whether they have just what we prefer that they should have, but whether they have, bad us it may be, the best they can get. Has any provision been made for them elsewhere? Are their sympathetic friends ready at the door to receive and provide for them? Is their condition in the mill, laundry, cannery, factory, bakery, or shop as good as the condition of thousands of others who would gladly exchange places with them? Will it really belo them to deprive them of a chance to work even in a mill? Most of these questions must be answered with a negative. We would all prefer it otherwise; but eloquent appeals to the pride and sympathy of the people and to the natural ove of the young have not yet made it so. At this time, as The News sees it, the opportunities of the young as well as the old should be doubled over and over again by a general multiplication of manufacturing establishments in grand old Texas, and nothing should be done to discourage the good work which we have so well begun in this line."

# LETTERS AND ART.

# INFLUENCE OF THE DRAMA UPON THE MASSES.

THE theater undoubtedly ministers in large measure to the desires of the well-to-do, and it is sometimes assumed, probably not without a basis of truth, that the drama has been devitalized because its appeal has been made too exclusively to those who have money and leisure. And yet, as we are reminded by Miss Ettaabeth McCrackeu, a Boston settlement worker, there is a gallery in every theater, and the "perennial attraction of the play" is often as potent in the tenement as in the mansion. Miss McCrackeu writes (in The Atlantis Monthly):

"It has given me much delight to find that some of the people whom I have met in various tenements have thus strongly. Mr. William Winter says most of us have in some measure—the dramatic perception. It has been to me so beautiful to have in common with them an interest in things so lovely as the drama and dramatic att. I meet it in new sequinatnees among them with keen pleasure; and they, when they happen to discover that I too like to go to see plays, seem always to feel 'a killed to joy to see plays, seem always to feel 'a killed to go to see plays, seem always to feel 'a killed to go to see plays, seem always to feel 'a killed to go to see plays.

"They go from their tenements to see plays: they see, and they feel, and they think, and they effectually remember. They are influenced; they are made greater or less; and, simple as the influence may be, its result is surely felt by their associates and their surroundings.

"They go not once, but often,—as often as they can buy tickets of admission to the galleries. The majority of them work throughout the day, and they go to the gallery in the evening. So much does the experience mean to them that many times they save for their suppers portions of the lunches brought in the norming to the shops and factories in which they work; and thus, enabled to go directly from their work to the theater, they gain another hour in which to await the opening of the doors leading to the gallery."

Miss McCracken proceeds to cite a number of instances coming within the range of her own personal experience and vividly illustrating the kind of influence that the drama exerts in its contact with humble lives. We quote as follows:

"One day I went to call upon a woman whose life had been very hard, whom circumstances might well have made more hard. She lived in one of the least model of tenements, and I had difficulty in groping my way through the dim hall and up the dark stairs. The woman received me in a room from which great poverty had not taken all cheer, and silently, stolidly waited until I should open the conversation. I had been warned that she would expect me 'to do rather most of the talking.' Very much at a loss for a topic, I glanced around the room. On a small shelf in one corner I saw a picture, cut from a magnitude of Miss Ellen Terry as Portia. Supposing it to be purely decorative, I said, partly for the sake of breaking the sitence, when was then threatening to be protracted, 'That is a beautiful picture.'

"'Yes, but it ain't as beautiful as she was,' said the woman nnexpectedly, 'Have you seen her?' I exclaimed in amazement. It seemed scarcely possible.

""Yes,' said the woman, 'once I saw her. I saw "The Merchant of Venice," and she was in it., . I 've never forgut the things she said 'bout havin' mercy, and how she looked when she said 'em. People ain' I always had mercy for ne; and when I've wanted to pay 'em back for it or be mean to anybody, I jes' remember her aud what she said 'bout havin' mercy—and I don'; want to be mean 'cause of her,' she concluded, almost shylo;'

Sometimes, adds Miss McCracken, the influence upon life and character is of the opposite kind:

"A boy, almost grown to manhood, living in the tenements, went at times to the gallery to see a play. I had known this boy also for several years, and realized that to an unusual degree his future rested upon the relative strengths of the influences which might be hought to bear upon him. With misgivings I lastened, therefore, when he said one evening: 'I saw a play the other night named "The Gay Lord Quex." The people in it are a bad lot, but they get out all right. The worst is the best, and they gets out best,'

"'But in real life it is different,' I replied to his inference,
"'Maybe it is,' said the boy, 'maybe it ain't. There's no tell-

"'Maybe it is,' said the boy, 'maybe it ain't. There's no tellin'.' This doubt he still holds. It is a dangerous doubt, and in the tenement district especially dangerous."

As a merely humanzing influence, intlinates the writer, the value of the theater is inestinable in its relation to the lives of the poor. The play quickens the idealistic and esthetic impulse; it fills the mind with beautiful images. Miss McCracken recalls the case of a girl who worked in a factory, but whose long, no-notonous days could not blot from her memory the picture of Miss Virginia Harned as "Rautendelein" in "The Sunken Bell."
"She was like a fairy come true," said the girl; "and sometimes, when I get tired, it rests me just to remember her, with her fairy ways and looks." The writer concludes:

"To me and my work in the tenements the theaters meant very much. Through them I was enabled to substitute volumes

GEORGE HARVEY, Editor of Harper's Weekly.

CHARLES FRANCIS HOURKE, Editor of Collier's Weekly,

JOHN A. SLEICHER,

of Shakespeare, of Sheridan, of Goldsmith, of Rostand, of Washington Irving (the last was lent to a loay who had seen Mr. os seph Jefferson as Rip Van Winkle), and of too many other masters of literature for present mention, for sensational papers worse than sensational books. The value of the substitutions is evident, and the value of the value of the value of the substitutions is

"The influence of the theater had been, through the gallery, a force, a real force for good and for evil. When it had been for good, it had been very good; and chiefly it had been, it would seem, for good. At its beginning the acted play was meant to be a power for good. It was given, as it is given, with a serious ness of purpose which was, and is, the secret of its power. It may be—with all its failures, it to-day is—a power for good. Wherever else it may glance saide, certain it it is that the people of the gallery abundantly receive it, and through it affect social and moral standards in the tenments."

# JOAQUIN MILLER ON BRET HARTE.

I T is appropriate that Joaquin Miller," the poet of the Sierras,"
should write his impressions of Bret Harte, for both of these
men have been in a special sense interpreters of the primitive
spirit in Western life. Mr. Miller thinks that Bret Harte was
"the brightest genius that has yet set foot on Californian soil,"
and he describes (in the New York Times Saturday Review,

May 31) his first meeting, in 1870, with the author of "The Luck of Roaring Camp":

"On reaching San Francisco, I went at once to [Charles Warren] Stoddard, and he took me to Harte. I found a spare, slim young man, in a chip hat and a summer dress of the neatest and nattiest cut, who took me cordially into his confidence at once. I liked his low voice, his quiet, earnest, and unaffected manner, from the first. He had neat editorial rooms, where he made me welcome, altho he was then engaged as secretary in the Mint. He told me, half-laughing, that he was playing secretary for fun, but running the magazine for glory. The fact is, Swain, the superintendent of the Mint, liked Harte, and gave him very little to do outside of drawing his salary.

"Harte's friends were always of the strongest and best in the land—whether in Loudon or San Fran-icso, a good sign of a good man at heart, I think. But he did not mix greatly with men; nor did he talk much. I think he was the cleanest man I ever net. He was always as clean, modest, and graceful of speech as a girl.

"Harte took me to the Zoo, the Mint, the park, and all sorts of or places of interest to a young man from the mountains, and places of interest to a young man from the mountains, met think of it now the more I marvel that this man, who keept aloof from the multitude in the trib should give his time and attention to an unknown man from the mountains."

One of Harte's loyalest friends during the early eighties was John Hay, at that time editor of the New York *Tribune*. Says Mr. Miller:

"Come to think of it, Hay knows more about Harte than anybody else; but maybe affairs of state keep him still for awhile. I recall with what exultation he wrote me: 'Sire, we've got yon Ratizbon! Hurrah, we've got Glassow for Harte!' Then after a change of Administration had turned Harte out, how he worked to get him back to Glasgow consulate again! Yes, our gifted Secretary of State knew Harte a heap better than any one else, and, as you can see, loved him and trusted him entirely."

It seems that Bret Harte did not put the same estimate on some of his earlier literary efforts that his admirers did. The writer recounts the following anecdote:

"Harte was always disgusted with bis 'Heathen Chines.' Its begged in never to speak of it. Once, as we were about to set out to breakfast with Lord Houghton, he bested." Description of the what was the matter. He sast! "Will be quote the Heathen Chines?' I sent a servant before us with a note to Houghton begging him not to say one word about 'the heathen.' But the jolly old nobleman gave the tip to a lot of good fellows at his babe, and they all talked nothing else. However, Harte soon saw through it all, and joined in cheerfully. I never saw him better spirits. You may know that he never meant this him seriously. It is simply a parody on one of Swinburne's sweeping and superb poems of the lonian Sea. Lengthen out the Heathen Chines, that is, make two lines into one, and you will have a sea chorrus that will, so far as sound goes, sing itself."

To enjoy Harte entirely, continues Joaquin Miller, one should read his "Condensed Novels," after being saturated with the real novels that he satirizes. "This is wonderful work—wonderful!" he exclaims. Mr. Miller's attitude toward Harte's famous mining stories is less enthusiastic.

JOAQUIN MILLER.

"I could never quite take to his mountain and mining-camp stories, for every page or so I find something out of joint-slang that was never used except in Dickens, who dug it up in London, cockney words. and so on. And then the men there in the days of gold were mighty men, and good. There was Chief Justice Field, John Mackay, Senator Hearst, Senator Jones, Senator Stewart, and more than a hundred thousand others of like stamp and strength. The rats were down by the waterfront; the hangings and 'hold-ups' were not in the mines, but in San Francisco. And Harte's gamblers! The John Oakhursts with their pretty polished boots! 1 never saw any man of that sort in the mines. I knew some gamblers. They gathered around me in Shasta, where I was teaching a night school in a miner's cabin, and coaxed and coaxed to get me to play. At last one of them borrowed the little money I had laid up and ran away with it, and then they let me alone,

The Times Saturday Review, commenting editorially on Joaquin Miller's article, thinks that the charge of travestying Western life

which has been made against Bret Harte is hardly a just one. Such a charge "might perhaps be true if the stories were written now, but it is not true of them as artistic presentations of the life of 'ao." The same paper adds:

"The rest of the world has accepted Mr. Harte's studies of the acrly Californians as admirable literary art, and the rest of the world is right. And, as we have already said, there is no reason why California should repudiate these stories. If they preach any doctrine at all it is the sound one that neither the coat nor the manners make the man, but the heart that beats within him. They proclaim in fulness of conviction the very old truth that the human heart is the same yearday, to-day, and whit worse than Washington Irving's early New Vorken. They are venered with a different twentry to be many constraints.

neath is pretty sound wood in both species. The time will probably come when California will be proud of the characters accredited to her by Bret Harte."

### AN ARTISTIC EXPONENT OF "NEO-JUDAISM."

A YOUNG artist has arisen in Germany who bids fair to become one of the most distinctive interpreters of new Jewish art and idealism. His name is E. M. Lilien, and in Jewish Comment (Baltimore, May 39) appears the following account of bis early life and struggles:

"Lilien is in his twenty-seventh year. Through his own exertions he rose from the depths of poor, contracted circumstances to independence and the light of the broad horizon. Born in Drohobycz in Galicia, the son of a poor journeyman turner, Lilien is absolutely self-taught. The artistic impulse by which he was early stirred had at first to be satisfied by hard work with a sign-painter. But he longed for art, and the way to his ideal was a way of suffering. For a short while he attended the art school in Cracow; then he made his way to the artists' Mecca, Munich, feeling the call to be the Mohammed of new-Jewish art. There he lacked the means to realize his hopes, and could not enter the Munich Academy. Without guidance, apart, therefore, from every art clique or coterie, he was forced to find his own way. In tireless work, interrupted only by dire necessity, in stiff-necked opposition to his hostile fate, in stern seclusion, away from the guiding rays of a kindly star, his talent developed itself, and his will became the pole-star of his life.

Lilien rapidly won recognition, and became a contributor to fugend and many of the best German periodicals. He also began to develop a style of his own. Jewish Comment declares:

"He became a symbolist. That is probably not due to the Jew in him, for it is a Jewish peculiarity to follow up an idea to its last consequences in all its forms. Lilied does not like the plain paths of thought, the trodden highways; he prefers losely, winding woodland trails, with their mysterious mazes, distant dream-

"HOMELESS"
Lilien's Portrayal of the Tragic Destiny of the Jewish Race.

journeys to the land of the Fata Morgana, the kingdom of yearning and thought. An unpublished drawing of his, called 'Trugland,' the land of deceit, reveals this characteristic trait quite clearly.

"All his work shows his symbolism, but the illustrations to Juda" afford the clearest evidence of it. At the same time, they indicate Lillen's second, quite personal note. He is a lyrist. His heart turns the discords of every-day life into trembling harmonies. There is music in his pietures. 'On Tender Chords,' which appeared in Jugend, illustrates, as do many others of his pictures, his tendency to depict tragedy and humor at the same time. Possibly the difficulties of his career cast their shadows upon his art. Be that as it may, he has what may be called a tragic longing for ideal harmonics, so that his pictures seem to have the rhythm of poetry. At the same time, they stimulate you to read their deeper meaning-they make you think.

"It has been said that Lilien's work has the melody that can be understood only by the few. This is shown by his headpieces for papers. The their general effect is highly decorative.

their symbolism is not plain to the man in the street."

Lilien has done some notable work in his designs for book bindings and book-plates. One of the most interesting of the latter is reproduced herewith. It was made for Richard Fischer, the Social-Democratic deputy, and represents the proud form of a woman, Freedom, wearing the crown of labor and a flowing robe into which are wrought "Liberty caps" and lilies of the valley that suggest the first

EX-LIBRIS OF DEPUTY R. FISCHER.

of May. A flock of swallows, the harbingers of the spring of hope, fly about her, and on the background are various symbols of labor. Jewish Comment says in conclusion:

"The arist's career seems to show a gradual transition from the chaffsman to the painter, and it is probable that he will soon estimated by the seems of the seems of the seems and patent. And since in the dedication of 'Juda' he calls himself' one of the faithful sons of Zion, 'we may hope that he will develop a new Jewish art, a true art."

# BALZAC'S FATE WITH A CHICAGO JURY.

"THERE will be little left of literary glory for France," remarks the New York Times, "when the Chicago courts get through with it." It is only a few days since Rostand, the eminent French playwright, was convicted of plagiarism, and now it is Balasca who is pronounced unifs for the libraries of selfrespecting people. The Times gives the following account of the events leading up to this sensational denomenent:

"It seems that a certain Chicago matron, Mrs. Mary A. Jerome, was recently persuaded by a peripatetic purveyor of masterpieces to subscribe for a many-volumed and expensively bound edition of what he spelled 'La Comedy Humaine,' the P. P. having told her, she now declares, that the books were especially suited for the edification of her growing family. After they had arrived, Mrs. Jerome, cautious matron that she is, proceeded to read them herself before trusting them to her husband and children. The first volume excited her suspicions, the second her alarm, the third her horror, and the fourth compelled the writing of a frantic letter to the agent, the substance of which epistle was-'Take them away! take them away!' This appeal was not heeded. Instead bill followed bill in quick succession, and when the angry lady announced her firm determination never to pay for what she didn't want and would not have, suit was brought to compel a settlement. The case was tried last week in the superior court before Judge Jonas Hutchinson and a jury, and the latter, after listening with what may have been loathing, but looked much like interest, to the reading of certain passages from the volumes that had been perused by Mrs. Jerome, decided that her repudiation of her contract was perfectly justified and that the publishers would have to take back their dreadful books. Thus does Chicago rise superior to the laxity of a too careless world, and set a standard for herself."

If books are to be judged by detacled passages, comments the Chicago Evening Post, "one shudders to think of the reputation of Shakespeare or even of the too realistic and conscientious chroniclers of the Old Testament! A smart Cook contry lawyer would have no difficulty In persuading some jurors that a man need not pay for his Bible. As for the literary classics—English, French, Italian, Spanish, etc.—there is now nothing to prevent a Cook-county citizen from acquiring a whole library of them without a cent." The Chicago Record-Herald thinks it will be wise if the publishers of classical authors "with whom a misguided literary world have classed Balrac" hereafter justit upon "payment in advance" for books sold in Chicago.

# ON "OXFORDIZING" AMERICA.

N the flood of comment evoked by the educational features of Cecil Rhodes's will and its provision for the entrance into Oxford University of scholars from every State and Territory in this country, a good deal is being written that would hardly prove very grateful reading to Mr. Rhodes, were he now alive. only beneficial result which The Electrical Review (New York) anticipates from the Rhodes bequest is for Oxford. "To-day, It declares, "it is doubtful if any young man going to Oxford from the United States would find the advantages he leaves behind. To-morrow, it may be that the influx of new students with new ideas from newer countries may cause a revolution in the methods of teaching and the methods of thought of Oxford itself, and perhaps out of a combination of dignified tradition and energetic, progressive vitality thus engendered may come something better than anything that has yet been seen in educational institutions. We may at least hope that this will be the case and that the lavish millions which Mr. Rhodes has left will not be wasted," Similarly, Prof. E. E. Slosson, of the University of Wyoming, confesses that there is some truth in the charge that "the average American is prejudiced against Oxford." He contiques (in The Independent, May 22) ;

"Our difficulty is chiefly that Oxford is so unlike the German universities and our own, which are somewhat modeled after them, that we do not understand it. Our ideal of a university is a place where any one can learn anything, and many of our institutions are making sad work trying to attain prematurely att impossible ideal. We like to have a university keep closely in touch with current life in all its phases.

"The American thinks that the educated man should differ from the uneducated, not so much by what he knows as by its freedom from prejudices and irrational conservatism, by his eagerness for all wise changes in language, institutions and customs. The American thinks that a university should always be in advance of public opinion, and it seems to him that offer, but ford, instead of being in the van of progress, has often been behind, and, like a cannon pointing backward, has been slowly dragged from point to point as the people advanced. He admires of the progress is the case if it is not modern. That it gives culture he knows, but he fears it is not the kind of culture demanded by modern life. He likes often without he will be the control of the

"What we are afraid of is that the student in his three years' recidence at the 'home of lost causes' may acquire somewhat of insularity which will be out of place on our continent; that he may wish to wrap himself in a rug rather than share the common warmth of steam-heated cars; that he may prefer books with uncatedges and in limited editions, and that he may build him a house with a high stope wall around it crowned with broken bottles, rather than sit in the cool of the evening on the front stop.

where he may see and be seen of passing neighbors in the good old American way."

Such views as these emanate from England as well as from America, Mr. E. S. P. Haynes, an Oxford M.A. who has recently visited this country, records in the June Bookman his belief that "Great Britain has more to learn from American universities than from any other transatlantic institution," "I felt an atmosphere of invigorating cosmopolitanism," he declares, "in all of the American universities I visited, and this was the more striking the further West I went." Ile adds:

"The American whom you meet casually has probably been to a nuiversity, and has a range of companionship and of intelectual interests which the Englishman of a corresponding class has not. Such an Englishman will have a distant and pury social veneration for Oxford and Cambridge, the he may profess a hearty contempt for the indeeleged university man on the threshold of business life. So long, however, as Oxford and Cambridge on the contempt of the indicated primarily as 'finishing' establishments for wealthy young men, this undestrable state of things will without doubt continue."

And yet, as is pointed out by Mr. C. H. Hinton, a former exhibitioner of Balliol College, Oxford, in a paper on "The Oxford Spirit," contributed to The Independent (May 22), Oxford has much of highest worth to offer to the American student. "Oxford and Cambridge," he affirms, "are so indisputably the best that England has to offer, so inevitable, that any panegyric appears like an unpertinence," He says forther.

"What is of importance to those whom Cecil Rhodes's will concerns is the closeness with which Oxford is in touch with the political life of England. In those reunions in the common room in which those who have gone forth confer with those who have remained behind, national questions form the subjects of most absorbing interest, and there are sure to be not a few who are taking an active part in their decision.

"University distinction is a passport into the ranks of those concerned with the administration of the empire. It is to the absorption of the past, not as dead learning or elegant scholarship, but in living application to the problems of the present time, that is the Oxford ideal.

"16 England, among his fellow undergraduates, the American student will mingle with those on whom a full share of the responsibility of the administration of a great empire will subset of underly fall. If he loses those associations of friendship withs own countrymen which a college engenders, he will have in their own place friendships which will enable him to look on national fallirs with a broader view, and which will be doubly valuable as America begins to manifest more and more those tendencies of racial expansion which have found a temporary assuagement in the plains of the West."

# NOTES.

MR. RICHARD LE GALLIENNE has returned to England, and will make his residence there during the coming six months.

MARK TWAIN has been made a Doctor of Laws by the University of Missouri-the State in which he was born and which his early books have made famous.

In November last the publishers of Gord Words (London) announced that they would give  $d_{T}$  in cash prizes for the three best Coronation Odes submitted to them. The number of those who entered the competition is sore, and hardly any part of the British Empire, even down to the smallest island in the most remote seas, is nortpresented.

THE "Boys' Empire Leagne" of England has presented to M. Joles Verne a gold-headed walking-steck. In a letter accompanying the gift the donors remark that "boys are not much burdened with pocket-money, as you know, and the gift is not to be prized for its intrinsic value." M. Verne is the anthor of about sightly books, and lives at Amiens.

JEAN JOREPH BNS/AMIN-CONSTANT, the well-known French painter, was fix-sever pears old at the time of his death to Frisa few days ago. In slop he was commissioned to paint a portrait of Queen Victoria, and it was a portrait painter that be gained his widerd fame. His Oriental pictures, record from the painter of the pain

# SCIENCE AND INVENTION.

# THE VOCABULARY OF A CHILD.

H OW many words does a two-yenr-old child know and use?

We are told by M. C. and H. Gale, of the University of
Minnesota, who have actually counted them, that the number is
much larger than one would think; in fact, it runs up into the
thousands. Say these writers in The Popular Science Monthly
(May):

"A physician and father was asked to guess how many different words were need by our three children up to two and a different words were need by our three children up to two and and years of age, either in common or by any one of them. He gave vent to emphatic protests of incredulity when his guess of 'about 200' was met by the actual number of 2,170. And we ourselves have found several times that after following a child about all duy with pad and pencil and taking down all his talk for a wating day till we were almost exhausted, when we then tried to make an estimate of the words used we larve only come to within mation of a child's vocabulary is so universal that it can only be corrected by cataloguing, indexing, and actually counting the words thus recorded for a whole day.

"Such a record does not by any means include all the words which it would be possible for a child to use in one day, could it come into contact with its entire little world of experience by playing all its plays, looking at all its books, going on all its occasional visits, seeing all its acquaintances, living through the days of the week and seasons of the year—that would involve almost its entire vocabulary up to that date.

Most of the estimates of children's vocabularies hitherto published have been underestimates, the writers tell us, because, in the first place, the first child has usually been the one observed, and the vocabulary increuses in the case of each uddition to the family; and, in the second place, unreliable methods have been used. The authors go on to sav:

"The total number of words used on one day is to many people even more actionishing than the number of different words. For the child's energy represented in the production of 3,000 or 9,200 words is something relatively enormous. Would that this child energy could be expressed in figures! But here again some idea of what a speech 'record' is, can be obtained from the case of Carl A., who used on his second birthday a total of 10,507 words!"

Here is a little table of the number of repetitions in a single day of various common words, observed and set down in the case of one of the writer's children:

Sammy,	1,057	water,	34	will,	79		BOW.	151
Papa,	150	want,	704	did,	66		there,	114
Mama,	193	see,	128	Was,	61	٠	down,	105
Dick,	148	going,	124	have,	56		here,	100
Hilde.	60	don't	191	take.	55		that.	226
bov.	45	go,	97	some,	134		this,	216
bed.	43	get,	88	no,	202		in,	145
house,	41	put,	86	5'05,	104		to,	947

The child's own name was "Sammy," which accounts for the large number of repetitions of that name. Those writers have classified the words used at different periods and have come to the following conclusions regarding the laws of their acquisition:

"We believe that the acquisition of words by a child Is mainly accounted for by the psychological laws of pleasure-pain, viz.;

(i) the biological law that whatever is favorable or more immediately beneficial to our organism is pleasurable and that the harmful is painful; (i) between these extreme limits things are further differentiated as pleasurable or painful by being associated with things already differentiated by the biological law, and this principle of association comes indirectly under (i): (3) by the babit or custom principle, whereby we come to have pleasure in anything long-continued about us—supposing it is not so immediately harmful as to kill us in the process of adaptation.

"Words then are simply the tools whereby the child gets more

pleasures and avoids more pains. And the number of these words is normally limited only by the pleasure-pains which are of sufficient intensity to make the motor connections for speaking the words. We have many observations showing how this association of the sound with the thing was made without any paparent attention to the sound; so that when the child's pleasure-pain interest in the thing was enough for it to want to use the control of the control

# THE ARTIFICIAL FERTILIZATION OF EGGS.

A LTHO public attention has only recently been directed to this subject by the newspaper notices of Professor Loeb's experiments, it has occupied the attention of biologists for many years-at least since 1895. The Revue Scientifique, in answer to a request from a reader, prints a brief résumé of the work already done, from which it may be seen that the Chicago experimenters have merely been carrying out a series of investigations begun years ago. The fertilization of an egg becomes evident to the eye by the beginning of a process of cell-division known as segmentation or karyokinesis-a well-defined series of changes which ends in the production of a new individual, When this process takes place without fertilization it is known as parthogenesis. Now the discovery of Loeb and his predecessors is simply that in certain cases parthogenesis can be induced or stimulated in the case of crentures when it does not usually take place. In other words, the process of cell-division in eves can be started in various ways artificially. To quote the article just referred to:

"In 1895 Hertwig showed that by exposing the eggs of seaurchins to the action of a solution containing a little sulfate of strychnin, these eggs could be caused to present the phenomena of karyokinesis. This was the starting point for the researches of Morgan, who in 1898 . . . obtained the same result, not by employing a poison, but by increasing the osmotic pressure of sea-water. Eggs thus treated showed the pheuomena of segmentation as soon as replaced in ordinary sea-water. In 1899, Mead took up Hertwig's studies with the eggs of a different creature, the Chetoptera, and proved that these eggs would develop when potassium chlorate was added to the sea-water that held them, Then Morgan in 1899 confirmed Hertwig's strychnin experiments, and expressed the opinion that the non-fecundated egg is in a state of unstable equilibrium, and that, under the influence of various exciting agents, it is ready to react, which it does in the manner natural to it; that is to say, by segmentation. In other words, there is nothing specific in the excitnnt; only the reaction is specific. Many facts of physiology go to confirm this, such as are presented by the muscular, nervous, and secretory cells, etc.

"In the same year Loeb obtained experimental parthenogenesis by exposing sea-urchiu's eggs for n very brief time to the action of a small quantity of neid or alkali in solution in sea-water.

"It may thus be seen that the chemical products capable of bringing about the segmenturion of the unfertilized egg are quite various. The list is not closed yet; Professor Mathews extended it in 1893 and 1909. He exposed searnchins' eggs to the acted of sear-water saturated with ether, for 10 to 15 minutes, and the ether provoked karyokinetic division of almost all the eggs. Chloroform in sea-water acts similarly, but n certain proportion of the eggs disintegrate. Alcohol exerts the same action.

"In like manner, the absence of certain chemical substances provokes segmentation. If we take from sea-water the oxygen that it contains, and replace it by hydrogen and leave the eggs out of contact with oxygen for a time . . . they will, when transferred to normal sea-water, begin to divide. . . . Heat acts similarly: eggs warmed to 32 or 32 °C. [about 90° F.] for three or four minutes, begin segmentation as soon as placed in water of normal temperature. . . On the other hand, lowering of temperature will also provoke segmentation, and agitation or mechanical excitation, as Mathews has shown, provokes no only the

expulsion of the polar globules but also segmentation. A curious fact noted by Matthews is that our results hitherto seem to show that cellular division consists in the production of localised zones of liquefaction in the protoplasm of the egg. There is something analogous to local digestion, and we can hardly help asking whether the centrosome fa body that appears near the cell-nucleus in segmentation] may not play the part of a liquefying enzyme."- Translation made for THE LITERARY DIGEST.

# NERVOUS AFFECTIONS IN ANIMALS.

"HE study of animal psychology has directed attention also to mental disease or its analogs in animals, especially in dogs, cats, and horses, which come more directly under our ordinary observation. Investigation has thus shown that animals, as well as man, may have hysteria and various forms of insanity, and that the physical effects of violent emotion are as marked in them. M. Henri Coupin, who contributes an article on this subject to La Nature, writes as follows:

"Mental pathology is beginning to be a familiar subject in the case of man, and unfortunately there are only too many objects for study: but it has scarcely been touched with animals. Nevertheless, these clearly present mental troubles, from the angry dog to the horse that takes fright causelessly. A veterinary surgeon, M. Lépinay, has just directed attention to this subject in a paper read to the Society of Hypnology and Psychology; he begs every one to make observations regarding it, no matter how apparently slight and unimportant they may be.

Nervous troubles may be provoked in animals, as with us, by different causes.

"First, there are the lively emotions. The fear that horses show toward locomotives or automobiles is the cause of trembling and temporary paralysis, whose real origin is often unnoticed. Fear of punishment in small animals or joy at sceing a beloved master has given rise to nervous crises that have been mistaken for epilepsy. One female dog, about whom M. Lepinay tells, was put out to board every year at vacation time, and on her return it was necessary not to let her see her mistress at once, in order to prevent an attack of nervous joy that recurred at intervals for several months.

"A case of nervous trouble brought on by fear is related by Dr. Hyger, regarding a canary. The bird was executing its most varied trills in its cage when a cat came in suddenly and, leaping on the cage, threw it to the ground. The doctor ran up in time to drive the cat away before the bird had been wounded, or even touched; but the shock was such that the canary lay on the floor of the cage voiceless and still. It could be revived only by sprinkling cold water on it. Then it came to, and shortly was leaping and flying about as usual; but it had become suddenly dumb, and remained so for six weeks, when as suddenly it recovered its voice.

'A traumatic shock may also produce hysteria. Very often a horse that has been in an accident gives evidence of paralysis, or some such affection, without exhibiting any symptom that can plausibly explain it, and when the injured animal is killed, no lesion is discovered that would justify the malady. Insurance companies have records of a great number of cases of this kind,

"Dr. Hyger cites another similar case. A cat, nine months old, was bitten by a dog that had pursued her. The cat at once acted as if paralyzed, and from that moment she could not move her hind limbs, but dragged them on the ground as she walked. The posterior third of the trunk and the hind legs were completely anesthetized, as well as the tail, which had lost all power of movement. About two months after the accident, a servant, of an original turn of mind, wishing to see whether a paralyzed cat would fall on its feet like a normal one, threw the poor creature out of a second-story window. The cat did fall on her feet, and, wonderful to relate, at the same instant jumped with all her legs. This sudden shock had completely cured her paraly-

"Lightning striking a stable has often caused insignificant wounds or burns followed by serious hysterical attacks, generally involving paralysis or contraction, . . . M. Arueli, of the Milan Veterinary School, relates the following similar observa-

tions on dogs showing that acute nervous affections may be due to causes that are rather moral than physical. One of these animals, who had already, on one occasion, been made ill by the departure of her master, was greatly affected by seeing her mistress with her new-born babe in her arms. The dog was a female, about two and a half years old, and very intelligent and affectionate. Her symptoms were loss of appetite, cough, a change of voice, and a capricious humor; then there was progressive paralysis of the limbs and the creature became dumb. The animal was killed, but at the autopsy no lesion of the nervous centers was found,

"In the second case, a dog eleven years old, fat, intelligent, and affectionate, was seized for the first time with convulsions, without loss of consciousness, when sharply reprimanded by his master, After this the animal was taken with a similar attack whenever his master entered the house, the convulsion taking the place of his customary manifestations of joy.

"A third observation was of a two-year-old terrier that had previously had a paralytic attack of which he had been cured for a year. His mistress having purchased another dog, he at once lost his habitual gaiety and appetite, and then his paralytic troubles returned. No medical treatment did any good, but the animal recovered rapidly when separated from the other dog."-Translation made for THE LITERARY DIGEST.

# THE STELLAR BACKGROUND.

HE background of the visible universe is not dark, but light, altho the light is of almost inconceivable dimness, and broken here and there with rifts through which the astronomer seems to gaze into the blackness of outer space. So we are told by Edgar Larkin, of Lowe Observatory, California, who writes to Popular Astronomy (May) on "The Stellar Floor," as he has named this dim background. Says Mr. Larkin:

"The stellar floor is surely visible from the Lowe Observatory, It is the background of the universe or that part of it within range of telescopes—that glimmer or phosphoresence shining be-yond the separate stars. The entire sidereal structure is draped in white, but the cloth of pearl is rent and torn in thousands of places. These apparent openings or rifts are dark, or in some cases apparently black. The robe of nature is not nebula, being unlike that sheen round about Orion, for where the real cosmical floor is on display the nebulosity is absent. The azoic pavement, basic rocks of stars, appears to be made up of inconceivable mul; titudes of minute stellar points. The sidereal sheet is granular, and the granules are as fine as those seen on a gelatin-bromid plate. When first seen here it was thought a mistake had been made, so nothing has been printed until now after more than a year of careful scrutiny, through all possible changes of weather and varying conditions of air. In the darkest mountain-night, extensive areas of the celestial vault are almost solid white, yet made up of microscopic points.

"Positively this is not due to diffused light in the atmosphere of the earth, for other parts are dark, or seemingly black, on the same night. Thus, on last night, February 28, 1902, after a three days' rain, the primordial stellar floor was seen in more wonderful display than during the past year. The dust from the Mojave desert was absent and the mountain air was of such absolute purity that the air on plains, even, can not be compared with it. The floor below the stars ranges through all degrees of intensity from pure white easily seen down through faintest shimmer and sheen to the limits of visibility. . .

"The starless fields are not black, neither is the rift in the Orion nebula-that which seems so is contrast. There is light in space and it does not suffer extinction to the amount usually supposed. The universe is also doubtless far larger and more massive than commonly believed,"

The Ethics of Patents,-It has long been deemed unprofessional among physicians for one of their number to patent a medicine or a surgical device; and now it appears that some members of the engineering profession are taking a similar view. In a paper read before the "American Society of Civil Engineers," A. R. Eldridge ridicules this idea. Says The Engineering Magazine, which abstracts Mr. Eldridge's paper:

"Mr. Eldridge strikes a very happy point when he compares patents and copyrights. 'One does not see or hear of any objection being raised when an engineer copyrights a book which he writes, or even compiles, yet wherein is to be drawn the fine distinction between a patent and a copyright? An article, a device, a method of manifacture may be patented, whereas a book may be copyrighted. In either case others than the owners of the patent or copyright are restrained from using the article or the contents of the book without compensation in one form or another, being paid to the holder of the patent or the copyrigh.

"Especially pertinent is the fact pointed out that the Proceeding of the American Society of Civil Engineers are themselves copyrighted, so that the whole society as a body is continually doing that which some of its individual members would have us believe is in violation of the ethics of the profession!"

# TO THE NORTH POLE BY AUTOMOBILE.

A NDRÉE tried to reach the north pole in a balloon; Nansen tried to walk there; and now Captain Bernier, a Canadian explorer, proposes to reach the pole in an automobile, so we are told by *The Marine Review* (May 22). Says this paper:

"The automobiles in which he proposes to make the last stages of his trip to the north pole are adapted from a Russian invention. Instead of wheels they have rollers. Such invention has been used, it is said, with success on extensive ice-packs similar to those of the polar regions. The nearer to the pole the closer is the ice packed, presenting after snowfalls a comparatively smooth surface for many miles at a stretch. Rough masses of ice and large spaces of open water are less common. The captain's plan is to place his vessel in the ice-pack off the coast of Siberia, at a point which he calculates will drift him to the nearest point attainable to the pole. When that point is reached he will disembark working parties, who will earry wireless telegraph outfits, with which his ship is also to be furnished. The parties will drill holes in the ice and plant poles as landmarks as they proceed and establish their first station and storehouse about 50 miles from the ship. The road having been made as practicable as possible, the automobile sleigh will be put into commission to stock the station with supplies. In the mean time other parties will be working on toward the second 50-mile station, and so on, There will be a second automobile in reserve or for use where two can be usefully employed, as well as dog-sleighs with teams of thirty dogs.

"The sleighs on which the motors are to be placed will be so constructed as to be capable of being used for navigating open stretches of water, where such can not be avoided. In case rough ice is met with that presents an insurmountable obstacle to the automobiles, the machines will be disconnected and taken to pieces and portaged, a work in which Canadians, such as a will form a large proportion of the exploring company, have been familiar with since infancy. Fower for the electric dynamos will be furnished when the conditions allow, by windmilis, and are wireless communication with the civilized world through Dawson City. Captain Bernier's plan for drifting with the currents that carry the pack-ice to the coast of Greenland is based on actual observation by men experienced in the polar seas, among whom are several members of his own family."

The ship in which Captain Bernier is to make the first stages of his trip is to be 133 feet long, 23 feet beam, 18 feet depth of bold, and a little over 300 tons register, to run under both steam and sail. She will have a perpendicular stern-post with outside radder, so that either rudder or propeller nay be unshipped at will. This will prevent the rudder and screw getting frozen in the ice, as with other Arctic vessels. Captain Bernier's ship will also have a flush-deck, which will prevent her being over-weighted by flooding the forward deck with water and slushy snow. To quote again:

"The engines will be more powerful and better protected than

in any other Arctic vessels hitherto constructed. She will have three masts, and her total sail area will be 1,000 feet more than that of the Fram, or 7,000 square feet. She will be provisioned for a six years' voyage and will have a company of fourteen. These will consist of six scientific men, including a surveyor, an astronomer, a geologist, a biographist, an artist, photographer, and doctor. There will be three navigators, all qualified as capitains; three sailors, one engineer and one assistant engineer, who will be a mechanic and letertician."

### AN OIL-BURNING LOCOMOTIVE.

THE locomotive represented in the accompanying picture burns only oil as a fuel and is now in service on the Pacific coast, drawing passenger-trains from San Francisco to the town of Cazadero on the North Pacific Coast Railroad. Says Railroay Machinery, from which we take both illustration and description:

"A glance at the wheels will show that the lower part is constructed in the ordinary manner, but the cab is placed on the front of the truck instead of in the usual manner, while the boiler is also reversed. . . . The usual spraying device for introducing the oil into the firebox is provided, the fluid being conducted to the burner from the tank located on the top of the boiler. This is what might be called the distributing-tank and is fed by a pipe line running along the side of the boiler and connected by flexible tubing with the reservoir on the tender. Valves in the cab

NORTH PACIFIC COAST NAILROAD OIL-BURNING LOCONOTIVE

control the supply both of oil and water, so that the services of a freman are not required. The water is feel to the boiler also through pipes which can be merely disconnected when desired, as will be noted in the photograph, the tender is coupled to the truek-frame of the engine, while air-brakes are also provided, Both the oil and water reservoirs are provided with openings in the top, so that they can be filled from elevated tanks or otherwise as desired. Crude petrolems such as is procured in the Los Angeles district is used altogether, and thus far the locomotive has been operated at a saving in finel as compared with coal ranging as high as so per cent. Another advantage chimed for locomotives of this type is the fact that the cab is located in consortive of this type is the fact that the cab is located in the rank abord. Hereby lessenting the danger of collisions or other accidents.

New Receiver for Wireless Telegraphy.—Widespeed interest has been aroused by the experiments carried on by Professor Fessenden with a new form of aerial telegraphicreceiver, which gives promise of greater rapidity than the cobeter with which the public is generally familiar. Experiments have been carried out under the auspices of the Weather Bureau for about two years. Says The Scientife American:

"Some of the results achieved have been made public by the Bureau, and they are considered to foreshadow a great improvement in the speed of aerial telegraphy. The work has been earied on between llatteras inlet and Roanobe faland, over a distance of fifty miles, and messages have been sent and received without the use of the coherer, the place of which is taken by the new receiver, which Professor Pessenden calk a waye-detection. The elaims that he has worked it experimentally at speeds which would be equal to over five hundred words a minute, and this with only about twenty-five per cent. increase of energy per signal over that which is used with the ordinary apparatus. We understand that the wave-detector consists of a wire whose con-

ductivity is automatically increased and diminished through a range which can be determined by the adjustment of the apparatus, and that the making and breaking of the circuit is so delicately adjusted that the higher speeds are easily realized."

# DOMINATION BY DISEASED IDEAS.

"HE word "obsession," which in old times meant investment of an evil spirit in preparation for demoniac possession, is now used by medical men to denote that abnormal state of mind in which a person broads over some one idea which continually recurs with discressing persistence. A person may suffer an obsession and still be sane; but he certainly is not normal. Obsessions, we are told by a reviewer in The British Medical Journal (May 24), play a more important part in life than is usually supposed, and especially with neurotic or psychopathic persons, in whom impulsive tendencies and fixed ideas, often strange and obscure, play a potent part in influencing moods and conduct. In an interesting article in the Archives de Neurologies for April, Dr. F. L. Arnaud discusses this subject. He states at the outset that obsessions can develop only in a morbid brain, most frequently when there is defective will-power as the result of disease. Every one, for example, has some conception or mental image of hydrophobia, and entertains a natural and legitimate fear of a mad dog; but the healthy mind does not continually brood or dwell on the idea of contracting hydrophobia. Such a phenomenou, a morbid fear recurring with distressing persistence, constitutes an obsession. Some persons exhibit similar morbid fears of becoming infected with some loathsome disease. Many other kinds are well known to the allenist. Dr. Arnaud attempts to explain the nature and origin of obsessions

"In man emotional reactions may be aroused by visual, auditory, tactile, and other stimuli, as also by memories of bygone experiences. In some persons such emotional responses may be provoked in great intensity and with unusual facility, whereas other individuals exhibit but little emotion even under the most exciting circumstances. The author points out that individuals who are the most prone to obsessions belong usually to the former class, and he adopts as his basis of subdivision the theory of emotion advocated by Lange and James, and now widely accepted, that the somatic and visceral disturbances which form the basis of the emotion secondarily arouse in the mind the consciousness or experience of the emotion in question. Some people react more than others in this respect. Obsessions may often take the form of theological and metaphysical scruples, doubts, and perpetual questionings on the Creation, on angels, on free will, predestination, etc. An interesting case, reported by Séglas, is quoted of a patient with recurrent obsessions of suicide, in whom each attack was preceded by a period of vague unrest and mental distress. Dr. Arnaud concludes that obsessions are not purely intellectual or purely emotional in origin, but complex phenomena. 'Among patients with obsessions, whatever may be the Intensity of the malady, a lesion or defect of volition (aboulia) is always met with. It preexists, and, in fact, predisposes to obsession. If these observations are correct, it will be seen that a field exists for early diagnosis, and for education and training, so that obsessions and impulses of a dangerous or objectionable nature may be selected and dealt with in their inciplent stages, so as to be nipped in the bud, as it were,"

The Earliest Man.—The discovery by Dubbis of the much discussed remains of Phitacenthropus recruits has reawakened interest in the autiquity of man, and has led to a reexamination of some of the more interesting prehistoric remains, we are told in The Popular Science Monthly (June). Says this magazine "The Neanderthal skeleton has recently been carefully studied and minute comparisons have been made with recent races on the one hand, with the Nyp remains and Phitacenthropus on the tone the new properties of the new propert

them as representatives of a distinct species of Homo, the Homo Neanderthaliensis. Of this species we know at least three individuals and possibly more, and It seems certain that It is quite distinct from the Pithecanthropus, the skull characters of this Javanese form placing it on a much lower level than the Neanderthal-Spy skulls, and showing a more pronounced approach toward generalized anthropoid condition than is to be seen in the European skulls. There is, however, an enormous gap between even Pithecanthropus and the recent anthropoids, and, indeed, it seems certain that the latter can not be regarded as coming into the direct line of human descent, but both these and existing human races must trace back to a common ancestor, whose characteristics are perhaps indicated in the cranial peculiarities of young anthropoids. If this be the case it would seem that the origin of the human race must be referred back to a period antedating considerably the horizons to which H. Neanderthaliensis and Pithecanthropus belong. The former is assigned by Klaatsch to the first interglacial period, while the latter seems to pertain to the late Pliocene, and the divergence of form which led to the genus Homo would accordingly seem to be referable to the early Pliocene or possibly even to the Miocene period,"

Substitutes for Sugar.—The growing use of saccharin and other sweet coal-tar derivatives instead of sugar is noted in the coarse of an article on food adulteration by Dr. de Lavarenne, editor of La Press Medicale (April 30). Says The British Medical [swanta], in an abstract of those paragraphs in which he treats of this subjects.

"It [saccharin] is one of the many bodies made out of coal-tar. and is, of course, not a sugar at all, altho many people are quite convinced it is. It is not only used to sweeten beer, but it is now also employed in the manufacture of syrups, jams, lemonades, wines (especially champagne), cider, brandy, pastry, and chocolate. Special substances of this nature are on the market for sweetening cider and brandy. Among these sucramine may be mentioned, which is said to be 700 times sweeter than canesugar. Other products of the same kind are sugar extract (made in Switzerland), cannabin, etc. All these names are misleading, for the substances are only sugars in name, being all coal-tar derivatives. They are not foods. Moreover, their longcontinued use may gravely affect the digestive functions. According to Professor von Bunge, of Basle, saccharin reappears in the saliva after being absorbed, and in this way leads to a persistent sweet taste in the mouth, which interferes with the appetite. Dr. Plugge has shown that the addition of saccharin in artificial digestion experiments with various digestive ferments interfered with the breaking up of food substances. Dulcin, an other sweetening body, which has been used as a substitute for saccharin, was given to a dog at the rate of one gram a day. The animal died in three weeks.

# SCIENCE BREVITIES.

An immediate his unexpected result of a recent hot ware, may The Entertical Review, "was that its several of the large office buildings in the business center (of New York) part of the elevator service had to be distincted recent to the large of the la

The effect of blue light in reducing inflammation, diminishing pain, promoting absorption of morbid secretions, and curing diseases of the skin, has been shown by several recent researches, says the Staats-Zeitung (New York, March 301. "Dr. Kniser has given to the Vienna medical society the results of his investigations on the effect of the blue rays on tuberculosis and tubercle bacilli. He threw the beam of a powerful lantern, filtered through a glass which allowed only blue rays to pass, directly opon cultures of bucliff. Similar cultures were attached to the back of a patient whose chest was exposed to the beam at a distance of five meters, for half an hour daily for six days. In all these cases the bacilli were killed, even when the invisible heat rays were also filtered out. The blue rays, therefore, penetrate the human body. The effect of exposing inherculous pa-tients to the light was markedly beneficial. A few days' treatment produced a perceptible improvement and a diminution of the number of bacilli in the sputa. Tuberculous abscesses which had resisted every other treatment during three months were healed by the blue light in four -Translation made for THE LITERARY INGEST.

# THE RELIGIOUS WORLD.

# AN APPEAL TO CHRISTIANS TO BUY THE HOLY LAND.

RECENT activities in the Zionist ranks both in Burope and in this country would seem to indicate that the Jews are at least within measurable distance of the realization of Dr. Herzl's plan to purchase Palestine and make it the home of a rejuvenated Judaism. 'There are signs, however, that the Jews may be forestalled in their project unless they make haste. Mr. Arthur Smedley Green, who is appealing to Christians to undertake a new "crusade" to the Holy Land, based on money instead or arms, and who claims to have considerable financial backing, writes of the project in all seriousness in Everybody's Magazine (June). He says:

"How strangely inconsistent it is that the Holy Land, where Christ was born, where he lived and died, should be under to control of a cunning, superstitious, and barbarous nation! Yet this is the deplorable fact, notwithstanding that to Christianty we owe the rich blessing of our present civilization, progress, and enlightenemen.

"Situated under the blue Eastern skies; endowed with a glorious luxuriance of foliage, luscious fruits, and brilliant flowers; and abundantly blessed with rich, natural resources. Palestine was apparently designed to be the garden spot of the world.

"What is Palestine to-day? A country desolated by Molammedan misrule; a country of vagabonds and beggars, who prey upon travelers and pilgrims; a country of bad roads and filtly, cobblestone streets which shake all the sentiment and reverence out of a traveler before he has ridden a mile. What should be the brightest spots are the scenes of the most pitiable desolation and desecration.

"How much longer will Christendom allow this fair land, with its wealth of associations, to remain under the blighting influence of a nation aggressively opposed to Christianity?"

The crusades of past centuries failed, in Mr. Green's opinion, because they were an attempt to wrest Palestine from the hands of the spoiler, "Conquest," he says, "is only theft on a large scale, and is not in accord with the fundamental principles of Christianity." He pleads for a crusade which "shall be in accord with Christ'a teaching and our modern sense of right";

"It must be a crustade of money, contributed by the Christian peoples of the world for the purchase of the floly Land. A combination of Christian meu and women for this purpose, regardless of creed or dogmas, could raise out of the chaos caused by backward looking and unprogressive fanaticism a republic in honor of Christ; could restore the famous cities of the Bible to more than their former grandeur, and regenerate the whole country by the infusion of our Western Christian civilization.

"With the construction of a much-needed safe harbor at Jaffa, by making good roads through the country, and by the thorough development of the marvelous natural resources, Palestine would become a land 'flowing with milk and honey,' and one restful place in all the world for the pilgrim tured in mind and body."

"No great undertaking," adds the writer, "was ever accomplished without the meeting and surmounting of apparently impossible obstacles"; and he goes on to say that "a properly organized international society for the raising of the necessary funds" is already in process of formation. He conclude:

"When the society is formed, the chances of success seem not at all chimerical. Turkey is poor. Christendom is fabulously rich. In Christendom money flows like water for any worthy cause, and, without a doubt, when once the Christians of the world are thoroughly awakened to the necessity and duty of bringing under Christian influence the gloriously fair lander of Palestine, money will flow in abundance into the treasuries of the society.

"An investigation is now being made to enable us to form an approximate estimate of the amount of money required. As soon as the society can be established with sufficient money to give it

weight and dignity in keeping with so noble a cause, a Christian Power or Powers will be petitioned to negotiate with Turkey for the purchase in the name of the Christian peoples. Palestine will then be created a republic, and the Powers will, as a matter of course, guarantee its independence, neutrality, and integrity. It will stand as a living example of peace on earth and good-will to men.

"When we speak of the purchase and control of the Holy Land by the Christians, it must not be inferred by people of other eligious beliefs that this is a movement to exclude them. It is not. The Christians have simply the first and strongest claim; but any laws made under Christian rule could not, and would not, admit of intolerance.

"The aim of Christendom will be to restore Palestine to its former greatness and prosperity, and to enfold the birthplace of Christ with the mantle of brotherly love."

# OBJECTIONS TO "JEFFERSON'S BIBLE."

GOME account of Thomas Jefferson's famous New Testament, which bears the title. "The Life and Morals of Jesus of Nazareth, Extracted Textually from the Gospels in Greek, Latin, French, and English," was given in The Liferance Dears of February 8, in connection with the bill then pending before Congress to authorise the printing of 9,000 copies of this Bible." On May to a resolution favoring the publication of the work was adopted by the House of Representatives; and it was not anticipated that any serious obstacle would be put in the way of carrying out the plan. As Representative Lacey, of lowa, explained in a statement made before the House, Congress had authorized the publication of all the works of Thomas Jefferson except this volume, which had apparently been overlooked.

The decision of the House, however, was greeted by a storm of protest. Objections were raised by secular and religious papers alike, and the clergy have been almost unanimous in their hostility to the project. The basis for opposition in almost every case is the fact that Jefferson was a Deist and not a Christian, and that his compilation omits all reference to the supernatural artifulates of Jesus. The Critistian Intelligencer (Dutch Reformed, New York) characterized the whole undertaking as "a meetless waste of money." The Jewith Exponent (Philadelphia) took the ground that the publication of the book was entrely outside of the province of the national Government, and was likely to do violence to the religious sentiments of many people. The Cithelic Union and Times (Binfalo) said:

"Let us grant that the look is a curiosity. So, it may be added, would be the attack on Christianity by Celsus the pagan. If it be asserted that Jefferson was an American statesman, what legitimate excuse can be given for not publishing Paine's 'Age of Reagon'?

"Frankly, we do not think much good will be done by bringing on the work at the present dangerous moment. We can not believe the Christian people of this country were demanding it very urgently. They have an ample host of things similar to engage their attention. Above all, we fall to see why the Government of the United States should lend itself to the diffusion of free-thought literature. We can not see what right it has to do so, to grind in stocking the public libraries of the country with a Gospel that refuses divinity to our Lord.

"Positively and absolutely, such books should not be brought out at public expense. Does the Government mean to adopt free-thought as the national religion?"

Many elergymen expressed emphatic disapproval of the action taken by the House. The following protest from the Rev. Charles W. Nevin, of Philadelphia (printed in the Philadelphia Press) may be taken as representative:

"The publication proposed is said to advocate certain views, commonly called infidel views, as to the deity of Jesus of Naza-

reth, and the dissemination of these would be a direct, public, and powerful attack upon the religion of Christians everywhere. No one could fairly object to the publication of Mr. Jefferson's annotated Bible by private enterprise, but every citizen should object to a national assault of this character upon any religious belief, and every Christian should resent a proposed attack upon Christianity under the imprint of national sanction."

In view of these and similar objections, the House has requested the Senate to return the bill directing the printing of the "Jefferson Bible." Private publishers, it is said, are eager to issue the Bible at their own cost, and it seems probable that they will be given an opportunity.

# THE CONDITION OF RELIGION IN NEW YORK.

N EW YORK is as cosmopolitan in its religion as in its population. In the opinion of the Rev, Walter Laidlaw, Ph.D., who has been making an exhaustive study of religious conditions in the metropolis, "the world has never known the like of New York's roster of religions, not even in that ancient India, center as it also was of trade, where the first parliament of religions was suggested to King Asoka by the collected complexities of a Babel of beliefs." A single block, he says, on the upper East Side of Manhattan Island "has Roman Catholics, Greek Catholics, Armenians, Jews, and ten Protestant communions," while "Ethical Culturists, Orthodox

Russians, Spiritualists, and Christian Scientists, and fourteen other species of Protestantism are found in adjacent blocks." The writer continue (New York Evangelist, May 29) as follows:

"The non-Christian population of New York has grown proportionately more in the last ten years than its Christian population. Chinese, Japanese, Hindus, Turks, and miscellaneons Asiaties have increased 165 per cent, and fully half of this increase, of course, is non-Christian. The accession to alien faiths, moreover, is not all use to immigration. The net is spread in vain in the sight of any bird, but a few Hudson River fish are being meshed in Hindu nets, and the Vedanta doctrine is advocated every Sunday afternoon in Carnegie Lyceum.

The Hebrew growth of New York during the last decade has been astonishingly large. On this point Mr. Laidlaw writes:

"There are to-day not less than 69,000 Jews within the limits of Greater New York, an increase of nearly 100 per cent. in ten pears. This growth is continued by the arrival of every immigrant bearing ship; 66,172 Hehrew-jargeaking immigrants landed at Ellis Stand between Juse 30, 1000, and April 1, 1923. In addition to 4,000 other Jews speaking Polish, addition to 4,000 other Jews speaking Polish, birth-rate is no much higher than the Protestant birth-rate that it is altogether likely that New York's Jewish population will soon reach one million."

Roman Catholicism, declares the writer, has greatly distanced Protestantism in New York since 1890. This is true both concerning property and membership. He adds:

"The Roman Catholic Church is growing in A<sup>AD BRONS, NAM numbers, however, not only on account of immigration, but because it stays hy every neighborhood in which it has commenced work. On the East Side of Manhattan, from the Battery to the Harlem River, its property amounts to \$1,002,000, while in the same area Protestantism, in all its forms, has nearly one million dollars less investment. As a</sup>

consequence only 4.3 per cent, of the population of Manhattan's East Side are communicant members of the Protestant churches, when the proportion on the West Side is twice as high, and along Fifth avenue six times as high. . . . Throughout Greater New York the Roman Church claims 954,602 persons, and the Protestant communicant membership is 332.546. Of the entire population of New York at the time of the federal census, viz., 3,437,202 persons, the Federation of Churches estimates that 1, 206, 955 were practical or hereditary Roman Catholics; 598,012 Hebrews, the balance actual or potential Protestants, making a potential Protestant population of 1,632,335 persons. The actual Protestant communicants of the city represent about one million persons, hence the missionary population of New York, which is Protestant in affiliation, must be over six hundred thousand persons, and it is in the reclamation of these lapsed people that Protestantism. federated, has its duty and opportunity for the next decade."

The following table shows the value of properties exempt from taxation held by the religious bodies of New York:

	Pro- lestanl.	Roman Catholic.	Hebrew.	Ail other.	Total.
Manhatian Bronx Brooklyn Richmond Queeus	13,008,670 634,200	\$23,822,700 4,119,800 9,311,100 477,350 1,043,125	\$6,036,500 \$0,000 339,300 26,725 56,000	\$16,583,500 3,001,950 12,395,310 279,200 1,251,900	\$104,286,200 6,791,850 35:954,380 ,1:417:475 3:458,135
Total	874,687,570	\$38,774,075	\$4,538,515	\$33,511,880	\$153,812,030

Appended is a diagram showing the percentage of population in Manhattan and Bronx composed of communicant members of Protestant churches.

# CAN THE CHURCH AS NOW CON-STITUTED MEET PRESENT DE-MANDS?

THE Rev. Harvey E. Berkey, A.M., who propounds this question in the current issue of The Lutheran Quarterly (Gettysburg, Pa.), admits that the answer must be largely determined by one's attitude toward the church and one's view of its mission. This is an age when all kinds of demands—reasonable and unreasonable—are made upon the church. Says Mr. Berkey:

"There are the demands of the low and the vile dens of infanty and their supporters that ask the church to go on its way and let them alone. Demands of well-meaning but misled friends in and out of the church that the church incorporate Eddyism or Dowieism or something similar. Demands of professional and imaginary reformers that the church father every new fad, scheme, or ism, as well as every real reform. Demands of Socialist leaders that the church become the champion of the masses against the rich, be the arbiter between labor and capital, preach to the masses about present-day secular problems rather than about God and Christ and the Christian life. Demands of scientists that the church accept their latest theory as a fact and incorporate it in the church's doctrine, even tho it is labeled 'liable to change without notice.' mands of the higher critics that the church accent their theory that they have discovered the original coat of many colors, and that the Bible account that it belonged to Joseph is not credible inasmuch as the coat fits Genesis perfectly. De-

mands of progressive liberalists that the church

DIAGRAM SHOWING PERCENTAGES OF PROJESTANT CHUNCIL MEMBERS IN THE BOROUGHS OF MANHATTAN AND BRONX, NEW YORK,

discard the doctrine of an infallible Bible, of future punish ment, of the immortality of the soul, of original sin, for behold, say they, these things are not found in the Bible, and are not in accord with the views of scholars or with reason. Demands of sealous enthusiasts for the coming of the Kingdom, that the church adopt hot-house methods and bring the millennium in this generation. Demands of nameless hosts that the church discard present and historic doctrines and methods and return to Christ."

How many of these demands, asks the writer, are rational or reasonable? How many are in accord with the teaching of Christ, or of the Bihle? He continues:

"It will be well for us to keep in mind the fact that when Christ was on earth there were some demands which he himself could not meet—in the sense of granting them. The fond mother who wanted her sons exalted was told frankly, 'That is not mine to give.' When the Jews, in their enthusiasm, sought to make him their temporal king, he was compelled to remind them.' My kingdom is not of this world.' And doubtless, if the Savior's teachings mean anything, we may believe that, were solved to the savior's teachings mean anything, we may believe that, were of his church to-day than he could the things just cited, in the days of old."

If the church leaves the "golden standard of truth as it is in Jesus through the Bible," adds Mr. Berkey, only confusion can result. He says further:

"Let us now look for a moment at the demands made by and for the masses. Let us see how they accord with the teaching of lesus, . . . With all charity for the honest and sincere souls among those from whom these demands come, must it not be admitted that their demands are of the earth earthy? Demands for the bread that perisheth? Such demands are diametrically opposite to the Savior's exhortation, 'Seek first the kingdom, This class want all temporal things' first ' justead of 'added, ' and the 'kingdom of God ' last-if indeed at ail. To their minds the church must begin with the 'added' things. And because the church insists on following the Lord's orders, the church is condemned. They forget the Lord's words to the man who came saying: 'Master, bid my brother divide the inheritance with The Master's stern answer was, ' Man, who made me a judge or a divider over you?' And then to the multitude he added the warning: 'Take heed and beware of covetousness, for a man's life consisteth not in the abundance of the things which he possesseth.' . .

"Another demand that we need to examine in reference to its scripturalness is the popular rery: Back to Christ." This demand is on the lips of men like Principal Fairbairn, of Oxford, progressive liberalists like Professor Hermann of Marburg, the leader of Ritschitanism in Germany, and President Eliot, of Harvard; and it is the watchword of social reformers and the laboring that the same in every case? By no means. To Principal Pair batter and his class Christ is indeed the Son of Gol, the Savior of men. To Professor Hermann and President Eliot Christ is a difference preson altogether."

Mr. Berkey, while conscious of the shortcomings of the church as at present constituted, believes that its conservative attitude is fully justified. It has shown itself, and will continue to show itself, he thinks, ready to meet the new demands of our age, in so far as tiep can be reconciled with the Gospel teaching. Noting the statement of a recent critic of the Christian religion, to the effect that in two titousand years it has won the allegiance of but thirty per cent, of the world's population, he goes on to say:

"If the church is slow in its growth, and sometimes shows, signs of decline and apparent paralysis, it, by this very fact, shows itself to be in harmony with food's laws of growth in the naturals world, and in the spiritual life of the individual believer. The most casual observer of nature sees that the things that have any degree of permanence have been slow in their development. The mushroom grows in a night, but declines in a day. The tee marks its development by centuries, and its ago, barring accidents, is practically limitless. During its entire history it is subject to the vicisitudes of time. The cold and frost of winter, the storms, the lightning, the hait, and the drought of summer, in turn, blight its buds, distort and disfigure its branches, check, and all but paralyze its growth. But are not these the very things that help to hadnel it and give it the power of endurance?

"So too in the individual Christian life. It grows slowly and is only completed at death. Like the tree, it too has its vicis-

situdes, exaltation, depression, assurance, doubt, joy, sorrow, sometimes almost despair, yet through them all it grows slowly but surely up into the full stature of the Lord of Life."

### PROGRESS OF ROMAN CATHOLIC MISSIONS.

THE Roman Catholic "society for the Propagation of the Faith" has recently issued from Baltimore an interesting history of its work, bearing the Imprimatur of Cardinal Gibbons. This society, as is explained in the report, should not be confounded with the "Roman Congregation for the Propagation of the Faith," which is a department of the general administration of the Entheth, established in 1622. The society "takes no part in selecting missionaries nor in appointing them their field of work, nor in training them for it," and it does not concern itself with the interior administration of missions. Its aim is "to support missionaries who are chosen, trained, and sent forth on their mission by the usual authorities of the church."

The enterprise has grown out of very humble beginnings. Its organization, which was effected in Lyons in 1822, was due in no small measure to the influence of Bishop Dubourg, of New Orleans. Only towlve persons were present at the first meeting of the Society, and the receipts for the first year amounted to about four thousand dollars. Soon after its foundation a central council was established in Paris, and words of encouragement were received from nearly three hundred hishops in different countries. Finally, Popo Gregory XVI, published an encyclical in the year 1840, recommending the Society to all churches and placing it in the rank of "aniversal Christian institutions."

The following table shows the contributions made from 1822 to 1900, and gives some idea of the remarkable financial support that the Society has received:

that	the Society has received:	
1822	France, French Colonies	\$42,076,005.00
1825	Belgium	3,701,140 00
1827	Germany and Austria	5,862,666.00
1827	Italy	5,460,135.00
1827	Switzerland	775-457-90
1827	Balkan States	987,943.00
1833	United States	1,130,411.00
1811	Canada, Mexico, West Indies	1,143,476.00
1813	Great Britain and Ireland	2,301,754.00
1817	Holland	1,167,634.00
1817	Portugal,	445-371.00
1817	Russia, Poland,	68,754.00
1829	Spain,	\$23,608.00
1840	Central and South America	\$15,706.00
1843	Oceanica	85,875.00
1848	Asia	74,068 00
1857	Africa,	256,536.00
	Countries not named,	22,558.00
	Total	\$65,690,017.00

The money collected was distributed as follows:

America	\$0,072,016.00
Europe,	
Asia,	
Africa	
Oceanica	6,011,630.00
Special gifts sent to missions as directed by the donors, trans-	

\$65,690,017.00

The total sum given to the cause of missions in the United States during the same period was \$5,807,393, the the receipts from this country have been only \$6,120,420.

The missions now assisted number several hundred. Those in the United States are chiefly among the Indians, and Asia has a greater number than any other continent. Regarding the number of missionaries in the field, the report says:

"We may safely assert that there are at least 15,000 priests and religious, 5,000 teaching brothers, and 45,000 sisters laboring as missionaries, not to speak of the priests, brothers, and sisters native to the regions where they work, catechists and othere who make up the personnel of a mission, and the laborers among the Oriental Rites. Probably the estimate is much too small, but he is so. At the lowest computation there are, at the

opening of the twentieth century, about sixty-five thousand missionaries, istiry-five thousand men and women who have joint their country, their brothers and sisters, houses and lands, and all the blessings they hold most idear in this world, to bring the still greater blessing of the faith to those who are as yet deprived of its Assuredly it is an astonishing number, which may well missionaries such all the more because a century ago those missionaries such all the distributions of the still greater blessing of the still greater blessing of the faith to those who are as yet deprived in the still greater blessing of the faith to those who are as yet deprived to the still greater blessing of the faith to those who are as yet deprived missionaries such as the still greater blessing of the still greater bl

"Sixty-five thousand missionaries is a noble army; but what victories are yet to be won! Almost fifteen hundred millions of human beings inhabit the earth; and only about four hundred millions are baptized Christians. The immense majority of more than a thousand millions have not yet acknowledged Christ, and are divided among the many sects of Buddhism, Mohammedanism, Petichism, and infidelity."

# IS OXFORD ORTHODOX?

THE University of Oxford has the historic reputation of being the stronghold of High-Church theology; but times have been changing and evidently Oxford ortholoxy has changed also. Recently six Oxford University professors united in the publication of a volume called "Contento Veritatis: Essays in Constructive Theology," which is practically a theological manifests and confession, and which, The Christian World, of London, declares, would make a Pusey and a Liddon turn in their graves could they read these new essays.

This is not the first time that Oxford theologians have disturbed the church by such publication. The famous "Essays and Reviews," of which Dr. Temple, now Archhishop of Canterbury, was one of the authors, was an epoch-making event in the church affairs of England; but, The Christian World claims, that famous book was as the light of the moon compared with the light of the sun, when placed side by side with this new production.

The new work contains seven parts. The first, by Dr. Rash-dall, discusses "The Lost Grounds of Theism"; Dr. Inge discusses "The Person of Christ"; a third essay is devoted to the "Doctrines of Christ" by Vice-Principal Wild; a fourth describes "The Personaent Value of the Old Testament," and is written by Rev. Burney; the fifth, from Rev. Carlyle, discusses "The Modern Criticism of the New Testament"; a sixth discusses "The Church"; and the seventh "The Sacraments," the last also by lurge.

The six collaborators, as stated by a German critic in the Leipsic Chronik (No. 17), are a unit in accepting the leading results of modern Biblical criticism. They regard the Pentateuch as a composite from various sources, accept the priority of the old prophets over the Mosaic legislation, divide Isaiah into two books, believe that many of the earlier accounts in the Old Testament are legends, and maintain the difference in the ethical ideas of the various stages in Israel's historical development. In the same way there is a practical agreement on New-Testament critical problems. The Gospel of Mark is regarded as the oldest and most reliable source for the life of Christ, and, together with the Logia, as the source of Matthew and of Luke. These two latter are not in such close touch with the oldest traditions, but have modified certain facts in their reports. 'The fourth Gospel is discussed in the modern sense advocated by the German professor Wundt. The Panline letters have in the main stood the test of critical research, and the Acts in their main contents are considered historically reliable.

In the discussion of the fundamental problems in connection with Christ, such as his person, his miracles, etc. the writers substantially agree with Harnack. Jesus no doubt performed great deeds, but by a psychical power, the limitations of which can not be scientifically determined. Wild declares that the probabilities do not favor "nature miracles." In the doctrine of the divinity of Christ, the views of Rischel have found expres-

sion, according to which Christ represents for us the religious value of God. We find our God in and through Christ. Modera views in general are maintained on these matters. In the essays on Church and Sacraments, the exclusive, priestly views of the Anglican Church are sharply attacked.

The Chronic asks: What is the significance of this manifesto at this time from the center of Anglicanism for the Christianity of to-day? It is an evidence, it thinks, that the revolutionary results of modern critical theology can be made to serve the church and her best interests. It shows that modern Biblical criticism is not merely or chiefly destructive and negative, but also positive and reconstructive.—Translation made for The LITERANY DIGEST.

# AN ARTIST'S PLEA FOR A "FULL-BLOODED"

"WHEN is an artist going to arise amongst the people of this earth who will paint us a true likeness of the Christ?" asks Grace A. Williams in the Boston Transcript. The world is weary, she declares, of "stoop-shouldered, worn-out-looking Christs, going about in rags or trailing gowns"; it craves the Christ "of lofty and majestic carriage and superb physique; a man the picture of vigorous health, who gives out even in the picture some suggestion of the tremendous magnetic force and power that Jesus most assuredly had." She writes further:

"Christ's whole life goes to prove that he was not only a brawny, muscular, powerful, and absolutely healthy man, but that he was a man of imposing height, galt, and appearance, and of wonderful physical beauty. He must have been, to attact crowds wherever he went as he did; to have so inspired them with awe that they would listen spellbound to him fonours; would throw themselves at his feet, fawning upon him, calling him 'master,' and in unhesitating faith imploring him to have pity on them and heal their diseases. A weak, feeble, sickly looking man most certainly could not have won the admiration, respect, and reverence and absolute confidence of the multitudes, nor inspired with terror, jealousy, and awe all the high priests and Roman efficiels, as Jesus of Nazareth did.

Oh, we have had enough of feeble Christs! Paint us a stalwart, broad-shouldered, muscular lew of the highest caste in appearance; aristocratic and scholarly in looks; of great height, with the high-bred Jewish features tanned by the sun and wind; with great, deep, brown eyes shining with a tender, yet brilliant light, the dark hair curling upon the neck, just visible under the white, hood-like head-dress which falls upon the shoulders and is bound about the head with a band, much the same kind of head-dress as is worn by the Arabs to-day and which is necessary for protection from the hot sun. As for the dress, it certainly was not the ridiculous trailing gown of voluminous proportions painted for ns by all painters, which would have necessitated eing held up, like a grand dame's reception gown; neither was he clad in dirty, disreputable rags. His garment is said in the New Testament to have been without a seam; which meant a handsome and costly garment, and certainly, like all the other garments of that period and this, it escaped the ground by nearly a foot. As Jesus was a lay reader in the Jewish Church, he wore the insignia of his office, which consisted of a deep blue border to his garment; also, if I remember aright, a blue sash about his waist, the ends of which hung at the side and were fringed with blue tassels. The rest of the garment and the head-dress

"As for the face, apart from the highly refined Jewish features, every noble and lovable quality of character known would have to be depicted therein; all the finest feminine qualities, all the finest maculine qualities combined in perfect balance, for it would necessarily be a face as full of power, force, courage, and energy as of gentleness, frankness, tenderness, and sympaty full of firmness, intensity, and resolution, yet as full of love and compassion. A subline face, illuminated with an inspired light."

# FOREIGN TOPICS.

# EMPEROR WILLIAM'S GIFT TO THE UNITED

THE gift of a statue of Frederick the Great which it has pleased the German Emperor to bestow upon the United States is the occasion of contending emotions in the German editorial mind. There is a general but conventional laudation of the Emperor's act as one of infinite delicacy and courtesy, but there is also a tendency to criticize the American people for being unable to appreciate fully the gracious thing which his imperial Majesty has done for them. "Notwithstanding President Roosevelt's thankful auswer," says the Berliner Tageblatt, "we must be prepared to discover that the same absence of discord will not characterize every echo coming to us from the United States." The Lokal-Anzeiger (Berlin) is overcome with admiration at Emperor William's depth of policy "in spinning the thread of the connection he had established " with this country. The Socialist Vorwarts (Berlin) approaches the subject from another point of view altogether:

"The monument to old Fritz that the German Emperor means to honor the Americans with is preparing notable anxieties for President Roosevelt. Mr. Roosevelt has laid up numerous embarrassments for himself by forming hasty resolutions which he has later been obliged to alter. Delighted with the dithyrambic heartiness of the imperial offer of a statue, Mr. Roosevelt sent the Emperor an equally dithyrambic telegram of reply. But while his grateful telegram let loose the jubilee of the German Byzantine press, he himself ran against the opposing reality of the republican traditions of his country, which is not yet sufficiently accustomed to monarchical gewgaws. When Mr. Roosevelt had announced to the Emperor in his telegram that he would at once lay the offer of a statue before Congress, he turned to his Cabinet for further developments. In the Cabinet, however, Mr. Roosevelt was apprised of unexpected difficulties. The result of the deliberations was the abandonment of the plan, conceived in the first warmth of impulse, to lay the offer before Congress and thus before the American people. A despatch from Washington shows what a surprising change had taken place in the appreciation of this monarchical statue at Washington.

Thereupon Vorwarts quotes the Washington news despatch stating that Mr. Roosevelt had decided that Congress need not be consulted regarding the statue, and that. Frederick the Great having been a great commander, the gift could be put in the yard of the war school. Verwafts resumes:

"On Tuesday President Roosevelt meant to lay the gift-statue before Congress, that its enthusiatic acceptance might indicate the intense delight of the American people. Now Mr. Roosevelt deprives the American people of all opportunity of indicate their intense delight, and at the same time deprives the Emperor of the pleasure of receiving the vociferous thanks of the republicans for the monarchical statue. Vesterday President Roosevelt volt celebrated the Pressian King Preferried. It as 'one discussion the greatest of men of all time.' Now he sees that he was a 'great commander.'

Whereupon our authority concludes, with the fine sarcasm habitual to it, that the monarchists surrounding the Emperor will regret that Congress can not now send over to Berlin the statue of one of our "historical heroes" to decorate some thoroughfare given over to statues of men of the people and champions of republican freedom. This sort of thing is annoying to the Hamburger Nachrichten, and it even intimates that the Americans are likely to have too good an opinion of themselves in view of the way Emperor William is spoiling them. An English view of it all. Iron the London Standard, runs:

"Mr. Roosevelt undertook to lay the Emperor's offer before Congress, but on second thoughts he appears to have decided that this was superfluons. Congress, it is reported, showed itself somewhat pusseld as to what it was to do with the statue. There is, indeed, a touch of oddness in the situation created by the present of an image of Frederick the Great to a republican nation. Kings as despotic have been common, and even still are not unknown. No other ever combined in so great a degree the property of the status of the status

# CORONATION CARES.

E VERYTHING that can be said about the coronation seems to have been said by the English press, and it is pretty generally agreed that the occasion will surpass any merely spectacular demonstration witnessed in Europe for a long time. Attention now is concentrated upon details, and among them is the care of the crowds. Says The St. James's Gazette (London):

"There has been no lack of warnings addressed to the authorities through the medium of the press as to the probable difficul-

PREPARED FOR THE WORST.

- Brooklyn Eagle.

ties in dealing with coronation crowds. Whether the authorities will accept them in a spirit of liberalminded docility, is not a matter of such moment as the precautions that are being taken. These may, we fear, 'from information received, and so far as that information goes, prove inadequate, not through any fault of those in charge, but by lack of numbers of the police, and by the loyalty and excitement of unprecedented crowds. We have no wish to pose as prophets of ill, but if, as has been suggested,

likely to stay out all night so as to scure a good place next day, their safe regulation might well tax the powers of several army corps. It is not or business to suggest expedients; we must leave the question to the powers whose immediate concern it is, with the fullest confidence that they will do their best, but not, it must be confessed, without certain tremors. If to be forewarned were but (to revive an old joke) to be four-armed, then would the police indeed be fortunate."

Not only has there been trouble regarding the crowds, but there has been trouble regarding the poetry. It is too imperialistic, in the opinion of the "pro-Boers"; but The Westminster Gazztie (London) says "the wave of imperialism which has just been passing over ne" is responsible for that. Another objection is to the language of the coronation service, a point upon which the Socialistic Keyneldr's Newspaper (London) asserts:

"The French tongue will be used in portions of the coronation service a few weeks hence, as, for instance, 'Du tres hant, tres puissant, et tres excellent monarque Edouard par le grace de Dieu, roy de la Grande Britagne et Irlande, defenseur de la foy, Largess.' Any nation with a sense of humor, any people not a race of helots, would not tolerate such a reminder of defeat."

The grand features of the coronation as a rite will be the anointing, the investiture and enthronement, according to the London Pilot, which traces the ceremonies back through a remote past:

"The accounts contained in the Books of the Kings of the inauguration of Solomon and of Joash seem to have been followed more or less consciously in the formation of the English coronation rite. In them we may trace the riding of the king in state to the palace of his coronation, the giving of the cant, the anointing, the putting on of crown and robes, the setting of the king upon his throne or upon some substitute for a throne, the cacknowledging of him, so set, by the princes and the people of the land. The anointing, the crowning, and the enthronement, which are, perhaps, the most marked features of the ancient cermonies, are made in the Christian rite to be the central points round which the forms of prayer and beneficition gather; they are the essential parts of the actual rite of the hallowing of the English kings.

# RESIGNATION OF THE FRENCH PREMIER.

WillEN the announcement was first made that M. Waldeck-Rousseau, the French premier, intended to resign, there was an almost unanimous chorus of astonishment and incredulity. French and English papers agreed that there could be nothing in the

report. M. Waldeck-Rousseau

had just come ont

of the elections

victorious after

remaining at the

head of a cabinet

longer than any

other premier the

third republic has

seen, Why should

he go? Now that

there is no longer

any doubt of M.

Waldeck - Rous-

seau's departure, the French papers

do not know what

PAUL DOUMER, TO-DAY A FRENCH POSSIBILITY,
TO-MORROW?

—Le Rire (Paris).

to say. The only definite utterance comes from the Intransigéant (Paris):

"The apparent cause of Waldeck-Rousseau's retirement is the state of his health. It is true that while his age is but fifty-five he bears the weight of sixty-five, and with his pale and flathy cheeks he has the look of an old detard in decay. ... But it was really through fear of defeat on the bill fagninst the religious orders) that he made up his mind to go."

This opinion is that of a pronounced political enemy of the former premier and, curiously enough, it finds a sort of confirmation in something that has been said by the Clerical Correspondant (Paris):

"M. Waldeck-Rousseau announces his intention to retire. He gives a very queer reason. If he has made up his mind to leave the ministry it is because, according to him, he is sure of having a majority. He would have remained if things had gone against him. Things do not happen thus ordinarily. Ministers retire when the majority is against them. . . From all this we infer that the ministerial faction is beaten and that it knows it."

The ministerial Temps (Paris) asserts that M. Waldeck-Rousseau's work is done and therefore he goes. It ridicules the statement that there can be any question about the genuineness of the majority in the Chamber. The République (Paris), nevertheless, questions the majority. The Matin (Paris) prints details of the premier's worn-out condition. As for the Combes ministry, which succeeds that of M. Waldeck-Rousseau, there is nothing in the editorial utterances of French newspapers which have reached this country to indicate that they had any intimation of its make-up. M. Combes, a radical republican Senator. had, however, been regarded in the light of a possible premier. According to the news despatches of the New York Tribune, the Journal des Debats (Paris) does not expect the Combes ministry to last three years, as did its predecessor, while the Temps (Paris), a ministerial paper, says the great need of France is sound financial legislation, which it hopes the new ministry will provide .- Translations made for THE LITERARY DIGEST.

# UNCLE SAM'S CRITICS ON CUBA.

THE United States is not acting in good faith toward Cuba,
if the views of the continental European press may be accepted. It seems to be considered that the inauguration of a
republican government for the island and the effacement of our
officials are parts of some solemn sham. This idea pervades a
recent elaborate editorial in the Journal des Dibats (Paris),
which says:

"So far as Cuba is concerned, it is known that her independence is only relative, if even that. The Platt amendment, adopted by the American Congress, placed Spain's former colony under the disguised protectorate of the United States. The Cubans, attho it went against the grain, resigned themselves to the inevitable, asking no more of their liberators, become their protectors, than that they come to their aid in their economic distress."

A similar tone is manifest throughout most of the editorial

THE ELECTION OF A CUBAN PRESIDENT,

Which brings with it a few who are Cubans and more who are not.

—Electronista Internacional (New York)

This Liberal paper considers that selfish and material imperialism alone actuates the United States Government. It notes,

"From its incention the Government of Cuba will have to contend with very serious financial difficulties. It will have to raise

\$2,000,000 for the back pay of the soldiers of the republican army, Every Cuban family being interested in this payment, it may be seen how the Congress will concern itself with its liquidation; but the poverty of the treasury is so great that President Palma appeals to the moderation and patriotism of the people for delay until a more propitious period. Will this appeal be heeded? It is difficult to believe so, the opponents of the President being always able to argue that Cuba, before everything else, should pay her debt to those who contributed so greatly to her freedom from Spanish domination '

Naturally, those Enropean newspapers which doubted from the beginning the good faith of the United States toward Cuba can see nothing in the present posture of affairs to alter their opinion. An idea of their standpoint may be gathered from what the Frankfurter Zeitung says:

" I wonder what I was begun for If I was so soon to be done for."

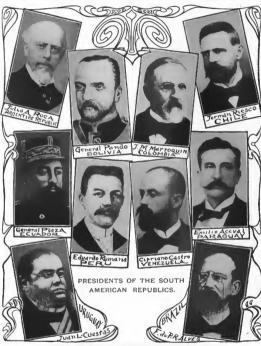

This couplet might be recommended as a motto to the republic of Cuba which came into existence on May This republic will evi-20. dently give the historian of future days little to do. for its career can not extend over a long period. If in a not too distant future it enters the American Union. the wonder will be that a more independent form of government was ever established in Cuba. The transition from a Spanish colony to an American one, or to

a State of the Union, could have been effected more directly. The Americans, however, were not in favor of this plan. Before the beginning of the Spanish-American war they had made their jubilant promise of a free Cuba. Moreover, it is desired that Cuba shall make a plea for annexation in view of intolerable conditions on the island, whereupon Uncle Sam can say to the natives. 'You wanted it,' With the establishment of the Cuban republic deference is paid to the wishes of those who yearned and fought for a 'free Cuba' and when this heart's desire of theirs is realized they will not set themselves against admission into the union, in which one State is on a level with all the others."

English papers are quite generally disposed to give the United States eredit for work well done in Cuba, and to be sparing

utterances of the Indépendance Beige (Brussels) on the subject. of adverse criticism, but an exception must be made in the ease of the anti-American Saturday Review (London), which avers:

> "Cuba, we are officially assured, is now a free and independent republic, and Americans are quite frankly lost in admiration of their own faithfulness and magnanimity. President Roose-

From Photographs loaned us through couriesy of El Economista Internacional (New York).

velt has already discounted the rhapsodies of his 4th July oration in portraying the full unselfishness of the sacrifice; and the world, always curiously apt to take Americans at their own valnation, is more than half inclined to believe that something very fine and generous has actually happened. The facts are much less one-sided. It is true that the American troops and officials have been withdrawn, the American flag hauled down, and a republic of sorts inaugurated. But it is not true that the republic is independent even in the management of its internal affairs, while so far as foreign relations go, it is undisguisedly under the thumb of Washington. The republic has been obliged to cede naval and coaling-stations to the United States: it has no power to declare war without American consent: it may not add to the Cuban debt without permission; even its control over the island treasury is subject to supervision. Moreover the United States retains a most elastic right of intervention."

The same authority is induced to philosophize in the following fashion upon all that has gone before:

"Cuba supplies us with the formula of American expansion in the West Indies and South America. It offers, too, not a few data for a judgment on Americans as practical empire-builders. Where it is a mater of a road to be cut, a school built, or fewer-den like Havana cheaned out, the Americans do capitally. For the elementary mechanics of colonization they have a decided aptitude. . . The work was well done, but only Americans out of speaks of it as the beginning and end of government. They are the more inclined to exalt it as in other branches their success is less patient. They have not, for instance, the art of winning popularity or even respect."—Translations made for The Letters Duest.

# THE DIAZ DOCTRINE AGAINST THE MONROE DOCTRINE.

THE Montroe Doctrine occupies the press of South America from time to time, but all expressions of opinion continue to be favorable to its maintenance in the sense indicated by Theodore Roosevelt in his message to Congress last winter. That is, the Doctrine must be maintained in its integrity as regards the prohibition of European encroachment upon the American continent. Thus the Pressa (Buenos Ayres), which, apparently, sees no need to dwell upon the so-called Dias doctrine, or at any rate, its columns contain little or no allusion to it. The Montreal Wilness thus defines the Dias doctrine.

"The obvious meaning of this amendment to the Monroe Doctrine is that, while the Latin-American republics accept the principle of inviolability against European encroachment, the plass desire a like guaranty against the United States. . . . The 'Diat doctrine' would bind the Spanish republics into one to resist the United States should she further assail any of them, and bind the United States to protect them against each other. It occurred the states of the states of the states of the states of the reduced to the states of the states of the states of the states of reduce to Chile, whose aggressions on her neighbors are almost ceaseless, but is specially amed at the United States."

South America is certainly in great peril from the United States in the estimation of the *Economiste Français* (Paris). This paper does not look for "brutal conquest," but it anticipates an "infiltration of capital":

"Latin America must develop rapidly enough to resist this infiltration or to absorb it without altering gravely her own character. Any halt in the development of Lutin America risks placing her at the mercy of Anglo-Saxon America. . . . The simplest foresight imposes upon Latin America these three conditions for the maintenance of her independence and her own development: order and good government internally, peace among the various sister republics, and close economic and financial relations with Eurone, from whom she has nothing to fear."

This article is from the pen of the distinguished economist, Paul Leroy-Beaulieu, who takes up the South American republics one after another and notes the able men who are attaining or have attained power in each, and he warns the whole continent against the North Americans. But, if other authorities may be accepted, this warning can do no good, because of the mastery which the United States has attained on the American continent. The Celestial Empire, a British paper published in China saves.

"There is a rumor that a secret agreement has been come to hetween Russia and Germany, in which, for a free land in China, Russia is to allow an equally free hand to Germany in South America. Abourdity could hardly go further, since neither of the alleged contracting parties is in a position to prevent the other from doing what she chooses, while there are other Powers that most decidedly are. So far as South America is concerned a Europeau state would be better off with half a promise from the United States than she would with a signed, sealed,

and delivered treaty with Russia. Uncle Sam is, in short, master of the situation if he chooses. It remains to be seen whether he will choose. At present it looks as if he will,"

A careful study of the Europeau press does not reveal that it attaches importance to the Diaz doctrine. The official and semi-official press of Germany appear to be oblivious by the existence of this Mexican addition to the Mouroe axiom. This is doubtless due to the general European belief that the United States is the only Power to be reckoned with in the new world.—Translation made for The LITERAKY DIGST.

# SPANISH PRESS ON ALPHONSO'S ENTHRONEMENT.

A LTHO the newspapers of Spain have said nothing of great moment with reference to the recent enthronement of Alphonso XIII.—nothing, indeed, that was not anticipated and even discounted—their uterances have still a certain interest. The general wish to say nothing against the youtful monarch is compatible, it seems, with a notion that he is a Bourbon and that little can be expected from him. Nothing of this, of course, appears in the comment of the Epsea (Madrid):

"The general sympathies of the nation go out to the young sorties meeting. We trust his youth will be atoned for by the patriotism of our public men and our political parties, who will loyally cooperate with their aid and counsel. By sacrificing their personal and partiaen interests they can contribute to the realization by the new reign of the hopes the Spanish people have built uron it."

But this is a dynastic paper, and it takes a view of the situation which finds little or no support in papers of another tendency. The republican Pair, published in Madrid or elsewhere according to the necessities of the hour, prints a great editorial oath of its own as a counterblast to the King's oath. It thus cows. amono other thinos:

"We swear to fight to the end the religious intolerance that has covered the soil of Spain with inquisitorial infamise and made her a reproach to the world for her sacerdotal fanaticism, causing an uprising against such intolerable religious conditions of the consciences of Americans and Filipinos and her own subiects everwhere."

The paper also awears to drive the English from Gibraltar if it can, and finally to try to establish progressive democracy in the land, to the end that a "great republic" may be founded. There is reason to believe that this sheet has in store for it the same ordeal as was recently undergone by the Corree Esphales (Madrid). This official organ of the Carlist party in Spain published the protest of Don Carlos against the enthronement of Alphonso XIII. The edition was confiscated and the publisher is to be prosecuted. No other paper published the protest, through fear of the police. The Liberal (Madrid) says:

"The country desires that under Alphonso XIII. the monarchy shall be honestly democratic and liberal. It will protest from the first day of his reign, against any relaxation of firmness in dealing with ultramontane pretension, a firmness which the uncompromising can be courteous."

Enthusiastic is the tone of the Implarcial (Madrid), which says that "those who aspire to reform ancient abuses and to away with standing errors in Spanish official life, those who hope that the first years of the twentieth century may make up to for the last years of the uncertainty, see in the King the hope of his country. He is very young. The bitterness thought and weakening his country. He is not each of the thing the hope of his country. He is not each of the water hope of his country. He is not each of the water has not eaten into his soul, making somber his thought and weakening his courage. He is notle and well disposed. It will be easy for him to put himself in touch with all that is generous and disinterested and illustrations in young Sosin."

But there are Spanish papers, among which is the *Heraldo de Cadia*, that take a gloomy view of the outlook and fear that Clericalism will gain the upper hand.—*Translations made for The Literary Dicest*.

# NOTABLE BOOKS OF THE DAY.

# A BOOK OF REAL AMERICANS.

THE KENTONS By William Dean Howells. Cloth, 5x71/2 Inches, 317 pp. Price, & to. Harper & Brothers, New York

7 E may protest against Mr. William Dean Howells's literary methods; we may urge, and with justice, that he is tedious with his microscopic details, that his women are usually tiresome, and, as one reviewer has it, that he "describes the kind of people we have spent our lives in trying to avoid"; but after all this and

WILLIAM D. HOWELLS

more has been said, it must at last be admitted that there is no one in this country who can produce work of the same caliber as that of Mr. Howells's. If the reader happens to be one who has plunged deeply into the sea of contemporary fiction, he will have to give Mr. Howells the foremost place among American writers of the present. Besides Mr. Howells's books, the other work seems only a mass of tendencies, the other writers but authors in the making, their books but student work not yet ready for the public, and Mr. Howells about the only finished master of the craft. It is he alone who can give a true picture of life in this country. There have been other writers, it is true, who have drawn very real and very promis-

ing netures about small sections of the country. They have, however, usually mistaken localisms for American trans, and have thought that to represent the pacturesque of any given locality thought that to represent the partitional of any great standy was to give its spirit. Mr. Howells is not picturesque, neither does lie confuse some local individual with a type that is wide-spread enough to represent the dwellers of a large section of the country. In his latest novel, "The Kentons," he has given a page out of the life of an American family of the Middle West. In this one book we get the life of our people more truly embodied and many of the social traits of our present development more subtly characterized than in all the works of the other would-be portrayers of American life of the last five years. Most of our writers are too much influenced by what they have read in books to give a true picture of life. They re-create the types which they have admired in other people's work. We are a patriotic people tou, and are anxions to make our countrymen appear well on paper; we are still too childish and too near our own civilization to observe it closely. Mr. Howells alone has the distance necessary for a true perspective. Quietly and in his own tedious way, he gives an actual picture of things as they are. His manner may not be popular, and he may treat of questions in our social life that most people are not interested in ; but the result is as close a picture of life as is possible. "The Kentons" is a study of the relation of the American child to the American parent, and it is so exact a human document that a foreigner anxious to become enlightened on this perplexing question could not do better than to read the book. It is a masterplece in the way of character drawing. The only weak spot is Ellen. It is not that she is lacking in vividness, but we have only Mr. Howells's word for it that she is lovable. He has failed to make her appear so.

# THE NEGRO AS A SPOT.

THE LEGFARD'S SPOTS. A Romance of the White Man's Burden, 1865-1900 By Thomas Dixon, Jr. Cloth, 5½ x 72 Inches, 465 pp. Price, \$1.50. Doubleday, Page & Co., New York.

HIS is a book by an intense Southerner on what the negro is to the Sonth. It is a vivid partizan portrayal of that section of the country from the period of the Civil War, with the consequent emancipation of slaves, up to our own day. The author most appro-priately takes as his motto: "Can the Ethiopian change his skin, or the Leopard his spots?" Mr. Dixon understands thereby, "Can the negro be elevated to equality with the white man, and will the South reiterated through four hundred and sixty-five pages.

Whether the author had or had not hope of proselytizing in the North (where he once occupied a Baptist pulpit) by this energetic work, it must have been a relief to him to pour himself out as he has on the subject. If what he says be true, there can be little question that the sufferings entailed on the South by reason of the negro may claim sym pathy from the unprejudiced. The two negro men he uses as awful examples may be rare exceptions. That they are types, the grim stories of negro outrages which come North at intervals prove, and they are enough to make even the blood of an Abolitionist boil.

It is impossible, of course, in dealing with a book so preeminently

one with a purpose, to ignore the author's sim. It is not necessary. however, to thrash out the old arguments here on the negro question Anybody must admit that the South is the section of the country which has suffered from the negro, especially during the period of reconstruc-

tion. The poverty and sorrow after defeat were less, according to Mr. Dixon's story, than the angulsh en-

dured from the freed blacks Mr. Dixon's story is not without interest apart from the race question involved. He shows a good appreciation of the Southern character, expecially of the young woman and her lover, she n "beile" and he her "beau." They are thoroughly typical of the romantic and chivalrous reintion of the seves in the South He introduces some of the characters of "Uncie Tom's Cabin" into this story. The monstrops Simon Legree, the slave baiter of the former novel, is a negrophile in this, purely for reasons of policy and interest. George Harris, son of Eliza, is a Harvard graduate, and friend of one of Boston's finest aristocrats until he

THOMAS DIXON

makes love to the daughter of the house, when he is promptly turned out. He fails to secure any occupation fitted to his education, and even as a workman finds doors closed on him.

### TWO ROMANCES OF THE SOUTH.

THE BATTLE-GROUND. By Ellen Glasgow. Illustrated by W. J. Baer and W. Granville Smith. Cloth, 31/4 x 7% inches, 500 pp. Price, \$1.50. Doubleday, Page & Co., New York.

Cloth, 3% x 7% THE MASTER OF CARTON'S By Hildegarde Brooks inches, 413 pp. Price, \$1.30, Charles Scribner's Sons, New Yor

HERE are certain lands that apparently compel those who write stories concerning them to take a certain tone. The spirit of these countries, rightly or wrongly, has stood for so much in the

minds of its own people that its very name spells romance. It seems impossible to write of the South without a special tenderness. The South before the war has been the theme of hundreds of stories: whether the author is Southern-born or not we may trace a vague note of regret. The South of the present day has been chosen time and

again whenever an author wished to draw a community where grace and charm were the predominant

note instead of energy and push.

Two books have been published lately that are so similar in their spirit that they invite comparison. One, "The Battle-Ground," by Miss Ellen Glasgow, treats of the South in the sate-bellum days and carries the hero through the Civil War. The other, "The Master of Cazton's," by Miss Brooks, gives a picture of life in the South at the present day. The actual plots of the books are very different, of course. Miss Glasgow has chosen by far the deeper theme, and the one with the greatest dramatic possibilities. Miss Brooks's book is very simple as to plot and pretends to nothing be-

side picturing the life of a comsphere of the South is in both of them. They both paint a community, gay, graceful, hospitable, whose women are quixotic and lovable, whose men are quixotic and chivalrous.

Parts of both are somewhat spun out. Miss Glasgow has not added much to the battle literature of the world; the accounts of the fights themselves are the usual thing. Here and there she has fallen into the conventional phrases that all writers about battles find it impossible to do without. What one does feel, however, is the atter weariness of the men, their hunger and their hardships. And even If one is a Northerner by birth and conviction, for the moment Miss Glasgow makes the breast beat in sympathy with the South. Sympathy with the South is, in fact, the keynote of both books. The beauty of the old formal society, the joyousness of the less formal society that succeeded it, the dignity of the old-time manners, the unconscious grace of the manners of to-day,-these are the things that one finds in both books. Miss

Giasgow shows the regiment of young dandies starting out on a two weeks' campaign, attended by their negro servants, turned into me, through the four years of saffering. One might almost say that where Mass tilasgow lett the story of the country Mass Broads had taken it up. Her descriptions of the life are full of vigor and charm, the characters are clearly and eleverly farsm. The class of the beliefs, of the thrifty German with his thriftless neighbors, is very well brought out. There is more, light-her architectures and wholesomeness throughout the book. Mass Broads has yet to learn, however, the use of the blue pencil. The love interest of the book is drawn out unconsciously.

# AN ELOQUENT HISTORY OF THE BOER FIGHT.

THE BORN FIGHT FOR PREFION. By Michael Daviti. With maps and illustrations and photographs taken by the author and others. Large five, cloth, (egp., Price, \$100, Det; postage 28 cents. Funk & Wagnalla Company, New York and London.

THE result of the Boer War has been to deprive Paul Kruger of the title of President and to confer on him the reputation of a prophet. The contest has indeed "staggered humanity," and has in addition influenced, perhaps for generations to come, the poll-

MICHAEL DAVITT.

tics of Europe. The impetlal nations have been thrilled into sympathy with republican nationality, and England has been compelled to reconcile her inherited democratic polity with an imperial destiny which now can not be evaded. The South African war must be studied primarily from a statesman's point of view. The first authoritative book that takes in the whole conflict is this of Michael Davitt's, which brings the history down to the cessation of hostilities. It presents, of course, the Boer side, but does so with insight, a full knowledge of what is to be said for the other side, and with an eloquence that is never unrestrained. Mr. Davitt's book will convince the

most materialistic reader of the power of ideals. Patriotism in its most indomitable form, the brotherhood of race and tongue, the blood

that is theker than water and yet was poured out like water to center the union of the Afrikandre peoples, has withstood for almost the years assaults only less overwhelming than the Spanish invasion of the land from whence most of the Boers themselves had come. From its own observation Mr. Davitt describes the sincerity, integrity, and may annimity of the Boer leaders. Furthermore, he has the orator's comand over the rhetorical figure known as "vision." He makes the readers we for himself this attempts of purpose and purity and largeness readers we for himself this attempts of purpose and purity and largeness

Even when, years hence, the great, impartial history of the Boer War accounts to be written, this book of Michael Davitt's, penned at white heat on the spot and in the saddle, as it were, will still be the history to which the general reader will turn that he may see with the eyes and feel with the hearts of those brave men who have fought for "Land un Volk" the make literaic and not the least successful war of modern times.

# A AMERICAN GIRL ABROAD.

ABROAD WITH THE JIMMIES, By Lilian Bell. Cloth, 5 x 7% inches, 303 pp. Price, \$0.50. Le C. Page & Co., Boston.

R EADERS on good terms with themselves and the world in general will be likely to peruse this book with a ripple of amusement that may sometimes broaden into a laugh. The testure of the work is so very-slight that after it is done with one wonders what it was that proved so pleasing, while at the same time there is a distinct consciousness of respect for a talent that succeeds in pleasing with so little outlay of capital.

It is with a curious mingling of frolle, shrewdness, and American independence that Lilian Bield lidnes up her European trip. She extractspare fun even from the Englishwoman's contemptuous summing-up of the Jimmel party as Jux. 'Ammurikins,' no more, no less; and with equal gusto portrays Jimmie's quiet delight in throwing the Wirth-adoby into a purple rage by naively asking. 'Do you speak English' She omits no opportunity of letting us see her own lack of sympathy with our.' 'English ammerican feel themselves so temperamentally aftern while at the same time she does full justice to the especially nice English man or woman racely (to her case) me with the specially nice English man or woman racely (to her case) me with the specially nice

Most delectable is a little scene during the Henley races, when an English acquaintance made Jimmie's houseboat his own, composedly occupying Jimmie's bed and forcing him to extract what comfort be could

from a plank in the dining-room. At last the women (the author and leee) arose in defense of Jimmie and offered the Englishman their own stateroom, which he promptly accepted.

"Did you ever in all your life?"
asked Bee, looking at the other wo-

man.
"No I never did," came the reply.
"Never did what?" asked the Eng-

"Never saw anybody like you in a book or out of it," promptly returned liee; "but I suppose there are ten thousand just as good-looking as you are, just as tall, and well built and selfish."

"Selfish!" he blurted out, with a very red face, "what is there selfish about me, I'd like to know; you offered me your room, didn't you?"

LILIAN BELL.

fered me you'r rown, didn't you'r ''.
To many readers the most valuable thing in the book will be be 'To many readers' the most valuable thing in the rown of the control o

### A MACHINE-MADE NOVEL.

DOROTHY VERNON OF HADDON HALL. By Charles Major. Cloth, 5 x % inches, 369 pp. Price, \$6.50. The Macmillan Company, New York.

THE first and most merited comment on this historical novel by the author of "When Kinjkhod Was in Plower," is that the obtains on of the artisanhip is insufferable. If Arrestector stone, the has Mr. Major cast art axide in this product of his pen. No reader of today can have failed to note that literary style, once regarded as the characteristic executence of a writer, is in these plaint times of flamboyator absolutely nuncressary to the success of a novel or the reputation of a subtor. Major is guilties of style. The vorpoison reader will not be distracted in this book by polished periods or elegant turns of plans: to the will find himself tripped up incessanily by the most trinating intrusions of the author himself, to you odd-be nalive comment. Is because the present of Malocum François de Lorraine Verton, Mr. Major is a frank-

The period is that of Elizabeth, and of the escape of Queen Maryinto England. The Houses of Vernon and Rutland have a tremendous fend. Sir George Vernon, of Haddon

CHARLES MAJOR.

Hall, Derbyshire, a violent, blueses "King of the Peak," is the father of Dorothy Vernon. Dorothy is heard compared to whom Helen of Troy was the Queen of Spades and Clooparts at the Queen of Spades and Clooparts. The browne of "When Knighthood Was thousand horse-power for loving. The browne of "When Knighthood Was Peak," the Character painting and winders that you have been dead to burothy she is as sedate safes. Fay. Character painting was a factor of the compared to burothy she is as sedate as the safe of the compared to burothy she had been dead to be a sedanting the compared to the compared to burothy in the deep she was the safe of the compared to the comp

but we are treated to a passage where that Queen makes the coughts of a Casno girl seem subble and evy.

See John Manners, son of the John Porton Hauten, although the cought of a Casno girl seem subble and evy.

See John Manners, son of the John Dorophy's Montr Feler outburst of love. He is the sanest, claracter in the book. But within there is diverted, and had Jiff Major been comment to John going and do in its journey to the same of the same o

Should this book be turned into a play, the features which mar it so greatly as a novel will necessarily be eliminated. Even stage "aode; or directions do not permit such a personal note on the part of the dramatist's welf.

The Company offers for public subscription 10,000 Shares of Preferred Stock on the following terms: Preferred stock at \$100 per share, and of the 10,000 shares of common stock now in treasury

In case of subscription for one share only of preferred. \$100 per share, a share of common stock will be reserved for 90 days and issued as a bonus if a second share of preferred stock is subscribed for within that time.

The right is reserved to withdraw or reduce the bonus of mon stock without notice.

The founders of the business have personally invested over one million dollars in cash in the stock of the Fore River Ship and Engine Co. before the present offering of stock to the public is made.

Fore River Ship and Engine Co. is capitalized as follows: Preferred Stock, 20,000 Shares \$2,000,000 Common Stock, 20,000 Shares \$2,000,000 Par Value of Shares, \$100, Full Paid and Non-Ass

### THERE IS NO BONDED INDEBTEDNESS

The preferred stock has a non-cumulative first preference upon the net profits of the Company up to 7 per cent, per annum. In case of hauidation or dissolution of the Company, and distribution of its assets, the Charter provides that \$125 per share must be paid to preferred stockholders before anything is paid to holders of the common stock. The Charter further provides that one half of all net profits in excess of 7 per cent. on the preferred stock shall be held as a sinking fund which, on reaching \$100,000, must be applied to redeeming the preferred stock at \$125 per share, or at a lower price if so offered by holders to the Company, to such amount as such sum will redeem. For example: When there is \$200,000 of net profits over and above the dividend on the preferred stock, \$100,000 is applicable to a dividend on the common and \$100,000 must be

ed to redemption of a portion of the preferred stock. Of the above \$4,000,000 total stock authorized, there is now in the treasury of the Company \$1,000,000 preferred and \$1,000,000 common. Prior to the incorporation of this Company in February, 1901, the business had been conducted for seventeen years by Messrs, T. A. Watson and F. O. Wellington as a co-partnership. During the last two years and since the incorporation of the Company, the sum of \$1,500,000 cash has been expended on the plant.

There is at present outstanding \$1,000,000 of preferred stock and \$1,000,000 of common stock issued against a plant which has cost \$1,500,000 cash; and the stock now to be sold provides cash for additions to plant and working capital to the amount of \$1,000,000.

The provisions of the Charter guarding the investor in this preferred stock are exceedingly strong, being drawn with great care by the highest legal talent. It has a preference not only on the net profits up to 7 per cent., but also upon the assets of the Company in case of distribution.

### EARNINGS

The earnings of the Company for five months to January 1, 1902, were \$101,574.36 in accordance with the certificate of the Eastern Audit Company

The entire \$2,000,000 preferred stock requires but \$140,000 for its 7 per cent, dividends. The Company earned, at the rate of over \$100,000 in excess of the amount required to pay the dividend on the entire \$2,000,000 preferred stock—this while construction of the works was under way.

By the operation of the sinking fund the earnings applicable to the common stock will naturally increase, and with the Company see common stock will naturally increase, and with the Company carring from \$40,000 to \$50,000 per annum in the future, which is quite possible with the yard filled with work, it will be seen that owing to the small capitalization the common stock is likely to earn very large dividends in the future.

By the provision that a sum equal to any dividends on the common stock must be used to retire preferred stock, it is probable that the preferred stock will rapidly decrease. As it decreases the common stock will command more of the net earnings of the Company on the small capitalization of \$2,000,000.

### DIVIDENDS

By the terms of the Charter, semi-annual dividends on the pre-ferred stock are payable on the second Mondays in January and July, out of the earnings of the Company.
In accordance with this provision a dividend on the preferred

stock of 34 per cent, will be paid on July 14, 1902, out of accrued earnings.

# DESCRIPTION OF PROPERTY AND CONTRACTS

Below is a brief description of the Company's plant, and business and contracts in hand:

### REAL ESTATE

# 78 Acres of Land, Bounded by 11/ Miles of Water Front

The buildings enumerated here are only the larger buildings comprising the Company's plant. In adultion to these there is a large office building and some fifteen other buildings which it is unnecessary to mention in detail. Outside of the plant proper the company owns a number of dwelling houses and other real estate in Quincy, which produces a substantial income, and this outside real estate is conservatively held as being worth \$100,000.

### BUILDINGS

Forge.	107×904.	21,400 4	eq. ft.	Wandwork Sho	mend		
Annealing Plant	LADRATO T . ATHOR	5 000	-			Boors, 43,774 (	m. D

		Acres over				Marie P Street	
		195,45A				397,140	40

The forge in the above list is one of the three large forging plants in this country, and Fore River is the only shipyard having a forge capable of the largest work in shipbuilding. This forge is also kept busy on miscellaneous outside work.

Work in Progress in Fore River Yard May 1, 1902 Battleship—New Jersey. 15,000 tons. Torpedo Boat Destroyer—Lawrence.
Battleship—Rhode Island. 15,000 tons.
Torpedo Boat Destroyer—Macdonough. Cruiser—Des Moines.

Seven-Masted Steel Schooner (11,000 tone displacement).
(The largest sailing vessel in the world.)
Forgings for Steamships now being built in other yards. Steel Bridge, Son feet long, over Waymouth Fore Biver. Seventy-five Sets Porgings for rapid fire-guns. Miscellaneous Structural Work

Steel Car Floats (unsinkable) for N. Y., N. H & H. R. R. Co.

The above, with other work in hand, will bring the total amount of contracte up to over \$9,007,000. In addition to the above contracte in hand, the Company has

tenders under consideration for additional work aggregating several million dollars.

Upon application to the Boston office of the Company, a copy of the Charter of the Company, and an illustrated description of the plant will be sent by mail. Reference is made by permission to several banks and trust companies. Copies of reports made on the property by several eminent engineers and naval experts may be seen on application.

seen on apputation.

Subscriptions may be made by letter directed to the Fore River Ship and Engine Co., 115 Federal Street, Boston, Mass., or Federal Trust Co., Boston. Remittances may be made by check, registered letter or money order, payable either to Fore River Ship and Engine Co., or Federal Trust Co., Boston, Mass.

Since the first offering of this stock for public subscription more than half has already been subscribed for. We advise prompt action on the part of any one desiring to subscribe for any of the remaining shares.

### A CHOPIN FANTASY. (On Remembrance of a Prélude.)

Come. love, sit here and let us jeave awhile This custom-laden world for warmer lands Where, 'neath the silken net of afternoon Leisure is duty and dread care a dream.

(The music begins.) That cliff's Minorca, that horizon Spaln. There in the west, like fragrance visible, Rises the soft light as the son goes down Till half the sky is palpltant with gold. Follow it eastward to the geotic ble With falth and childhood in it, and the peac Men agonize and roam for. See that fleet That flutters in the breeze from the Camarone Like white doves, huddled now, now scattering, (They say all native boats are homeward bound Against to-morrow's annual festival.) What rest there is in looking from this height On palma and olives, and the easy steps By which the terrace clambers youder hill ! How dark those hollows whence the roads of white

Ascend in angles to the high-perched town! Needleas the music of the convent bell : Tis vespers in the heart as in the air. This is the hour for love, that, like the breath Of yonder orange, sweetest is at eve.

Here, safe entwined, what could be wished for Hid in an island hidden in the sea?

Now set me lay my head upon your lap, And place your rose-leaf fingers on my ilds, Lest, catching glimpse of your respleadent eyes, My arder should blaspheme the coming stars!

How fast it durkens i. One must needs be blind To know the twilight softness of your voice. And Love .- not blind, but with a curtained sight .-Like one who dwells with Sorrow, can discern The shading of a shadow in a tone.

There's something troubles you, my sweet-ofbearts. A hesitance in that caressing word: Nothing unhappy-a presentiment Such as from far might thrill the under-denths Of some still trangoil lake before a storm. Be happy, love, not ponder happiness.

Unerringly I know your woman's soul,

Content to have your happiness put off Like well-planned feast against to-morrow's need, And more enjoyed in planning than in use. But, oh, we men, God made us-what was that? A drop upon your hand? Perhaps a tear Lost by an angel who remembers yet Some perfect moment of th' imperfect world, And goes rejuctantly her way to heaven, Still envisors of our fot? Another drop! Why, 'tis the rain. Stand here and see that sky

Blackness intense as sunlight. What a chasm. Of either where that lightning tore its way ! That erash was nearer! Here's our shelter, quick! Now it's upon us! Half a breath, and-there i No wonder you should tremble when the earth Sways thus and all the firmament's a-reel.

Tremble, but fear not-Love created Fear To drive men back to Love, where you are now. What rhythmic terror in the tideless sea. That wildly seeks the refuse of the rocks From unknown dangers (dangers known are

God! Did you see within the headland's jaws

That drifting sail? Walt the next fissh at d-

Oh, heaven! to cruise about a hundred coasts, Safe past the fabled monsters of the deep, To break supinely on familiar shoals Where one in childhood digged a mimic grave !

Thank God for those few, momentary stars, And that slow-lifting zone of topaz light, Like parting guest returning with a smile. We care not now that the insatiate storm Plunges with leaps of thunder on the east.

(The music ceases.)

Give me thy hand, dear one, the unto pain I crush it to be sure that this be drea Knowing 'twas Death that passed, and oh, how

- [From "Poems" (The Century Co.).

### PERSONALS.

Lincoln and Beecher Praying Together .-Samuel Scoville, Jr., grandson of Henry Ward Beecher, writing in The Sunday School Times (Philadelphia), tells of a secret meeting between President Lincoln and his grandfather in 1860 :

"Late one evening a stranger called at his [Mr. Reecher'sl home and asked to see him. Mr Beecher was working alone in his study, as was his usual custom, and this stranger refused to send up his name, and came muffled in a military cloak which completely hid his face. Beecher's suspicions were aroused, and she was very unwilling that he should have the interview which he requested, especially as Mr. Beecher's life had been frequently threatened by sympathizers of the South. The latter, however, insisted that his visitor be shown up. Accordingly the stranger entered, the doors were shut, and for hours the wife below could hear their voices and their footsteps as they paced back and forth, Readers of THE LITERARY DIDEST are asked to mention the publication when writing to advertisers.

Finally toward midnight the mesterious visitor went out, still muffled in his closk, so that it was impossible to gain any idea of his features.

"The years went by. The war was finished. The President, had suffered martyrdom at his post, and it was not until shortly before Mr. Beecher's death, over twenty years later, that it was known that the mysterious stranger who had called on the stormy winter night was Abraham Lincoln. The stress and strain of those days and nights of struggle, with all the responsibilities and aorrows of a nation fighting for its life thrust upon him, had broken down his strength, and for a time undermined even his courage. He had traveled alone in disguise and at night from Washington to Brooklyn to gain the sympathy and help of one whom he knew as a man of God, engaged in the same great battle in which he was the leader Alone for hours that night the two had wreatled together in prayer with the God of battles and the Watcher over the right, until they had received the help which He had promised to those who seek His aid. Whatever were the con-victions and religious belief of Abraham Lincolu, there is no doubt that he believed in prayer, and made that the source of his attenuable

are been cured. Bend for the free trial package to-day. It will deletes the rest of your life.

# and Diabetes.

No other diseases known to medical science are so insidious. No others make such frightful inroads upon the human system without apparent symptoms.

On December 31st a physician apparently in good health, was consulting me about a patient of his who had Bright's Disease. Neither the doctor nor I suspected that he had anything wrong with his kidneys. On February 1st that physician died with Bright's Disease. cold with high fever started the latent disease in his system and carried him off in five days, I. W. CORBIN.

One of the best and best known physicians of Philadelphia says that "every man past middle life should have his kidneys examined at least

once a year," We say twice a year.

In every case of Bright's Disease or Diabetes the disease is detectable by a careful analysis long before it becomes acute or immediately At our establishment we make this analysis absolutely free. We feel as happy as our applicants when we can assure them are all right. There are enough who need our treatment, without our attempting to work on the fears or credulity of those who do not. We will gladly send you our booklet on request.

## CATCHING

The Coffee Habit Breeds Trouble.

It is quite commonly the case that both husband and wife are somewhat similarly troubled with coffee drinking.

A lady writes and, after giving description of her hasband's relief from indice dyspepsia and general nervous troubles, says. I was almost as had as he, having the headache mailty every day and was nervous and weak, did not sorep well, was pale and thin and had a bad combession.

When I found how much good Postum Coffee was doing Husband I concluded to use it and I tell you life is altogether a different thing. I eat and sleep well and look like a different woman. My usufal weight for years was from 95 to 1co pounds, I now weight rox pounds and everyone tells me how much baster. Lym Enderen.

I had some friends who did not like Postum, but knowing it was because they did not built long enough I made some at their house one day, and it be agree with me that Postum is a delicious beverage, and white, of convex, the thave and taste is pleasing and we are glad Postum does suit us that way, the great advantage is in the wonderful, bounding health that we have tecovered." Name given by Postum

# Slightly Damaged Sets for Literary Digest Readers

This is a genuine book batgain. Lovers of Shakespeare and those who are collecting a library will see in this announcement an opportunity to secure the best edition of Shakespeare at a surprisingly low figure. If you ever intend to tead Shakespeare or to possess a good edition of his works, now is yout chance. At the close of our heavy spring sale we find that we have on hand about eighty-five sets of the International Shakespeare in a slightly marred condition-each set having a few pages slightly soiled or the bindings a little rubbed. But for all practical purposes they are as good as new. We cannot sell them, in justice to ourselves, as perfect sets, so we are going to close them out to "Literary Digest" teaders at about what it cost to make them. The coupon will bring you a set, at out expense, which may be returned if not satisfactory.

Sets in 13 Handsome Volumes, 7000 pages. Size of Volumes, 8 x 51 inches

## The New International Edition

high-water mark of Shakespearean scholarship. It contains the famous Cambridge text, which has been for forty years the standard text of Shakespeare. To this text have been added Prefaces; copious Critical Comments taken from the works of great Shakespearean scholars; full Glossaries defining every difficult word; Explanatary and Critical Notes, which make clear every obscure passage. There are over 200 litustrations, many of them being foll-page chromatic plates in colors and phatagravures on Japan vellum. Included with the set is a complete Life of Shakespeare by Ily. Israel Gollance, with critical estimates of Shakespeare's genius by Walter Bagehot, Leslie Stephen and Thomas Spencer Baynes. Shakespeare's Works are given complete, including the Sonnets and Poems. The volumes are elegantly bound in cloth or half-leather, stamped in gold. A set is a complete Shakespearean library.

# Entire Sets Sent on Approval

The remaining sets that we have on hand will be closed out to "Literary Digest" readers at \$18,00 for sets in half-leather binding and \$15.00 for cloth binding, and you may pay in small payments of \$1.00 a month. The regular price of these sets is \$10 00 and \$10 00, and the lowest price at which they have heretofore been sold on the Club plan is \$22,00 and \$18.00. We advise you to order promptly if you wish to avoid possible disappointment in not securing University a set. We are so confident that this edition will please the most exacting Society buyer that we are willing to send complete sets for examination. The 78 Fifth Avenue coupon will bring you a set for examination (express prepaid by New York us), and if it is not satisfactory it may be returned at our expense or end me or without costing you a cent.

FREE We will send free with costs set to the plane (forming plane Topical Index to Shakespeare's plane (forming sendy sugar We will send free with each set of this edition a comone volume) and a Plan of Study for each play contaming study questions. The Index Volume is in every way equal to a Concordance,

and no Concordance can be purchased for less than \$6.00. The Method of Study for each play is invaluable to students.

#### TOPICS OF THE DAY.

#### CONDITION OF THE NEW YORK POLICE.

NQUIRIES are being heard in New York City as to just what improvements have been made in the government of the metropolis by the "reform" administration in the six months that it has been in power. It seems to the press that Devery. the ousted Tammany chief of police, still has more influence with the police than Commissioner Partridge or Mayor Low; and several papers are asking when the heralded reform is going to begin. Last week there was a big "shake-np" of police captains, evidently calculated to relegate the Tammany captains to rural precincts, and place the reform captains on the more responsible posts, and the papers interested in police reform are awaiting results and boping for the best.

The New York Times declares that "the situation is grave, definite, notorious," and the New York Evening Post attributes the state of affairs largely to Commissioner Partridge, for whom the police are said to entertain "a pitying contempt." The World is calling loudly for the commissioner's resignation, declaring that under his rule "the demoralization of the police force is going from bad to worse," and the Boston Herald takes a similar view, remarking that "his melancholy fallure is making reform a thing for mockery and sneers." Says the New York American and Journal:

Except for ridding the police department of Devery, what single positive thing have Mayor Low and his fellow officeholders done to distinguish his administration from any other?

'These are the questions that the men who made Dr. Low the city's chief executive, with the full belief that there was more to him than the familiar platitudes of any politician seeking a place, are asking.

"Even the one act that is quoted to the administration's credit Is incomplete. Removing Devery was an excellent thing, but it was implied that a competent substitute would be found. Yet we have in the sixth month of the new régime the spectacle of policemen actually appearing before their trial judge boisterously drunk-a condition of things that would never have happened even when the saturnalia of police corruption, with Devery at the head of the table, was at its wildest.

"The demoralization of the police department was one of the strongest counts against the former administration, but never in its history has the force been so demoralized as it is now.

"The gambling-houses, pool-rooms, and dives operate as extensively under the college president's headship of municipal affairs as it did under that of Van Wyck, admittedly as bad a mayor as ever afflicted this city. We were told by the spokesmen of the reformers that the evil resorts could only exist by virtue of the system of blackmail that honeycombed the police department from its foundation to its top,

Will anybody say that there is not as much blackmail levied in New York to-day as there was then? The flourishing condition of illegal estab-

lishments answers this question. The places exist openly. or with the thinnest possible disguise, and they would not be allowed to remain open a night if they did not pay tribute to somebody. That this tribute is distributed without involving any of the city's chiefs does not make for either morality or rever-The people are likely to consider a department head who can not stop his men from blackmailing asonly a shade less desirable than a participant in the plunder. It is the fact of the

JOHN N. PARTRIDGE, New York's Commissioner of Police.

blackmail and not its distribution that is the issue in New York. On the excise question the record of the Low administration is as feeble as in its other performances. The saloons are still carrying on business much as they did before, except that there is more irritation, without a particle of compensating effect, in the present wabbly method of getting around an unpopular law.

With patrolmen revolting against the system that cast the burden of the excise pretense on them; with District-Attorney Jerome carping at the mayor and the mayor's men for not doing as they promised, and the mayor's friends acridly reminding him of the beam in his own cye; with an amiable old gentleman police commissioner wondering why his men will not be good, and the town as wide open as it can be, the cause of reform is certainly making slow progress.

"Even if the very worst that was said of our former city governors was true, the utmost comfort that New York could take would be that it had exchanged rascals for incompetents. The soft-coal smoke is not the only fog over New York.

"There is plenty of room for reform in this city, but it must be real reform, and it will take men of force and backbone to effect it. Timid respectability and vacillating commonplace will never

Commissioner Partridge finds defenders, however, in his home papers, in Brooklyn. The Brooklyn Times, for instance, believes that "it is altogether too early to pass judgment upon such an important brauch of the municipal government as the police department," and so says the Brooklyn Eagle. The Standard Union finds encouragement in the "shake-up" noticed above, and goes on to observe:

"To impatient reformers and other hasty critics the move has

seemed to be long in coming, but time for preparation was essential, and five months is really a short period in which to learn the 'true inwardness' of the Devery 'system' and to size up the good and bad material in a force of over 7,000 men, especially where there is so much bad and so comparatively little good. Commissioner Partridge has been earefully studying the situation. night and day, since he assumed office, and it must be remembered he has had very little efficient or honest aid. The inspectors and captains and headquarters men by whom he has been surrounded, and through whom he must necessarily act, were mostly in a league against him, not merely keeping important facts from his knowledge, but actually misleading and deceiving him so far as possible. . . . Steadily, from now on, the honest policemen will be advanced and encouraged, and the corrupt ones, so far as the courts will allow, gotten rid of or relegated to the rear. Deveryism will be gradually weakened and minimized, even tho it can not be extinguished."

# THE COAL STRIKE AND GOVERNMENT INTERFERENCE.

HE idea is expressed in many papers that large industrial wars like the hard-coal strike are affairs of national concern, that they are "everybody's business," and that the national Government ought to take a hand in settling them. The President's action in sending the Commissioner of Labor to investigate the coal strike is thought by some to forecast Presidential interference, either by legal proceedings against the coal trust or by the use of moral sussion, and the action is variously regarded. One finds The Wall Street Journal, which is eminently conservative, and the Colorado Springs Gazette, which has Socialistic leanings, both approving of government interfercace in such struccles and the Baltimore Herald thinks there are good grounds for interference by the President. Says the Baltimore American: "The proceeding may sayor of using a club, but President Roosevelt will be indorsed in his action if he should wield that club, and wield it with vigor, until the strike is ended, the men return to work, the threatened coal famine averted, and the price of fuel lowered." So, too, thinks the Cleveland Leader, which observes:

"It is absolutely essential to the continuance of such good times as are now prevailing, that there should be a fair dependent of industrial harmony and peace in the United States. Reasonaidoe men's all classes must see this fundamental truth. Surface, and it is equally certain that he will do what he can to impress infinite and capable the state of the capable certain that he will do what he can to impress infinite and the state of the stat tial corporation officials with the full meaning of a great and prolonged labor deadlock which is said by such an authority as Senator Hanna to have been caused by the uncompromising and subborn attitude of a few grasping companies, which must have been provided by the companies of the property of the companies of the companies

"It may be, for these reasons, that industrial peace in Pensylvania will come quite directly from the White House. If there is fatted to be a less fortunate development of the present situation, it will not be the fault of Theodore Roosevelt."

The Philadelphia North American adds, in the same vein:

"President Roosevelt evidently looks upon the strike not as a private quarrel, but as a conflict in which public interests are directly involved. In response to the demand of the business community for protection from the disastrous disturbance threatened by continuance of the unnecessary quarrel, he doubtless will use such powers of coercion or persuasion as may be found lawful to put at an end to a situation which is becoming intolerable.

"That is clearly the President's duty to the public, and the performance of this duty does not involve either express or implied approval of the demands made by the miners. It does necessarily involve, however, indersement of the offer of the miners to submit their case to arbitration and abide by the result, and in giving such indorsement the President will be upheld by a practically minanimous public sentiment and by the deliberate utterances of his party conventions. It is to be hoped that his search for means of bring the coal trust to a realizing sense of responsibility to the source of all its privileges and powers—the people—may be immediately successful."

On the other side, the New York Journal of Commerce argues as follows:

"No law and no precedent has been found for action by the President of the United States in the coal strike. The operators have not asked his intervention, and there is nothing that he can do but to offer advice unasked, and possibly to be rejected. This would put the Chief Magistrate of the country in an embarrassing and audignified position. The President is no better placed to form an opinion in the matter than other well-informed citizens. It is very doubtful if there is anything at all to be decided except a question of strength. If the meu ask for more wages, and the owners decline to pay them, it is primarily, and it may be exclusively, a question whether the men are able to get the wages they ask. The freedom of bargain must be preserved in the interest of both sides. It is difficult to see what right the President has to advise either side. If this strike should develop into a serious interference with interstate commerce, or mail trains, it might be the duty of the President to act officially in the matter, and if he had already expressed an opinion that one

party or the other ought to yield it would be very embarrassing or him as the Chief Magiartae to use the national resources for the protection of the public interests. The artikers are trying to drag the President into their quarrel in order to influence public sentiment and bring pressure upon the operators. As the Presdent has no official relation to the difficulty, he can not afford, as a matter of his own self-interest, to involve himself in the controversy, and to invoke the general Government in every local and personal dispute is permission paternalism which should be discouraged."

#### OPERATORS' SIDE OF THE COAL STRIKE.

HE majority of the daily newspapers appear to sympathize with the miners rather than with the operators in the present hard-coal strike, so that most of the renders of the daily press probably have a fairly good idea of the miners' side of the controversy. What is to be said for the operators? The correspondence between President Mitchell and the operators, made public a lew days ago, throws light on the employers' side of the case. It appears from this correspondence that the advance in wages granted at the end of the last strike resulted in decreased efficiency of the men, who worked fewer hours and produced less coal than before. As one operator says, in The Coal Trade fournal (New York), "they took the increase in time and not in money, showing that they had previously received sufficient money for their work"; and another operator remarks that this "makes it evident that their wages were satisfactorily high," The same journal reckons that the miner, "for the hours he labors, is the best-paid artisan in the State to-day." Mr. Baer, president of the Philadelphia and Reading Company, the largest of the hard-coal companies, says that President Mitchell suggested that the operators put up the price of hard coal, and so recoup themselves for the requested advance in wages; but this would be impracticable, says Mr. Baer, owing to the competition of soft coal. Another operator, Mr. R. M. Olyphant, puts his side of the case concisely in the following relegram to Mr. Mitchell:

"The concessions made by the mine operators in your last strike addied to the wages of the mine workers as millions of dollars or more per annum. You now propose changes adding a charge of many millions more, and suggest that you will make a further demand a year bence. The public will not meet such advances by submitting to an increase in the price of coal, and the operators can not meet them without such aid. I must, therefore, decline your proposition."

The suggestion that the dispute be referred to Archbishop Ire-

land, Bishop Potter, or others for arbitration is rejected by Mr. Baer on the ground that "anthracite mining is a business, and not a religious, sentimental, or academic proposition."

It is a rather curious fact that most of the papers outside of New York City factor the miners, while most of these in the metropolis favor the operators. The New York Tribine consulers the strike "ill founded," and the New York Mord and Express thinks the miners' position "minerable." The Times thinks the strike "without ostensble justification," and The Ann takes a similar view. The Executing Post says: "A foodsh strike can be settled only by the foolish strikers going back to work. We look to see that result greatly hastened by the revealation to the public of the indefensible nature of the position taken by the miners." Says The Commercial Adventure.

"There can be no further room for doubt that the coal operators are fighting the battle that the steel-mill owners fought last summer, to determine whether they shall have the right to control their own business or whether they must turn over this control for all time to an arrogant labor-muon. With this vital point

THE REAL SEFFERERS

- The New York Herata

at stake it is idle to think of arbitration or compromise, and whoever works to accomplish this mode of settlement simply encourages the miners' resistance and prolongs the stringgle."

The New York American and Journal and The World Issor the strikers. The World says have the mine-owners. "Public opnion, operating through moral force or through law, will in the end hold to their just responsibility those whose greed and arrogance have contributed so much to bring this trouble upon the country."

#### GOVERNOR TAFT AND THE POPE.

H AVING been assured by Secretary Root that Governor Taft's visit to the Pope would be "purely a business matter" and nothing more, the daily press seem to be heartily in favor of the errand. The purpose of the governor's visit, as

.....

stated in Tirk LITER-ARY DIGEST OF MAY 31, is to negotiate for the purchase of the friars' lands in the Philippines, for the settlement of land titles, and for the entire separation of church and state. If the mission succeeds, says the Seattle Post - Intelligences, "one of the most vexatious problems presented in the Philippines will be solved, and the most crying abuse in the islands, dating back for generations. will be done away

with." The Minneapolis Times remarks, further, that "it is a high compliment to the success of American institutions when an American emissary, without plenary powers, is given a hearing of more satisfactoriness than has been accorded to fully accredited ambassadors of European monarchies bear on less innovatant missions."

The reason for the purchasing of these lands, it is stated, is to quiet the apprehensions of the Filipinos who fear the return to power of those Spanish priests who ruled them under the system of government established by Spain up to 1896. It is also reported that these apprehensions have grown to such an extent that it is impossible for the priests to return to their posts without the protection of the United States troops. Says the New York Times:

"One Government, therefore, is, as we expected that it would be, now prepared to purchase the lands of the friars at a fair value, but it wishes, if it shall purchase them, that the friars shall not return to their posts to be a cause of infinite disturbance, expense, and difficulty. And this the authorities of theurch can guarantee with entire propriety, without saryficing any of the essential rights of the friars, without any compromise of its own position, and with great and permanent advantage to its own most substantial interests. It is reported, and is highly probable, that the church authorities understand the situation, and are ready to meet the views of the United States in a most friendly and lepful spirit."

The St. Louis Globe-Democrat believes the purchase of the friars' lands is "essential to the free development of the archipelago." The Salt Lake Herald's asys the transaction will have no effect on the ultimate independence of the Flippinos, for should they be granted a government of their own "the friars' lands can easily be paid for by the Flippinos through direct taxation, customs receipts, or in some other way." The Chago News publishes the following list giving the area of friars' lands in the Philiopines.

"The friars' lands, of which so much has been said, consist of about 40,000 acres, owned by the Dominiens, Augustinians, and Recolletos. The annual income of the friars from their lands was formetry about \$200,000. In the populous and fertile province of Cavité alone the friars own 121,000 acres, and bere have started the various revolts against Sanjaish rule. Other

large holdings on the island of Luxon are in the following provinces: Lagua, &coo. acres: Manila, \$0.000 acres: Capua, \$0.000 acres: Capua, \$0.000 acres: Capua, \$0.000 acres: Capua, \$0.000 acres: On the island of Mindoro the Recolleto own a tract of \$5.000 acres. On the island of the holding of the holdin

#### GENERAL MILES.

T is now two months since General Miles intimated that our soldiers were practising cruelties in the Philippines, and he has not yet been retired, as was expected at that time. During these two months the Democratic Senators have been laying before the Senate evidences of such cruelties, and have been calling upon the War Department for explanations. This has aroused a suspicion among the Republican Senators and Republican newspapers that General Miles has had something to do with supplying to the Democratic Senators the information that has proved so embarrassing to Mr. Root; and renewed rumors of court-martial for the general, or retirement, are heard. Thus far, however, there is no evidence that these suspicions are well founded, and the general still holds his position.

The Indianapolis New and some other papers think that if the general has had a hand in bringing out all this Philippine evidence, he has done the country a service. The Detroit News remarks, too, that "the grim and rather fassy old fighter" enjoys the hostilities with the War Department and "is probably having as good a time as he could have in time of peace, and needs no sympathy. The Memphis Commercial Appeal says homogrousity.

"Niles seems to be a very handy person for Roosevelt and his man Root to have around. Whenever Teddy makes a break or Root has a fit, why, Miles is responsible. If the War Department is charged with suppressing important information, it rotten meat seed to the soldiers, Miles Is to blame for calling attention to it. If Roosevelt makes a blunder in forbidding the French republic tender decorations of honor to the leading officers in the army

and navy, it is really Miles's fault, for he happens to be the lien. tenant - general of the army. Even those who dislike Miles-and his unpopularity is quite extensive-find that naming him does not excuse every blunder made by every member of Roosevelt's official family. Indeed we are led to suspect that the President finds Miles a great convenience. If guilty of everything alleged against him, be ought to be promptly bounced : but no

MH. ROOT EARNING HIS MONEY.

—The Chicago Chronich

doubt. Roosevelt realises that be can not get along without Miles any more than the realistic temperance lecturer can get along without a borinibe example. The general is too nseful a heavy villain to be dispensed with. An Administration without its Miles would be as helpless as a fer-de-lance without its death-dealing virus.

Roosevelt will retain him because he needs him in his business."

Other papers, however, regard the strained relations between

the general and the President as insufferable. The Detroit Journat thinks that General Miles has made bimself "a superfluous quantity in his relation to the army of the United States," and the Chicago News suggests that it might be "better to retire him than to keep up a pestiferous squabbling that mars his personal fame and reflects discredit on the Government." Says the Minnearolis Tribuns:

"It would be easy for a person having access to the records of the Warr Department to convey fragmentary and innecurate data, on which a theory might be built contrary to the fact. If it can be shown that General Miles has been doing this, the last shred of public sympathy for him will disappear. He has done the Democratic party no service and has done binsself a fatal injury. He has brought upon limself both the wrath and contempt of the has not injured the stray, except by the divergute to the will be a fact of the stray of the contract of the charge made and not yet denied, the military career of General Miles will surely end."

#### OUTLOOK FOR CUBAN RECIPROCITY.

THE opponents of tariff aid to Cuba declared emphatically last week that the reciprocity bill was doomed. Mr. Thurber's revelation that General Wood had been paying thousands of dollars out of the Cuban treasury to aid agitation for the reciprocity bill, which was under discussion in Congress, and that the president of the sugar trust had been contributing to the same fund, was thought sufficient to make the whole reciprocity enterprise odious and impossible; and when the President sent in his message urging the passage of a reciprocity measure, these critics expressed the belief that not even the crack of the party whip, wielded by the President himself, could put the bill through. Nor was this view confined to those whose wish might be considered father to their thought. The Washington correspondent of the Philadelphin Press, a paper that favors Cuban reciprocity, found little indication" that the message had changed the situation any "; the correspondent of the New York World. another friend of reciprocity, reported that the message "has had no immediate perceptible effect"; and the correspondent of the New York Times, which holds a similar position on the matter, reported that "fully the prevailing view is that the breach in the Republican ranks has been widened by the President's action, and that there is far less chance for the passage of the Administration reciprocity bill than there was before the message was read in Congress." Turning to the New York Press, one of reciprocity's stoutest opponents, one finds the following paragraphs in its Washington despatch:

"President Roosevelt and Congress now are arrayed in open conflict. The 'man on horseback'. assuming apparently that bis word should command the legislative branchof the United States Government as it did his regiment of Rough Riders, rushed blindly into peril to-day, when, in a dictatorial message to Congress, he joined bis executive influence with that of the sugar trust, the Havemeyers and the Turbers, ngainst the disjoint of protection to home industries, and by implication rebuked them for their ratitude and belief.

"No President never faced a more acute situation than that which has resulted from President Roosevelt's action to-day, Many of his friends are astounded that he should have action so rasbly, while his enemies are chuckling with glee. The breach between the President and the Protection element in his own party in Congress has been widened beyond repair, and the contest now became will continue for many a day.

"A majority in either branch of Congress stand firm to-night against the passage of the sugar trust's shum reciprocity bill for a reduction of twenty per cent. on Cuban sugar, despite the President's special message ndvocating this legislation. The President's action is regarded as unprecedented and as a fatan blunder. In going to the extent of telling Congress just what it should do in regard to pending legislation, and just what kind of a bill should be passed, Mr. Roosevet its regarded as even exceeding the dictatorial methods practised by Grover Cleveland when he had 'Congress on his bunds,'"

But such predictions are by no means unanimous. General Wood's contribution to the reciprocity exploitation fund from the Cuban treasury is thought by some to be perfectly proper. If the Cuban congress now in session in Havana should appropriate money for this purpose, no one would think it improper, it is argued, and when General Wood made the contribution be occupied the position of the Cuban Government. A number of papers admit that the general's action was impolitic, but aver that the real merits of Cuban reciprocity are unknowled. The President's message is taken by these papers as an indorsement of that view.

In decided contrast to the predictions of the Washington correspondents who are looking for the defeat of the reciprocity measure is the report by the Philadelphia Ledger's correspondent that "the leaders among the beet-sugar Republican Senators held several conferences after the promulgation of the message, and practically agreed to abandon opposition to the reciprocity bill." And the correspondent of the New York Tribune says similarly:

"The President's message has cleared the atmosphere perceptibly. It sounds the tocsin for which his party leaders in the Senate have been waiting. Straight recliprocity with Culb is sow a party measure, and the beet-sugar Republicans must come into line or openly support the Democratic obstructionists. It is not believed that many of them, either in the House or the Senate, will care to break with the party organisation over beet sugar, as they did a few years ago over free-silver coinage. At any rate, it is now certain that not a sufficient number of them will longer advocate the specious makeshifts of a rebate in the Senate and of confusing tariff revision in the House to threaten the Administration's clearly defined Culan policy with defeat."

## A NEW AMERICAN REPUBLIC IN THE

F the Philippine Islands become independent, the Americans there will seize control of the Government, and, "whatever may happen, Americanism will remain dominant in the islands." Such says the Manila American, are "the spontaneous sentiments of all Americans" in the Philippines, and seutiments that "in one form or another, bave been many times expressed." The possibility of such a startling sequel to Philippine independence has scarcely been thought of in this country, and it is likely that many people would dismiss the suggestion as preposterous. It seems, however, that the idea is being seriously entertained in Manila, where the American population knows its own strength and the strength of the opposition it would meet. One man prominent in business circles in Manlia has gone so far as to outline for The American the probable course of action in the event of the granting of Philippine independence, with an American protectorate to ward off outside interference. He says:

"Now, in that event what are we Americans, who have adopted this as our bome, to do? It is apparent to all that the Filipinos are not ready for self-government, nud to put them in control would mean anarchy.

"There would then be but one thing to do, and that is for us to take the reins into our own hands and give the islands nn American government,

"Could we do it? Why certainly. We come of a race which has the governing instinct in stronger degree than any on earth. Moreover, we have had actual, lifelong training in a government by the people; and, what is just as important, we are used to taking the liftiation. Consequently, at a moment's notice, as the Stars and Stripes come down, we would be prepared to run p a flag of our own and proclaim The Philippine Republic.

"There are something like twelve or afteen thousand American civiliaus in the islands; most of them ex-soldiers with the best of training in the style of warfare prevalent over here. They are filled with the spirit of adventure or they would never have left home. Let a leader get out in the park facing the Ayuntamiento and make a speech calling upon Americans to rally around the new flag, and within two hours he would have a well-armed regiment of the finest soldiers the world ever saw. Within twenty-four hours there would be three or four regiments, and as fast as the news could fly those in the provinces would begin to come iu, so that within a week or two the main points of the islands would be well garrisoned. As soon as the cable carried the news to the United States, those who love adventure would turn this way, and within two months we could muster an army of 50,000, if needed.

"But they wouldn't be needed. The Filipinos haven't the faculty for rapid organization and action, and before they could do anything the Americans would be in power. There would probably be attempts at an uprising, but with several flying columns of a battalion each, the American commander-in-chief could strike and break up all attempts at mobilization on their part.

"Such a régime would govern the Philippines well, and would not be in the least autoratue, beyond the necessary demands of military operations. Self-restraint, moderation, and fairness are characteristic of Americans; responsibility always makes them conservative—even those individuals who me rabid before responsibility would be nearer, more direct, it is likely the government would be better than one appointed in the United States. The man on the ground would know the situation better.

"So far as opposition from the forces of the United States is concerned, the soldiers are Americans and would not be likely to shoot their brothers, with whom they would be in full sympathy. The same might be said of those in command. Very likely the would be a bluff at a protest, but—you remember the Hawaiian affairs, with its talk of restoring the deposed monarch."

#### PROHIBITION VIEWED BY ITS CRITICS.

THE editor of Mida's Criterion of the Wholesale Whiskey and Who Market warms his readers against the fallnices of the principle of prohibition; and the editor of the Toronto Wine and Spirit Journal insures his readers that the liquor and the banking businesses are on the same moral plane. Whether or not these articles indicate editorial apprehensions of a drift among the liquor dealers townd the Prohibition party, and a desire to check it, is a matter of inference! The Criterion philosophices on the mobilibition idea in part as follows:

"Prolibition as a theory is a mere negation. It proposes to impose on men a restraint from without, which will prevent them from doing what they internally will do. Such a method will of itself ever fail, as it is contrary to what the Creator put into the making of a man. There are two precious gifts conferred by his Maker on every humnn being, which are indispensable to his manhood. These are freedom and rationality. Man is not man by reason of his form but hy the possession of these qualities, and the more he possesses them the more of a man he is.

"Along comes the Prohibitionist and attempts to override man's freedom, and all the forces of nature are put in action against such an invasion of his manhood. It is a well-recognized phenomenon that the moment prohibition is attempted that moment there arises in the human breast a desire to do the very thing prohibitied—a desire which did not exist before, or at each only feebly and inertly. In the end human nature will succeeder in throwing off the yoke sought to be imposed. Drive nature with a pick-fork out of the door and it will come in hy the window, it will reenter by the chimney. He who fights against the stars in their courses.

"Being of sumptuary nature, prohibition is an invasion of personal liberty and so differs from law that does not pertain to personal habits. But still being lnw, a violation of it leads to evil and to contempt for all law. Thus this attempt to control personal habits tends to anarchy, and the man who feels it right to violate one law is led inevitably to contempt for laws in general. "On the other hand, as we have frequently pointed out, the probabition theory, while would force others to accept its dictum tends to impatience with the restraints of law, and a resort to force and violence to carry out its will. Pounded on force as cornerstone, prohibition logically travels the road to force as its weapon against prevailing law.

"In short, it degrades the entire community and all who come under its sphere. It is an artificial and not a natural remedy.

"Man was put in this world with a view of developing manhood. Even of our first parents, it is related that evil as well as good was within their grasp, and it is only by having such a shoice that mahood can be developed. Prohibition, vises in so own conceit than the Creator, would clange all this, and forciblyremove from man the possibility of evil. It is true that if the very the property of the property of the property of the very world with the property of the property of the very odd of working or burning would seek to deprive mankind of water and fire? But such is the underlying principle of prohibition that to prevent what it deems an abuse it would prevent even the mse."

The Toronto liquor-dealers' paper mentioned above comes to the defense of the trade in the following fashion:

"Why is it that so many people are against liquor? They preach against it, they curse it, but still they drink it-that is, the greater part do. The manufacture or sale of liquor is just us legitimate as any other line of business. Why not? The banker is no better, neither is the merchant, for all trades are alike. They all exist for one end, the almighty dollar. It is not necessary for a man to be a drunkard because he drinks, nor a banker a thief because he fails. All trades have their failings, just the same as the liquor trade. Some are good and some are bad, only the liquor trade is open, while the rottenness of others is hidden and kept secret. It is not necessary for a man to get drunk, for he can take a drink at his liking and still be a good mmn. Of course it is too bad to see people intoxicated, but surely the manufacturer or seller is not responsible for his ac-We make ourselves and our world. The liquor manufacturer does not ply his trade to rob the people, for if we notice, ninety-nine per cent, of them are the first ones to dig down to help our poor, make our laws, and huild our cities. Little is known of the amount of good they do, nor what they give to the poor. We do not preach intemperance, nor do we believe in temperauce. No doubt a great deal of suffering is caused by intemperance, but is liquor to blame? No. Good liquor never hurts, and good bankers never fail, and so it is in all trades. Because a person is an inveterate drinker do not blame the liquor trade, blame him. He is the one, and not the liquor, and if those who preach so strongly tried to help those who are weak, not by casting them aside, but by teaching them to be moderate and not hogs-a lecture at the proper time, and a little liquor at the other, there would be less drunkenness, just as much liquor consumed, and more happiness."

The various degrees of wetness and dryness on Sundays under the new "reform" administration in New York strike the editor of *The American Brewer* humorously. He remarks:

"The severity with which the Sunday laws have been enforced on some of the recent days of the Lord, and the tolerance which reigned on others, necessitate the establishment of a new office in our city departments, namely-that of an Excise Weather Clerk. This new office would have to be connected by wire with our police headquarters in order to be advised by this windy central office every Sunday morning what kind of weather the people are to expect-dry or wel? Perhaps then every saloon could hang over its rear entrance a kind of 'Beerometer,' showing to all the poor dry souls every possible change of weather that might occur in the enforcement of the Sunday law on that special day, so that they may be guided accordingly. It could be arranged still more simply after the fashion of our park board in winter time, by hoisting a flag with a red ball, which 'high ball' would inform the people of the city that they may enjoy their harmless cold sport, while on dry Sundays a blue flag might signify the strict enforcement of the blue laws. That would at least be fair and square, and such signal service might save the owners of 'schooners' from disaster.

"As it is, our commissioner of police, Colonel Partridge, ap-

pears in the lamentable position of the poor housewife on Tuesday morning after wash-day, undecided whether or not to hang out her wash ou the roof, as it might rain-or shine."

#### DISQUIET IN CUBA.

VERYTHING that points to the stability or instability of the Cuban republic is now being watched with keen interest by the press, both in this country and in Cuba. In Cuba there seems to be a kind of determination that affairs must go smoothly.

CONTALO DE OCESADA Cuban Minister at Washington.

even when it would be more patural to quarrel. La Lucha (Havana) reports that it was for reasome of this sort that the nomination of Gonzalo de Quesada to be Cuban minister at Washington was confirmed by the Cuban Senate: the Senate was opposed to him, but did not want to defeat the very first nomination sent in by the new President. We also read (in the New York Journal) of a crowd of Hayana's poor trooping to the palace of the President on Tuesday

morning of last week and begging for brend, whereupon "President Palma took \$1,000 from his private purse and with it purchased bread, which he distributed to the crowd." It turns out later that the amount was the more modest sum of \$15. The Republica Cubana (Havana) reports that the negroes, who form one-third of the population, are dissatisfied with the small share in the appointments to public office, and La Lucha says that the ruin of sugar plantations is throwing out of work many laborers, who are resorting to brigandage, and that "the matter of security in the country is becoming the most pressing problem of the Government." El Nuevo Pais (Havana) takes a rather gloomy view of the future. It says:

"Instead of a propensity to make good laws, the representatives are tending to convert the House into a stage for mere oratory, which neither in form nor substance can be held up as an example to be imitated, and, what is worse, reveals a frame of mind far from reassuring, a profound antagonism among the various groups into which the House is being divided on account of the provinces from which the representatives come, and which would be a sufficiently disquieting symptom if this attitude were a faithful expression of the wishes and sentiments of the electors in the various parts of the island.

are now publicly being made in the name of revolutionists belonging to a race which considers itself slighted and left out in the cold in the distribution of the war booty, or, in other words, the public offices, which for the generality of those who fought make up the fruits of victory and the only means of achieving the felicity of the people. This erroneous belief was imprudently encouraged by the proceedings which the American intervention

"Neither are those expressions of discontent reassuring which

poses on lines of classes and races, and not on account of a common condition as Cubans.

adopted, and later by the invitation extended for electoral pur-"Those who allege a right to live from the budget, whether fitted or not, simply because they fought or conspired against the sovereignty of Spain, are not in accord with those in the Senate who are disposed to resist the initiative and action of the executive in the appointments of a diplomatic representative because they do not consider his sufficiency for the position established. We suppose that the motive for this opposition can not be other than what we have expressed, as the person in question, bothprior and subsequent to the revolution, was one of the most distinguished agitators, and hence the evident contradiction with the absurd general principle that services rendered to the revolution are tantamount to ability. . . . . .

"This conduct lessens the nutbority and prestige of the President, who should be strong in all matters, if the great interests, in which the attempt at self-government just commenced by us

are bound up, are to be safeguarded. . . .

"The kidnapings which have occurred in Cienfuegos and other places reveal the existence of a criminal organization which it would be easy to discover if the courts could count on the assistance of a good police force and public spirit in the inhabitants. The repetition of these outrages would be cause for diseredit and dishonor for the republic. . . . When General Polavieja wished to know and took the steps to find out, he discovered all he wanted, acted, and the misdeeds of the bandits were stopped. What invincible cause can there be to prevent the same results from being obtained now? If we should be so fortunate as to see n condition of harmony between the executive and legislature whereby the President should be invested with the authority and prestige necessary to preserve order, protect the lives and property of the citizen . . . the republic of Cuba would last for a long time; but if we do not make a joint effort to obtain this, the days of the republic will be few."

#### LETTERS AND ART.

#### THE "OUEERNESS" OF HENRY JAMES.

"IN a literature so well policed as ours, the position of Henry James is anomalous. Any other man would be suppressed." Thus Mr. Frank Moore Colly in the current issue of The Rookman. It has been a long time, he continues, since the public knew "what Mr. James was up to behind that verbal hedge of his," but there has been a general suspicion that he meant up good, because a style like his seemed to be "jinst the place for guilty secrets." Mr. Colly writes further:

"Those of us who formed the habit of him early can make him out even now, our eyes having grown so used to the deepening shadows of his later language that they can see in the dark, say you might say. We say this not to brag of it, but nerely to show that there are people who partly understand him even in 'The Sacred Fount,' and he is clearer in his essays, especially in this last wicked one on 'George Sand: The New Life,' published in April North American [see The Literaxay Dasses, April 26].

"Here he is as bold as brass, telling women to go ahead and do and dare, and praising the fine old hearty goings-on at the courts of Angustus the Strong, and showing how they can be brought back again if women will only try. His impunity is due to the sheer laziness of the expurgators. They will not read him, and they do not believe anyboly else can. They justify themselves, perhaps, by recalling passages like these in the 'Awkward Age':

"What did this feeling wonderfully appear unless strangely irrelevant."

"But she fixed him with her weary penetration."

"He jumped up at this, as if he couldn't bear it, presenting as he walked across the room a large, foolish, fugitive back, on which her eyes rested as on a proof of her penetration."

"' My poor child, you're of a profundity."

"'He spoke almost uneasily, but she was not too much alarmed to continue fucid.'

""You're of a limpidity, dear man?"
""Don't you think that's rather a back seat for one's best?"

""A back scat?" she wondered, with a purity.
"Your aunt didn't leave me with you to teach you the slang of the day."

""The slang?" she spotlessly speculated."

Henry James, adds the writer, is the only author of the day whose moral notions

"do not seem to matter." His "dissolute and complicated Muse" may say just what she chooses. Mr. Colby declares:

"Never did so much vice go with such sheltering vagueness. Whatever else may be said of James, he is no tempter, and tho his later novels deal only with unlawful passions, they make but chilly reading on the whole. It is a land where the vices have no bodies and the passions no blood, where nobody sins because nobody has anything to sin with. Why should we worry when a

JEROME A. HARTE, Editor of the San Francisco Argonaut

spook goes wrong? For years lames has not made one shadow easting character. His love affairs, illicit tho they be, are so stripped to their motives that they seem no more enticing than a diagram. A wraith proves faithless to her marriage you. clopes with a bogie in a cloud of words. Six phantons meet and dine, three male, three females, with two thoughts apiece, and, after elaborate geometry of the heart, adultery follows like a Q. E. D. Shocking it ought to be, but yet it is not. Ghastly, tantalizing, queer, but never near enough human to be either good or bad. To be a sinner, even in the books, you need some carnal attributes-lungs, liver, tastes, at least a pair of legs, Even the fiends have palpable tails; wise men have so depicted them. No flesh, no frailty; that may be why our sternest moralists have licensed Henry lames to write his wickedest. Whatever the moral purport of these books, they may be left wide open in the nursery.

During recent years, concludes the writer, Henry James's interests seem to "have dropped off one by one, leaving him shut in with his single theme—the rag, the bone, and the hank of hair, the discreditable amours of selections. They call it his later manner, but the truth is, it is a change in the man himself. He sees fewer things in this spacious world than he used to see, and the people are growing more meager and queer and monotonous, and it is harder and harder to break away from the summ his fance, sited to."

## RICHARD STRAUSS AND A "NEW ERA" FOR

WHEN Emil Paur a few weeks ago tendered his resignation as conductor of the New York Philharmonic Society, the remrk was made, probably not without an element of semi-humorous exaggeration, that his decision to return to Europe had been hastened by his differences with his coworkers as to the merits of Richard Strauss's music and the place it should occupy on Philharmonic programs. Whatever tratt there may have been in this remark, there is no doubt that Strauss has come into the musical world as a dividing force. There are critics in Energe and in this country who hall him as the legitimate successor of Richard Wagner, and a controversy is beginning which reminds one of the furious conflict over Wagner and his music. The admirers of Strauss are asenthusiastic in singing his praise as his detractors are bitter in denying him anything but telesia.

cal skill and musical endition. Does he write genuine music? Are his methods and theories legitim at e and sound? Has he added anything to music as a beautiful and inspiring art? These are questions that are now being discussed in several countries with spirit and acceptive.

Mr. Gustav Kobbé of New York, a well-known writer on musical topics, does not hesitate to describe Richard Strauss as "the most significant figure in the musical world to-day," and adds that "something the straus of the straus

WILLIAM MARION REEDY, Editor of the St. Louis Mirrer,

EDITORS OF CURRENT PERIODICALS.—XIV. THE SAN FRANCISCO ARGONAUT AND THE ST. LOUIS MIRROR.

new" has certainly been achieved by him. Mr. Kobbé writes further (in The North American Review, June):

"His music forms neither a continuation of Wagner nor nu opposition to Wagner. It has nothing to do with Wagner, beyond that Strauss appropriates whatever in the progression of his rat the latest maser has a right to take from his predecessors. Strauss is, in fact, one of the most original and individual of composers.

"He has been a student, not a copyist, of Wagner, Thus where others who have sat at the feet of the Baireuth master have written poor imitations of Wagner, and have therefore failed even to continue the school, giving outly feeble echees of its great master, Strauss has struck out for himself. With a mastery of every technical resource, acquired by deep and patient study, he has given wholly new value and importance to a of the average modern Wagner disciple sounds toot like Wagner half like Wagner and water. Richard Strauss sounds like Richard Strauss."

Stranss's fame rests mainly upon what he has accomplished as an instrumental composer, and in the self-created realm of the "tone poem." "Tone poem," declares Mr. Kohbé, "is a new term in music. It

RICHARD STRAUSS.

stands for something that outstrips the symphonic poem of Livet, something larger both in its boundaries and in its intellectual and musical scope." Strauss's most famous tone poems are entitled "Thus Spake Zarathustra' and "A Hero's Life." Of the first of these compositions Mr. Kobbé

"It was like a man of great intellectual activity, such as Richard Strauss is.

to select for musical illustration the Faust of modern literature. Nietzke's Zarathustra. 'I be composer became interested in Nietzke's works in 1892, when he was writing his music drams, 'Guntram.' The full furtion of his study of this philosopher's works is 'Thus Spake Zarathustra.' But this is not an attempt to set Nietzke to music, not an effort to express a system of philosophy through sound. It is rather the musical portrayal of a quest—a being longing to solve the problems of life, finding at the end of his varied pilgrimage that which he had left at the beginning, nature deep and inscrutable."

"A Hero's Life" is another work of large plan. It is music full of dramatic feeling which "illustrates itself, so to speak, like the author-artist who can both write and draw." We quote again:

"Like 'Zarathustra,' it would be effective as music without a line of programmatic explanation. The latter simply adds to its effectiveness by giving it the further interest of 'inction' and ethical import. In 'A Hero's Life' we hear (and zet, if only like) the hero himself, his jealous adversaries, the woman whose love consoles him, the buttle in which le wims his greatest worldly triumph, his mission of peace, the world's indifference, and the final flight of his soul toward the empyrean. All this can depicted musically with the greatest cloquence. The battle-field scene is a stupendous massing of orbestral forces. On the other hand, the amorous episode entitled "The Hern's Helpmate' is impassioned and charming.

"In the world's indifference to the hero's mission of peace,

there is little doubt that Strauss was indulging in a retrospect of his own struggles for recognition. For here are heard numerous reminiscences of his earlier works—his tone peems 'Don Juan,' 'Death and Transfiguration,' 'Macheth,' 'Till Emlenspiegel's 'Merry Pransk,' 'Thus Spake Zarathustra'; 'Don Quistote': his music strama, 'Guntrama'; and his song, 'Dream during Twitight.' These reminiscences give 'A Hero's Life' the same autobiographical interest that attaches to Wagner's 'Meistersinger.''

Apart from the illustrative and dramatic features of his work, Strauss has shown himself to be a master of polyphony, that is, the simultaneous interweaving of many themes. "As a polyphonic composer," maintains Mr. Kobhé, "he is second not even to Wagner." It is laurily too much, he says, to declare that "modern music seems entering upon a new era with Strauss." The writer concludes:

"At the age of thirty-eight, Strauss occupies a commanding position in the world of music. He has achieved it through a remarkable combination of musical tecture and inspiration coupled with rare industry. His ideals are of the highest. His intellectual activity is great. He seems a man of calm and noble poise, of broad horizon. It would be presumption to speak of expectations, in so tone who has accomplished so much. For the great achievements already to his credit are the best promise for the future.

Richard Strauss is one of the conductors of the Berlin opera, and his massic enjoys considerable vogue throughout Europe. The London Path Math Gazette has acclaimed him "a brilliant portent, an unrivaded musician, a personality of amaning procative power." In St. Petersburg, the "Strauss cult "is already beginning to attract attention. M. Ivanow, the critic of the St. Petersburg Nortype Viewpte, concedes to Strauss musical learning and skill, but on the question of originality and genius he writes:

"The fundamental proposition in Strauss's musical philosophy is that music should be expressive, and its language almost ordinary human speech. This is not new; it was theoretically proclaimed and practically applied by Liszt, and it was accepted as a matter of course by musical Germany. Nor was Liszt original in his contention. The degree of the expressiveness of music may be disputed, but the principle has not been questioned. Richard Strauss has followed in Liszt's footsteps and has not so far gone beyond his predecessor. . . . He piles theme upon theme, caring nothing how the combination will sound. His themes are of little interest and not at all characteristic, whatever his followers may say to the contrary. The result is at times frightful and painful, sheer confusion and cacophony, but this does not disconcert his admirers. Indeed, they tell us that Strauss must be heard in a 'horizontal' manner. This means that we are not to regard the harmony or lack of harmony, the depth or significance of music so much as the combinations and interrelations of the themes on the horizontal plane. This, it is admitted, may seem strange to the average amateur who is used to musical 'sweets,' and it may sound harsh and cold, but then 'truth must take precedence of beauty ' is the new gospel."-Translation made for THE LITERARY DIGEST.

#### INDIANA'S CLAIMS TO LITERARY HONORS.

I NDIANA'S plea for recognition as the literary center of the United States does not seem so extrawagnit when considered in connection with its recent muster of literary celebrities at an entertainment held in Indianapolis for the benefit of the Harrison memorial fund. On the occasion referred to, eight authors, all of whom were born in the State, gave public readings from their wocks—Gen. Lew Wallace, James Whitcomb Riley, Charles Major, Booth Tarkington, George Ade, Mary Hartwell Catherwood, George Barr McCatcheon, and Meredith Nichobson. The Indianapolis Sentinel, which surveys this list of names with justifiable price, goes on to say that "setting these eight aside

... Indiana can come nearer matching them in celebrity and ability with eight others than can any other State in the Union from its total list of authors." The supplementary list of Indiana-born authors which it submits is as follows: Joaquin Miller, John Hay, John James Patt, Robert Underwood Johnson, William Vaughn Moody, Edward Eggleston. William T. Horuaday, and Annie Fellows Johnson.

The New York Sun thinks that the lists presented "make a brave show of present literary distinction and success." It continues:

"Can other States take up the dealenge and prove their quarrer just? Indiana's neighbor Oho might make a good start Mr. Mr. Howells, Miss Edith Thomas, Mr. James Ford Rhodes. We leave it to Ohioans to complete the list. Chicago can furnish leave tight eights. Pennsylvania has Dr. Mitchell, Miss Repplier, Mr. Owen Wister, Mr. R. H. Davis, and plenty more, by plier, Mr. Owen Wister, Mr. R. H. Davis, and plenty more is the start of the dealers of the dealers of the blocks and has authors to burn; but we don't year for the plot of picking authors to burn; but we don't year for the plot of picking to the New York First and Second Eight. Besides, some of our rules best New York names belong by right of burn to other Start We should have to resign Mr. Stedman to Connectent and Mr. Stoddard and Mr. William Winter to Missachusetts.

"The Bay State used to be the Interary center. Indiana says that she is the literary capital now. Rasselly and at random we select slateen names of hving authors born in Missachuserts. Be. E. Hale, Julia Ward Howe, Richard Henry Stoddand, William Winter, Thomas Wentworth Higginson, Mary E. Wilkins Freeman, Elizabeth Stuart Phelps Ward, Louise Imogen Guiney, Harriet Preston Waters, Charles Frances Adams, Henry Adams, Henry Cabot Lodge, Robert Grant, Frederic Jesup Stimson, William Rounseville Alger, Thomas Russell Sullivan Donbless any of our Massachusetts french can make an unbetter list. Let it go for what it is worth and stand by the side of Indiana's Big Sixteen."

#### THE NEW PRESIDENT OF PRINCETON.

THE news of the resignation of President Patton, of Princeton University, and the immediate election in his place of Prof. Woodrow Wilson—the change being accomplished, as one paper remarks, "with as much businesslike speed as if in a rail-

way company "-

alleled in recent

times-without so much as causing

a proper feeling of

FRANCIS LANDEY PATTON, Retiring President of Princeton.

"President Patton's resignation was also of an unusual kind.
Leaving in the full vigor of middle life, with health and popularity unimpaired, he resigns a charge which he has administered

with indubitable success, because he feels the call of his old studles, and because he realizes that a man of different training may more advantageously inflire the prosperity which he has done so much to pocure. It is grateful, in this time which produces college presidents of a far different type, to find one who is willow to shift the hardness of administration before rating powers con-

pel him to that step, and who deliberately returns to the pleasures of scholarship and the dig inty of the teaching office."

The election of a layman to the presidency of Pranceton. the successor of an unbroken has of theologians during a hundred and fifty years, is widely commented upon, "A change in many respects so notable." declares the New York Times, "is not and can not be the result of accident." It continues

WINDSKOW WILSON, Pres dent-Elect of Princeton.

"Princeton accepts the below more which the governing boards of most of the volleges and miversities—the exceptions are few and growing fewer—lawe acted in electing as presidents men trained in theology. First-arte capacity for successful administration and for the best educational work are in these days, seem to be the qualifications for the head of a miversity. While the theological training is not a disquariteation, possibly, it is me acidence that those who have it have not decreed all their meand all their energies to the things now held to be descentials in university management,"

The New York Tribune attempts to forecast "how much of radicalism in administration this departure from tradition implies." It says:

"Princeton has reached the point where it must find its own solution of the college university problem which embarrasses all the American institutions. Graduate schools have not yet overshadowed the college in it, the old college life still rules, and courses more than elsewhere are shaped with a view to the collegian rather than the specialist. The practise there, however, is ouly tentative. The place of the college-that is, of higher liberal training as distinguished from academic work on the one hand and technical work on the other-is all unsettled. It is the greatest of our educational problems; for on its satisfactory solution depends the production of students technically trained for professions who are at once cultivated men, not mere specialists, and who at the same time are graduated for practical work at a reasonably early age. What ballast can be best thrown overboard? What cargo is precious enough to keep? What method will best use the school period to inculcate the highest culture and character together with the greatest practical working power? Those are the unsolved questions of the universities. It will be interesting to see what answer Princeton will give them as under her new president she proceeds to develop her real university system to supplant the overgrown college character which has clung to her until now,"

The following account of Prof. Woodrow Wilson's career is taken from the New York Evening Post:

"Prof. Woodrow Wilson, Ph.D., Litt,D., LLD., who has been chosen as Dr. Patton's successor and who has signified his acceptance of the presidency, was horn at Staunton, Va., in 1856, and is a graduate of the university of the class of 1879, where his name appears on the roll as Thomas Woodrow Wilson. After

his graduation he studied law in the University of Virginia, receiving the degree of bachelor of law in 1882. He received the degree of bachelor of philosophy from Johns Hopkins University in 1886, that of doctor of laws from Wake Forest University, North Carolina, in 1887, and that of doctor of literature from Vale University at its late bicentennial celebration. Professor Wilson occupied the position of adjunct professor of history in Bryn Mawr College, and was afterward professor of history and political economy in Weslevan University. In 1890 he became professor of jurisprudence and political economy at Princeton. In 1805 the title of his chair was changed to that of professor of inrispradence, and upon its endowment he became McCormick professor of jurisprudence and politics. Professor Wilson has also for a number of years given a course of lectures in Johns Hopkins University. He has obtained celebrity as a lecturer and also as a writer. His work entitled 'The State' and his 'Life of George Washington' are his best-known writings, President Wilson is the thirteenth in the roll of presidents at Princeton, and is the first layman to hold this office, all his predecessors having been Presbyterian clergymen. He is, however, a ruling elder in the Second Presbyterian Church of Princeton. As a professor he is very popular, and his elective classes have always been among the largest,"

President Patton, it is stated, has not severed his connection with the University, and will fill the chair in Biblical instruction, ethics and philosophy of religion.

#### THE PRESENT CONDITION OF FRENCH LITERATURE.

F -RANCE has been widely regarded as the home of the "realistic" and "naturalistic," as well as of the "decadent," in literature. The statement of two eminent French critics, M. Georges Pelissier and Madame Blane ("Th. Bentzon"), that the tendencies in French literature which these words describe are passing, is therefore

of more than ordinary interest and significance. M. Pelesser intimates that French literature is reaching a "turning point" in its develop-TIMP 117 "The old standards," he declares, "are being abandoned, with the result that personal originality is no longer prevented by conventionality, or by arbitrary and fictitious rules. The dogmatism of even the critics has been entirely overthrown. norwithstanding the efforts of such men

NADAME BLANC

as M. Branctiere." The writer continues (in La Revue, Paris):
"We have two groups of crities. The first is composed of pure impressionists, who decline to pass judgment and recognize no rule; the second includes the critics who, on the other hand, make a point of passing judgment and applying rules, while admitting that nothing is absolute and thus contradicting the very principle of their dogmants in. Therefore it is not to be wan-dered at that our literature proves refractory to scholastic discipline, and that poetry, the drama, and the novel, which are the essential forms of literature, enjoy in our time an amount of liberty unbeard of until now."

In poetry, adds M. Pelissier, the enfranchisement is as complete as possible. Not only do the poets now refuse to submit their versification to arbitrary rules, but the influence of the schools "is gone. The "Romanticists" of the early part of the nineteenth century were succeeded by the "Naturalists," and, later, by the "Parnassians." Finally came the school of "symbolism," not to establish a new principle, but to abolish everything which in the "Parnassian" discipline impeded the free expansion of individuality. Similarly, the modern theater has discarded the systematic affectation of former schools in order to consider only a true representation for featily; and the "psychological" and "naturalistic" novel has given place to the novel which simply concerns itself with reproducing human life in its integrity.

Madame Blanc supports the same general conclusions as M. Pelissier in a paper contributed to the New York Outlook (May 24). She writes:

"Here in France, after the excess of romanticism, realism has had a great wave of success. Driven from the sound method which George Eliot followed in England, we have had realism in its turn grow dim and dull. What it has left us is a more scrupulous exactness in observation, an increasing concern with common and precise details of every-day life, a new interest in 'the average man,' All this is a gain, for every evolution, literary or otherwise, leaves (whatever bad effects it may temporarily have) at least a trace of value, once the dross is got rid of, count as among the dross not yet got rid of the habitual use of coarseness in situations and language, which unhappily still forms part of the heritage of realism. In the same way, the insupportable affectation of our decadent writers continues to insinuate itself into what we choose to call 'artistic writing'; but it has to offset it the seeking out of new forms of expression. often very happy. Moreover, the decadents are really dead and huried; naturalism, properly so called, that of which Zola was the high priest, may be classed among the crumbling idols,"

Fiction shows perhaps more clearly than any other department of French literature the changing temper of thought. We quote again:

"In the domain of psychology pure and simple, the novelists, since the beginning of 'feminism,' have been able to study characters heretofore not available. One after the other have appeared 'Femmes Nouvelles,' 'Les Vierges Fortes,' 'Telielovek, and 'Eve Victorieuse,' the last two written by women. The vonue wirl in French fiction, as in French life, has at last taken a place of her own; if only in exceptional cases, she has learned to use her will, and lives on her own account and at her own risk, so to speak. This is a phase of life well worth noting, and the impulse toward it comes from America. . . . Then there are the novelists of the neo-Christian type, who are more or less under the influence of Maeterlinck, and in their books, no matter what the subject, diffuse a vague religious perfume of religiosity and of a mysticism that I shall not hesitate to call decadent. M. Huysmans has gone ahead of the others in passing from excessive seasualism to not less inglify accentuated Catholicism. But, however critical one may be in this matter as to inconsistency and exaggeration, it is impossible to deny that, among all the new ideas which have been brought to the surface in fiction, the religions idea has assumed a prominence it has not had for a long time. The enormous and altogether extraordinary success that a foreign work, 'Quo Vadis?' has had in France proves this. And this again marks a return toward idealism. Note the nnusual esteem in which M. Edouard Rod's novels are held. The reason is that the author of 'Science' has constantly before him a high moral ideal; that he is interested and interests us in the inner life, its mysterics, its problems. All this does not, I repeat, prevent stories of another kind selling better; but the unwholesome curiosity which pushes toward the latter books a erowd of readers, with whom we need not concern ourselves, has nothing in common with literary curiosity, and it is of literature that we are speaking just now."

Madame Blane finds the same evidences of healthy progress toward a higher ideal in French poetry, instancing the work of Leconte de Lisle, Cupide, and J. M. Hérédia, and characterizing the award of the Nobel prize to "so generous, sweet, and pure a poet as Sulty Prudlumme" as a most happy augury for the future.—"Dranslation made for Tire Latreage Diagra.

#### THE PLETHORA OF POETS.

In recent discussions of the general question, "Is Poetry Losing its Popularity?" (see Tur Literary Dictset, March 22
and April 9), some rather pessimistic views have been expressed
regarding the present standards of poetical writing and the popular appreciation of poetry. Mr. Sidney Low, who writes on the
subject in the current issue of The Cornhill Magazine, confesses that he is never able to consider the subject of contemporary poetical production in England "without a sense of bewilderment." He declares:

"It piques my curiosity more than it rouses my interest, and presents me with a whole series of problems which I am powerless to solve. On the one hand, I seem to see indications of an extraordinary absorption in verse composition, while there are, at the same time, facts which might point to absolute public indifference. 'This is not a poetical age,' it is said; and it is an opinion which one would be disposed to accept without much question. You do not see any particular proof that poetry is widely read. People seldom talk about the subject as they do about novels, the theater, politics, or sport. One rarely hears verse quoted, at least by anybody under forty. I know two or three old gentlemen, and some elderly ladies, who adorn their conversation with scraps from Tennysou or Byron, from Keats or Wordsworth, or Pope. But the quotations fall irresponsive on the ears of their sons and daughters, their nephews and nieces, who regard these literary allusions and reminiscences as among the harmless foibles of age. If you except the professional literary class-and I am not even quite sure of them-modern educated Englishmen and Englishwomen seem extraordinarily illread in the poetry in their own tongue, compared with German or French people of a similar status,

And yet, in spite of the apparent popular indifference to poetry, Mr. Low doubts if there was ever an age when more werse was produced. He cites William Archer's "Poets of the Younger Generation" as evidence of the fact that much excellent poetry is being written by the younger poets of England and America, and goes no to say.

Many more names crowd up for recognition, among which the writer includes those of Mr. Norman Gale, Professor Dowden, Canon Rawnsley, Sir Rennell Rodd, Dr. Richard Garnett, Mr. Wilfrid Blunt, Miss Mary Robinson, "Violet Fane," Mr. Stephen Gwynn, Mr. Conan Dovle, the Earl of Crewe, Mr. Newman Howard, and, as representatives of the lighter Muses, Mr. Rudolph Lehmann, Mr. Owen Seaman, and Mr. Charles Graves. Mr. Low confines himself in the present article to poets of British birth and nationality, but adds a note in which he says: "The United States, as usual, has a larger production of verse, as of other manufactured articles. In Mr. E. C. Stedman's 'Anthology of American Poetry ' there are 580 names, most of them those of living writers. But it is difficult to form any fair estimate of the productions of the minor poets of the United States, since there is very little export trade in their wares," Mr. Low continues:

"Why are poems not read? Or, if not read, why do people go on writing them? Considering the extraordinary interest taken in almost every other literary form, the public indifference to verse is curious. There is a young poet, whose tame has been mentioned in the foregoing pages, and who has been deservedly praised by Mr. Swinburne, Mr. Meredith, Mr. Watts-Dunton,

Mr. Courthope, and other good judges. He tells me that to the public he has sold exactly five copies. There are, I believe, some few living poets-I suppose not more than three or four at the outside-whose works do command a sale which would not be held to signify absolute failure in the case of a second-rate novelist. But their experience is quite exceptional. Taking the whole body, we may assume that they write not only without reward-poets have often done that-but even without recognition. So that going back to our 'first class,' we must conclude that there are scores of the most finished, most accomplished. writers of the age-men and women often of rare gifts and attainments, whose delicate literary art contrasts significantly with the slipshod workmanship so frequent in contemporary fiction and drama-with so few readers that their works can scarcely pay for the cost of paper and printing. We come back to the proposition with which I started. We live in an unpoetical age. But it is not unpoerical in the sense that people do not write verse, for, on the contrary, we have seen that they do, and plenty of it, and often of very high quality. The lack of poetry is in the reading public, which has apparently lost its taste for the oldest and most characteristic art-form of the Anglo-Celtic

Mr. Low does not profess to be able to solve the riddle he puts forward. But he suggests that the waning interest in poetry may possibly be due to the increasing interest in music. "To the modern senses," be says, "music means more than verse wer can," for 'the composer goes straight to the fevered modern soul, nor does he demand from it that kind of tranquil and intelligent cooperation without which verse is like the tinkling of a cracked cymbal, the beat of an untuned drum," If this be not the solution of the enigma, "it is at least more flattering than some others that might conceivably be suggested."

The Novellat and the Physician,—William Black, the English novelst, was accustomed to frequently consult an emiment London physician, Sir Lauder Brunton, in order to obtain information that he needed in his stories. If in the course of a story he had to afflict one of his characters with physical or mental illness, he always sought the most detailed and exact information regarding the particular disease of which the ficttious person was to be the subject, from Sir Lauder Brunton. Says a reviewer in The British Medical Journal:

"He had a horror of carelessness and scamped work: . . . he never subjected one of his characters to any abnormal conditions without satisfying himself that his description of those conditions was scientifically accurate. Accordingly we do not find in Black's novels such absurdities as the use of the stomach-pump in the treatment of poisoning by the hypodermic injection of morphin, as described the other day by the author of a story appearing in Pearson's Magazine; or 'pyemia' classed with the pieura, the thorax, and the clavicle as parts of the human anatomy, as is done in Mr. George W. Cable's fatest novel, 'The Cavalier.' It is not every novelist, of course, who can in any difficulty appeal to one of the shining lights of medical science. But all can use reasonable care not to go wildly wrong. Gustave Flaubert, who had himself studied medicine. took extraordinary pains to get medical details accurate, and M. Zola, as might be expected, laboriously gets up his facts. Thus, when he wishes to describe the death of Nana from smallpox, we find him writing to a friend for reference to detailed descriptions of the disease. But altho his industry in collecting 'documents' is beyond praise, in medical matters he is too apt to rely on the light of nature for their interpretation. Hence, as in 'Lourdes, his craving for 'realistic' effect, unrestrained by practical knowledge or skilled advice, makes him draw pictures of disease which have no counterpart in clinical or pathological fact. In connection with this subject it may be mentioned that not long ago an American novelist thought himself exceedingly ill-used because his family doctor, of whom he bad sought counsel as to the right manner of disposing of one of the creatures of his fancy, afterward sent him a bill for professional services. Would the novelist admit any right on the part of the doctor to ask bim to write a short story for nothing?"

#### SCIENCE AND INVENTION.

#### THE THEORIES ABOUT VOLCANIC ERUPTIONS.

HAT steam at high pressure has a great deal to do with the activity of volcanoes nearly all authorities are agreed, althe there is no unanimity regarding the mode of its action. According to one view, the water that is at the bottom of the trouble is already present in the uppermost layers of rocks that form the earth's crust, and is brought into action by movements and fractures of the crust that force them into close quarters with the lower and more highly heated layers. This theory is clearly set forth by Prof. Stanislas Meunier in La Nature (Paris, May 24). Says this distinguished French geologist :

"In an eruption, two essentially different things must be distinguished, namely, the determining cause of the subterranean explosion and the

Theoretical section of the earth's crust, showing how the explosive matter thrown out of volcances results from the covering of waterrocks by others at high lemperature, during the shifting due to mountain-making. (Explanation of letters in text.)

be regarded as a solution of watervapor under verv high pressure, in molten lava. It is the exact reproduction of a mineral water in which

carbonic-acid gas is dissolved. We know that with a bottle of such water we have only to remove the cork, holding the bottle upright, to cause all

the water to rush out, and we know that this . . . is due to the fact that the carbonic acid, freed from the high pressure that exists in the bottle, tends to put itself in equilibrium with the atmosphere, resumes the gaseous state, expands, and carries its solvent with it.

"A volcano can be regarded as a buge bottle of mineral water: when it is corked, nothing happens on the outside, but as soon as a crack in the ground establishes communication between the depths and the atmosphere, there is an explosion, throwing out whatever is in the way, and causing the outflow of lava, after a rain of ashes and lapilli.

"Thus, to bring about a volcanic eruption it is sufficient that communication should be opened with the outer air and that the resistance of the 'cork' in the volcanic orifice should thus be diminished.

"But the question is, how the explosive material comes to form -the boiling lava of which we have spoken. We can not think that it has always existed in the ground, for then the phenomenon would be continuous and not intermittent.

"Doubtless the water penetrates to the depths from the surface; but at first sight there seems to be incompatibility between the admission of water to the volcanic laboratory and the high pressures that exist there.

"Here comes in one of the grandest harmonies of nature that it is given to man to contemplate. This volcanic water that is necessary to bring the internal substance to the surface-a phenomenon that constitutes one of the essential factors of telluric physiology-is carried into the very hot regions and incorporated there by occlusion with the substance of the lavas, owing to the same phenomenon that gives rise to mountains.

"The accompanying diagram will make the subject very clear: it is a theoretical section of the outer regions of the earth's crust, and we see in it the superposition, along the line MN, of a region E where the rocks are impregnated with water and of a deeper zone S which is yet too hot for water of filtration to penetrate to it.

"The elevation of mountains depends on the opening of 'faucets' like FF, whose two edges move in the direction of the two arrows. It may be seen that this brings about, at points like //. . . . the juxtaposition of rocks saturated with water, and extremely bot rocks. These rocks //, superheated by their inclusion between the masses R and P, volatilize their water of impregnation, which finds itself in the best conditions for incorporation with the neighboring masses, lowering their point of liquefaction and causing aqueous fusion, which transforms them into boiling lavas, only waiting an opportunity for crup-

"We are forced to note ouce more the association-a normal one, so to speak-in the terrestrial medium, of cycles of phenomena whose coexistence brings on, from time to time, conflicts of the most serious character. The evolution of living beings, for instance, must reckon with the progress of terrestrial transformations. At Martinique, thousands of human lives have been sacrificed by an accident which must have seemed to those who saw it like the very end of the world. And nevertheless, the letting loose of the volcano, considered in itself, that is, from the planetary point of view, was simply the displacement of a few cubic kilometers of particles in obedience to the circulatory force without which the terrestrial mechanism would come to a stand-

"The remarkable thing is, not that the surface of the globe should be subject to eruptions and earthquake shocks; it is that being so easily fatal to the establishment and development of the human race, it has nevertheless permitted the course of history to go on, altho it has had to make its way, so to speak, since the beginning, among possible causes, constantly renewed, of total destruction."-Translation made for THE LITERARY DIGEST.

#### EDISON'S NEW STORAGE-BATTERY.

HE newly invented storage-battery of Thomas A. Edison, in which iron and nickel are used instead of lead, with the result that great lightness is attained, has already been described in these columns. The battery, we are told in the daily press, is now nearly ready to be put upon the market, and great results are prophesied. Says Electricity:

"The trouble with storage-batteries for automobile purposes up to now has been the fact that the weight which had to be carried was out of proportion to the amount of power given. This objectionable feature. Mr. Edison now claims, has been overcome.

"To a representative of a daily paper Mr. Edison told of two tests of a runabout that had been equipped with one of his batteries with a net weight of 332 pounds. The first run, he said. was two weeks ago over roads having grades of from 21/4 to 12 per cent. The vehicle ran 62 miles on one charge, and the speed at the finish was 81 per cent, of the starting speed. The second trial was on May 26 over comparatively level roads, and on a single charge the vehicle ran 85 miles to a standstill,

"On both these trials, Mr. Edison said, the speed averaged nearly 12 miles an hour. Rough roads, ruts, and sand were cov-

ered at the same speed as the smooth stretches.

"Among advantages claimed for the new battery over all other classes of motive power are its simplicity, reliability, cheapness, and safety. Any novice may operate it, and the only attention required is that the supply of water in the solution be replenished. The speed possibilities are declared to be limited only by the weight of battery that the body of the vehicle will carry.

Mr. Edison himself is quoted as making the following statement in a recent interview :

"A speed of 75 miles an hour will be easily attainable in a properly constructed vehicle. There will be no running expense except the cost of current, and it will not be possible in the streets of New York to exhaust the battery in one day. The battery will not deteriorate and will be capable of the same speed throughout.

"The main feature of my battery is that it is indestructible, as it can be charged and recharged without perceptible change in materials. It is an iron-nickel cell, or, in other words, the negative pole or positive element is iron and the positive pole or the negative element is a superoxid of nickel. As contrasted with the old lead storage-battery of 136 pounds per horse-power hour my battery is only 53.3 pounds per horse-power hour."

Commenting on this, Electricity says editorially:

"That Mr. Edison's battery is an improvement over the majority of storage-batteries now on the market we do not doubt, but before giving absolute credit to the statement that it will revolutionize the automobile industry we should like to see some further tests with official reports of the same.

#### ARTIFICIAL IMITATION OF LIFE.

A NOTHER of those fascinating investigations in which substances or tissues supposed to be peculiar to living matter are imitated artificially has jint been made in France by Dr. Leduc. In a discussion of his results in The Academy and Literature (London) by P. Legge, the author begins with an interesting account of the earliest recorded experiments in this direction—those of Paracelsus—and a speculation regarding the exact meaning of this author's description of them, which may possibly have been intended as allegorical or cryptic. Paracelsus gives directions for precipitating from certain chemical substances the tiny body of a human being, which may be kept nourished, and even questioned regarding "the secret of hidden things." Possibly, the writer suggests, this is all an elaborate attempt to describe in enigmatic language some experiment in which vital phenomena are instated. He goes on to say:

"It is at any rate plain that his story can not be taken literally, because neither the human nor any other animal form can be precipitated from a liquid as is a mineral. The reason of this—other things apart—is that all known forms of life, whether vegetable or animal, are not simple, but complex, being made up of one or more organisms known as cells, which perhaps bear the same relation to the materials of which they are composed that the crystal does to the anorphous or shapeless condition of the mineral."

Going on a little further with this explanation, the writer reminds us that the simplest form of living being known to in su-the mance on which stirs in the depth of the waters—is a mass of albunean about the size of a pln's head, without any apparent differentiation of parts, and having for all evidence of life the power of protruding continuations of itself in any direction. The next more complex form, the ameka, has sevolved into a cell having a kernel or nucleus of harder albumen, an external body of softer albumen or protoplasm, and in yet another stage of evolution an onter pellicle or cell-membrane which keeps the whole organism together. He goes on:

"These cells propagate themselves when they have reached their normal maximum of growth by self-division, each half anpearing in turn with the full equipment of nucleus, protoplasm. and membrane, and it is from cells like these that the bodies of plants, animals, and, finally, man, are compounded. Into the life-history of the cell I can not now enter, but I may perhaps say that with cells, as with other things in nature, many are ealled but few chosen, and that millions of cells must die every day in order that the whole complex may live. The body of a plant and, a fortiori, of an animal such as man, is in fact not a simple entity, as Paracelsus and his contemporaries fancied, but a republic of cells, aggregated together, indeed, for the common good, but competing for existence among themselves as fiercely as do the individual members of our own communities. For the struggle for life, which is said to exist even among the stars of the sky, extends also into the remotest nooks and crannies of nature, and among the independent organisms which go to make up our material bodies, it is only the fittest who survive.

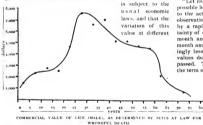

"If, now, we analyse the substance of which these cells are composed, we find that the ulbume is not a simple substance or 'element,' but is in itself a compound unde up of carbon, nitrogen, hydrogen, and oxygen, with, it is said, always a trace of sulfur and phosphorus. But there is nothing in these elements, consisting as they do of the three gases and the three solids which are most widely diffused through the universe to account for the phenomenon of life, the explanation of which must therefore be looked for elsewhere. What is it that gives to the cell the mysterious powers of growth, of movement, and of reproduction? Many answers have been made to this question. hut it can not be said that any of them are satisfactory. . . guess that life was first brought here in an aerolite from another planet-which does, indeed, but throw the mystery one stage farther back-is about as far as we have got at present, and even one so thoroughly determined as Haeckel on finding in matter an explanation of all phenomena, does not go beyond the oracular saying that 'the infinitely manifold and complicated physical and chemical properties of the albuminous bodies' is the real cause of vital phenomena. In this excessive complication of adjectives we may, perhaps, see the confession that he is unable to form even any plausible guess on the subject,

"One small corner of the veil which covers this mystery has now, however, apparently been lifted. In a communication lately made to the Congress of Physical Science held at Ajaccio, Dr. Leduc of Nantes asserted that he had discovered a way of forming cellular tissue artificially and not in the way of pasure. If, he says, you cover a perfectly clean glass plate with a very thin layer of gelatin, and sprinkle it with a few drops of ferrocyanid of potassium, you will see start into life a collection of cells having a regular polyhedric form, and containing each a nucleus. a sac of protoplasm, and a membrane exactly like the cell of a plant or animal. He does not, indeed, say that these artificial cells have the power of growth, movement, or reproduction that we have seen in the lowest form of animal life, nor do I know what precautions he took against the infection, to use a convenient phrase, of those bacteria of which gelatin is the favorite field of culture. But assuming that these cells are really produced by the saline solution and the gelatin without any extraneous aid, we have, even if they be lifeless, a sort of hint of the process by which the first moneron took life. It has always been supposed that the albumen of the cell-plasm possessed a highly complicated molecular structure, altho this has never been demonstrated, so far as I know, by microscopical or other examination. But cyanogen, which is one of the elements of the salt used by Dr. Leduc in his experiment, is one of the most anomalous substances known to chemistry, because, while it behaves in all respects exactly like an element, it is nevertheless found by analysis to be decomposable into carbon and nitrogen, a solid and a gas that we have already found present in albumen. Such a quality of origin in an otherwise elemental body is found in only one other substance, namely, the hypothetical metal which is the base of ammonia, and which, altho behaving like its related metals, sodium and potassium, is known to be a compound of nitrogen and hydrogen. In this connection, too, it must be noticed that the first 'organic' substance artificially produced, viz., urea, was manufactured from the union of these two anomalous substances-cynnogen and ammonium. It may, therefore, be that at some period in the earth's history, of which they form almost the sole record, the elements known to modern chemistry were themselves formed by the union of yet simpler bodies, and that this process was for some reason favorable to the development of organic life. If this speculation, suggested rather than supported by Dr. Leduc's experiment, turn out to be well founded, the homunculus of Paracelsus, altho it may never come to us in visible form, may yet be not such an impossible dream after all."

New Theory of Wireless Telegraphy.—That wireless telegraphy depends on distribunces of potential in the earth, regarded as an electrically charged sphere, rather than on Herisian waves, as is usually supposed, is maintained by Rankin Kennedy. This physicist, says a writer in The Electrical Rerétire (May 31), "has been unable to swallow or digest the usual statement that the workings of wireless telegraphy depend upon Hertaina waves, since he has been unable to see why such waves should be able to bend around the curved surface of the earth through many degrees of are. . . . . in effect this suggestion is poses as an electrically charged sphere whose charge is at senposes as an electrically charged sphere whose charge is at the protectial. If a disturbance is set up in this charge—which we are led to believe resides upon the surface of the earth—through the connection of an insulated capacity and a spark-gap with the earth, surges of current are caused to flow; then, inevitably, ripples of electrostatic disturbance will radiate out from the disturbing point, and these may be detected at great distances by means of appropriate apparatus sensitive to electric waves. It makes no manner of difference whether the sending and receiving circuits are parallel. A somewhat curious corollary of this hypothesis is that at the antipodal point from the sending-apparatus there ought to be a maximum of effect. If the earth were a smooth sphere having a uniformly disturbed charge, the ripples radiating away from the disturbing influence in widening concentric circles would come together again at the other end of the diameter of the sphere, where their mutual interference and addition would create a point of maximum effect. It would not be extremely difficult to test this assumption. If it is found true, the explanation of wireless telegraphy is evidently at hand. It may be remarked here that the antipodal point to Mr. Marconi's powerful sending-station in Cornwall is to be found in longitude 174 degrees east, and latitude 50 degrees, 30 minutes south. This point is in the South Pacific Ocean, very near Auckland Island which lies immediately to the south of New Zealand. There the British Government maintains an admiralty supply depot. It would be very interesting to know if messages which have faded out and become no longer sensible to the receivinginstruments at twenty-three degrees away from the sending-station would not be again easily received one hundred and eighty degrees away at the antipodes. All that would be needed to try the experiment would be to send a ship provided with a receiving apparatus to the point indicated, and wait for results."

#### THE VALUE OF HUMAN LIFE.

H OW much is a man worth, commercially? We have no slave-market to settle the question, at least for those members of the human race that presumably are of the greatest value to the world. In an interesting article in The Popular Science, Monthly (June), Marshall O. Leighton makes an estimate based on a large number of awards made by juries in suits for damages. He concludes that a man's life has a definite value which

ages is fairly well represented by the awards given in the courts of law, the relations of these values being logical and capable of mathematical representation. Mr. Leighton first inquires what it is that determines the purely economic value of human life. He says:

"As eminent an authority as Rechard has stated that it is the sum 'that the individual has cost his family, the community or the state, for his living, development, and education. It is the loan which the individual has made from the social capital in order to reach the age when he can restore it by his labor." It is hardly probable, however, that this statement will receive permanent acceptance by a thoughtful man. A little reflection will thereby that values are determined by cost. Under such a valuation, the resource vested in an individual grows from birth, not with his increasing powers of production and he greater cer-

tainty of his attaining the age of self-support and becoming useful, but by reason of the fact that his maintenance is costing more and more. It would mean that the individual is most valuable at the moment before he becomes self-sustaining, and thereafter loses value until he has paid back to society the cost of his maintenance during dependent years. The time arrives when the account is balanced, and he is of no value whatsoever, even the he might be at the prime of his productive powers. On the other hand, the generally accepted meaning of value has little relation to the cost of production; it depends upon final utility. The value of a commodity depends upon its use, or its productive ability in a community, and, as we are dealing with hie as a commodity, in truth an article, these well-established economic principles must apply, even as truly as in the case of commercial products, in the market of New York. The more logical view, therefore, must be that the commercial value of a life must he measured by its general usefulness, its power of production, and the monetary returns which it makes to society."

After examining the grounds on which damages are awarded in suits for loss of life, the writer concludes that these damages represent fairly well the loss to the surviving relatives, excluding, of course, all considerations of mere sentiment. This loss being measured, in the last analysis, by the man's productiveness, it also represents his value to society and so is a "safe and trustworthy estimate" of the pecuniary value of his life. The curve given by Mr. Leighton was drawn from 147 cases, a large number of others being excluded where primitive damages were assessed. He first divides the life into age-periods of five years, and, on combining the awards in each period, it is found that the resulting average in each period is thoroughly representative of the whole group and possesses tolerably narrow limits of probable error. The distance of points on the curve from the vertical axis, measured horizontally, represent the ages of the decedents. and the corresponding vertical distances from the base the average amount of damages awarded per case, for each age-group. Says Mr. Leighton :

"Let us now examine this diagram and observe as closely as possible how the relative values there expressed (without regard to the actual values which they represent) conform to common observation. From the initial point, there is a rapid rise, caused by a rapidly coliancing value occasioned by the greater certainty of escape from the dangers of tender childhood. Each month and week during this period is hazardous, and as each month and year is passed in safety their sike becomes correspondingly less. Following this, is a flat portion during which the values do not change so markedly, until the age of puberty is passed. Then occurs a sharp increase, which, as it merges with the term of self-sustenance, becomes more rapid, culminating at

about the age of 30 years. This is the prime of American manhood; not the period of highest productiveness, nor the age of ripest wisdom. The future is now the important feature, and there are questions of permanence to be taken into consideration. Physical vigor issually begins to decline at this period. We are familiar with the fact that the powers of the athlete then begin to wane; champions of this age give way to younger aspirants. This

means that the risk becomes greater and the confidence in future values is lowered. Therefore, even the the age of 30 is not the climax of existing psefulness, it comprises the highest combination of value and permanence.

"After the age of 30, there follows a gradual decline of values until the age period \$3,5-60 is reactied, when the declivity becomes sharp, remaining so to the end. The decrease in each age-group is not marked and might not be apparent when separate cases are considered, but the collective arrangement indicates with faithful accuracy all that might be expected from common observation.

"CONCLUSIONS: 1. The pecuniary value of life is subject to the same economic laws as are applied to the more vulgar commodities.

"2. In courts of law, the measure of an individual's productiveness, which is the measure of his value, receives the most careful scrutiny; therefore the decisions of such courts, where existing statutes permit, are trustworthy in determining an individual's value to his family.

- "3. The pecuniary value of a life to its relatives represents its pecuniary value to society.
- "4. Damages given for wrongful death are such that they can be represented by an average in different age groups, with only narrow limits of probable error.
- "5. The relation of these age-groups values, one to the other, is supported by common observation and statistical reasoning."

#### TOBACCO MADE HARMLESS.

A NUMBER of processes have been devised for removing from tobacco its harmful ingredients, especially the nicotin; but the trouble is that the residue is generally not only harmless, but insipid. Now, however, an experimenter named feerold, of Halle, Germany, claims to have succeeded in neutralizing the injurious principles of tebacco without taking from it the flavor so much prized by smokers. The fellowing description of Gerold's method and its results is given in Cosmos (May 24):

"The leaves are treated with a solution of tannic acid, which has the property of fixing alkalouds as that the nicetin and the essences contained in the plant, such as nicetianin, etc., are neutralized and readered inoffensive. It would appear that this operation does not cause the tobacco to lose its flavor. To renew the perfume dear te the smoker, which is injured by the tannin, the tobacco is then soaked in a prepared decection of the plant Origanum vulgare (wild marjoram). These cigars are now sold in America, Germany, and Russia, and are, it appears, much liked by smokers, while they are recommended by physicians."

Careful experiment has shown, we are told, that this mode of preparation removes all toxic properties from the tobacco. After smoking the prepared cigars, the atterial pressure and the pulse remain precisely the same as befere. A solution of the treated tobacco was even injected into the veins of varieus animals without serious results. A large number of the cigars have been smoked by M. Bardet, who reports on them as follows:

"The cigars retained completely and very agreeably the taste of tobacco; one can barely detect a very slight difference between them and ordinary cigars of the same quality. This surely gives them a great advantage over the so-called denicotinized tobaccos.

"Wishing to make some experiments on the action of this tobacco, M. Bardet smeked between 10.M. and 6 r.M. no less had 15 cigars of a grade comparable with our favoriles at 20 centimes [4 cents]. He did this with perfect impunity, althoto day before, he had not been able to exceed his tenth cigar, made of erdinary tobacco.

"Here is another experiment: M. Bardet gave a prepared cigar to a boy of 16 years, who more than once had been made ill by trying to smoke an ordinary Caporal cigarette. The youth felt no disagreeable sensation.

"The assertion of the inventor that he has left all the nicotine in the tobacco and at the same time rendered it harmless is somewhat paradoxical;... nevertheless there is nothing unscientific in the idea that the alkahold may be chemically fixed so as to make it nen-volatile."—Translation made for The Literary Deerst,

Still Another Air-ship,—A new dirigible balloon, which embodies also some of the principles of the acroplane, has been devised by M. L. Roze, who described his machine in a lecture befere the Paris Aero Club recently. M. Reze regards the dirighte balloon of Commandants Renard and Krebs, made in 1884, as the first of its kind, and those of Santos-Dumont as only "feeble copies" of its. Says a writer In Curmos (May 3):

"According to M. Roze the conquest of the air will not be accomplished except according to the fundamental principle that the air-ship must be heavier than the air. Altho it must be, he thinks, sufficiently lightened to save itself in case of danger, it must remain heavy enough to breast the air like a bird, which is the only way to travel horizontally at any desired altitude without danger of the loss of gas and of ballast which shortens voyages."

The advantages of this particular air-ship, as stated by the inventor, are complete security for the passengers either over

ROZE'S AIR-SHIP ASCENDING.

land or sea; the rigid councetion of two balloons, rendering them stiff; the position of the propeller at quarter height, where it is sheltered from all contact with the ground or the water; and the placing of the engine above the passengers, where it does not interfere with their comfert and applies the propulsive free in the axis of mass, preventing all rolling. Vertical descent is avoided by the use of a parachute. The ascensional force of the combined balloons is sufficient to carry four persons and about 500 pounds of ballast. The trial of the air-ship is to take place in June.—Transition made for This LITERARY DIGEST.

#### THE RELIGIOUS WORLD.

#### CREATION LEGENDS IN ANCIENT RELIGIONS.

THE desire to piece the mysteries of the universe awakened at an early stage in human history, and the primitive creation stories of the great centers of ancient culture—Babylonia, Judea, Egypt, Phenicia, India. and Greece—are among the most interesting records that we possess of the intellectual temper prevailing at the time they came into existence. Prof. Morris Jastrow, of the University of Pennsylvania, who writes on the subject in Interper's Magazine (June), declares:

"The theologians of the Euphrates Valley, as early at least as the second millennium before our era, grappled with the problems of beginnings, and finally contented themselves with a theory of evolution from chaos to order. On cuneiform tablets which date from the seventh century s.c., and which represent copies of much older originals, we now read the story how once upon a time, before even heaven or earth existed, the waters covered everything; it was a period when confusion held sway. This confusion is symbolized by a monster known as Tiamat, whose name, signifying 'the deep,' is a survival of the very primitive notion found in various parts of the world that makes water a primeval element. The end of Tiamat's sway is foreshadowed by the creation of the gods, tho we are not told in what way the gods were produced. For the Babylonian theologians it was sufficient to indicate that the gods are the representatives of order arrayed against Tiamat, the symbol of chaos, Creation in the proper sense follows as the result of a conflict between chaos and order, in which the gods eventually prevailed.

A similar idea underlies most of the Egyptian legends of creation, in which Ra, the sun god, is represented as the offspring of Nn, the personification of the watery deep. He is pictured as lying askep in the waters, or as coming out of a world-egg that foats on the waters. The bursting of the shell of this egg, pregnant with life, marks the beginning of the cosmic process. Professor Jastrow proceds to a consideration of the story of creation as given in the first two chapters of Genesis. He says:

"As a matter of fact, we have two creation stories of Genesis; one embracing the first chapter, and coming to a rather abrupt end in the middle of the fourth verse of the second chapter; the other, much briefer than the first, forming the remainder of the second chapter, and concerned chiefly with the creation of man, Confining ourselves to the first story, its points of contact with both the Babylonian and Egyptian legends are too striking to be due to accident. Here, too, we have at the beginning of time chaos pictured as a period of darkness, when the waters held complete sway. The 'deep' must be placed under the control of the Deity, who is called Elohim, before the work of creation can be undertaken. There are unmistakable indications, moreover, that the Hebrew writer was familiar with the view which regarded the earth as appearing after the waters had been gathered 'unto one place' (Genesis i. 9), not therefore 'created,' but, as in the primitive tales of various nations, 'restored' after an inundation. The resemblance between the Hebrew and the Babylonian versions extends even to an identity in regard to an important term, for the Hebrew word for 'deep' (Tehôm) is the same as the Babylonian Tiamat."

At the same time, observes the writer, there are certain unique features in the Hebrew marrative, such as the account of a succession of definite creative acts, instead of the theory of vague development from chaos to order, and of the creation of light by the Deity, instead of the assumption that the Deity was Himself the sun-god. Professor Jastrow takes the view that the story in Genesis is chiefly interesting because it is "an attempt to put ancient traditions long current among the Hebrews, Babylonians, and Egyptians, and other nations, into accord with a novel ethical conception of divine government that starts the universe with a spiritual Being ruled by self-imposed laws." It is futile, he thinks, to try to force the data of Genesis "by an

unnatural interpretation of perfectly definite terms" into accord with the teachings of modern science. He concludes:

"A recent writer has declared that Greece was fortunate in having become the heir of the wisdom of Babylonia and Egypt, without also falling into the meshes of au all-powerful priesthood, that controlled the thought and wisdom of the Euphrates Valley and of the Nile district. Instead of priests combining primitive funcies with metaphysical speculations and making the cosmogony an integral part of religious belief, the characteristic Greek cosmogony is to be found in the systems produced by her philosophers, from Thales to Aristotle, and who, independent of religious doctrines, and in a measure in opposition to prevailing beliefs and traditions, evolved theories of creation that rested upon the observation and study of nature, reenforced by bold and ingenious reasoning. Greek philosophy sounded the death-knell of creation legends, both primitive and advanced: it swept away the cosmogonies of Egypt and Babylonia and Phenicia. If that of India survived, it was because the religious development of Iudia was not affected to any extent by Greek thought, while the Hebrew story maintained its hold mainly because of the emphasis it placed upon certain religious doctrines that met with wide acceptance, and partly because of the sublime conception of a single power governing the universe that pervades the tale in Genesis. These features, however, of the Hebrew story must not blind us to the fact that to Greek philosophy belongs the great distinction of being the more direct precursor of the modern scientific theory. The tone of the Hebrew story is spiritual; its spirit is essentially religious, whereas the spirit of Greek philosophy is the spirit of science.

#### A CHRISTIAN SCIENCE VIEW OF THE MAR-TINIOUE CATASTROPHE.

I T would seem as if even the most firmly held beliefs in the "non-existence of matter" would have to succumb before the relentless logic of such events as those which have recently transpired in the islands of Martinique and St. Vincent. And yet "Christian Scientist," who writes to The Mexican Herald to "state as simply as possible the Christian Science thought in regard to the Martinique disaster," sees nothing in the late volcanic upherawls that is necessarily in conflict with the idea that "God is good and God is all," and that, since evil is thus excluded, "there is no storm, no fire, no flood, no earthquake." "God never made those things," he declares, "and they are, therefore, unrealities. Knowing nothing of evil, God can not, and therefore does not, ordain it." He writes further the vertex products of the products of the control of the reference of the control of the the twites further the vertex of the control of the the twites further the vertex of the theory of the twinter further the products of the theory of the twinter further the twites the twites

"We hold that God governs this universe wisely and well, in spite of our fears. You may ask: Why, then, did God perint the destruction of St. Pierre? He did not, and we hold, furthermore, knew nothing about it. How did it happen? As everything evil' happens, 'through an erring human sense of things, All evil is error, a false, distorted, unreal sense of things; but the real, which is always the work of God, obeys the law of principle. To the spirtually minded this is not at all vague, we have to understand it to appreciate it, and come within the range of the promises of God. If one will read carefully they Psalm, and pray for guidance to apprehend it, they will learn that 'there shall be no evil befall them."

If God be omnipotent, omnipresent, and omniscient, continues the writer, it is impossible to attribute to Him any disaster. "If men sin or sicken or die, it is because the false beliefs have temporarily separated them from God, and some time, even if in what is called the hereafter, they will be perfected." "Christian Scientiat" concludes:

"To the prophet in the rocky cleft, God was not in the earthquake, or the whirtwind, but He was in the still small voice. We can not recognize God in the perilous phenomena of nature, and are in duty bound to combat every manifestation of erroneous thought that may seem to try to mesmerize use with its selfimposed sense of power. In the face of all danger, death or destruction, we reaffirm that God is good, and God is all; that there is no evil, save in human bellef. It is belief that makes all mind-pictures of horror, manifestations of fear that perhaps have been latent for ages. The thought of centuries has been along the lines of human belief, and hence we have storms, fire, flood, earthquake, tidal waves, all nursed along in human belief until they now seem as real and powerful as tho God had created them. Fear and doubt so often make these floctures, and do to not make them others do, or others have. The belief in floods, for instance, is as old as the time of Noah. If the maintenance of the storyed mentally they are apt to be manifested materially, and rearrially, and

"The thing that I greatly feared has come upon me, said lob, and his sick thought was manifested in his sick body. It is all in thought. Shakespeare had the idea: 'There is nothing good or bad, but thinking makes it so.' The Bible says, 'As a man thinketh in his heart so is he ' The Penon hill or the volcano of Popocatenetl can not erupt of their volition, for they have no volition, no will, no power. Does God or man bring about such a result? God certainly does not, for His is a nature of absolute love and goodness, and it is impossible for Him to precipitate evil or destruction upon 11 schildren. Neither can man with his material fingers do so. But, what we call mortal mind (the absence of the God thought) in man is apt to any phase of evil, and the law of earthquakes and other like phenomena is human made. The mountains can do no harm, and yet people suppose they can. They slumber at the feet of God, for they are His footstool. Realizing the counter-fact that God has all power, man rises into the realm of the real, and has dominion, as God intended him to have, over all the earth. Having such dominion, all things work together for his good, and never for his evil or for his undoing."

#### HIGHER CRITICISM AND THE METHODIST EPISCOPAL CHURCH.

THE Northwestern University at Evanston, Ill., is just at present the center of an animated contoversy in the Methodist Episcopal Church over the merits and demerits of the higher criticism. The case of Professor Pearson had hardly been disposed of before an almost equally serious problem was presented by the resignation of Prof. Charles Horswell, A.M., Ph.D., head of the department of Oil-Testaneut literature and Hebrew in the Garrett Biblical Institute, the divinity school of the university. Dr. Horswell is a well-known exponent of the higher criticism, the not so radical as Professor Pearson. Says Unity (Chicago, undenom.).

"His method was chiefly inductive. He gives a man a piece of work, such, for instance, as the comparison of the account given in Chronicles of events narrated also in Kings. The student was allowed to discover for himself the discrepancies in fact and in interpretation, and was then required to formulate this own theory to account for them. The natural and inevitable result of this method was that he was creating a band of intelligence of the method was that he was creating a band of intelligence of the student of the method was that he was creating a band of intelligence of the student of the method was the student of the region of the student of the studen

Dr. Little, president of the Garrett Biblical Institute, who was one of Prolessor Pearson's severest critics, takes an entirely different view of Dr. Horswell's ease. "It is true that Dr. Horswell teaches higher criticism," he says, "and has been attacked for it. But he fills a position where attacks must be expected, and higher criticism is taught throughout the school. We are compelled to teach it. Students ask questions that must be answered, and we must answer them in the only logical way, . . . . Many students have come to me with complaints that Dr. Horswell is teaching heresy; but upon examination I have always found that they were mistaken and that the professor's views were not allogethet different from those of the remainder of us."

Professor Horswell is not the only member of the Garrett Institute faculty who has drawn hostile criticism from the conservatives. Dr. Milton S. Terry, of the same institution, is also a "macked" man, and at a recent session of Methodist preachers in Chicago his book on "Moses and the Prophets" was roughly handled. One critic, the Rev. Dr. D. J. Holmes, objected in particular to Dr. Terry's view of the authorship of the Pentateuch and of Isalah, and accused the Evanston professor of trying to "plow up the word of God with a four-horse team." When have been expelled from the church, "he exclaimed, "for a much less offense. Where are the bishops, the presiding elders, and the trustees of Garrett Biblical Institute? Are we all become dumb dogs that we can not protest against such teachings?"

The real question at issue in this controversy, declares *The Universalist Leader* (Boston), is "whether the higher criticism, taught in a reverent and scholarly manner, can be permitted in a Methodist institution." It continues:

"The Des Moines Conference, that has led the opposition to Dr. Horswell, and against the whole school of higher critics in the Methodist Chruch has sitred up quite an excitement. Prophery is unless to the waters of the most continued as a proper descrimination will prevail between the antisequent that a proper descrimination will prevail between the antisequent training of Professor Pearson and the new form of controversy, and that, as a consequence, the lighter criticism as represented by Drs. Horswell and Terry and President Little will survive at Evanston."

The Methodist press is devoting a good deal of space to discussion of questions relating to the higher criticism, and in some quarters extreme opinions are voiced. The California Christian Advocate (San Francisco) thinks that the higher criticism, if carried to its logical conclusion, would make religion "not a revelation, but an evolution of mere human experience, of no higher authority than, and possessing a common origin with, paganism." The doctrine of God would become "empty, impersonal, and agnostic." Similarly, a writer in The Wesleyan Christian Advocate (Atlanta, Ga.) refers with some contempt to "the set of men who call themselves higher critics." He asks: "Whence the name? Is it possible they will rise with God and set up their judgment against Him? . . . It is time the church of God should rid berself of lethargy and put herself anew on record concerning these things." A more representative view is that of Bishop S. M. Merrill, who makes a contribution to the discussion in The Northwestern Christian Advecate (Chicago,) He says, in

"My heart goes out in sympathetic appreciation toward all workers in the legitimate sphere of criticism, believing much is being done to clear away the accumulated rubbish of the age and to free the Itoly Scripures from necretions and misunder-standings which clog evangelical faith and give the enemy occasion to blaspheme. Heresy abounds and will, till God's word stands forth freed from bondage and able to break the fetters of ignorance and superstition. Let the light shore! In this work pretenders will appear. False prophets and false apostics are ever of old. Destructive critics and champions of doubt are bold, boastfal, blatant, self-asserting, and prood. Like Satan, they ligent delving will counternate the devices of umbelief and bring to light the refined gold of the kingdom. Let no lover of truth tremble for the ark of God.

"The church wants truth and invites research. Her attitude toward higher criticism is that of a synpathetic and yet jealous friend. She watches for the coming of new evidences of the truth as one watches for the morning during a night of storm. She honors carnest tollers in all lines of learning. Yet will she not tolerate pretentionsness. She wants no deceptions nor will she accept opinions for facts. Discrimination is her business. Mere inferences from half-known premises do not enrich her store of knowledge. While appreciating the good in the learning of to-day, she can not cast aside the soil clearning of yesterning of to-day, whe can not cast aside the soil clearning of yester as will ever be kindled to constant it. The word of the Lord standeth forever.

# A SCIENTIFIC PROGRAM FOR MODERN CATHOLICISM.

NDICATIONS multiply that the influences of scientific research and Biblical criticism, that have had such a disturbmy effect in Protestant churches, have reached some of the important circles of the Romau Catholic Church as well. Especially in France has the spirit of Gallicanism with its independent tendencies been coming to the front, not so much among the university professors, as has been the case in Germany, as among officials high in the church, who are claiming that the religious and theological thought of the church can come and should come into harmony with the best tendencies of modern scholarship. The most noteworthy utterances in this direction were made recently in a public address of the Archbishop of Albi, Monsignor Mignot, which was entitled "La Methode de la Theologie," and was published in the Bulletin de Litterature Ecclésiastique, issued by the Romau Catholic Institute of Toulouse. The address has attracted international attention, and its line of thought is as follows .

The church is the highest teaching authority on earth, and must remain such; but Roman Catholic theology, as taught by the church, has not, viewed from the standpoint of method, reached that precision which has been attained by other and inferior sciences. In theology it appears in our day that those branches which are connected with the positive and historical sciences are making more progress than those which concern themselves with the interpretation of dogma. The difference lies in the fact that in the former more exact methods prevail than in the latter. Theology has not adjusted itself to the new ideals that prevail in contemporary scientific research. The deductive and synthetic stage has been succeeded by an analytic and experimental. The former is in accordance with the traditional ideals of the Middle Ages, while the latter is characteristic of our age of new discoveries and experiences. The theology that would serve the church best must engage in critical sifting and judgment of materials as well as in speculative construction. This can be done without endangering the great doctrines of faith, as the bulk of these have certainty because of the authority of the church. But this certitude is one thing, and the scientific exposition of these truths is altogether something different. The epoch for a scientific establishment of the teachings of the church has now come. It is true that in this process Catholic theology must yet remain under the control of authority, and such authority is necessary in order to prevent the growth of purely individual notions. But theology must be both traditional and progressive. It must be the former in so far as it is to preserve old truth; and the latter because we must constantly seek the foundations of truth more and more deeply. We must be on our guard against trying to compress the life of the church within the thought of a single individual, even if that person is endowed with the possibilities of infallibility. In an organization the members are just as important for the head as the head is to the members; and if it is the privilege of the head of the church to express the thoughts of Christianity in their canonical form, it is our privilege to prepare the elements for this [d'en préparer les élements].

The achools have been accustomed to distinguish between a "Teaching Church" and a "Taught Church." It would perhaps be better to speak also of a "Learning Church," as expressive of the true relation of the church toward scientific research. The average laymen does not know what it costs to discover the truth. A Catholic theologian also can err, and the representatives of the church must often labor hard to assume the proper attitude toward new philosophies and sciences. Aristotle's philosophy did not receive its proper place until corrected by Thomas de Aquinas; the system of Coperalies had to wait long for adoption, but is now generally recognized by Catholic exegesis, thirty years ago the idea of evolution met with a cool receiption, but is to a certain degree now generally adopted in Christian philosophy.

The address closes with these words:

"Thus it is with nearly all new acquisitions of thought: They must be sifted and tested by fire before they can be adopted in

the schools and can be accepted in the official decisions of the councils and the Popes. No epoch in history has been richer in achievements of this sort than is our own, and these all furnish theological work and research with most valuable elements."

A very characteristic utterance in this direction is the brief "Testament" left by Professor Krauss, who to the end declares himself to have been a loyal son of his church, but hopes for a "revival of religious Catholicism," and the break of the "Uttramontane" power in the thought and life of the church.—Translation made for The LITERAY DIGEST.

#### THE GOSPEL OF "THE SIMPLE LIFE."

A STRIKING personality in contemporary French religious life is that of Charles Waguer, whose influence as fasteur of an independent congregation, which gathers in a handsome hall in Paris on the Bonlevard Beaumarchias, and as author of several books on ethical subjects, bearing such titles as "justice," "Youth, ""Courage," and "The Soul of Things," has already made his name famous. His last book, "The Simple Life," has been translated into English and affords an interesting glimpse of the philosophy of one whose moral and intellectual life, as we are told, early "dashed and broke against the religious structure" which bounded it, and who obtained most of his inspiration from Suinoza and the German westles.

M. Wagner's plen is for "simple thoughts, simple words, simple needs, simple pleasures, simple beauty." He appeals to the soul to rid itself of the non-essential, and to find in the great realities of life the only values. "Simplicity," he says, "is not a vanished good. To aspire to simple living means to fulfil the birbest human destiny." He continues:

"Simplicity is a state of mind. It dwells in the main intention of our lives. A man is simple when his chief care in the wish to be what he ought to be, that is, honestly and naturally human. And this is neither so casy nor so impossible as one might think. At botton, it consists in putting our acts and aspirations in accordance with the law of our being, and consequently with the Eternal Intention which willed that we should be at all. Let a flower be a flower, a swallow a swallow, a rock a rock, and let a man be a nan, and not a fox, a hare, a bog, or a bird of prey; this is the sum of the whole matter."

In the tight of this thought, M. Wagner proceeds to interpret the "practical ideal of man." He declares:

"Everywhere in life we see certain quantities of matter and energy associated for certain ends. Substances more or less crude are thus transformed and carried to a higher degree of organization. It is not otherwise with the life of man. The human ideal is to transform life into something more excellent than itself, We compare existence to raw material. What it is matters less than what is made of it as the value of a work of art lies in the flowering of the workman's skill. We bring Into the world with ns different gifts: one has received gold, another granite, a third marble, most of us wood or clay. Our task is to fashion these substances. Every one knows that the most precious material may be spoiled, and he knows, too, that out of the least costly an immortal work may be shaped. Art is the realization of a permanent idea in an ephemeral form. True life is the realization of the higher virtues-justice, love, truth, liberty, moral power-in our daily activities whatever they may be. Once captivated by the beauty and simplicity of the true life, the heart holds the fascination of it. Gradually everything subordinates itself to this powerful and persistent charm. The necessary hierarchy of powers is organized, within one: the essential commands, the secondary obeys, and order is born of simplicity. . . .

"I despair of ever describing simplicity in any worthy fashon. All the strength of the world and all its beauty, all true joy, everything that consoles, that feeds hope, or throws a ray of light along our dark paths, everything that makes us see across our poor lives a splendid goal and a houndless future, comes to us from people of simplicity, those who have made another object of their desires than the passing satisfaction of selfsiliness

and vanity, and have understood that the art of living is to know how to give one's life."

It may be asked. What is the definite relation of such a philosophy to religion, as commonly understood? To such a question M. Wagner replies:

"All religions have, of necessity, certain fixed characteristics, and each has its inherent qualities or defects. Strictly speaking, then, they may be compared among themselves; but there are always involuntary partialities or foregone conclusions. The question is asked: Is my own religion good, and how may I know it? To this question, this answer: Your religion is good if it is vital and active, if it nourishes in you confidence, hope, love, and a sentiment of the infinite value of existence; if it is allied with what is best in you against what is worst, and holds forever before you the necessity of becoming a new man; if it makes you understand that pain is a deliverer; if it increases your respect for the conscience of others; if it renders forgiveness more easy, fortune less arrogant, duty more clear, the bevond less visionary. If it does these things it is good, little matter its name; however rudimentary it may be, when it fills this office it comes from the true source, it binds you to man and to God

"But does it perchanee serve to make you think yourself better than others, quibble over texts, wear sour looks, domineer other men's consciences or give your own over to bondage; stifle your scruples, follow religious forms for fashion or gain, do good in the hope of exaping future punishment?—oh, then, if you preclaim yourself the follower of Buddian. Moses, Mohammed even Christ, your religion is worthless—it separates you from God and man."

#### REFORM OF CHURCH MUSIC.

It is not generally admitted that American clurch music is at a low obb. On the contrary, it is often assumed that the music of our churches has reached a high level—higher, probably, than the level of church music is England and other European countries. And yet the eldior of Music (Chicago), Mr. W. S. B. Matthews, takes the view that "while the Christian Church makes a natural selection of those individuals is every community who are serious, idealistic, and subject to a desire for a higher life, there is no place where musical taxe is at lower obb than in our so-called evangelical churches in America." He continues (if his low m magazino's

"Speaking from the standpoint of the artist, the entire power and meaning of the art of music are ignored and profaned in the church persistently and wellnigh universally. Besides losing the assistance which music might afford to the ends proposed by the church (which desires to do for the individual soul every Sunday pretty much what the fair Melusina gained from her weekly return to her home beneath the waters), the general value and comfortfulness of the art are lost in the private life of all this large class in every community. In fact, our national cultivation of music suffers seriously from our having disconnected it from the idea of religion. I do not mean by this that I regard any church music as affording the highest types of the art, which, if known, would open to the individual deeper vistas and make the music more precious to him; I have reference to that general attitude of mind which properly makes fine art a religion in itself-a part of the apparatus for bringing mankind into contact with the ideal-that is to say, with the true, the beautiful, and the good,"

Mr. Matthews objects in particular to "the manner in which any of the popular churches will carelessly sing through a few Moody and Sankey hymns . . . one song following after another without the slightest appropriateness or care to develop a unity or sequence of moods." He instances also "the American way of employing every tune to a large variety of hymns," by which are lost "all the symbolic and expressive infinences of the music." It is "like a polygamous melody marrying a new husband every Sunday," he says. As for the paid quartette.

"The immorality of the paid quartette does not lie in the sal-

ary; this is not generally large enough to have moral quality. It heis in the kind of things they do and in the way they do they. It there has ever been a paid quartette taking used seriously and employing a good quality of nusseal art from the standpoint of religious worship, or even from that of a true cult, I have never been so fortunate as to hear its work."

Prof. Locke Davies, of Yale University, writing in the same magazine, criticuses no less severely the present conditions of church music, and gives three reasons to account for its present "degeneracy." These are the lack of a real musical appreciation on the part of the average congregation; the average minister's ignorance of music; and the tendency of composers to adjust themselves to a low-class demand, because commercially profitable. He says further:

"Fortunately for us, for the church, and for the general welfare, the tide is on the cbb. In this country we are learning the lesson so well understood in England, of training choirs to sing good music, and of encouraging American composers of high rank to write religious work. Professor Parker's 'Hora Novissima," tho by no means a classic, is an extremely useful work, whose influence will be very far-reaching. Edward Elgar, Coleridge Taylor, and Hubert Parry, in England, are doing fine service in keeping up the standard of good church and choral music. What we in this country need is good anthem writers, We have some, among whom we may mention Sydney Thomson, of Summit, N. I., whose anthems show a very clear recognition of the needs of the average church, and, what is more, the deeper need of writing sacred music in a musicianly manner, His suite of Christmas carols, recently brought out by his publisher, Schirmer, of New York, is a gem of its kind. The trouble seems to be that work like this and some others is not known by organists, and, for this reason, perhaps, the organist's responsibility for the reform of church music is as great as that of any other person. For upon his shoulders rests the responsibility of keeping himself posted of the progress of the art in which he is presumably an expert. There is too much ground to the fear that this responsibility is not adequately appreciated. For surely the selections actually made would never be made by artists who really understood their work or comprehended the deepest needs of their choirs and the religious service in which they take part."

In harmony with the views of the two writers quoted, Prof. W. B. Chamberlain, of the Chicago Theological Seminary, has l'naugurated a church-music department, combining lectures on church music by himself and others, organ recitals upon the excellent organ in the chapel, and other illustrative aids.

#### RELIGIOUS NOTES.

THE REV. DR. WILLIAM R. RICHARDS, of Plainfield, N. J., has decided to accept the call extended to him by the Fifth Avenue Presbyterian Church, New York.

THE ninety-sixth annual sessions of the General Synod of the Dutch Reformed Church in America was held in Asbury Park, N. J., last week. Several verbal atterations in the liturgical forms of the church were agreed upon, but the more important question of creed revision was laid over without action.

This congregation of the Second Baptis Church, of Little Rock, Ark, has adopted a resolution withdrawing fellowship from Governor Jeff Davis, which means his expusion from the church. The charges made against him were those of drunkenuess and other immoral acts. Zow?: Heraid (Methodist Episcopal) prophesies that this action is likely to terminate the governor's public career.

"Parisa" DOLLINO, who recently died in London, was one of the most remarkable figures in the Church of England. Says the New York Chardware: "He was rector of Popher, one of London's ulum districts, work in a ster having his first apprehens of life as a Irish and adapter. The socially an extreme nonconformist, he was clerically an extreme reliantian. The Last End tawe him as "Brother Bobb." His parish calls were made cheeft smoking an aggressive pipe. He would preach in nonconformist pulprist be got a chance. And the in politics he was no pronounced a radical sate earl for binased the name of Socialist, he was frequently asked to occupy press of England print namerous eulogies of this mentilah man, who, the wealthy, accrificed all for the poor, and once confessed that, after vasting the Hisbap of Winchester in the jatice, he was obligated to paw his wasten

#### FOREIGN TOPICS.

#### HOW PEACE IS RECEIVED IN ENGLAND.

DROFOUND thankfulness, infinite relief, and in determination to make the British empire even greater and grander than it is to-day—these are the sentiments which find expression in all English newspapers at the end of the Boer war. There is not a trace of exultation over a fallen foe. There is no triumph at the expense of those who predicted that Britain would never overcome the South African resistance. There is simply a feeling that "the white man's burden" has been carried a stage further and that an additional responsibility has been incurred by the enspire. As for the war itself, the London Times calls in "the greatest ordeal" the British people "have been called upon to undergo since the downfall of Napoleon." The same authority proceeds:

"Looking back upon the history of the protracted and eventful contest which has now terminated, we must gaze with mingled

PERSPICACITY

At the annual celebration of the Primrose League, Lord Salisbury and England had emerged from the Boer War with increased power, prestige, and influence.

feelings on its course. The searching test of war has revealed to us many grievous defects and abortcomings in the organization and training of our army and in the professional equipment of our officers. We have no desire to undertate their gravity or to deny that they might have led to terrible disasters in other circumstances. On the other hand, there has been much in that history on which we may reflect with thankfulness and pride. The attitude of the nation at home and in all the great self-governing colonies has been above all praise. It has proved that we are not unworthy of our past."

Nor can the great London daily repress a national pride in the triumph of British arms:

"On the greatness of the military effort we have made it is needless to detell. No other nation could have made let at such a distance from its base. Nobody at home or abroad believed that we could make it, until we did make it. We have raised and equipped, with the help of our rolonies, some poo,ooo men, and we placed them in the field and supplied them at a distance of between six and seven thousand miles from our shores. Our sea power, we need hardly say, was the condition precedent of this feat without parallel in the annals of modern war."

This is the lesson, or rather the result of it all:

"The war has brought the whole nation and the whole empire together more closely than they ever were before. They have realized for the first time how firm are the bonds that knit all lands under the Union Jack together; they have realized the trest strength if they learn to use it, and they have realized the possibilities of their great imperial mission."

The Daily News (London), which has been accused of being a pro-Boer organ, says:

"As the rules of Ireland, we have painful knowledge of the fact that the conquests of a country may not be the end of rouble. The Boers are a very different race from the Irela, but I'we set orarely-ext to govern them in the same manner, we shall probably reap the same results. The spirit of race-supremacy will no more succeed in South Africa than in Ireland—will succeed less in proportion as the race is more stubborn and the country farther away. If we are content to add another failure to or empire—to become the rulers of another land of sullen people and sterile acres—no one doubts that we can achieve that re-salt by 'resolute government.' But if we wish, in Lord Roschery's phrase, to produce 'pacification' as well as pace, settlements as well as silence of the guits, then we require to inspire the Boers with a new trust in our good fath and good purposes."

What is to come next? The Standard (London) answers the question with much circumstantial detail:

"The Cape, Natal, and the territory acquired by the Chartered Company will naturally remain as separate bodies, in the sense that Wales is distinct from Yorkshire. The Orange Colony and the Transvand will not lose their names, and will continue to be administrative areas. But it will be as part of a great wivine, of a united hand under a single central Government stretching from the Zambesi to the extreme South of the Continent, and from the sea and the Fortuguese possessions on the English of the Continue of the Continue of the Continue, and from the sea and the Fortuguese possessions on the English of the Continue of the Continue of the Contipolation of the Continue of the Continue of the Contipolation of the Continue of the Continue of the Contipolation of the Continue of the Continue of the Continue color and race, alike require that there shall be a federated authority, working for the advantage of all."

A noteworthy fact in all English comment is the tribute paid to the gallantry of the foc. Says *The St. James's Gazette* (London):

"The Boers have 'put up a fight' against the whole resource of the world's mightiest empire which will live forever in history. They have taught us that which we shall forget at our peril, and which will be the subject for much inquiry, for the account is not yet closed at home. The nation will not easily quit the score with the pro-Boers in this country, in whose existence General Viljoen has declared himself unable to believe, but who are nevertheless a deplorably hard fact. If there has been any bitter feeling in this country toward our brave fees, It has been the work of these gentry. But to-day we are all pro-Boers, anxious only to heal the wounds of strife, and to compensate the burghers of the extinct republise for the shadow of independence they have lost by welcoming them as sharers with us on equal terms in the leritage of our free emplic."

These several comments seem to be fairly representative of practically all that is said on the peace by the leading newspapers of England,

Chamberlain and the Boer War.—The Boer war now ended was decided upou and "the war was made" by Lord Milner and not by Mr. Chamberlain, according to an article by W. T. Stead in The Pilgrim (Battle Creek, Mich.). The English editor saws:

"When Lord Milner began to make his first moves toward war, he complained bitterly that he had no support at home, least of all from Mr. Chamberlan. It was with great reluctance Lord Milner consented to go to Bloemfontein to meet President Kruger, but he took good care to render the conference abortive. Then he pulled Mr. Chamberlain's leg by cabling a warlike despatch, which insisted upon the necessity for action. From the publication of that despatch Mr. Chamberlain became Lord Milner's subservient instrument.

"But even then Mr. Chamberlain did not foresee whither Lord Milner was leading him. He was in a foot's paradise. He was quite certain there would be no war. He had even made arrangements for spending the recess holiday in Egypt. All that was necessary was bluft. A few thousand British troops despatched to South Africa would suffice to bring Kruger to his knees. Such was his confident belief."

This was "characteristic" of Mr. Chamberlain, says Mr. Stead, Mr. Chamberlain knew nothing of President Kruger's "rooted distrust" of himself and his policy, and he knew "less than nothing " of Lord Milner's determination " to force on war":

"The result was that, as the net result of his combination of georance and temper, the empire was plunged into a disastrons was which as already cost England her Queen, the lives of 20,000 soldiers, and £500,000,000 freasure. 'If I had brought it on,' said Mr. Chamberlain, it would be a feather in my cap'—an atterance significant of much. But he did not bring it on, the handed into it in sheer incorance and bad temper.

"From that day the control of events in South Africa has passed out of his hands into those of the military. There was enough of the original radical in him to cause him to hate farmburning and the concentration camps, but he was powerless prevent either of these methods of barbarism. No one—save Mr. Rhodes—was so outspokes in private in condemnation of the military blunders of the campaign, and he has unwillingly followed the impersous leading of Lord Milner.

"So far as the war is concerned, Mr. Chamberlain has no record to show but one of continuous uninterrupted failure to achieve any single object which he professed to desire. He has been able to make telling and effective party scores off his political opponents, but there his successes begin and end."

#### BRAZIL, BOLIVIA, AND THE UNITED STATES.

SERIOUS differences have arisen between Brasil and Bolivia because of the cession by the latter country to an American syndicate of rights in the territory of Acre, a rich rubber region. The boundaries of Acre, in the upper Amazon district, are ill defined, and Brazil so greatly resents Bolivia's action that there has been talk of a diplomatic rupture. Says the Notizia (Rio Janeiro);

"The present attitude of Bolivia may occasion a radical change in Brazil's corolial feeling for ber. A niere question of boundary lines has been resolved into a question which affects the general interests of the American continent. Brazil can not in any way accept the arrangement proposed by Bolivia, which makes over to an incorporated syndicate rights of sovereignty in American affairs which extend even to the issue of money and the maintenance of an armed force. We do not know under what flag the ships of war will sail that bear the military and commercial stores of this undertaking. It seems, however, that the region affected is to be converted into a sort of nation, a region enriched by Brazilian energy and labor. As for the Brazilians living in Acre, if the protection of the Country of their origin."

Many Brantian papers complain that the system of concession to corporations is making the United States the real ruler of South America. Thus the Gasera de Aveitias (Rio Janeiro), which attacks the Bolivian Government severely, and adds that the Yankees make the Monroe Doctrine an excuse to absorb South America to the exclusion of Europe. The Jornal do Commers to (Rio Janeiro) has an arriede urging the rejection of the pending commercial treaty with Bolivia. But the Corroe de Massha (Rio Janeiro) publishes an article by an exvice-president of Brazil in which rejection of the commercial treaty is decared unwise. The Bolivian side of the matter represents, on the authority of an official of the Government, that the Acre concession will deprive the Brazilian state of Amazonas of a large portion of the revenue which it derived from export duties on rubber, as much of the rubber from the Acre, Purus, Javary, and other rivers in the ceded territory has hitherto passed through the Manaus custom-house, but will now pay toll to Bolivia. The South American Journal (London) thus aummarizes the recent history of Acre:

"About two years ago the Braillians in the Aere got up a revolation under a Spuniard, named Galvez, and as there were year few Bolivians there, the revolution succeeded, and Galvez and his party held possession of that country for some months, und Galvez was bought off by the Government of Brazil. Another revolution was got up some time afterward by other parties the head man of which was bought off by the Bolivians, so it was said, at the time the military force from Bolivia was about a arrive at the Aere."—Translations made for Time LITERARY DISSESS.

#### THE CLERICAL VICTORY IN BELGIUM.

THE recent elections in Belgium show that the Clericals can not only hold their own, but can even make gains under the peculiar system of double and treble voring that prevaits. One-half of the members of the Chamber of Deputies were voted to (76 out of 153). The Clericals have a majority of 2a in the Chamber as it stands. The victory was not inexpected, in view of the state of the political machinery. The People (Brussela),

LEODOLD: "Fill try this head wear and you try mine," FRANCE: "But I don't wear a crown."

- De Amiterdammer Weehblad voor Nederland,
 a Socialist paper, frankly concedes victory to the Roman Cath-

olic party. It is of apinion that the workingmen were true to the Socialist cause, and that only the "floating element" went over to the Liberals and Clerais. The Roman Catholic press is jubilant over the victory. The Liberal Independence Belge (Brussels) says:

"The reactionaries are stronger than ever and the ministry, supported by a majority increased by ten votes, seems in an impregnable position. But it may be menaced far more than it saspects. Too much success means too great intoxication. Ministernal infatuation, new majority demands, governmental inpudentess, dangerous political errors—such are the reasonable probabilities, not to say the inevitable certainties. The De Smet de Naeyer ministry may, much sooner than it anticipates, be an explainory victim of its own triumph."

Nothing has been changed in Belgium as a result of the election, in the opinion of the *Journal des Dibats* (Paris), which has been accused of Clerical sympathies

"The Catholic cabinet, presided over by M. de Smet de Naeyer, will contune to govern as heretofore, without impediment—unless the opposition parties make new trouble for it outside the legal agencies. The partisans of nuiversal saffrage, pure and simple, taking their cut from the result of the elections, may resume their old argument that the electoral system in vogue assures the Catholics a majority."

The organ of the Roman Catholic Church in England, The Table! (London), under the title "A Catholic Victory," says:

"Scarcely more than a month ago Belgium was threatened with a social upheaval that threatened destruction to all law and order in the country. Acting with energetic firmness, the Catholic Government put down rioting in the great cities, and warded off a general strike-organized for purely political ends-in the coal-mining districts of the country. Riots and strikes were excited by the Socialist leaders under the pretext that the country wanted manhood suffrage, and The Catholics of Belgium have won indeed a famous victory. No wonder there is joy in the land, that the black, yellow, and red national colors floated gaily from the facades of Conservative and Catholic clubs, that bells in many an old gray time-worn tower rang out, like the famous bell of Ghent, 'there is victory in the land,' and that processions, with lively bands of music and gay with the flags and standards of guilds and societies, promenaded the streets of many a quiet Flemish city, as, on Monday last, it became known that the Catholics had scored a great victory."-Translations made for THE LITERARY DIGEST.

#### OUR DEBT TO FRANCE.

THE leading newspaper organs of the French republic have been prompted by the Rochambeau celebrations to enter at length into the obligations of the United States to the great nation of Lafayette and "the principles of 178," These obligations are not set forth in an assertive way. The feeling is rather one of gratification that France was afforded the opportunity of assisting in the struggle that gave a mighty Power to the world. And the Tombs (Paris) says:

"The manifestation of Franco-American synnjathy must be regarded not in the troubled and uncertain light of recent events, but as new evidence of a state of feeling that will never be lacking. As has been recently said, and very justly, the United States of Europe are in America. Distant sons of England, renewed by a great Testunic limiting ration, the criteries of the United States may make the tour of the Old World and successively sate therein all the elements which enter into their own makeup, save the one nation—not the least endowed—which drew in England, celebrate Germany, smile upon Russia, hall France. In the end it is still America they celebrate, since out of so many old races they have made a new nation."

Two nations which have in common memories such as those which cluster around the American War of Independence can maintain good relations and mutual sympathy, proceeds this ministerial organ, which seems to be uneasily conscious of the difficulties confronting the Freuch foreign office during the Spanish-American war. In a very similar tone comments the four-rand det Débats (Paris). It begins by observing that the friend-ship of the United States has been much sought for some time. "The reserve with which we refrained from this competition for

the favor of an old friend grown great has been rewarded." The reward is in the fact that "in mone of the international demonstrations to which the United States surrendered itself of late years" has American cordiality been so spontaneous as during the Rochambeau ceremonies.

"It is thus evident that to the Americans France remains the traditional friend, the friend pointed out to every new generation that goes through the schools of the Union as having been initiately associated, during the herole period of United States history, with the fathers of liberty. In truth we have never believed in any weakening of sentiments so deeply rooted in the echaering of and traditions of a people. The relations of the two countries have always been peculiarly agreeable. It was with France that the United States first signed, in 1897, a commercial reciprocity treaty. We have seen a French ambassador as a matter of course designated as the intermediary between the United States and Spain at a decisive moment."

The French journal next notes with indignation what it styles underhand efforts "to falsify recent history" and make it appear that France was not our true friend in the war with Spain. "Even Senator Lodge did not liesitate to show a sentiment that acts, as we know, upon individuals as upon nations. he spoke of cratitude."

But there is one publication which feels called upon to take the United States sternly to task for its failure to appreciate its debt to France. The Independance Belge (Brussels) says:

"There has not been hitherto any formal opposition between the governments of Paris and Washington, but it is apparent that these governments have too seldom pursued parallel paths. The Americans, as regards commercial treaties, for instance, have not always borne in mind that they are morally indebted to France."—Translations under for TBE LITERARY DIOSET.

#### THAT EMBARRASSING STATUE.

THE general impression abroad is that there will be trouble over the statue of Frederick the Great which Emperor William presented to the United States. The gift, or rather the offer of it, was to be laid before Congress by President Roosevelt, an intention which that statesman first announced and then discovered to be superrogatory. This is the feature of the business upon which foreign attention is more and more concentrated. It has given the German press a shock. Outside the German press there is a vague idea that Emperor William has other cards to play, and that he will even transport bimself to these republican shores to see after his statue himself. One German newspaper welcomes that notion as tending to win the American people over to monarchy. The St. James's Gazette (London) says.

"Some of the German newspapers are a good deal chagrined over the disappointing result of the Emperor's present to Washington of a statue of Frederick the Great. That it was a mistaken move seems to be generally recognized, since it proves even less acceptable to a considerable body of American opinion than was Lord Rosebery's statue of Cromwell to the Irishmen at Westminster. The Vossische Zeitung tries to conciliate Americans by reminding them that the Prussian autocrat was also the friend of Voltaire, tho why that should commend his memory to the people of the United States is left to the imagination. More to the point perhaps would be the plea that Frederick was 'an admirer of republican virtue,' if there were any ground for believing it to be the fact. If it were true in any sense likely to impress Americans, it may be doubted whether William II. would make such a hero of his ancestor. But as the Americans do not take kindly to the great fighting king who shared in the first partition of Poland, the German press is anxious to blame some one other than the Emperor for the mistake of making so embarrassing an offer. It appears that no steps were taken beforehand to sound American opinion on the matter, and accordingly a scapegoat is found in the person of the German ambassador at Washington. He is bluntly told that 'he is not the right man for so important a post.'"

What is the German Emperor to do, then, in order to win the United States, since gifts of monarchical statues do not seem to attain the result desired? The London Spectator goes into the subject at great length and concludes:

"Let the Kaiser give up his autocratic pretensions, and cease to require the slavish obedience demanded by jurc-divine orgalism, and he will soon find the way to the hearts of the American people, and will win, first their confidence and respect, and then their affection. If he can not, or will not, do that—and needless to say, short of a miracle, he will never change the nature of a rule which he honestly believes to be the only system suited to Germany—he must abandon his attempts to win over the Americans."

This utterance has much incensed the ultra-monarchical Hamburger Nachrichten, which sees in it new evidence of England's intention to create dissension between Germany and the United States. It exclaims:

"Does The Spectator really consider our Emperor so silly as to regulate his internal policy simply to please the Americans' Does it, on the other hand, deem the Americans so unintelligent as to let their demeanor toward a foreign monarch depend upon his internal political policy? To what extent has the abolition of the dictatorship paragraph brought our Emperor nearer to the hearts of the Americans, or how has the German workman's insurance law influenced the relations of Germany and the United States?"

The utterances of the English weekly can only inspire an amused smile on the part of Germans, concludes the authority last quoted, which dismisses the subject with another reference to England's determination to make trouble. The Frankfurter Zeitung, a paper of popular tendency, declares that the gift of the Frederick statue was "a mistake," and it is convinced that to carry out the scheme of its presentation would cause "great embarrassment."—Translation made for THE LITERARY DISMY.

#### MENELIK THE MONOPOLIST.

THE astonishing financial and commercial operations of Menelik, the Abyssinian monarch, are having a complicating effect upon international relations, if the accounts and comments of the European press are reliable. To begin with the Economite Français (Paris)

"It is the Emperor Menelik who monopolises the ivery trade, which he regards, moreover, as tribute. The quality of the ivery is very fine. It is sold at Addis-Ababa for \$9.5 to \$9.0 per frassela of \$9 bounds. The Emperor received in 1899 about 2, 500 frasselas, which permits an estimate for the total trade of that year of about \$9.00,000. It is believed this sum was exceeded in 1890, but it is to be feared this lenved this frast was exceeded in 1890, but it is to be feared this lenved this frast was exceeded in 1890, but it is to be feared this lenved this way, who keeps the greater part of the gold,"

Menelik refused to grant gold concessions to the French, which prompted the London *Times* to note, on the authority of M. Lagarde, of the French exploring expedition:

"Europe has at last obtained an inkling of the unknown forces of Abyssinia. Her military power has been asserted, and the brawery of her soldiers is beyond doubt. Moreover, recent engineering surveys have revealed that it is In Abyssinia that neitre intended the work of systematically regulating the rise and fall of the Nile to be done. The English themselves have acknowledged this. The construction of a reservoir at Lake Tsana to store water smilicenia for the needs of Egypt and the Sudan, and, at the same time, to improve the navigation of the Blue Nile during the summer months, is imperative. As to Menelik's co. sent, the Emperor is accustomed to reflect a long time before agreedge to anything."

The Hamburger Nachrichten has been printing items to the effect that Menelik's health is broken down and that the doctors have warned him to be cautious. Meanwhile the Abyssinian monarch has been pressing Italy for the money he claims as damages done him by the Italian expedition into Africa. The Poplot Romano compilains of Menelik's greed in this matter, but the Oitervalers Romano, the Vatican paper, says the Italian Government is not taking the right tone with the African. The Latex authoritative view of Menelik is afforded in The Edinburgh Review, which prints an article on the recent history of Abyssinia from which we quote:

"Up to the present the various merchant adventurers, chiefly French, who have settled in Hararor in Menelik's capital, Addis-Ababa, have found themselves allowed to start a trade, but, once the trade started, have been brought into disastrous competition with a ruler who is himself a merchant. Menelik has the example of Japan close at heart, and is anxious to use the Enropeans rather than be used by them."

"Abyssinia is to-day one of the most interesting countries in the world," asserts this authority:

"On its throne sits an emperor who traces his descent, through such a pedigree as commonly makes the glory of half-civilized races, to another Me-

MENELIK

nelik, born of the Oueen of Sheba's visit to Solomon, . . . Where fifty years ago the Christian kingdom of Abvasinia lay almost inaccessibleshattered into a group of disconnected femilal states, split into two portions, each ringed about with herce savages, and continually encroached upon and threatened with entire extinction-there Menelik to-day is absolute monarch of an empire which alone among the darker peoples has defeated a great European Power; with the diplomatic representatives of four great

nations rivaling each other in courtesies, and intriguing for his friendship."—Translations made for The Literary Digest.

#### Peace over Africa!

By ROWIN MARKHAM O Bugies, ripple and shine-Rippie and repture down the wavering line ! Praise! Praise! Preise! For the last of the desperate days. Shake out the lyrical notes From your cavernous silvern throats! Burst into joy-mad carols once again To herald the homing men!

O Bugles, tell it to the opening sky, And go the roads of men with joyoos cry i Peace on the wreathed and the wreathiess head; Peace over England-over Africa: Peace on the living : quiet on the dead : Peace on the sools horied downward from the

Hurled down with bated breath To join the old democracy of death.

The challenge of the bugle end the glum Rejoinder of the drum ; The neigh of startled stalllons; The hurried rhythm of the hot battalions;

The blown wild scent of crushed geraniom; The parley of the howitzers; the shrill Grim colloquy of hill with hill-These had their fateful hour. But oow, even no

A bird sloge on a cannon-broken bough-Sings all the afternoon. And when the dark falls On the shot-torn wails,

Frail wings will come to wander in the moon-Wander in long delight Through Africa's ster-filled, delicious night.

War's bitter root and yet so fair a flower ! Sing and be glad, O England, in this hoor; But not as one who has no grief to bear, No memories, no burden, no despair, Be glad, but not as one who hea no grief; The victor's laorei wears a wintry feaf. The clerioos ravel, and the joy-bells rave, But what is all the glory and the gain To those wet ayes behind the misty pain, Whose Africa is crompled to one grave, A lone grave at the mercy of the raio? No, not the stern everment of the guns, Nor all our odes nor all our orisons Can sweeten these intolerable tears

# I Can Sell Real Estate

(No matter where located)

Of course, I would like to have you take my word for it, but I don't ask you to. Out of several hundred recent transactions I will mention a few as proof that I can sell real estate

Within the past few days I have sold a hotel in Illinois to Geo, B. Caskey, of Richmond, Ills.; a farm in Michigan to H. P. Fitch, of Dalton, Ga.; a cottage in New York to Col. I. M. Foster, of Crestline, Ohio; a California orange grove to G. W. Waltman, of Laddsburg, Pa.; a Florida orange grove to A. Coll, of Connellsville, Pa.; a Clark County, Kansas, farm to L. W. Johnston, of Ashland. Kansas; a New York building property to Harry Grant, 308 North 40th St., Philadelphia; a Florida home to B. P. Wagner, of Sidney, Ohio; a Pennsylvania gas plant to W. T. Duke, Drexel Bldg., Philadelphia; a Porto Rico Plantation, to H. F. Maneely, of Pensacola, Fla.; a Chester County, Pa. farm, to Lawrence Miller, of Altoona, (present address Wagontown) Pa., etc., etc.

# Send Description and Price

of your property (any kind, of any size, and of any value) and learn how I can promptly sell it. Write to-day.

KLIPS H. R. Ballard, Aff Pittsfield, Mass

Mass Lies and personal with. Tackets of water of graduating and personal with. Tackets of the control of the control

These silences that fall between the cheers. in all the joy a memory cries and dwells. A beart break of beroical farewells

Let there be no more battles: field and flood Are sick of bright-shed blood. Lay the sad swotds as seep : They have their fearful memories to keep.

These swords that in the dark of battle burned-Burned upward with insufferable light. Lay them askeep : herote rest is earned. And in their test will be a kinglier might Than ever flowered upon the front of fight.

And fold the flags; they weary of the day, Worn by their wild climb in the wind's wild way. Outet the dauntless flags :

thown strangely old upon the smoking crags. Look, where they startle and leap! Look, where they hollow and heap! Tremulous, undulant banners, flared and thinned.

Living and dying momently in the wind. And war's imperious bugles, let them rest -Hugles that cried through whirlwind their be-

hert-Wild hugles that held council in the sky. They are aweary of that curdling ery That tells men how to die.

And cannons worn out with their work of hell, The brief abrupt persuasion of the shell, Let the shrewd spider lock them, one by one, With filmy cables glancing in the sun ; And let the throatle in their empty throats Build his safe nest and spill his rippling notes.

-From Coller's Weekly, with revision by the Author for THE LIVERARY DIGEST.

#### PERSONALS.

Brat Harte's First Cambling Experience .-In his recent volume of short stories, "Under the Redwoods," Bret Harie included a chapter describing his experiences in San Francisco in the early 'so's. The following paragraphs, which we take from the San Francisco Argonaul, describes his first experience in gambling :

inker from the San Francisco -tegenard, described his face acceptance in gambling:

I was watching routher one evention, intensely father than the property of the property of

### FOUR NOVELS FOR THE VACATION OUTFIT

### Daniel F.verton

VOLUNTEER-REGULAR

A Novel of the Philippines

By ISRAEL PUTNAM

A charming story of love and soldier adventure written in a brilliant style and with a plot full of strong situations and vivid contrasts

Daily Advertiser, Boston: "It is instinct with the dramatic timbre of life. . . . The book has double value as a story and a free sketch of the Philippine Isles to-day."

The Outlook, New York: " Some telling contrasts are drawn in the depicting of contact between Americans and the Pilipinos, and situations rich in latent humor are described "

The New York Press: "His characters from real life are drawn ably. Moreover, they are all man - so human that they do netural and mistaken things. . . . As a povel 'Daniel Everton' is full of that sober common sense which means so much to the reader, tired with the surfeit of rend heroics and theatric passion that fil nine book covers out of ten these days."

Diustrations by Sewell Collins, 12mo Cloth. \$1.20. net; by mail. \$1.30

A Story of Life Among the Combovs

#### By FRANCES McELRATH

Every reader who delights in a tale full of dash and edventure, love, and breathless suspense will revel in this story of the adventures of a spirited Eastern girl in the recent "Rustler" uprising of outlaw cattlemen in Wyoming.

The World, New York: "It is a book of real men, real women, and of the great ranges as they are. It is a novel of genulne American interest." 12mo, Cloth. Illustrated. \$1,20, net; by mail. \$1.34

### UNDER MY OWN ROOF

The Story of a Nesting Impulse

By ADELAIDE L. ROUSE

The delightful story of a bachelor woman, who, after enduring years of b arding house misery, satisfies a yearning for her own roof-tree, place and builds an ideal home, tends her garden and

finally renews an old heart longing. Pittabury Post : "One of the most delight-

### THE RUSTLER Captain Jinks. Hero

A Satirical Novel on War

By ERNEST CROSBY

Illustrations by Dan Beard

It is striking fire everywhere. Authors. artists, public men, the press, all greet it with enthusiasm or rage according to their point of view.

The Philadelphia Evening Telegraph : Full of good things and overflowing with sharp stings."

Wm, Lloyd Garrison : "It is a keen and ast satire on our military foolishness and crime. It paints the picture to life."

Robert Treat Paine: "Perham such books as this written with witty pen and full of pepper and sait, can do as much good as a thou sermons, and reach even a larger number of thoughtful minds."

Mark Tirain says of Dan Beard's illustrations: I can not tell you how much I like the pictures; I thi.' Dan Beard has not made better por bitterer ones, nor any that were redder with the bloody truth.

### SUMMER FROLIC

Get Ready Now.

Give the brain and body food during the summer that does not overtast the stomesh and heat the brody. Grape Nuts in a cripp, dainty and delicious food, selected parts of the grain teasted by heat, mount from the grain and transform the stark into grain and transform the stark into grain and transform the grain and transform in the most perfect manner; the small particles of phosphate of potash found in certain parts of phosphate of potash found in certain parts of cereals are retained and these elements witalize and nourish the body, brain and never centers.

In its predigested form, it furnishes the necessary strength and energy in an easy way for the system to absorb without undue exertion and removes the general feeling of heaviness usual to hot weather.

Grape Nuts and cream, a little fruit and possibly an egg or two cooked to suit the taste, is an ideal break-fast and will fully sustain the body until the noonday meal. Delicious desserts for luncheon and supper can be quickly made and have a flavor all their own from the peculiar, mild but satisfying sweet of the grape-ways.

Grape Nuts will save the heat of cooking and the exertion of preparing food; will make you feel internally ten degrees cooler and fit you for the summer's heat so that you may enjoy the full pleasures of the

SEVENTY CENTURIES OF HISTORY MADE INSTANTLY ACCESSIBLE

# The Cyclopedia of Classified Dates

Compiled by CHARLES E. LITTLE

Compiler of "Historical Lights," "Biblistal Lights and
Side-Lights," etc., etc.

All important known facts are recorded and classified for quick reference, including all the notable events of universal history from earliest times down to the present. Each event is brought out in its historical setting and its relation to all other events. Over two hundred thousand facts are given, classified chronologically under topics representing every branch of human interests.

S. Senator William E. Mason, Washington, D. C.: "It must be attractive to every lover of justice and liberty because it is written of the Boers, the bravest nation of all history, by Michael Davitt, one of the most patriotic and unselfish men the world has ever knot

U. S. Representative William Sulzer, Washington, D. C.: "It is the best, most vivid, and most accurate description of the Bores and the control of the Bores, and the sulface of the con-trol of the Bores, and their independence. Every student and every person who desires to be accu-rately informed regarding the great conflict in South Africa, abould read Mr. Bavitta admirable work. It is extremely interesting and passesses great literary merit."

### THE BOER FIGHT for FREEDOM

### Michael Davitt

This book, appearing as it did, by a remarkable coincidence, on the very day, almost, that the Boer War was officially ended, is the only complete, graphic, authoritative, ardent account of one of the most remarkable struggles the world has seen of a free people to retain their independence. Although the high hopes of the Boers have failed of realization, even their late enemies pay generous tribute to the splendid valor, the noble sacrifice, the Spartan endurance, the inspiring chivalry of their heroic struggle. The story of it, as told by the man of all men best qualified to tell it, is a glorious epic which will thrill the world through all time.

Nothing is lacking from this book and nothing it contains is mutilated or falsely colored because of the interference of hostile censors. The Boer side of the whole story is told here by a trained writer and eye witness. The facts were secured from the Boer officers and patriots themselves, and from official documents. Mr. Davitt resigned his seat in Parliament to go to South Africa during the early fighting to gather his material. The history is complete, and final, while at the same time it is full of the passion, the life-and-death heart interest inseparable from the subject.

### The Voice of the Living Teacher Always at Your Instant Command

A MARVELOUS SCIENTIFIC INVENTION THAT WILL TEACH YOU OR YOUR ENTIRE FAMILY, FRENCH, SPANISH OR GERMAN, GIVING YOU ID MINUTES OR ID HOURS WHENEVER AND WHEREVER CONVENIENT!

IIIS is the advent of a new era in language study. Previous systems for learning French, Spanish, German have been revolutionized. The new method is a marvel of the 20th century. Fifty years ago men would have pronounced it nothing short of miraculous, a hundred years ago its inventors would have been hung for witcherath. To dday the world welcomes it as one of the greatest blessings made possible by human intelligence and scientific perfection.

Dr. Richard Rosenthal, the foremost linguist of the age, after years of experimenting has perfected a mechanical system in which the living voice of this celebrated instructor can be brought to you without loss or defect.

#### TOPICS OF THE DAY.

#### GENERAL WOOD AND GENERAL GOMEZ.

"HE story that General Wood paid \$25,000 to General Gomez to keep quiet at a time when the latter and his followers meditated an uprising against the American forces in Cuba, is believed, disbelieved, denounced, and defended by various newspapers in the United States, General Gomez appears to one paper as a rugged and incorruptible old hero, to another as a bushwhacker with an eye to the main chance; and General Wood, in like manner, is pictured as the savior of Cuba, or as a fit companion of the postal thicves. The story was given to the New Orleans States by Charles M. Dobson, formerly staff correspondent of the Associated Press in Havana, and from New Orleans it was telegraphed all over the country. General Wood is reported as denying the charge, and saying that it is "all a canard" and "a fake," and General Gomez, who evidently misunderstood the allegations, has denied that he received money from General Wood for paying President Palma's campaign expenses. Secretary Root is reported as admitting the payments and defending them as perfectly justifiable.

The Pittsburg Dispatch believes the charges, and remarks that such statesmanship "is of questionable wisdom"; while the New Orleans Times-Democrat asks: "If the term bribery is not to be applied to such a transaction, what term shall be used?" Says the Chicago Chronicle:

"General Wood and President Palma may deny with much heat and indignation the story that the venerable Maximo Gomez was paid \$25,000 to keep him from stirring things up a year or so ago, but it is to be noticed that the venerable Maximo is saving nothing. That grand old liberator never did pretend that he was in the revolution business either as a hygienic occupation or as a means of recreation,

"Why, moreover, is there such a hue and cry over this \$25,000 matter when it is admitted that Maximo did receive certain other sums from the Cuban treasury nominally as compensation for

his military services, but really to keep him from taking to the woods once more with his army of liberators, who are up in twenty-four hours all the commeal and bacon that General Shafter left out of doors at Guantanamo?"

Wood and Neely are compared by the Memphis Commercial Appeal, which regards the military governor as an expert in the game of "graft." It observes :

"It is not easy for the average American to understand why the provisional governor of Cuba should have been allowed \$5,000 for 'entertain-

ment' in addition to a salary of \$15,000. There isn't a State in the Union that allows its governor so much as 10 cents for such purposes. The United States make no such allowance for any of its public servants.

"Cuba is a state with a population of about a million and a half, one-third of which is black, Yet the temporary governor of this insignificant island receives an allowance equal to the combined salaries of the povernors of Ala-

bama, Georgia, Kansas, Maine, Nebraska, New Hamp-

GENERAL LEGNARD WOOD ograph taken at the time of the evacuation of Cube

shire, North Carolina, and Oregon, General Wood's 'drink bill' alone equaled the combined salaries of the governors of Vermont, Oregon, and New Hampshire. There are no less than thirty-three governors in the United States whose salary is not as large as the sum allowed General Wood for the drinks and the eigars. It can not be said that General Wood's services as governor of Cuba were of such an exceptional order that he was justly entitled to such extraordinary compensation. The real work of rehabilitation in Cuba had been done by Brooke and Ludlow. Under Wood, we believe, the medical department of the army made the 'important discovery' that yellow fever and malaria are propagated by mosquitoes. Inasmuch as the propagation of malaria in this way had already been discovered in Italy, and a small Virginia city had for two or three years been treating the mosquito pests with coal oil, the 'important discovery' under Wood seems to have been rather a second-hand affair.

"In addition to the allowance of \$20,000 per annum, General Wood seems to have had an elastic corruption fund at his disposal. We know that \$9,000 was at his direction taken from the Cuban treasury and handed over to the agent of the sugar trust to influence congressional legislation in the interests of the trust. It is also rumored that he paid large sums to Gomez and other patriots in order to pacify them. In short, he seems to have had carte blanche to buy up blackmailers and contribute money to affect American legislation. We may sum up the entire episode with the remark that General Wood was paid \$20,000 a year for being the personal friend of President Roosevelt."

Turning now to the other side of the picture, we are met with the assertion that this payment, made at the rate of about \$5,000 a year, was regarded merely as a liberal pension for the old patrot; and it is said in a statement given out by a high official of the War Department that "it is believed that but for this assumption of the costs of Goniea's living expenses, the conditions in Cubia might have paralleled those in the Philippines, and the United States Government, after lighting Spain to secure freedom for the Cubians, might have been obliged to turn on them the force of her armies." If this was the cases, says the Baltimore Som, it was "a good bargain," for "a war with the Cubians would have been a calamity in more ways than one. "The Hartford Times, an anti-expansionist critic of the Administration, ealist the expenditure "wise and justifiable," and the Detroit News believes that "peace at the price paid the old insurgent leader was perhaps the cleapest purchase ever made by the United States." It "would have been cheap at a thousand times the price; "thinks the Philadelbolis Ledver."

But the idea of bribery is scotted by the Putsburg Times, which results the fact that General Gomes has just declined a pension which the Cuban congress wanted to give him, and that he previously declined to be a candidate for the Presidency, which would have brought him a salary of \$8.500 at year. The Boston furnal results that "Congress appropriated \$3.000,000 the express purposed refeveing the destitution of these homeless, ragged, and starving meu, who had given all for the cause of Cubat Lifer," and adds:

"It is an insult to General Gomes even more than to the United States to assert that this money was paid to him to 'buy' the support of his influence. General Gomes did not need to be purchased. He has been a firm, consistent friend of the Americans. Our officers have always had the pleasantest relations with him. Some of his subordinates who knew less of us and less of the world may have distrissted our purposes, but Gonez, never. The rank and file of the Chiban army would not have welcomed their own share of the tactful American gift if their beloved old leader made to him was noderate, proper, indispensable. The United States would have been blind and boorish had it not offered it-General Gome was absorbedly justified in accepting.

"As a matter of fact the payment to him has been for two years a public record of the War Department, available for Congressmen, anti-imperialists, and all others who run to read. It is being brought out now and exploited as a part of the general

ORATITUDE!

anti-Administration policy...as one more expedient of unprincipled politicians who, in desperate lack of all else, are now throwing mud at the flag of the nation."

As for General Wood's salary, the Louisville Post considers it "an extremely small allowance," and says that "the only wonder is that General Wood managed to support his office as well as he did and not come home a bankrupt,"

PREMISS BY PATTON of Princeton says our national conscience is in great danger just now. Will our traducers kindly note this significant admission. The nation still has a conscience? Cuban papers please copy.—The Character Surveyor Part.

#### IRRIGATION BILL A LAW.

THE irrigation bill, now a law, receives the unanimous support of the press of the Western States, especially of those to be benefited by the measure; but several of the Eastern and Middle State papers consider it an extravagant piece of legislation. For instance, the Philadelphia Ledger calls it "the entering wedge of a scheme of extravagance for the diversion of pub-

THE RIGHT KIND OF "WATER CURE."

lic funds for the benefit of railroad corporations and private persons, "while the Chizago Post goes further and remarks that it is "a sort of perpetual-motion appropriation that would make that perennial grant for a fence around West Point look like a pile second-hand truck in a pawnshop." The New York Nan-emarks that "the almost certain result will be that money will fail to come in fast enough over the Land Office counters to meet the demands of the irrigationists; and as soon as the vast scheme of local improvement at the general cost is well under way, we shall have an annual irrigation bill which will make the river and harbor bill or the public buildings omailus bill of past experience seem insignificant." The Providence Journal says.

"Each of the States and Territories named in the law will be urging its claim to early attention; and, if we may draw inferences from the comparative ease with which the measure has now been carried through Congress, there is every reason to believe that with no very difficult use of the log-rolling process new drafts will be made upon the Treasury at every session of Congress. This is not saying that the irrigation of the country's arid lands ought not to be undertaken at federal expense or that the law which has been passed provides an improper way of doing the work. What is intended here is simply to call attention to the very important fact that a wedge has been entered which may go far under the hammering of successive congresses. Not only is it entirely unknown what the ultimate cost of the irrigation work will be; but, once that is provided for by the federal Government, we must presently look for demands for the improvement of turnpikes, the drainage of swamps and other schemes of similar nature. In plain words, we are now to enter npon a new form of national expenditure which may lead no one can know whither. It may have been necessary, but it is a bit startling '

Turning to the other side of the argment we find the Salt Lake Tribaw, published in the region to be benefited, saying that the measure "is a very modest beginning, by no means adquate to the necessities of the case. Hereafter we hope to see appropriations put in the river and harbor bill for the reclamation of the public and lands, on a scale commensurate with the very great importance and magnitude of the work to be done." The Salt Lake Deserte Evening News, the Denver Republican, and the Denver Times all comment very (avorably upon the measure, The Republican stating that the worst thing to be feared from national construction of irrigation works "is that sooner or later Congress may enact laws that will conflict with those of the States and that thus State irrigation systems may be thrown into confusion." It also thanks the Eastern members "who supported the measure from unselfish motives."

The bill provides that the money derived from the sale of public lands in Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, Sonth Dakota, Utah, Washington, and Wyoming, less the amount paid to local land officers and five per cent. due the State under existing laws for educational purposes, is to be put into a "reclamation fund," for the construction and maintenance of irrigation works in the States and Territories named. Provision is made for the payment out of the Treasury of any deficiencies in the allowances to agricultural colleges owing to this disposition of public lands. The Secretary of the Interior is authorized to examine, survey, and construct the irrigation works and to report the cost thereof to Congress at each session. Of something like 600,000,000 acres of vacant land, 60,000,000 acres may be irrigated and saved for agricultural purposes, and to keep the lands from syndicates and speculators, no individual can acquire water rights to more than 160 acres.

### DEFEAT OF THE PROPOSED CONNECTICUT CONSTITUTION.

HEORETICALLY the cities and the small towns in Connecticut are arrayed against each other in a battle for representation in the lower house of the state legislature. The great fight was to have been waged on Monday of last week over the adoption of a new constitution. Instead of a fight, however, it turned out to be a very tame burial; only about fifteen per cent. of the voters, in cities and small towns alike, took part in the election, and the constitution that a state convention had been four and a half months in framing was speedily laid at rest. The little towns did not like it because it conceded something to the big towns; and the big towns would not have it because it did not concede enough. The existing system has the beauty of simplicity, and some of the Connecticut papers think the people of the State are satisfied with it. Under it about half the towns have one representative each in the lower house, and the rest have two each. The New Haven Palladium thinks the vote shows that "the people are satisfied with things as they are." and the New Haven fournal and Courier remarks; "It is difficult to tell what the performance means, if it means anything, but it doesn't seem to mean that there is any very widespread or strenuous demand in Connecticut for constitutional reform." The New York Sun observes: "The meagerness of the vote cast, only some fifteen per cent. of the registered vote of the State, must dump into doleful dumps those philosophers who hold that the referendum is humanity's greatest boon and brightest hope."

This defeat, in the opinion of a number of Connecticut papers, however, is not a defeat for either side, but a defeat for a compromise proposition, and a warning, therefore, that there is to be no compromise in the future. The conservative New York Evening Post urges the Connecticut city party to radical action. It declares:

"Experience has shown the futility of working for reform in Connecticut through legislative sanction. Even could the legislature be dragooned or stampeded into action looking toward another constitutional convention, it would again make the body representative of the towns and not of the people, and would again hedge it about with limitations, only morally binding perbaps, but effectual barriers in a body so organised. It is alle to ask the legislature to reform itself, but a way to reform may be found to the control of the con

#### VIOLENCE IN THE COAL STRIKE.

WILLE strike riots have been rife in Chicago, Patersou, and Pawtincket, it is considered a remarkable fact that the great coal strike, involving nearly 150,000 men, has been maintained with so little disorder. The officers of the niners union have made every effort to keep the men quiet, and the newspapers that sympathize most heartily with the men, like he New York American and Journal and the Philadelphia North American, have been most earnest in connseling the miners to avoid violence. No outbreak senous enough to call out a sheriff's posse has occurred so far. The New York Sun, whose sympathy is with the mine owners, says, however:

"Every authracite mine is an armed camp. Men working in them are hounded with insult, hanged in effigy, threatened with death, shot at from ambush, and made to feel that not only their own footsteps, but the hearthstones of their homes are dogged with dynamite.

"Soft and apologetic words about peace and order can not veil the terrorism that confronts those who wish to work in the anthracite mines; and plainly these would-be workers are thousands.

"The mine owners are strained to their utmost to provide simple defense of their property from destruction. What their task would be to provide protection to miners getting out coal can be imagined.

"If the authorities of Pennsylvania will uphold the law and the people of Pennsylvania will stand up for fair play and equal rights, anthracite will be mined, and New York will be cleared of the smoke from soft coal."

The popular supposition that all is quiet along the Susquelianna is also disputed by the Scranton Free Press, published in the heart of the strike region, which says:

"The newspapers that are saying that the anthractice mine districts are in a state of peace and quietude misstate the facts, and it is not necessary for any of the officers of this organization that is now on strike to minimize the danger or to say that the conditions as appearing in the netropolitan dailies are exaggerations. Indeed half of the truth has not been stated, and if the officers of this organization wish to make the public believe that they are entitled to a fraction of the consideration they are claiming, they will put an end to lawlessness or call the strike off. It should never have been instituted. Its prolongation is an incitement to deeds of violence.

"What was the offort to hang Engineer Flaunigan Inst Thursday? Who was responsible for 1t? Who should be punished for the attempt? Who should take the initiative in administering the punishment? The spirit of unrest is abroad, the law is disgraced and anarchy reigns. Do not be annaed at this statement. The facts will not warrant any other. Men, for exercising the commonest rights guaranteed to all who live in civilized communities, are terrorized and the lives of all belonging to them made miserable. For attending to their own affairs in their own way without nolesting any one they are jeered at, stoned, hung, and burned in effigy. Is this according to the spirit of trade-unionism? The Free Frest hopes that it is not. At this time and for several very long months back Scranton has been in a very unsettled conduction. Not only has freedom of action been denied, but freedom of speech has been punished severely, and if a man thought aloud he was liable to damage his business. Is this trade-unionism? The Free Press does not so inderstand."

The mine owners, in the opinion of the strike leaders, are ansions for a riot. "The operators would like nothing better than to get out the militin," said one of the union leaders last week, for then the strikers would have to fight the military of the State, and perhaps the nation, and would inevitably lose. The miners are particularly incensed at the "coal and iron police," and charge these police with inciting riots. The United Mine Worker's Journal, the organ of the strikers, says of them.

"The theory upon which these private armies are raised is in itself a menace to a free country, but when the character of the recruits in this army is scrutinized it is doubly alarming. Habitual criminals, men whose 'recent' and photo are prominent in police bureaus constitute the bulk of the army. They do not figure in bank robberies, or in swindles where brains and cool figu-

age are required, but in the general riffraff of scoundrelism, wife-beating, petty robberies-parasites on the 'powers that prey.' Generally they are derelicts on the ocean of life-the flotsam and jetsam on the shores of humanity. They are invaluable to the ward leader, where a caucus is to be packed or a primary is to be carried or a fury to be hung or a rival 'leader' to be assaulted and a voter to be personated. They are a covert threat to good government and furnish the applause when some petty ruffian makes a verbal assault on the candidate of decent men. Election day is the day of their anotheosis. Then they are a fit weapon for the hour and the power of darkness. That day they must be 'seen' and 'instructed, and they swarm from their kennels like flies ready for any deed of shame or blood. . . .

"This cowardly combination of Sikes and Carey is let loose on a law-abiliting village to work out his own sweet will. The quiet attitude of the strikers excites his wrath as it places his 'job' in jepondy. . . . If eshoots a child in the back in repelling an imaginary foe. He murders in cold blood inoftensive nen walking peacefully along the highway. He places obstructions on the

track, deralling a train. He does any and all species of crime. Taht is why he is there and what he is paid for? These Hessians are not used to maintain order—their business is to stirp disorder. They are not need to uphod law—they are there for the purpose of breeding lawlessness. They are a menace to bit-orty, a blot on the State, a portent for cvil, a premium on duoder, and as stench in the nostrils of decency.

"President Mitchell is not opposed to the companies protecting their property. He, in common with other good eitisens, stand for law and order. But he does protest, as every decent man will protest, against screening the slums of the cities for the vicious and depraved, and investing them with police powers."

#### PANAMA.

PELÉE and Panama are two names that are coupled frequently in the comments on the Senate's action favorable to the Panama canal route. "There is no doubt," says the New York Journal of Commerce, "that the explosion of Mont Pelée.

and the belief of scientific gentlemen that Nicaragua is far more subject than Panama to volcanic action, had much to do with the Senate's action in directing the President to go shead with the canal at Panama." The bill, as framed by Senator Spooner and passed by the Senate, authorizes the President to acquire the rights and improvements of the Panama route, if he can obtain them upon satisfactory terms, and to proceed with the building of a canal there. If he can not get terms that he thinks reasonable, he is to acquire the rights and improvements of the Nicaragua route and build the canal there. The Washington correspondents are wellnigh unanimous in the opinion that the llouse will concur in this action of the Senate, and they consider the victory for Panama assured. The Nicaragua advocates are taking their defeat gracefully. Senator Morgan, who led the fight for Nicaragua, says: "The great consideration is a canal. The question of route is secondary. The people demand a canal. I think they would have preferred the

MISTRESS OF THE SEAS.

A little coronation taking place outside of England — Harper's Weekly.

EDWARD: "He didn't gel my crown, anyway; I had it tied under my

OUTSIDE OBSERVERS . "As usual, they're ahead of us."

— The Chicago News.

Nicaragua route, but I feel satisfied they will be glad to have the Panama." Most of the Nicaraguan papers concur in this view, but the Hartford Courant bids the friends of Nicaragua "brace up," as "there are other years and other convresses to come," and "the Panama route may lose favor as quickly as it has gained it."

Some of the Democratic papers charge that the Senate vote for

COMPLETED SECTION OF THE PANAMA CANAL, WEST OF COLON.

Panama is merely a ruse to prolong the route discussion and delay the whole enterprise. Thus the New York American and Journal says:

"The Senate, house of lords for the trusts, served its masters and betrayed the country when it voted against building the Nicaragua Canal and in favor of the Panama job.

There were honest votes east for the Spooner amendment, of course, but they were few. The prevailing purpose was to prevent the building of any canal by playing Panama against Nica-

Once more the supreme use of the Senate to the trusts-to the organized predatory wealth of the country-bas been demonstrated. It is the chamber of obstruction, the citadel of special

So, too, thinks the Richmoud Dispatch, which says:

interests '

"The action of the Senate is a distinct triumph for the time, at least, for the great transcontinental railway companies, whose interests are now identified with the larger transatlantic transportation lines, and are seeking, according to all accounts, to control also the transpacific carrying trade.

"It means that there is to be no definite settlement of the isthmian canal question by this Congress. For the House passed the Hephurn bill, which favors the Nicaragua route, with only two dissenting votes. In so doing the lower branch respected the wishes of the vast majority of the American people, and it is hardly to be doubted that it will stand firm, as it should.

"The result ought to be to throw the question into the next congressional campaign, and in that event, it would seem, it will be in the power of the Democrats to turn the situation to their advantage.

"As we see it and as we have heretofore indicated, the 'advocates' of the Panama route represent a gigantic combination to defeat the building of any canal at all. Indeed, Senator Teller is quoted as having stated that he would vote for the Spooner amendment with that end in view."

But now is the time of jubilee for the Panama papers. The Baltimore American recalls that "for fourteen years and more The American made the fight single-handed," and "not a newspaper in the United States came to our aid." The New York Evening Post, however, says that it (The Evening Post) was "the first and for a long time the only American newspaper of any consequence to maintain that the Panama route was the better." It says of the result:

"We consider it one of the most gratfying triumphs of reason

over prejudice that this country has eyer seen. The Nicaragua route was not so much a project as a mania, a cult. We see in the case of Senator Morgan how it became bound up with the deepest religious beliefs. In his eyes, to-day, the American people stand convicted of national apostasy, in having abandoned the true Nicaraguan (aith. Yet his enthusiasm was only a little more extravagant than that which afflicted nine-tenths of our population but a little while ago. Nicaragna seemed impree-

nably intrenched. Both political parties were for it; the press was almost a unit in advocating it; a formidable array of engineers and military men stood for it, and it was backed by powerful financial interests. Vet the whole frowning fortress has now been battered down by simple common sense. Expert opinion was first won over. The international technical commission made a report in favor of Panama in 1868 which had a great effect on all engineers. Then followed our own commission, whose researches on the spot first resulted in the conversion of some of its members-Admiral Walker notably-and slowly and in the end led to the great revulsion of sentiment which had its crowning demonstration in the vote of the Senate vesterday. It is a fine and inspiring example of what the persuasive power of truth can do with a democracy. We Americans have not, per-

haps, that swift lucidity of which the French boast, but we have, at any rate, as the final choice of the Panama route proves, a practical love of the truth and a business capacity-a horse sense, let us say-which work well in the long run. The success won by steady hammering in this affair of the isthmian canal should be an encouragement to every reformer with a good

cause and sound arguments. They will come to their own with the American democracy, granted time and patience."

The St. Paul Pespatch does not think we need an isthmian canal, and the Baltimore Sun says:

"The fact is, there are grave doubts whether a caual would be worth the money which it would cost. There is also ground, so the scientists say, for the belief that a canal built in a region of carthquakes and volcanoes would be an unsafe enterprise. The warning of the scientists has had far more weight than the suspicion that the influence of the transcontinental railroads has been enlisted against the canal. If there is further delay in budding an interoceanic canal, there will be no cause for public regret. An undertaking of such magnitude ought not to be hurried along in a careless way. The country can afford to wait."

#### COMPETITION GAINING ON THE TRUSTS.

O weighty an authority in the business world as the New Sork lournal of Commerce expresses the belief that the folly of the trusts "in imagining that they can hold the enterprise of this greatest of all nations in unjust restraint" is approaching its day of reckoning, and it believes that "the inevitable is in sight to men of sound vision." This statement will come as a surprise to those who have been thinking that the trusts will soon control the country, and who have imagined that "the common people" will be held in a sort of vassalage to great monopolies that control everything. It is based upon the important discovery that the independent enterprises launched in the last seventeen months have a larger capitalization than that of all the trusts organized in the last twelve years. We seem to be passing, therefore, from an era of great trust organization to an era of strong competition, and as the trust is "to be regarded as an expedient for shielding preexisting capital against the natural workings of competition," it begins to look as if the "expedient for shielding " were failing to shield. The true capitalization of all the cousolidations effected within the last twelve years is reckoned by this authority at about \$4,500,000,000, while the increase of large and small independent corporations in the last seventeen months is reckoned at \$5,000,000,000. The Journal of Commerce remarks that this "affords much food for reflection to times who passively tolerate or enthusiastically support the trusts," and it goes on to say

"Reflect upon the significance of this comparison and see what it teaches. 1. That imposing as the expansion of the trusts may seem, that of the independent industries is immeasurably greater. 2. That our minor millionaires and our substantial men of business have reached the conclusion that conservatively financed and well-managed corporations, with moderate capitals, have nothing to fear from the competition and the supposed superior advantages of the trusts. 3. That the surprising magnitode of the new independent corporations evidences a very emphatic and general conviction on this point. 4. That the imlependent industries are gaining so rapidly on the tine forces that the hopes of the monopolist organizations seem to be already foredoomed. 5. That the process of consolidating capitals has released large numbers of well-trained principals of specessful corporations, who are now employing their means and experience in the ranks of competition; the efforts to create mo nopolies thus proving self-defeating. 6. The foregoing considerations may be regarded as largely accounting for such facts as the following -that the new independent concerns are so far generally doing well and finding no difficulty in competing with the trusts; that a noteworthy proportion of the monopoly elaimed by certain trusts in their respective trades has been reduced for instance. United States steel began with a control of 80 per cent of untional output and now claims only 67 on steel and 45 on pig iron; while the sugar trust has reduced its claim of control from about oo per cent, to so per cent. As further symptoms of decadence, it may be noted that, notwithstanding the extraordinary prosperity of trade, not a few of the trusts are falling far behind their early promises as to not earnings, expectations as to economies are failing more or less to materialize; and in several notable cases the consolidated concerns have been disbanded, while others appear destined either to early follow suit or to be reorvanized on a more conservative basis.

The day of reckoning for the trusts may be delayed, the writer infers, but it is in sight. To quote further:

"The foregoing facts foreshadow the impending outcome of the new movement. Its origin was based on a misconception of the laws that inevitably control the movements of industry and commerce; and its issue can only be failure and the return to natural competition, and that possibly with greater severity and a lower range of prices than has heretofore been experienced. The new-fashioued structures-so far as they may possess substantial backing or exercise a material measure of control in their respective trades-may be able to weather the trial after unloading their watered stock and otherwise reconstructing their finances, for, with a sound financial basis and good management, the magnitude of their scale of business need be no detriment to their success but possibly a help to it; but, for the others, it can only be that a reckoning awaits them proportioned to their reckless ignoring of the laws of sound finance and their folly in imagining that they can hold the enterprise of this greatest of all nations in unjust restraiut. There is no escape from the penalty of the making-haste-to-get rich policy on which so many venturous men have been running for the last five years. The inevitable is in sight to men of sound vision; but the event may prove to be comparatively distant,"

The Iron Age (New York) also sounds a warning against "the danger of continued flotations of industrial [or trust] secu-

LITTLE CUBA HAS WEATHERED MANY A STORM, AND WILL WESTIER THIS - I be Minneapoles lour nal.

The New York World.

rities," and after a consideration of our present prosperity, it adds.

"The day of reckoning for the many acts of financial extravagance committed in connection with the creation of our inductials is none the less bound to come, and every fresh creation which contains any elements of unsoundness will simply add fuel to flames. It is the part of common business prudence to keep this fact constantly in mind."

### CUBAN RECIPROCITY AND REPUBLICAN SENTIMENT.

NOTHING seems more clear than the fact that the Republican Senators and Congressmen who are opposing reciprocity with Cuba are out of line with the sentiments expressed in the majority of the Republican newspapers. Not only are the Republican papers overwhelmiggly in favor of reciprocity, but the Republican conventions thus far held show the same sentiment, resolutions in favor of such action baving been adopted in Pennsylvania, Illinois, Ohio, Kansas, and Nebraska. The present Congress, nevertheless, seems likely to grant reciprocity to Cuba either with extreme reluctance, or not at all. We give here a brief statement of the attitude taken by most important of the Republican journals.

Such leaders of national Republican opinion as the New York Sun and Tribune are earnestly in favor of reciprocity, as has been recorded a number of times in these pages. The New York Mail and Express believes that it "should be granted graciously and generously," and the New York Commercial Advertiser declares that the contemplated delay till November or December is "an injustice to Cuba which amounts to a crime, a deliberate calculated, fully comprehended crime." The Brooklyn Standard-Union says that if reciprocity is denied, "it will be difficult to remove from the public mind an impression that faith has beeu broken with the new Cuban republic," and it seems to the Philadelphia Press that "it will be a distinct blot on an otherwise glorious record and a plain defiance of overwhelming public sentiment." So, too, thinks the Philadelphia North American, and the Philadelphia Ledger believes that such an event "will place the party in a false and embarrassing position on the eve of the congressional elections, and, with unexampled fatuity, provide the Democrats with a powerful issue." Says the Philadelphia Evening Telegraph: "The bottom of the business is that, at the dictation of a small clique closely banded together, this nation is to repudiate its obligations, refuse to deal equitably with the islanders we have taken under our charge, crush out the hopes and expectations they have entertained with every warrant of right and reason, and compel them to face distress and disaster at the very outset of their career."

The Providence Journal declares that a denial of reciprocity will be a "national disgrace" by which "the sound sense of the country will be outraged." The Boston Journal takes a like view of the matter, and the Hartford Post regards it as "humiliating " that "the outcome of this long controversy is not the triumph of justice." The Buffalo Express, the Pittsburg Dispatch, the Cleveland Leader, the Toledo Blade, the Detroit Tribune, the Portland Oregonian, and the Indianapolis fournal all express similar views. The Chicago Inter Ocean believes that "the President has voiced the will and the desire of the American people" in this matter, and the Chicago Tribune thinks it will be dangerous to disregard that will, "The President sees the Cuban reciprocity question as the nation sees it," says the Minneapolis fournal, and the Milwaukee Wisconsin adds that "there is just one thing for the Republicans in the Senate to do, and that is to stand by the President." The Topeka Capital, too, declares that "the country is with the President on this question," and it is the observation of the Marshalltown (Ia.) Times-Republican that "he has the almost united support of the country behind him as represented in the Republican press and in the platform expressions of various state conventions."

There is a wing of the Republican press, however, which stoutly opposes the proposed concession. Their leader is the New York Press, whose opinions on this matter have been often quoted in these pages. A similar stand is taken by the St. Louis Globe-Democrat, which calls the reciprocity campaign "a free-trade raid, masked under the name of Cuban concessions. and the Louisville Commercial advises the party to "let this Cuban tariff tinkering alone for this session." The Salt Lake Tribune brands the proposed reciprocity as an "unjust scheme" that "discriminates against one of our home industries," and the Colorado Springs Gazette, published in another beet-sugar State, makes a similar comment. The Denver Republican believes that "the Republican Senators who are opposed to the reduction in the tariff on raw sugar from Cuba are making a highly creditable fight, on account of which they will receive the applause of good Republicans in all parts of the Union." The Brooklyn Times takes the optimistic view that "there is no better omen of good to party than the fact that the members of the House and of the Senate show a sturdy spirit of independence, and that they refuse to surrender their own convictions to the opinions of the President of the United States." "If Cubans are in temporary distress," says the San Francisco Chronicle, "Americans will cheerfully contribute to their relief; but there is no reason for tariff concessions on Cuban products which is not an equally good reason for making similar reductions to Germany or Mex-

#### LETTERS AND ART.

### ARE OUR BOOKS FOR GIRLS WORTH

T O the recurrent discussion of educational methods for girls different from those applied in the education of boys, The Saturday Review (London, April 19) has a very interesting contribution, chiefly in the form of observations upon so-called "girls' books," The Review pronounces against them as lacking robust ideals and omitting a normal enlitwation of her worship. It lays down the principle that in its judgment dominates in a successful book for the young:

"Hero-worship is rooted in child-nature; girls and boys equally can not live without a here, or at any rate can not live happily without one. With them it is just the reaching after the ideal, which in the child-mind neither disillusion nor degeneracy has had time to choke, and to the child-mind can appeal only in a concrete form. Therefore the hero is not a luxury but a necessity, and his influence is correspondingly deep on the child's career. Caterers for boys have long ago perceived this and have crowded their boys' books with valiant attractive lads, bold brave men, spleudid performances, and astounding dangers. Even the bad people are filled in with a good firm brush; their faults are the faults of qualities. They are wicked but not miserably or morbidly wicked. And the effect of these books on boys is that of a nice-tasting tonic. That the good people and had people alike are unlike human beings is no matter whatever, Children, unless poor little crammed precocities, are not introspective. They do not consciously consider themselves, and have no idea what their nature is like,"

As for girls' books, the writer considers them "drivel" for the most part. He says:

"Of course it would not matter at all, if there were none but loays' books, for we agree absolutely with the Duchess of Stutherland that 'books for loays appeal to girls because they appeal to losys, and for no other reason." That would be reason enough for anylosly but a publisher; but he is nothing if not symmetrical; and as there are well-recognized 'boys' books' so there must be 'girls' books.' And so the stupid convention grows up. Unfortunate authors are instructed to write for girls, which they naturally take to mean something the opposite of what they unifor boys. Therefore all the strength and freshness that undes the losy's story go strong is scrupiliously avoided and sentiment and drived takes its place."

All the best girls, we are told, have been brought up on boys' books and like them.

To all this Miss Frances H. Low, writing in the same journal (May 24), dissents, and points out that it is of a piece with what she conceives to be a radical defect in the present-day education of girls, in which the effort is made to fulfil the same methods and system with girls—tho very different results have to be looked for—as have been found advisable in the training of boys. The result is that "the middle-class young woman of eighteen or twenty years, after six or seven years' instruction, quits school without having learned one womanly craft of specific use to her sex (or even the principles of one)." Better educational effects, Miss Low thinks, can be reached by providing a hierature that is distinctively for them. She proceeds to give some characteristics which ought to belong to such books:

"Those of us who feel there is a whole wide width of heaven between this school system and true education for grist are aware that the alternative to tough-fibered 'boys' stories' in cheap, recule magazines is not to be found in the shape of feeths, respectively. The stories is such that the state of the state of the sipple, false 'girls' tales,' but in beautiful simple fiction that is classical; fiction that is fragram with tender love between butding grid and youth, that paints woman fair, modest, sugacious, as she might be and is and has been, and youth arbeit and noble, as Scott has painted youth for us in his immortal gallery that reveals to us how lovely domestic life may be if hearts are fresh, pure, and capable of admiring something else than money and evenesive houses and dresses,"

After the discussion has brought out other interesting correspondence, *The Saturday Review* closes it editorially as follows:

"We disqualified none but the professional 'hooks for girls' while we pointed out that the immuture powers of children made it impossible for them fully to appreciate most standard works. Of books that are now turned out for children's reading, we said and we say that only the boys' books are worth reading. These, of course, vary in quality. 'Stalke's Co.,' for instance, has no place amongs books for English boys. It would be infortunate indeed if they had surk to that level. But as a surface of the contraction of the co

That indeed is our main contention. There is no difference between boys and girls that requires or excuses discrimination between their books,"

### VICTOR MAUREL'S NEW DEPARTURE IN VOCAL SCIENCE.

M. R. VICTOR MAUREL, the well-known opera-singer, has declared war against all the private and official schools of singing. He asserts that "the art of song is not only decaying, but on the eve of perishing." "Evolution is the essential condition of art and life; during the last thirty years it has affected music through Wagner and Berlioz, and as a consequence a mod-

Copyright by Disposit, New York.

VICTOR MAURIL.

ern school is rising against the classical school." For this reason Mr, Maurel thinks that the education of singers should be transformed. With this object in view, he intends to establish a singing-school which he is to call the "lettic Academic," in opposition to the "Academic Nationale de Mussique," or grand opera, of Paris. Speaking on this subject to the musical critic of the Fixero, he said!

"The secience of the voice is the basis of the art of singing and instancein, produced by certain organ and instancein, produced by certain organ and instancein, produced by certain organ and instancein, produced distribution of the second side to constitute to constitute or and the art of singing without knowledge of vocal science; to use the instrument without having studied the modes of its functions. What should we think of a violin-maker who would persist in constructing violins without knowing the qualities of the wood he employs?

"To the empirical system of the professors, to what I will call pittlatirum, which consists in making the surgers spin it series of sounds like parrots, it in time to substitute a positive science including the study of the organs. Being physical and psychological, this science, like all other sciences, will have its methods and laws and will be supported by facts. Unlike empiricism, the value of which lies only in practise, it will be independent of the teacher's whim and possess an intrinsic value of its own, based on anatomy, physiology, physics, etc."

The method is intended for the professors alone, not the scholars. Its characteristic points will include "absolute sureness of a scientific, rational, non-empirical teaching; scenic technic, or adaptation of song to the interpretation of personality, which is taught nowhere, not even at the Conservatory of Music in Parls; finally, the study of general principles intended to develop the mentality of the scholar and enable him to assimilate the details of his art." From a practical point of view, Mr. Maurel disclosed his program as follows:

"I will teach, first, what the art of song is, what constitutes a part, the history of music, and the distinctive characteristics of the various schools and of the great masters. I will speak, also, of the selected profession, of the ways to join it, of the dignity with which it should be practised. This is the intellectual and moral side of the teaching. A large library will complete the oral lessons. Vocal exercises will be taken then and lessons in graduatious and 'nuance.' Specialists known for their science will at the same time give lectures on the practise of sound and the physiology of its producing organs. These special lessons will indicate the cause and the object of the efforts required from the scholars. At the completion of these exercises, the scholar will not yet be an artist; he will have to develop his critical sense and exercise his sensibility. I will show the profound differences existing between the modern lyric drama and the old opera. In the lyric drama the scholar has not only to sing, but to create personalities : he shall learn how to dress and make up : above everything he must be able to express profound sentiments, such as wrath, tenderness, passion, love, terror, irony, etc. The scholar will find that the power and the beauty of the voice are not sufficient; something else is wanted, and that is sensibility, which is art itself. Song is not the end, but the means to attain it. Song considered as an 'instrument de luxe' is useless to interpret the chef-d'œuvres which plunge down to the depths of the human heart itself,"

As an adjunct to his teachings, Victor Maurel advocates dancing, fencing, gymnasties, and physical culture in general to develop the lungs. Theatrical performances will give a finishing touch to the musical education.—Translation made for THE LITERAKY DIGGST.

#### THE SOUTHERN LITERARY IMPETUS.

IT can not be said that the South has in the past lacked appreciative interpreters who have been understood and received as contributors to our growing national literature. A somewhat recent development, however, is what might be called a Southern herrary self-consciousness, exhibited in the tendency of Southern writers to write about the literary achievements and prospects of their own section. In The South Atlantic Quarterly (Durham, N. C., April), Prof. Henry N. Snyder discusses intelligently "The Reconstruction of Southern Literary Thought." A preliminary comment on the industrial and political reconstruction gives him text for observing that the reconstruction that has taken place in the methods and spirit of Southern Internations since 1870 has been equally significant. He points out the provincial feeling from which he thinks the South is now emerging and notes the reasons for it:

"That really pathetic phrase, Southern literature, we are never allowed to forget. On the other hand, one never hears the books written by Longfellow, by Lowell, by Emerson, spoken of as Northern literature. Have they appropriated so much of the spirit of the nation as to give them the sole right to be called American writers? At any rate, something, either inherent conventional, has saved them from the taint of provincials on implied in any other naming; while we always hear of Southern literature and Nouthern writers as if we had no share in the larger name, American.

"This localiting designation of literary effort in the South—at once a distinction and a reproach—came out of those well-known social, political, and economic conditions which, before the war, kept the South sensitive to repel outside influences and arrogan —this word is not too strong—to maintain the high value of whatever it regarded as sectionally its own. This spirit was applied to literature as it was applied to everything slee, and the result

was the multiplying of books and periodicals under the emphatic and rather challenging title of 'Southern.' But the significant thing about this cry of the South for a literature which should be peculiarly its own—its own as distinguished from that pro. duced elsewhere in the nation—is that the cry was the sign of the excessive intellectual loneliness and detachment forced upon the South by the very conditions of its life. It was a sign, too, of our failure to understand these conditions as related to literary production.

In this matter of a literary development of the Sonth, Professor Snyder observes a change of attitude going on in the direction of breadth and cosmopolitanism in the intellectual life. He

"In this general movement in the South toward a livelier concern in all intellectual matters there are two important elements that have helped to make it so vital and so rich in fruit: the first is the wholesome and genuine interest which the Southern people themselves have been taking in their own life and history; and secondly, the interest which the outside world-a larger world whose influences and forces we are rapidly making our own-is displaying with reference to all matters pertaining to the South. This interest of our own is of a wholesome nature because it is felt that it is no longer necessary to be aggressively polemic when the word 'South' is mentioned: indeed, it is clear that the old idea that even Southern history must be always on the defensive, that it must carry 'a chip on its shoulder,' is fast vanishing; and as a matter of fact we now desire to know the truth for its own sake and for its lessons, however sharply our lingering sensitiveness may be pricked by it. Consequently, he who writes about the South now can be sure of not only a larger but a sancr body of readers than ever before-a body of readers if not keen to know the truth about themselves, certainly willing to hear it. It is important, moreover, to remember that such an attitude in the reading public is bound to have a saving effect upon the integrity of the product of the writer. A public that will not be misled nor beguiled even by the stupefying sweetness of patriotic sentimentality to which it has been so long used, is just the kind of public to quicken the energies of authorship, to stiffen its moral courage to say what it thinks, and to get out of its vision the squint of sectional bias. And it is only at the demand of such a public that what is really best in thought and literature can live a permanent life. .

This wider and more critical public and the incentive of greater remuneration have not only stirred Southern writers to supply a demand, but have also essentially modified their methods and aims of work. This outside public has put upon the writer the compulsion of specific training and discipline. This necessarily has quickened his conscience as to the body as well as the spirit of his utterance. This new public, with the rewards that have come with it, has made it possible for the Southern writer to become a literary artist if he has the divine impulse in him. For example, whatever of failure one may attribute to the works of Mr. George W. Cable and of Mr. James Lane Allen as complete performances, one is perfectly sure that each of them has, by a vigorous process of self-discipline, steadily developed a certain artistic quality of his nature, till there is the finer flavor of what is mere literature upon all each has written. The new conditions we have been discussing have made it possible for each to be, not-as was almost always the case under the Old Rigime that made of literature a mere accomplishment and no serious pursuit for men to live and die in-a doctor, or a preacher. or a lawyer with a taste for letters, but first of all a man of letters clinging to his art as the very staff of his life, as a jealous mistress brooking no rival."

The Author to the Reviewer.—An effort has been made by George Sands Goodwin to gather the opinions of some of the popular novelists on the art of book-reviewing as practised today in America. The result of his questioning is published in The Critis (Inne). Mr. Howells thinks that we get the fairest and most unbiased reviews of American books in English periodicals and of English books in American periodicals. Frank Norts jauntily answers that half the fun of writing books is in reading the reviews, but he thinks book-reviewing "should be a

department by itself on the staff of any periodical or journal, Cyrus Townsend Brady tells of an historical error that crept, by accident into the publisher's notice of one of his books, and over fifty journals used that notice, error and all. He wisles to see all reviews signed with the writer's name. Thomas Nelson Page thinks that there is very little real reviewing done nowsfor adays. He is struck, on reading the "book notices" that passadors reviews, to find how many geniuses are constantly being discovered, and wonders what becomes of them all. Mark Towin writes: "I suppose I ought to take an interest in this subject, but really I don't."

#### A STATUE OF DAUDET.

"I BELONG to my own boat" (to my own time), said Alphonse
Daudet some years before his death; "I love it, but the
boats which are to come interest me as much as my own. For
the same dangers threaten us all, and to each of our barquest the
current is adverse, and the sky traitorous, and for each the eve-

THE STATUS OF DAUDET RECENTLY UNVEHILD IN PARIS

ning is so soon fallen." And the evening fell for lum, but the glow of his fame remains. His statue has just been erected in the Champs-Elysées in Paris, and such immortality as the sculjor's art can give has been conferred on him. The orators, on the occasion of the unveiling of the statue, said some penetrating things about the gifted writer, as rejorted in the Paristan press. M. Abel Hermant observed that "Daudet booked at souls from the same close viewpoint as that from which he would look at flowers in a garden." He said forther:

"As a child lying on its back in the grass sees above its eyes a thousand twigs crossing and recrossing each other, he saw souls in their complexity and in their intersections, in the countless fine network details which are their ultimate reality. No metaphysics, no psychological or moralistic divination, no technic or reasoning: he raw. His intuition was sure and sudden. It has not been considered their properties of the control of the

lucidly, took the place of your own obscure conscience. . . . Not that he acted on his subjects by some mysterious magnetism, not that he fascinated you, he did not cuter into your soul like a robber : you called him rather and effaced yourself before him willingly, joyfully. And when he used to say- Give me one of your beautiful red flowers, one of your flowers of suffering. blooming and bleeding,' quickly you would give them all to him. And you felt that, like le petit Chose, he put your pain in his breast. , , . Like all that has life, this hving intelligence was not the product of spontaneous generation. It had ancestors and a civil estate, a motherland. Daudet was not a child of chauce, he was the issue of a race, and he was the flower of a race. . . . Gradually he fructified the gifts he had received from nature, passing from direct and fragmentary observation to the great syntheses."

"There are no sermous and no preachers," said M. Escudier, in Daudet's novels. He continues as follows:

"At first sight, it looks as if he was simply trying to make us laugh, but his irony is quite a surface affair. Underneath, it is indignation that burns and bursts out. It is not his way to attack bad passions and vices directly, but he applies himself, by the vehement opposition of their contractes, to provoke our anger and contempt. Never was there an author who put into pathetic action more personal emotion than Dandet, and, among his books, I know none which, more visibly than 'Sapho' ' lack,' reveal the man through the artist and writer. In short, this scoffer was nowise a skeptic. His irony, even in its most diverting form, hides a sensibility ever ready to be moved, and it is because he did not always know how to detach houself from his sentimental creations, and because he was too much bent on inspiring us with the love of good by the powerful autithesis of the consequences of evil, that he sometimes fell into exaggeration and invraisemblance. The beauty of his work suffers a little from this, but its morality and its social significance are enhanced proportionately thereby. The satirical work of Daudet is of that sort which acts strongly on the customs and manners of an epoch and transforms the present into the future."-Translation made for THE LIVERARY DIGEST.

#### THE QUESTION OF "GREATNESS" IN LITERATURE.

BY what standards shall we estimate the supremely great in literature, and what terms are we to apply to the enormous masses of literature that lie below the line of greatness? W. P. Trent, professor of English literature in Columbia University, who sets himself to answer these questions in The International Monthly (May), admits that the task is a most difficult one. "It is hard to conceive of a rasher attempt, at least in the sphere of thought," he says, "than the one implied. . . . Yet it is obvious that if every man stood in awe of being deemed presumptuous and kept silence with regard to all vexed problems, few attempts would be made either to settle or to come nearer settling them," He continues:

"How do we as individuals use the term 'great' in literature? We use it loosely, but no more loosely than we do in other connectious, and presumably we all use it mainly of things or persons that do something, not of things or persons that are on the whole quiescent, no matter how full they may be of potential energy. The great statesman, for example, is to each of us the man who accomplishes something in the sphere of politics, not the man who has merely the potentialities of success. And he must accomplish something which in our view is large, important, influential, comparatively permanent, more or less original, and unique, or we shall not call him great. Do we not apply the term in literature in some such way? The poem or the poet, the book or the writer, must actually do something with us, and that something must be large, important, influential, comparatively permanent, more or less original, and unique. Obviously there are two spheres in which this large, important something may be done-the sphere of our emotions and the sphere of our intelligence. One book stirs our feelings deeply and permanently; another opens out a range of new ideas which make an impression upon our lives; we call both these books great, and rightly,"

That individual judgments and collective judgments are often widely at variance is obvious. Even the greatest critics have applied the same standards with totally different results. In spite of these facts. Professor Trent points out that "there is a small group of what are sometimes called world-writers-writers. chiefly poets, supremely great, who are read in nearly every land and have been so read almost since they wrote; who seem

to be separated in point of genius by a wide chasm from all other authors." He says:

"They are very few in number: Homer, Sophocles, Vergil, Dante, Shakespeare, Milton. Goethe nearly exhaust the list. Mohère however should be added because he represents the comedy of manners so marvelous. ly, and we should doubtless include Cervantes and a few others. It is clear that the writers named are supreme in their excellence, and it is

PROF. WILLIAM P. TRENT.

also obvious that they have no living peers. In fact, there are scarcely more than two recent authors known to us who seem possibly entitled to such a high rank, and they are Victor Hugo and Balzac, about whom the critics are still arguing pro and con."

Below these writers, yet far above the majority even of writers to whom the word "great" is freely applied, comes "a small group of writers of very eminent originality and power, of great reputation outside their own nationalities, but still not universal in their genius, nor so dazzling in their achievements as the supreme or world-writers." We quote again :

"Into it would seem to fall such poets as Pindar in Greek, Lucretius in Latin, Petrarch, Tasso, and Ariosto in Italian, Chaucer and Spenser in English, Schiller and Heine in German. It is not unlikely that some critics, desiring to give the French a place in the list, would insert the name of Victor Hugo; but as we have just seen, he is a candidate for higher honors, and personally I should unhesitatingly assign those same higher honors to Voltaire in his capacity of prose writer and poet combined. But whatever we may say of French poets, there are at least two French prose writers who seem very great-Rabelais and Montaigne-and to balance them we may name two very great British prose writers, Swift and Gibbon. But we must be tentative in our illustrations, for there is little unanimity among the critics, as may be seen by comparing the rank given Chaucer by Matthew Arnold and that given him by Mr. Theodore Watts-Dunton. Not a few of us would doubtless like to assert emphatically the supreme position of the author of 'The Canterbury Tales, but, while his merits are being more and more acknowledged by foreign scholars, it may be questioned whether he has even yet attained a truly cosmopolitan fame."

Still another classification must be made of writers whom "one would never think of calling sunreme, altho one would as little think of calling them minor." Of this grade Professor Trent says:

"No attempt at enumeration is here demanded, but we may be reasonably sure that both Catullus and Horace belong to the Roman list and Leopardi to the Italian. In English we have in this class such poets as Marlowe, Ben Jonson, Dryden, probably Pope, and perhaps Gray, Birras, Coleridge, Keats, very probably Tennyson and Robert Browning, as well as Wordsworth, Byron, and Shelley, unless the partitans of the last group succeed in elevating one or more of them into the class of the very great poets. ... We need not add the names of many corresponding masters of prose. Those of Charles Lamb and Landor and Hawthorne will he sufficient."

"All that has been said," concludes the writer, "is intended to be suggestive merely. Even if the classification has been made on correct lines, it needs filling out and requires many qualifications. . . . And we must always remember that any scheme of classification is bad if it tends to make our judgments hard and fast, if it induces us to think that we can stick a pin through a writer and ticket him as an entemologist does an insect. But if we use such a scheme intelligently, it may prove useful, if only by stimulating us to candid objections, for enadid objections imply honest thought, and honest thought on such a noble subject as literature can not hat be beneficial."

### MAETERLINCK'S NEW DRAMA, "MONNA

FROM philosophy, natural science, and the contemplation of the mysteries of existence, Maurice Macterlinck has turned to art again, to the drama, the not to that poetic and symbolical form of it which marked the first period of his career as a playwight. A new work of his, a drama of human love and suffering, of distillusionment and emotional struggle, entitled "Monna Vanna," has recently been produced at Paris during a "Maeterinck week," for the Belgian poet-philosophier visited the French capital to superintend the production of an opera based on his "Pelleas et Melissande" and of the new play just named.

In reviewing this drama, for whose plot Maeterlinek went back to the time of the Italian remissance, Catule Mendes writes in La Journal: "It is a very fine tragely of love. There was reason for announcing that M. Maeterlinek- had bandoned the mysteries—so alluring, withal—the shadows and the obscurtties in which he formerly delighted. What was adolescent 1: his genius has developed into virile, firm, clear, rare talent, and, aside from certain chimerical thoughts almost superhuman, his new the clear is represented by palpitating humanity, which loves, suffers,

The lesson of the drama, so far as one may be disengaged from the story, is said to be this—that sincerity, absolute trust, and faith are essential to love, and that distrust, jealousy, or the faintest auspicion destroys that sentiment. The plot, in brief, is thus summarized by M. Mendés:

"Toward the end of the fifteenth century, Florence, at war with Pisa, almost conquered and reduced her with the masterly aid of a mercenary soldier named Prinzevalle. Pisa is without provisions and ammunition, and must surrender at the next assault. The population is desperate, facing death from the enemy's sword or from starvation. The commander of the Pisanese troops, Guido Colonna, is conferring with his lieutenants and wondering why the final assault is delayed. Guido's father, Monco, a philosopher and somewhat pessimistic judge of men and things, returns from the enemy's camp at this moment, whither he had gone under a flag of truce. He brings amazing news. Prinzevalle is ready to spare the city and to betray his master, delivering arms and food to Pisa-but on one condition: Monna Vanna, Guido's beloved wife, the most beautiful and fascinating woman in Pisa, must come to Prinzevalle's tent, alone and at night, with nothing but a cloak to cover her nude boly, and she must remain in the tent till dawn, obeying Prinzewalle's will

"Guido is furious at this shameful, dishonorable suggestion. Never will be consent to this sacrifice, be the cost what it may. Moreover, Vanna, the virtuous and gentle and good, will scornfully repudiate the monstrous proposal; of this he is sure. But the old Marco thinks otherwise; Monna will consent, he says, for the sake of the city—the thousands of women and children who are threatened with death. Vanna is called and informed of the condition; she consents. She is ready to make the saypreme searrifes of her honor. She thinks the victorious mercenary captain old and ugly, but her hussand tells her that, on the contrary, Princeralle is young, hantisome, and brave. He susther she had never seen him. He is mad with rage, but had aerred to alide by Yanna's skerisjon.

"She carries out her promise. At night she goes into the enemy's camp and enters Prinzevalle's teat. She is wounded by a shot Intended for some one clee just as she enters. Prinzevalle asks her a few questions; the answers are frank, simple, noble. She loves her husband profoundly; she deplores the sacrifice, but is resolved to submit to the tragic necessity. Prinzevalle, however, has already been compared by her charm and for the property of the property of

"He kisses her on the forehead; she returns the kiss, and she is free, while Pisa is spared, Prinaevalle follows her into the city. Her bushand, anxious and distracted, meets her. She lells him the truth, but he does not believe her. She protest and asserts her innocence, but in vain. Prinaevalle is attacked, and Guido plans terrible recepte. But he must know the truth, and promises to pard on Prinaevalle if Vanna will but confess, "This distracts this factors that the confess of the prinaevalle in the

"This distruct, this jealousy, these manifestations of lack of perfect faith and confidence, kill Vanna's love for her bushand. She is now free; the real marriage tie is broken. She'confesses' accuses Princevalle of the outrage he has not committed and people consent. Princevalle is placed in a dungeon to which vains alone its to have a key. She is to be his executioner. But old Marco is not deceived. He knows that Vanna now loves Princevalle. For Vanna a new dream has begun, and Guido has Princevalle. For Vanna is we dream has begun, and Guido has

Mendés and other critics find flaws in the development of the drama and object to certain episodes as too sensational drama and object to certain episodes as too sensational "theatrical." But they praise the beauty, sonority, and chaste simplicity of the style, the rare and original magary, and the grandeur, boldness, and loftiness of the ideas of the "psychological" play. The ending, it is remarked, is too vague for average theater-goer, the sufficiently definite considered poetically.—Translation made for Thus LITERARY DIGEST.

On the occasion of the recent visit of the Rochambeau party to St. Louis a memorial tablet was unveiled by Mark Twain "at the house where Eu-

gene Field was born, 624 South Broadway." Eugene Field's brother, Mr. Roswell M. Field, now rises to remark that "Eugene Field was not born at the house at 6s4 South Broadway, or within a mile of that neighborhood!" Sava the St. Louis Globe-Democral: "After recovering from the unpleasant shock that this information conveys to us. must still maintain that the generally unlifting sentiments inspired by the unveiling do not necessar-Ily lose their effect through e mistake of this sort the poet whom we love to honor was born even with in a mile of the memorial of him that we have set up, there is virtue in it; and yet we can not refrain from a furtive amile at the thought that it is the most diverting loke Mark Twain was ever caught in, recalling in some degree his own account of his grief at the tomb of Adam."

#### SCIENCE AND INVENTION.

#### DO NATURE'S LAWS CHANGE?

That an eminent scientific man should make a statement to apparently subversive of the foundations of science as that the laws of nature are changeable is certainly noteworthy. This is what Prof. S. P. Langley, secretary of the Smithsonian Institution, did on May to last in a paper read before the Philosophical Society of Washington, and now published in Science (june 13). Professor Langley's position is thin there are no teal natural laws; that what we call "laws of nature" are merely expressions to simplify the results of human observation; and as science progresses and viewpoints change, the so-called "laws" have to change too. He says:

"It is perhaps a hard saying to most that there are no such things as 'laws of nature'; but this is the theme on which I have to speak.

These, then, are the laws of man's own mind, or the effects of his own mind, which he projects outside of himself and imagines to be due to some permanent and unalterable cause having an independent existence.

"To decorate our own guesses at nature's meaning with the name 'laws of nature' is a presumption due to our own feeble buman nature, which we can forgive for demanding something more permanent than itself, but which also leads us to baxe and an exalted conceit of our own opinions as to hide from ourselves that it is these very opinions which we call nature's laws.

"The history of the past shows that once most philosophers, ceven athesis, thus segarded 'the laws of nature,' not as their own interpretations of her, but as something external to themselves, as entities partaking the attributes of Deity—entities which they defined in print with capital letters—as we sometimed ostill, tho these 'laws' now are shorn of 'the glories of their birth and state' which they once wore, and are not turning out to be substantial things.'

"But are there not really things (like the fact of gravitation, for instance) external to ourselves, which would exist whether we-were-here or not, and which are part of the order of nature? Apparently, yes,—but part of the laws of nature, no!

"The phrase even yet exercises a wide influence, tho it has seemed to me that a significant change is taking place in the leaders of common opinion with regard to the meaning that the words convey.

"The present generation has begun, if not to be modest or humble, to be somewhat less arrogant in the assumption of its knowledge. We are perhaps beginning to understand, not in a purely poetical sense, but in a very real one, that there may be all around us, in beaven and earth, thurgs beyond measure, of

which philosophy' not only knows nothing, but has not dreamed.
"As a consequence of this, there is growing to be an unspoken, rather than clearly formulated, admission that we know little of the order of nature, and nothing at all of the 'laws' of nature."

An interesting consequence of this changed feeling, Dr. Langley asserts, is that a scientific man may now be more ready than formerly to admit the possibility of a miracle. Hume's argument against miracles, he says, was and is absolutely conclusive when we grant his premises—the absoluteness of natural law. But there is much more mystery around us to-day than in Hume's time. It may be, of course, that there are even fewer believers in the miraculous now than there were then; but so far as the work of science goes, Dr. Langley asserts, belief should to-day be easier instead of more difficult. This is certainly provocative of thought.

The writer next proceeds to deduce a warning for the future. What happens, he says, when a miraculous or unnatural event happens? Why, the "laws of nature" are adjusted, and after being enlarged by a little patching, so as to take in the new fact, are found to be inst as good as ever! He goes on.

"So it is always, when the miracle has happened, then and

only then it becomes most clear that it was no miracle at all, and that no law of nature has been broken.

"Applying the parable to ourselves then, how shall we deal with new facts which are on trial, things perhaps not wholly demonstrated yet partly plausible? During the very last generation hypnotism was such a violation of nutural law. Now it is a part of it. What shall we say, again, about telepathy, which seemed so absurd to most of us a dozen years ago? I do not say there is such a thing now, but I would like to take the occasion occupres my feeling that Sir Wilham Crookes, as president of the British Association, took the right, as he took the couract of the objects of richeste and part of the courage of the objects of richeste angle of the rate as ago, of delate now, but which have not all found supporters who possess the courage of their conviction.

"The lesson for us in dealing with them is not that we should refuse to believe, on the one hand, and sneer at everything which is on its trial; for this, the a very general and safe procedure, is not the one to be recommended to those of us who have some higher ideal than acquisecence with the current

"The lesson for us is that we must not consider that anything is absolutely settled or true.

"This is not to say that we are to be blown about by every wind of scientific doctrine. It is to be understood as a practical rule of life that we must act with the majority where our faith does not compel us to do otherwise; but it seems to me that we must always keep ready for use somewhere—in the background of our nind possibly, but somewhere—in perhaps trite notion that we know nothing absolutely or in its essence; and remember that the trite it is always true, and to be kept as a guide at every turning of the scientific road, when we can not tell what is coming next. . . . . . . . .

"Let us repeat, and repeat once more, that the nature be external to ourselves, the so-called 'laws of nature' are from within—laws of our own minds—and a simple product of our human nature. Let us agree that the scientific imagination can suggest questions to put to nature, but not her answers. Let us read Bacon again, and agree with him that we understand only what we have observed. Finally let us add that we never understand the so-called laws of nature the most constantly observed, and most intimately and personally known to us, are those of life and death—and how much do we know about the meaning of them?"

### EARTHQUAKES, VOLCANOES, AND SOLAR CHANGES.

A T least one scientist believes that the recent West Indian outburst is connected in some way with sunspot activity on the solar surface. Sir Norman Lockyer, whose life-long study of sunspots has led him to believe that they are closely connected with many terrestrial meteorological phenomena, has been comparing records of seismic daturbances for the last seventy years with recently compiled tables of solar activity, and he writes thus to Nature (London) of what he has discovered.

"I find beyond question that the most disastrous volcanic cruptions and earthquakes generally occur, like the rain pulses in India, round! the dates of the sunspot measimum and minimum, More than this, the 35-years otal period established by Dr. Lockyer, which corresponds approximately with Bruckner's meteorlogical cycle, can also be obviously traced, so that, indeed, the intensification of the phenomena at the minimum of 1867 is now being repeated.

"In 1867, Mauna Loa, South America, Formosa, Vessurus were among the regions involved; in the West Indies it was the turn of St. Thomas. Then many announcements of earthquakes in the present year before the catastrophe of St. Pierre will be in the recollection of everybody.

"In the maximum in 1871-72, to name only West Indian stations, Martinique first and then St. Vincent followed suit; in the next maximum, in 1881 came Krakatoa.

"At Tokyo, in a country where the most perfect seismological observatories exist we find that at times near both sunspot ma.i-

ima and minima the greatest number of disturbances have been

"Very fortunately, the magnificent work of the Indian Meteorological Department enables us to associate the solar changes with pressures in the tropics, and obviously these pressures have to be taken into account and carefully studied."

In conclusion, Sir Norman asks that meteorological observers in the West Indies and the surrounding regions will send him copies of their barometrical readings, showing the departures from the local averages for the two months preceding the eruption at St. Pierre. In this way he hopes that one or two years may be saved in getting at the facts regarding the possible connection of the cruutions with solar activity.

#### A DARING INVESTIGATION OF MONT PELÉE.

OF several daring ascents of Mont Pelée while still in activity, those made by President Angelo Heliprin of the Philiadelphia Geographical Society are especially noteworthy, because Professor Heliprin is a trained scientific observer. The results of his investigation which have first been made known throw interesting light on the nature of the recent catastrophe in the West Indies, and show that many commonly received ideas about it have no foundation. Says The Scientific American (June 14):

"The first ascent of the mountain was made on May 31, and the second on June 1. On the first expedition, when the edge of the old crater was reached, the party was overtaken by a terrific thunder-storm. Clouds of rain and steam from the volcano so. completely enveloped them that they were able to see only a few feet. Further progress was impossible, for on account of the electrical disturbances their compass refused to work, varying as much as twenty degrees to the eastward. With great difficulty they groped their way down the steep ridge, slipping at every sten; for the rain-soaked ashes afforded a precarious footing and threatened to harl them down the yawning gulfs at each side. The terrific detonations heard were supposed to be of volcanie and not electrical origin, for when the River Fallaise was reached it was found to be filled with steam and mud indicating a fresh volcanic disturbance. The party reached Acier, caked with mnd and much disappointed. However, on the next morning, Professor Heilprin was ready for another encounter with Mont Pelée. We can not but admire the bravery and devotion of this man who, with his followers, twice climbed the angry volcano, and who once, by a sudden dash during a lift in the clouds of vapor, reached the very lip of the crater, from which point stones could be dropped into the white-hot mass, 200 feet below. Standing on the very brink of the crater, he was witness of a most awful, vet fascinating scene. As was to be expected, the principal output of the crater was steam, and but for a favorable shift in the vapor clouds the party could not have made the valuable observations that they did. So far as known, steam is always found in volcanoes, and seems to be the main cause of the eruption, Scientists divide volcauoes into two classes: the quiet, characterized by a flow of lava, and the explosive, characterized by the blowing out of fragments. Professor Heilprin states positively that no lava has flowed from the crater of Mont Pelée. One of the main characteristics of the explosive volcano is what is called the 'einder-cone.' This is formed of material which is cast out and which drops back around the orifice from which it was thrown, forming a cone. Professor Heilprin, however, states that no such cone was found in this volcano. What was taken to be a cinder-cone proved to be but a pile of ejected rocks with no central vent. Of course, in the present condition of Mont Pelée, it is impossible to state absolutely that there is no cindercone, for it was possible to see down only about 200 feet, and it is believed that the crater is much deeper than this. In shape, the new crater appears like a great gash in the mountain, runuing north and south and expanding into a bowl. The fissure runs transversely to the old crater, and appears to have nearly rifted the mountain."

Another commonly received report that is shown to be unwar-

ranted is that relating to the supposed lowering of the mountain. Statements have been made that the mountain is now reduced to one-third its original height. This is now shown to be utterly untrue, for from a number of observations taken with an ancroid barometer; it was found that the height of the mountain had remained unaltered and that no important topographical changes had taken place. The writer goes on to say.

"The exaggerated reports may have had their origin in the fact that a dense cloud of steam normally covers the top of the mountain, which might lead to the supposition that the mountain was much reduced in height. From the investigations made. Professor Heilprin considers violent eruptions improbable. Mont Pelée has freed itself of interior pressure, and while small disturbances may continue to occur, they will probably decrease in frequency and power. However, no one can prophesy with certainty on subjects of this sort. Volcanic action is very little understood; new and unexpected phenomena are continually occurring. The explosion of flaming gases is unprecedented, so far as known, and was probably the main cause of the terrible loss of life. The electrical phenomena were also new, tho they probably did not play an important part in the destruction of the city. Specimens collected by Professor Heilprin show that the lightning bolts were small and very intense, penetrating the walls of the houses. No other volcano was ever so rapid in action, and never before has such a loss of life resulted directly from a volcanic eruption."

#### ELECTRICITY UP TO DATE.

A COMPREHENSIVE abstract of those views of electricity that are based on the very latest discovery and experiment may be found in an article published in the London Electrician (March 21). According to these views, electricity is a material substance, just as the earliest experimenters thought that it was: only, it is identical with ordinary matter, the electric unit, or "electron," being nothing but a tiny othip separated from an atom of any elementary substance. The writer goes on to say:

The generation of 'electricity' consists in splitting off an electron from the atom. The electron then produces a stress in the ether similar to that due to a 'negatively' charged body, The remainder of the atom acts as a 'positively' charged body, tho we do not know as yet whether the positive charge is due to a special positive electron or not. If it is, we have not yet succeeded in isolating the positive electron, but it is supposed to be about ten times heavier than the negative electron. In any case we have here an elementary negative charge of about one-tenbillionth of the absolute unit and an elementary positive charge of the same amount. These elementary charges attract each other and repel similar charges. They can associate with clusters of neutral particles. A negative electron thus associated with ordinary matter becomes a negative ion, and a positive electron becomes a positive ion.' Conduction consists in the wandering of positive ions down the potential gradient, and of uegative ions up the potential gradient. This wandering cau take place in metals. It then produces heat by collision with the molecules of the metal, and a magnetic field by the motion of the charges. In a liquid, the energy of motion is consumed in the splitting up or 'ionization' of neutral molecules. Every current of heat is associated with a transportation of ions, and here the whole field of thermo-electricity is entered. In the vacuum-tube, ions move with less restraint. Negative electrons are shot off from the cathode with the velocity of light, or something very nearly approaching it, and where they strike upon a solid they produce explosive ether-waves of remarkable penetrating power which are known as Roentgen rays. Where they hit gaseons particles they ionize them, and in doing so develop great heat and light, thus giving rise to the whole fascinating vista of vacuum discharges. Nor is their wonderful activity confined to the fields enumerated; for the whole phenomena of magnetism are based upon the electron. Whenever an atom has a high valency, such as iron, cobalt, or nickel, it appears that the free electrons which constitute these valencies revolve round the rest of the atom. These revolutions produce whirls in the ether which are known as magnetic displacements or stresses, or 'lines of force,' and whenever a conductor, i.e., a body containing freely movable ions (say one for every 5 000 neutral atoms) is moved through these whirls, the ions are set moving in opposite directions with a velocity of about one centimeter per second, and we have the whole phenomena of induced currents. The enormous rapidity of the magnetic revolutions may be judged from their probable period, which is about one-trillionth of a second. In the electric arc we have not only a great exchange of opposite ions, but a vivid ionization due to ultra-violet light, and Elster and Gentel have shown how this ionizing action of ultra violet light may lead to the elucidation of all the problems of atmospheric electricity. The latest information, as recently supplied by us, goes to show that ionization is constantly going on wherever there is matter, and that some bodies have the faculty of projecting either negative electrons or positive ions with some force. These bodies, like radium, actmium, and polonium, are then said to be radioactive. Hurmuzescu has gone further, and proved that the electrons revolving in magnets often shoot off at a tangent and 'electrify' a liquid in which they are placed.

All these manifold applications of the electron idea show that we have here one of the most fruitful conceptions of the human mind. We have at last discovered, and even isolated, what we may call the 'electric substance.' We can weigh it, and measure it, and produce it in any quantity. It may yet prove to be the 'protyle' of the philosophers-the fundamental and primordial substance of the universe. Whether it is that or not, we have now some definite and almost tangible nucleus round which to crystallize our thoughts. The 'electric charge' is now no longer a mere phantasm of the mathematician. It is a solid reality; as solid, at least, as a deal table. It remains . . . to remodel our text-books in accordance with the new truths, and to build up our whole electrical science upon the properties of the substance whose conquest has been so long and arduous a task."

#### GESTURE AND NATIONALITY.

T is comparatively easy to tell a person of a Latin race from a Teuton by watching his gestures. A writer in La Science Illustrie (May 31), M. P. Fardeau, goes further, and asserts that every race has its own characteristic gestures, or at any rate its own system of gesture. M. Fardeau begins by quoting

NEAPOLILAN NEWSBOY.

so greatly appreciated, .

Diderot's assertion that ail gesture is metaphoric, which be indorses as "an exact characterization of this translation of feeling into anaiogous movement." He goes on

to say

"With primitive man gesture came before speech, and it must therefore have been very complex; it is still more in use among savages than with civilized peoples. We understand less and less the delicate art of pantomime, once

Gestures may be divided into two great groups : "(1) Gestures of extension, which express force. joy, pleas-

ure, pride, revolt, action by the affirmation of the personal element in the effort for life.

(2) Gestures of flexion, expressing fatigue, grief, illness, humility, thought prayer, repose-the abasement of self with weakening of the effort for life.

'Certain gestures are absolutely identified with certain feelings. To shake one's fist is to threaten; to hold up one's finger is to warn. To indicate thought, we place the tips of the fingers on the forehead; to show concentrated attention, we apply the whole hand, . . . To rub the hands is everywhere a sign of joy and to clap them a sign of enthusiasm. It would be easy to multiply examples; affirmation, negation, repulsion, are all indicated by motions that every one understands.

The influence of the brain over the gesture is well shown in the different professions. The soldier has an attitude of extension; the priest, one of flexion. . . . The sailor, the horseman, the dancer [says Mantegazza] can be easily recognized; the banker, the notary, the lawyer have also characteristic gestures, but in their cases diagnosis becomes uncertain.

"It is the same, in quite as great a degree, with nationalities, in spite of the original diversity of the races that make them up. The mimetic char-

acter of each nation results at once from race, from history, and from climate

"The climato notably influences the number and mobility of the representative images, and the more numerous. ravid, and intense these are, the more so do the corresponding motions become. In warm countries, existenco is easy and all active manifestations are greatly developed. In cold regious, on the other hand, where the is constantly veiled by clouds, the man is self-concentrated, sad, silent : for him life is a perpetual struggle.

NEAPOLITAN LEMON-SELLER

manner in gesture. The first is found among the Italians, the French, the Slavs; the second among the English, the Ger-

mans, the Scandinavians, and the Spaniards, . . . "The physiognomy of the French, says Lavater, is open; it announces a thousand agreeable things at once. The Frenchman, he adds, does not know how to keep silent; when his mouth is shut his eyes and his facial muscles continue to speak.

. . The Frenchman expresses what he wants by his face and his gestures; thus he betrays himself at the first giance and can hide nothing. Mantegazza finds that our gesture is 'eccentric,' in the physiologic sense; that is, expansive rapid and gay. This statement requires qualification, for there are Frenchmen and Frenchmen; those of the North are sober in gesture, while those of the South, Provençals and Gascons, gesticulate with exuberauce.

"The gesture of the Englishman is fierce and harslt; he speaks briefly, brusquely; he is cold, positive, forceful. His salutation is cold and accentuated, but his handshake is loyal, . . . The art of gesture, of pantomime, is nowhere so appreciated as in England. The English mimics are extraordinary. I must say, says M. Engene Nouton, in his book on comparative physiology, that no spectacle in the world has impressed me like their performances, . . . The genius of the English people was there-harsh, energetic, sharp, and coid as steel, somber as storm and death, profoundly human,

"According to Mantegazza, the gesture of Germany is beavy, good-humored, and always ungraceful; many of the Siav peoples are unwilling to look one in the face, and they have a false gesture.

"The Spaniard and the Portuguese, altho dwelling in a Southern land, gesticulate little, their language is rhythmic, slow, solemp; they are grave . . . their salutation is a little theatrical.

Their faces remain almost always impassive, owing somewhat to Asiatic influence, but especially from a feeling that a hidal-go's dignity must not be compromised.

"The Italian is lively, mobile, intelligent, gay: his language is harmonious, sonorous, warm, and luminous like his country's sky. The salutation of the Italian is quick and full of feeling; his gesture colored and exaggerated.....

"In Naples gesture often takes the place of words, not only with lazaranio, but even with princes. King Perdinand, on the return to Naples after the revolt of 181, addressed his subjects in gestures; for exproached them, admonished them, and impless them, and include them, are included as ingestivers; the returned with the particular of the principle word.

"Our two pictures, made from instantaneous photographs, are valuable documents for the study of Neupolitan gesture. The little newaboy is joyful. Doubless a customer has beckoned to him... and the whole body of the boy is stretched out toward the purchaser. It is the extensive gesture in its whole intensity.

"Gesture in extension is also shown by the little lemon-seller, but it expresses revolt and not joy. He is asserting, not without anger, with voice and gesture, to a too miserly client, that for one sou he gives five and not six lemons, as the buyer doubtless wishes."—Translation made for Time LINERARY Discreta

#### HIGH SPEEDS ON THE HIGHWAY.

TILAT great speeds can be attained on an ordinary highway with moderate power has been shown by the so-called "Baker torpedo" automobile, which, altho it ended its career, in a public speed trial on Staten Island (May 31), with a tragedy, seems to have made good its inventor's claim that speed depends more on construction than power. At the time of the accient that put a sudden stop to the trials, its speed was estimated at 75 miles an hour, and it is said to have made 80 or 90 miles an hour in the West. Its inventor, in a statement issued before the trial, said that the practical feature of the race was to center the public attention to the fact that great results are secured from little power. It added:

"We availed ourselves of the opportunity offered in this speed contest, that we might publicly show in a practical way that our theory of electric automobile construction was based upon principles of applied science in which friction is dealt with and reduced to such a degree that our small power demonstrates resuits equal to or greater than the larger, cumbersome, and more expensive machines.

"The racer, being impractical for daily service, becomes practical to prove the correctness of our regular designs, for, unlimited by any demands for comfort or curbed by regulations as to speed, we simply carry our lines to the extreme to secure abnormal results, or, in other words, we magnify our every-day theory of manufacture in a degree sufficiently important to attract unsual attention.

In this case, the whole machine, chauffeurs and all, was covered with a turtle-or toped-olite casing, even the wheels being swathed in oil-sulk to lessen air-resistance. In view of the accident with this machine in consequence of the giving way of one of the wheels, it has been resolved by the Automobile Club of America to discountenance road-racing in future; but records will doubtless continue to be broken on specially constructed tracks, and if the day ever comes, as Mr. H. G. Wells thinks it will, when special roads are constructed fast motor use, we may see private vehicles running over them at higher speed than that of a fast erlyress.

The Birth of a Crystal.—The formation of crystals has been studied by Messrs. Richards and Archibald at the Harvard Chemical Laboratory, by means of photography, a special form of microkinetograph being used, by which magnified pictures of successive phases of formation could be taken. The experimenters wished specially to test the theory that in the primary stage of a crystal it is a liquid globule. The investigators summarize their results as follows in *The Scientific American* supplement (Xo. 1,379):

"It has been found possible to take very frequent photomicrographs of crystals during their birth and growth. An enlargement of over 4,000 diameters was obtained, and both common and polarized light were used. Only substances with high melting-points were examined, and the crystallization was always from aqueous solution. No properly forsued image on any of the plates seemed to be devoid of crystalline structure. The growth in diameter during the first second of the crystall's life was found to be vastly greater than during the subsequent period. It was the control of the crystallization of the crystalliz

... We may conclude that whatever theoretical reason there may be for believing that crystals always develop from a transitory liquid phase, the present experimental evidence is inadequate to prove that these globules attain a size visible in the microscope, except in the case of substances which melt at temperatures not far from the temperature of crystallusation."

The First Milliard of Minutes of the Christian Era,—The Parisian papers recently annonneed that one milliard (a thousand million) minutes since the birth of Christ had elapsed on April 14, 1952, at 10.40 A.M. M. Camille Plammarion, the well-known astronomer, took exception to this statement and announced to the Astronomical Society of Frauce that, according to his calculations, the milliard of minutes was attained April 18, 1952, at 6 10 r.m. The calculations of M. Flammarion were pashed to the thousandth of a second. Now comes the "Bureau of Longitudes" masering that Flammarion made an error of nine days, sixteen hours, and thirty minutes. The calculations of the "Bureau of Longitudes" may be thus summarial.

"We follow the Gregorian calendar, which is thirteen days alread of the Julian calendar of the Russians. In the Julian calendar we have a bissettile year every four years, or twenty-five bissettile years during a century. Until the end of 1900, the last year of the nineteenth century (for everybody except His Majesty Kaiser of Germany), we have in the Julian calendar 475 bissectile years. Therefore we have 965 multiplied by 1900, plus 475, or 95,9755 days, according to the Julian calendar and 693,052 days according to the Julian calendar and 693,052 days (e.g. 194),053 days (e.g. 194),053 days (e.g. 194),054 days (e.g.

"One day being equal to 1,420 minutes, 996,89.850 minutes elapsed up to the beginning of the present year. To reach the milliard, we have to add 169,120 minutes, equivalent to 117 days, to hours, and 20 minutes. Jannary, February, and March include 90 days, to which we shall add 27 days, to bours, and 20 minutes of the month of April, which brings he milliard of minutes to the month of April, which brings he milliard on minutes to April 25, 81 40 minutes past 100 clock a.m."—Translation made for The LITERARY DESIGN.

#### SCIENCE BREVITIES.

"Tilk dignity of a cable despatch," says The American Machanat," signer the announcement that an engineer of the Chanty Islands has devised a method of extracting electricity from the atmosphere 'without the use of chemicals or a dynamo or any motive force, 'Prankin did a thing very like this when he flew his kite; but making practical use of atmosphere electricity is a different matter,"

"A BI MAKEAILE, phenomenon," remarks "Asmirdge," was recently observed on the Californian coast. One day last july as streak of red water' was noticed some distance of the month of San Pedro harbor, which salter than the control of the control of

#### THE RELIGIOUS WORLD.

#### THE MORAL ASPECT OF AN ACT OF GOD.

UNDER the above caption the London Spectator (May 17) engages in the current discussion of the Martinique calamity in its relation to a divine Providence. Adverting to the question as to how far such disasters are to be considered acts of God, The Spectator reasons as follows:

"The consideration of instances shows that a disaster arising from a pure act of God is extraordinarily rare, and that as the standard of prudence rises, as the storehouses of experience expand, as the knowledge of the laws of nature increases, even these rare instances tend to disappear. Many accidents that formerly would have been attributed to the act of God would now rightly be referred to gross personal negligence. Surely, therefore, we may have faith enough in science at least to believe that the day will come when men will no longer be afflicted by the dread of sudden and irresistible acts of nature that can not be foreseen, or if foreseen can not be prevented or forestalled, Is it, for instance, too much to suppose, had there been in the town of St. Pierre a high standard of prudence, a large accumulation of experience, and an adequate and (quite attainable) knowledge of the laws of nature in their application to volcanic conditions, that this outburst could have been prophesied with certitude months ago, and the entire population removed to some safe place for temporary refuge?

"If this is true, the 'so-called act of God ' takes on a new aspect. By means of such acts, through dread of such acts, the human race is compelled to develop to the utmost its highest intellectual and its deepest moral functions. We can imagine without irreverence the Creator saying to the created: 'I have given you inherent power to control and use all the forces of nature: if you do not choose to develop that power these forces will slay you.' It will scarcely be denied that it is in the contest with nature that the highest intellectual faculties of man have been developed. It is less obvious, though equally true, that it is in that same conflict that the deepest moral faculties have been also evolved. For nature has a way of creating new and subtle problems that require for solution not merely intellectual, but also extraordinary moral qualities. The laws of supply and demand, for instance, have created great cities and industrial districts which have in their rapid growth developed appalling social problems, such as overcrowding and chronic pauperism. new problems involve the year-long misery, suffering, and degradation of vast multitudes, and not merely-for one may use such a word in such a comparison-the one great awful pang of an instantaneous act of God.' Such social problems are acts of God as truly as the volcanic upheavals in the West Indies, and indeed have more than once been accompanied by social volcanic horrors more fearful than those which we mourn to-day. To solve such problems, such acts of God, needs the highest human intel-

ligence, the noblest human sympathy, love and self-sacrifice."
It is customary in reasoning upon great evils, indeed, all evils,
to construct a logical dilemma, one horn of which excludes God's
plenary power and the other of which impencies His beneficence.
Referring to this form of argument, The Spectator ways:

"If the superbest manifestations of human nature are involved in the attainment of empire over the forces that are exhibited in the working of natural laws, then it would appear to be the mere negation of reason to say that because terrible pain and loss and vicarious suffering are involved in the conflict there can be no God, or that if there be one He is either not all-powerful or not wholly moral. It is not necessary to solve the mystery and apparent cruelty of vicarious suffering in order to justify the way of God with man. It is by results that man is able to justify to himself the sufferings of this present world. He is appalled and horrified that the flowing fire of Mount Pelée should have fallen upon the just and upon the unjust; that innocent babes and saintly men and women should have been overwhelmed in the company of the sinners of the fated city. But with reflection the judgment modifies. We do not know, the knowing human nature we may surmise, what acts of sublime heroism, what deeds of noble repentance, may have taken place in those dreadful minutes of destruction; but we do know that a disaster of this

kind will set science to work to devise warnings and safeguards that will render life among volcanic ranges safer; and we do know that already the thrill of sympathy through the world is awakening self-sacrifice, and is drawing together in joint effort for the sufferers alien races long embittered by clashing ambitions and the sound of war. Thus, even applying the slight test of near results, we see, in this extreme case, that the passion for humanity need not hopelessiy descend to the denial of God. If this is so, we may surely affirm the moral aspect of every act of God. In a word, we have no more cause to deny the existence of God because of a great and violent catastrophe than we have when a swollen stream drowns a home-going laborer on a dark night. The difference is not in kind but only in degree. Nor, again, if we can trust God's purpose in the smaller mutations of life, is there any sufficient reason to doubt it in the shock of earthquake? If we are to turn materialists, we must find a better reason than that conveyed when death is simultaneous, sudden, painful, terrific, and multitudinous."

#### THE HEART OF CHRISTIANITY?

ONE of the commonest attempts now being made by persons who are trying to readjust religious formulas is to condense into the simplest and briefest form possible the essentials of religious trath. In considering what is the essence of Christanity, William Hayes Ward, D.D., in The Independent (June 13), classifies religion as a section of ethics, and affirms that the contribution of Christianity to ethics consists of the answer it gives to the chief ethical question, via., What is man's duty? Christianity's peculiar and essential feature is the doctrine of Love:

"Christianity first taught ethics its first principle of Love. In doing that it showed that righteousness, justice, common morals is not enough. Something more vital is needed, something more positive and forceful. Not to have done wrong is something, not to do to others what you would not have them do to you; but it has in it nothing really divine. To do justice is but the neutral level of morals, not bad and hardly good.

The pagan religions and Judaism failed to be truly missionary, and could not become universal because they never made the positive doctrine of love primary and central. Love, however, to be developed, must be practically applied, and hence a conversion is required by it to service and to evangelism. Dr. Ward proceeds to eliminate as essential various things that have at one time or other been required as integral to faith:

"Christianity must be a sptritual and not a formal, ceremial religion. As it is not national, but individual, so it is not prieatly, but spiritual. It accepts God as a spirit, who must therefore be worshiped in spirit and in truth. Christianity may use days, places, and rites, but they are no part of essential Christianity. Christianity finds use for the Sabbath, but the Sabbath is not a part of Christianity. Christianity honors the church, but can exist without the church. Christianity has two or more sacraments, but can dispense with all of them and still be good Christianity, for Christianity is not a body, but a spirit, and that spirit is love."

In a similar strain Dr. Ward rules out from among the essentials of faith the miraculous conception and other miracles

"Christianity teaches biographical facts about Christ, but we must distinguish the important from the non-important. It is interesting, but not important, that he came as a child. Paul never spacks of the virgin-birth, peritaps never heard of it, as the Gospels had not been written in his time. Christ's miracles are interesting and throw much light on his character, but they have not the importance of his teachings and example. Those teachings would be equally valuable if Jesus had performed no full-grown. These biographical facts, however interesting and however important, are not essential to the substance of Christianity. Christ's command of love and his teaching that God is a loving Father is essential.

A person may be a Christian even tho unable to believe in a

future life and holding to the doctrine of annihilation; even tho this involves disbelief in the resurrection of Jesus:

"Christ's resurrection is of even more importance than his death, because on it is based a considerable part of our faith in the future life; and it was of even greater importance for this reason to the early church. A belief in a future life, of blessedness for the good, and in which persistent wrong will suffer retribution, is of no little help, expecially in beginning a life of self-sacrificing love; for in it self-love adds its aid to disinterested love. But a belief in the future life, and so in Christ's resurrection, is not absolutely essential to Christian character, which, as we have seen, is the really essential. Hing in Christianly, for only the life of love is essential. It was in a flash of excessive and mistaken oratorical fervor that Paul exclaimed. What advantageth it me if the dead rise not? Let us ent and drink, for

#### BIBLICAL CRITICISM IN SUNDAY-SCHOOLS.

"I F the critical study of the Bible be accepted as inevitable and desirable, to what extent are the results of this to be introduced into our Sunday-schools at the present time?" This question receives the consideration of several representative men, knowe either as Biblical critics or prominent Sunday-school workers, who express their views in The Biblical World (May). A. E. Dunning, D. D., editor of The Congregationalits and one of the International Committee on the Sunday-school lessons, describes the situation as follows:

"A widening clasm divides the teaching of the Bible in schools and colleges from its teaching in many Sunday-schools. The accepted principles of the development of life and of the growth of literature, as taught in public schools, are being contradicted in Sunday-schools, in the effort to defend theories of the creation of the universe and of the composition of the Bible which are contrary to known haws of the evolution of nature and of literature. The consequences of such opposing teachings are not difficult to predict.

"The main conclusions of Biblical criticism are now accepted with practical unanimity by all scholars who have given attention to them. They have been reached by patient investigation, and have displaced traditional theories among educated people, just as the truths of geology and astronomy have supplanted the earth and the laws of the universe, that the sun, moon, and stars revolved around the earth. These conclusions have entered into the earth and the laws of the universe, that the sun, moon, and stars revolved around the earth. These conclusions have entered into assumed in nearly all teachers' Bibles and revent commentative, assumed in nearly all teachers' Bibles and revent commentative, and in the majority of lesson helps. The last step, their acceptance in the popular mind, can be hindered only temporarily by unreasoning conservation, ignorance, or prejudice,

"The Sanday-school is not the place to follow or to work out the processes by which these conclusions have been reached; still less the place to controvert them. But the results of criticism, so far as they correct false theories of the Bible and illumine its revealed truth, should be known and used by the teacher to increase the power of his teaching.

Prof. Willis J. Beecher, of Auburn Theological Seminary (Presby.), regards the Sunday-school as really not a school, but a place for exerting religious personal influence; and while assuming that some results of Biblical criticism will inevitably be found there, he makes the following suggestions:

"In my judgment, the most profitable study of the Bible, for most Sunday-schools, is that which mainly confines itself to the contents and the practical bearings of those parts of the Scriptures which directly illustrate the problems of life and duty. Of all things, a Sunday-school should avoid neglecting the work which it can do well for the sake of attempting work that is beyond its reach;

Camden M. Cobern, D.D., of New York City (Methodist Episcopal), thinks that the results of modern criticism should be utilized in a greater degree in the Sunday-schools than at present. He writes:

"That the viewpoint of present-day evaugelical scholarship

with regard to most Biblical questions is different from that occupied twenty-five years ago is also evident, not only to minsters, but to most of the intelligent laymen connected with our Sundayschools. Even those who are not academically trained, or well read theologically, are sure that something has happened. Many of these are cagerly inquisitive to know whether there is a new 'orthodory' which, while it takes account of all the valid results of modern criticism, yet finds itself able to hold to the great fundamental faiths of Christianish.

"Nowithstanding, then, the acknowledged delicacy of the situation, and admitting that it is better even yet to do or say nothing rather than to do or say the wrong thing, or the right hing in the wrong way, I am beginning to feel that there is a present need in Sunday-school work of a greater utilization of the results of madern Bhilder criticism.

"The main function of Biblical criticism in the Sunday school is to safequant the scholars from failst eaching, as that they are it is to safequant the scholars from failst eaching, as that they are school, or else drift off into Intideity. My judgment would be that op per cent. of the prevailing intellectual skepticism has arisen because of childhood misconceptions as to what trusts were fundamental to Christianity. These men have discovered the unreliability of certain things which they were taught to be lieve, and, supposing these beliefs to be essential to Christianity, they have given up all faith in the Christian system."

Amory H. Bradford, D.D., one of the editors of *The Outlook*, notes the inability of the average teacher to teach Biblical criticism, and goes on to say:

"But, asually, the work of interpreting the principles of criticism had better be left to the pulpit, and the Sunday-school confine itself to teaching the contents of the Bible, and to impressing such truths as may be essential to daily living. By this I do not mean that the new knowledge should be excluded, but only that for many years to come it will be impossible to secure persons able properly to teach or to apply it, simply because most teachers are themselves ignorant.

Milton S. Terry, D.D., of Garrett Biblical Institute (Methodist Episcopal), considers that the task of carrying on critical Biblical study is comparatively easy and one that ought to be undertaken. He saws:

"Every such school is supposed to be primarily for the study of the Holy Scriptures, and why should they ignore or seek to avoid important questions about the original texts, the authoriship and composition of the different books of the canon, and their probable chronological order? Much information on all these subjects may be acquired without a knowledge of the original languages of the Bible. A competent teacher could easily conduct a series of most helpful lessons in textual criticism, with a class of boys and girls twelve to fifteen years old, by means of the Authorized Version and the Revised Version of the New Testament, simply comparing a selection of passages (c.f., Matt. vi. 13; xvii. 3; 1 Mart. x. 29; xi. 3c; Luke iz. 55; 1 Juke iz. 55

A warning against merely destructive criticism is sounded by H. Clay Trumbull, of *The Sunday-School Times*, who remarks that "a boy with a piece of smoked glass can see spots on the sun," while "it requires the ability of the scientist with the aid of the spectrum to show the beauty and separate colors of the sun's rays."

W. C. Bitting, D.D., of New York (Baptist), not only holds that Biblical criticism should have a place, but the supreme place in our Sunday-schools:

"In so far as Biblical criticism is a method of study, historical research, scientific investigation, rigidly loyal to facts, and releutiess in rejecting fancies, the sincere effort to treat the Bible honestly, there is need for it in every school, and it should hold the supreme place. There is no remedy for the foolish religious fask that have sprung out of false methods of Bible study except such a process. For such grotesque distortions and caricatures of Christianity there is no preventive comparable to it. The wild 'smms' which reach our churches thrive because of the very methods of study which Biblical criticism corrects."

#### RECENT VIEWS OF ECCLESIASTICAL UNITY.

THE constant conflict in the Anglican communion between the "Romanizing" and the "Broad-Church" parties continues to elicit discussion of the possibility of reunion between the Roman Catholic and some portions of the Protestant Church. Two books on this subject have lately appeared, the first in England, a series of sermons preached mainly in Westminster Abbey by Rev. II. Hensley Henson, B.D., entitled "Godly Union and Concord"; the other in New York, entitled "England and the Holy See," by Spencer Jones, M.A. These volumes are reviewed by The Catholic World (June), which presents its own point of view on the question of reunion as follows:

"Souls instinctively drawn to faith and definite dogma are beating their way steadily toward the center of sound doctrine and firm discipline; those of the opposite sort are gathering together upon a platform bound to grow broader and broader until it is able to support all who are willing to be called religious men, and who yet disbelieve in the existence of a living, infallible teacher. Instead of one kind of reunion, there are two; for some men rally round the dogmatic principle; others about the rationalistic. By every rule of logic and every principle of consistency, but those reunions should inevitably be accomplished; vided into these two hosts, the consistent followers of antagonistic standards—authority and private judgment. The pity is that, among those disposed to listen to a teacher, there should be more than a single camp."

The Catholic World, however, makes perfectly plain what basis of reunion it would propose:

"On what conditions will Christendom actually be united? No one has said; no one can say. An ideal is being sought for, and the conditions of attaining it have not yet been specified. Tho the proposal is as yet but a vague one; the the outlook be havy and indefined, as is often and truly charged; still, let us at least display some responsive enthusiasm in the presence of so splendid a vision as that of Christendom reunited. But again, let us always remember that enthusiasm is not a cover for compromise; for even supposing, for impostable, that the Church of Rome were to concede some vital points, her concession would necessarily be in vain; for the instant it was made reunion with Rome would lose its charm for England. Rome is peculiar and unique trait as distinguished from all other calcinates is precisely her loss of the control of the control of the control of the control of the calcinate is precisely her control of the control of the calcinate is precisely her control of the calcinate in the control of the teaching."

The advantages possible to Roman Catholics from a reunion with the Anglican communion in view of the growth of the American spirit are thus pointed out:

"For ourselves in the Western world a more than ordinary interest and importance attach to the subject of England's reunion with the Holy See. Whatever Mr. [Benjamin] Kidd's latest book may prove, at least it exhibits incontestable evidence of the impression America's prospects are making upon the world. Call them Anglo-Saxon, or what you will, the 'principles of Western civilization ' have come to stay and to dominate. There is a reality underlying such phrases as 'the Americanization of the world. Even were Great Britain's influence as a worldpower to diminish, nevertheless the English-speaking races give unmistakable promise of playing a leading part in the future molding of humanity. What then? Why, it needs no prophet to suggest that the reunion of England-or even of the High-Church party-with the Holy See would go far toward evolving a condition of Catholicism possessed of 'Projected Efficiency'nicely adjusted, that is to say, to the needs and aspirations of the coming age. Were England Catholic again as of old, and America as Catholic as there is hope of making her, then we would hear no more of the popular calumny that our church is a thing of the past and built in conformity to conditions that have disappeared forever. . . .

"It is the fair promise of the future, this dream of a Christendom reunited and rejuvenated, with strength renewed as the eagle's. And it is almost all we have to sustain us while we contemplate the present distressing accumulation of numbers

and power by the church's enemies. What can be done to further the realization of the blessed vision? No one dare point out in detail. But this is certain: the first great need is readiness to concede all that principle will allow. The indefinite possibilities of adaptation, when things are viewed in this spirit, almost persuade us to delay and speculate on what might be done; but it is unsafe to wander in this maze without official guides. History, honestly studied, however, will throw a broad and searching light over the future by reflection from events and changes in the past. It will even encourage us to dream of wonder-working developments. But before beginning to dream, there is another detail to be attended to, namely, the creation of an atmosphere in which dreams will possess a strong likelihood of being reproduced by reality later on. We dare say the foremost advocates of rennion would regard it as an amply sufficient cause of thanksgiving and joy if they could hear it said by one and all. We promise that to promote reunion we will make every possible concession which is not repugnant to inviolable principles."

The same general subject is treated editorially in *The Churchman* (Prot. Episc., May 24), in a review of one of the books already mentioned. Speaking of the proposition of unity on a Roman Catholic foundation, the editor says.

"The great fraternity of a common belief can not be obscured by dogmatic differences and ritual divergences. The Roman system can never, from our point of view, offer a basis for a restored Catholic Church; hut that the individual Roman Catholic should be considered anything but a fellow Christian and fellow chiten is abborrent to the temper of American civilization. Social isolation on account of belief can not flourish in this atmosphere. Absurd and foolish things have been said in polemical attacks on the Roman Church. On both sides there are too many bitter memories. Let them be used as the lessons of past experience, not as guides for the future. The history of the civilized world since the Reformation has proved conclusively that everywhere human nature is found at about the same standard, both its sexcellencies and in its defects."

#### THE SHRINE OF POSITIVISM.

THE memory and singular personality of Auguste Comte are brought vividly to mind again by the mountent which is soon to be dedicated to the renowned philosopher in Paris on the Place de Sorbonne. This mountent, the work of the sculptor lightert, consists of a bust of the founder of Positivism accompanied by two allegorical figures; one representing a young moman holding a child in her arms, supposed to symbolize humanity rising higher with each generation; the other the figure of a young man in an attitude of meditation, symbolizing manual workers called to intellectual culture. In these two images, according to a Prench critic, is resumed the supreme thought of Auguste Comte, which is in brief as follows: "Humanity, enfranchised from all religions which in their time have belped to develop it, has no longer any other object of religious worship than itself. This is of itself its unique religion."

The apartment in which Auguste Comte died (September 5, 1857) in the Rue Monsieur-le-Prince, No. 10, where he had lived for sixteen years, has been preserved by his followers in the same condition as at the time of his death. It is the social center of Positivism. The following description of this apartment and of the ceremonial system of Comte's followers is found in a recent number of the Magasin Pittoresque, written by Pelicien Pascal:

"This apartment is a veritable sanctnary where the profane are admitted only as an exceptional favor. In general, admission is reserved alone to members of the Positivist Society. The apartment consists of a salon, library, dining-room, and bedchamber. The whole furnished in simple style of the Louis Philippe period, for Contie was by no means a rich man. The bare, shining floors are devoid of either range or carpets, as these had not come lato general use in the time of Auguste Comte. Upon the walls of the dining-room hang a few photographs, among which is to be remarked the portrait of Danton, who is for the Positivists the great man of the Revolution, and that of the house in Montpellier where Comte was born, a very ordinary dwelling with a group of bushy trees separating the garden from the street.

"In the center of the salon stands a table which is of great importance to Positivism. It has a round top of gray marble supported by three mahogany legs. It must not be thought that this table serves for spiritnal manifestations, for Positivists admit neither occult powers nor the survival of personality after death. But nevertheless this table must be considered the most precious object among the relics of Auguste Comte, for it was before this table that the great philosopher gave his lectures to the disciples that came to him, and it is around this same table that are administered the nine sacraments of the Positivist religion. In the salon, among other portraits is to be seen one of Comte himself, painted in such bituminous colors as to give him with his cleanshaved face quite an ecclesiastical aspect. On the opposite wall hangs the portrait of Clotilde de Vaux, whose intelligent and tender affection exalted so powerfully the great philosopher and inspired him with his personal theories concerning the relations of men and women and the social mission of woman.

"In the library the books of Auguste Comte are ranged in two high cases with glass doors which permit their ordinary bindings to be seen. There must be something over a hundred volumes. the number which, according to Comte, should suffice for the library of every faithful Positivist. Chairs are arranged in this room, one before the other, indicating the present use of the apartment as a lecture room. From this one passes into the bedchamber where the philosopher died. His bedstead in plain mahogany. Empire style, is made up as if he were coming to occupy it again. Above the simple couch hangs a portrait of Comte, taken after his death. Upon the black marble mantle stands a vase of artificial flowers under a glass case. These flowers were the work of Clotilde de Vaux. A tea-pot in blue porcelain and the cup from which he last drank stand beside the superannuated bouquet. In a panel beside the bed are suspended the garments worn by the defunct. One can not help thinking that the preservation of the least objects which August Comte used by his pious disciples corresponds exactly with the Catholic veneration for the saints. It is not alone in the worship of the relics of its founder that the rites of Positivism consist. It also possesses nine sacraments, intended to remind man of his social functions in the principal events of his life, and these sacraments are conferred upon the Positivists of Paris around the gray marble tuble with the mahogany legs, which thus takes on the character of a veritable ultar.

The Presentation is the sacrament of the new-born child. It is administered by the presentation of the infant some time after its birth to the adepts. The Initiation is conferred at fourteen years. It marks the entrance of the adolescent into self-conscious life. The Admission is accorded at twenty-one years. It indicates a conscious and reflected participation in human life. The Destination, administered at twenty-eight years, consecrates the definite choice of a career in which one is to contribute to the universal life of humanity. Marriage is the foundation of the family. Altho there is no age indicated to receive it, it is preferred that it take place between the age of twenty-eight and forty-four years. Maturity is conferrred upon n man at fortytwo years. It reminds him of the fulness of life upon which he has entered. At sixty-three years a man receives the sacrament of Retreat. Death confers upon him the sacrament of Transformation, and posterity the last and definitive sacrament of Incorporation of his memory and of his works, if he has accomplished any, into the common treasury of the ideas of humanity.

"Like Christianity, like Mohammedanism, like the Revolution, Positivism counts the years from an era peculiar to itself, dates from 1758. Positivists are therefore at present in the one lumdred and fourteenth year of the Great Crisis. They have likewise a calendar of their own.

"Each momh is named after a distinguished man, beginning with Moses and including Homer, Aristotle, Archimedes, Cassar, St. Paul, Charlemagne, Dante, Shakespeare, Descartes, Frederick, and the Freens Scientist Bichat—thirteen months in all twenty-eight days each. Each day is consecrated to one or more great men as in Catholicism to one or more saints.

"The Positivists recognize the authority of a director of Positivism. His rôle, while respecting the independence of thought allowed to each one of the faithful, is equal to that of the Pope in Catholicism. M. Pierre Lafitte is still invested with this authority, which M. Jeannolle will inherit when M. Lafitte shall have received the sacrament of the Transformation.

"Finally, there are dissenting disciples who reproach the faithful of the official church with giving too favorable an interpretation of the doctrines of Comte to revolutionary democracy. And among the adherents of the church of the Rue M. le Prince there are those who claim their independence of mind from the letter of this doctrine. "Translations made for Tue LITERARY DISCIPLES."

#### A SCOTCH DECISION ON HIGHER CRITICISM.

A NOTHER significant indication of the increasing tolerance with which the higher criticism is regarded was found in connection with the proceedings of the General Assembly of the United Free Church of Scotland, May 23, when that body declined by a decisive vote to take action upon Dr. George Adam Smith's recent work "Modern Criticism and the Teaching of the Old Testament." The motion for tolerance was presented by Principal Rainy, who argued it at length. It declares that while the members of the Assembly can to held as accepting or authorizing the critical theories set forth in Dr. Smith's book, "it is not the duty of the church to Institute any process against the Triessor Smith." This motion, which was made the action of the Assembly, contains this declaration:

"The Assembly recognize that the discussions in regard to the origin and history of Biblical books, which for a number of years have exercised the minds of learned men, have tended to create perplexity and anxiety for many Christian people; yet, recapillate the results of former discussions, the Assembly carnestly exhort their people not to be soon shaken in mind by what they heard of statements regarding the Bible, or regarding some parts of the contents. These will in due time be weighed, adjusted, and up in their proper place. Above all the fluctuations of luman opinion, the Lord rules and overrules; and Ihis word abides."

Dr. Rainy himself is the recognized leader of the United Free Church. In the course of his speech, an hour long, supporting Dr. Smith, recalling the time when people were troubled over the geological discoveries, he said, as reported in the London Guardian (May 28):

"New facts of science were then discovered and at first people were nuable to assign them their proper place in relation to the story of Creation; but, when the facts were seen to be facts beyond dispute, it was not long ere the interpretation of Genesis, was adjusted to the facts. So, he maintained, a certain amount of established fact had been recognized in speculations or criticisms by accredited scholars. If facts were facts, the ascertainment of them was pure gain; let them never be afraid of such."

The Congregationalist (June 14), remarking upon the addresses of Principal Rainy and Professor Orr, says

"Both these Christian statesmen made it plain that the question was not what judgment should be pronounced on Professor Smith, but what was to be the attitude of the church on the nodern movement which is called the higher critisism. It was well the trend of opinion of devout Christian scholars is that facts have been made known as established which must be faced, and which require readjustment of views regarding the character and methods of the impiration of the Bible. The Twee of the Assembly of the proof of the Assembly of the Assemb

Zion's Herald (June 11) notes the same contrast between the present and the past, and acknowledges the gain to religious freedom from the change that has come throughout the religious world.

#### FOREIGN TOPICS.

#### ENGLAND'S ENEMIES ON THE BOER PEACE.

CONTINENTAL Europe comments in a most unuminable frame of mind upon the end of the war in South Africa. The German newspapers as a rule seem to be disconcerted. Ever since the Boer war began they have been denouncing Great

PEACE BE WITH YOU.

They fiv to each other's arms and weep from pain and joy.

THE HOER: "I'd gladly embrace you, but you've shot off my arms."

THE HRITON: "I'd gladly be on a peace footing with you, but you've shot off my legs."

Per Flok.

Britain for it, and predicting that she would, or asserting that she should, go to pieces in the struggle so recently terminated. The London Times, through its Berlin correspondent, refers to the German expressions of oxinion in the following severe terms

"The value of German comments on the restoration of peace in South Africa is questionable, seeing that to a very great extent they represent the reflections of impotent malice, disappoint-

tent usey represent the reflections of inflatent to trent, or despating resignation. Whoevercliming the last two and a half years has follable to the property of the property of the conlable eligible at unique opportunity of correcing take impressions regarding the distribution of the friends and foss of England on the continent of Europe. The German Government originally set the taue to which public opinion danced. When the hopelessness and fullify of the original policy stood revealed to the whole world, it was too late to call back the forces of inter and calming which had been set in motion. Even the semi-official press could not be earbed,"

The Krenz Zeitung (Berlin), which has been bitterly ann-British since the war began, says there may yet grow up a generation of Boers in South Africa that will reverse the fates of this war. Yet it thanks tind the war is over. The equally anti-British Hamburger Nuchrichten quotes English comments on the peace, and says they show how rejoiced the British are to get off so well and so easily.

"The peril into which England was led and which she has overcome was a deadly peril." The same paper notes English tributes to the Boers, and says that these are inspired not by generosity toward a beaten for but by Britain's shame at her own weakness. The Boers come inwardly strengthened out of the war, which can not be said of Great Britain. Thus the comment runs in the German press, the Socialist I'orwa'rt (Berlin) not sparing the British lion any more than the others. The terms of peace, oddly enough, are not deemed so favorable to the Boers. The Rheinsch-West-fallishe Zeilung says:

"England now rules the Boer republics and will thus have vested patronage to bestow. The railroads will all be constructed by England. German monopolies, like the noted dynamite concession, will be done away with. . . . In short another part of the globe is closed as a mart for German labor products.

French papers of the popular type indulge, as usual, in violent denunciation of everything British. The ministerial Timps (Paris), however, speaks in a dignified way, ways it is glad the war is over, and attributes the peace to the King's coronation. The fournal des Débats (Paris) says the terms's enot favorable to the Boers. The Intransigeant (Paris) attacks. Great Britian as a foe to mankind, and it says that the Prench Minister of Poreign Atlairs is in the pay of King Edward, altho all this seems to have very little bearing on the peace. The Matin (Paris), which supported the Boers, says that Europe will breathe freely now that the nightmare of war is over. The Echod & Paris says:

"The Boers are not beaten. They are more powerful than they ever were. They have given a blow to the tradition of British power. The men called bandits by Chamberlain negotiated as equals with Kitchener and Milner."

The Independance Relge (Brussels), a Liberal and enlightened paper, which has denounced Great Britain throughout the war, now calls upon the continent of Europe to ecase slandering the English. It says that the terms of peace are creditable to both sides and that the peace itself will be "lasting" if Great Britain acts in good faith. In Holland, pressopinion (avors the Boers to the last gasp. The Innectant (Amsterdam) says that Great Britain will yet reap what site has sown, while the Neuroe Rotterdamsche Courant says the Boers could never have accepted the published terms of peace. There must be secret terms about which the world knows nothing. In Spain call the papers, except dynastic sheets like the

PEACE AT ANY PRICE.

JOHN BULL TO BOER: "No one will know who surrendered, but if you pretend that I licked you I'll give you anything you want."

- Weekly Freeman (Dublin).

Efoca (Madrid), insist that Britain is shamed before the world. The Imparcial (Madrid) says the Boers won. Salisbury and Chamberlain are the defeated party. As for the Nationallst papers in Ireland, they can not conceal their indignation at the turn of affairs. The Weekly Freeman (Dublin) says.

"It is very interesting to note the frantic attempts of the lingo newspapers to prove to the world, in face of the facts, that England has conquered the Boers. The compulsory payment of the war indemnity is one of the vital facts which they find most difficult to explain. Never before in the history of warfare was the conqueror compelled to pay to the conquered a war indemnity of £3,000,000, supplemented by a liberal loan without interest. This is indeed a decisive test which settles at once and without the possibility of doubt the vital question which side won and which side lost in the war that is just over. . . . The credit of the peace which has just concluded belongs to the King and Lord Kitchener. His Majesty's interposition was inspired by kindly humanity. Moreover, he naturally did not desire to have his coronation marred by the coincidence of Another Great Boer Victory,' Lord Kitchener knew that the war could be no longer maintained. Peace with ignominy is at least better than war with greater ignominy, which was the only alternative. But if the peace is to be maintained, the curb on the tongues of Mr. Chamberlain and Lord Milner must not be relaxed."-Translations made for THE LITERARY DIGEST.

#### TROUBLES OF COUNT VON BÜLOW.

THE imperial German Chancellor, Count you Bülow, is in the midst of a series of complications that make his task of "assisting" Emperor William very difficult. The Agrarians are said to have cowed him on the tariff question. He has raised a hornet's nest about his ears by saying in effect that the Poles breed like rabbits and thus threaten to swamp the Germans, who breed like harcs only. A short time ago he gave an interview to the Pairs Figure in which he talked freely, if not sensationally, about the Triple Alliance and kindred topics. He said the Triple Alliance made for peace and did not menace France, and that Germany wants peace in the Far East and secks only to build up her commerce there. He denied that Germany wants to form any sort of combination with the United States to protect mutual interests in the Orient or for any other purpose. These several utterances and acts have drawn down upon Count von Bülow a shower of press criticisms of bewildering variety and complexity. The Temps (Paris), speaking of his "strange weakness," savs:

"Those who persist, in spite of one disappointment after another, in placing their faith in Count von Bülow, in seeing in him something more than an amiable skeptic, an idle do-nothing, at heart indifferent to great principles, ready to sacriface every-thing in order to retain the good graces of the extreme Agrarians, and trembling at the frown of the country aristocracy—such observers maintain that it is wrong to judge a man out of his sphere, and that the real field for his capacity is that of diplomacy."

But it is in this very field, pursues this critic, that Count von Biliow shows his incomptence. Recent developments reveal that he is inferior to nearly all contemporary statesmen, and that the has few faults left to commit." It must be admitted also that the Chancellor made, even in the opinion of his countrymen, what we Americans call "a break" when he compared Germans to hares and Poles to rabbits in breeding capacity. The Kêlmiske Vielkszeitung, a Clerical paper, says that Count von Bilmis his hideous figure of speech passed Judgment upon his own policy, for he must mean that he wants to drown like young east all new-boar Polish children. The Berliner Tiege-Matt says that there would have been a storm of indignation had Chamberdain talked like that in Empland. The Berliner

Neurste Nachrichten, an anti-Polish paper, condemns the "hares and rabbits" simile. Attention is called in the National Zeitung to Count von Billow's fondness for figures of speech in all his public utterances. He lately compared himself to the slepherd Paris in classical mythology, who had to award the golden apple to one of the three goddesses who contended for it. English papers express the opinion that Emperor William can not stand Count von Billow much longer unless he gets something done and makes less trouble.—Translations made for The Literary Direct.

#### THE NEW FRENCH PREMIER.

M. JUSTIN COMBES, the new prime minister in France, is a pronounced anti-Clerical. His name was practically unknown outside of his own country prior to the formation of the present ministry, nor did the great majority of Frenchmen know

PREMIER COMBES, Head of the New French Ministry.

anything about him either. He was at one time minister of education and studied in early life for the priesthood. altho now so much opposed to the political policy of the Roman Catholie Church in France. He is about sixtyseven years old. practical, self-contained, and sagacious. The rest of the cabinet is made up of good material. M. Delcassé, Minister of Foreign Affairs, and General André. Minister of War, hold over from

the Waldeck-Rousseau ministry. The impression in Europe is that there will now begin a brisk anti-Clerical campaign. To quote the London Spectator:

"M. Combes, whom the church fears and detests, will carry out the law against associations till the monastic life becomes nearly impossible, and will endeavor so to 'lacisic 'education that the interference of a priest in a school of any kind shall deprive it of all claim to state help, even if it is not treated directly as an offense. They will, in short, commence a campaign against the church which will stop short only of complete disestablishment, a revolution of which they are a little darial, because, thost would relieve the treasury and impair the social position of the bishops—a subject of endless irritation—it might amony the peasantry, who would have to pay for Clerical offices, which they have never paid for, and would deprive the state of all pressu, and indeed of all means, for restraining or punishing the more finantical section of the clergy."

French Radical opinion certainly demands energetic action of the nature thus outlined. But the *Journal des Débats* (Paris), which is often accused of Clerical sympathies, has another view

"It appears that M, Combes is more concerned than was at first supposed in regard to the initiative of his ministry, and in particular more concerned with regard to the actual needs of the country. He is not quite so bent as his too assidious friends thought upon a policy of combat and upon taking up his time with measures more sectarian than efficacious. Does M, Combes feel the need of vielas? Where will be get them? Andicalism is the domain of passions without ideas, the chosen field of phraseology and the demogo, It is, a place of bitterness. There is much ado without greatness. There is lattle thought. Will M. Combes have recourse to Socialist theories in the solition of the problems that will confront him? He has never shown much sympathy in that direction. The only thing the for him is to adopt some of the principles of the Moderate Republican policy.

It is noteworthy that the Temps (Paris), which is the organ of the Ministry of Foreign Affairs, and was deemed extremely friendly to the former ministry. In expressing itself with great reserve on the subject of the Coulbes ministry. This is taken to mean that responsible parties are awaiting developments before committing themselves. The French press in general is taken aback at the manner in which political events have shaped themselves. The measure of the new premier has yet to be taken and the results of the pending anti-Clerical agitation have to be seen before anything definite can be said. Outside France editorial opinion is equally doubtful. The Petter Lloyd (Budapeys) asys:

"What is going to happen? Perhaps the prevailing state of things is so firmly roated that the new misistry can not analorate it. . . . The one consoling circumstance is that Waldeck-Rousseau would not have returned had there been any double of the safety of the republic."—Translations made for THE LITER ANY DURST.

#### THE BRITISH AMBASSADOR IN WASHINGTON.

THE recent appointment of Michael Herbert as British ambassador in Washington has occasioned wide countent and discussion in the English press. The problem of Lord Pauncefote's successor had been taken up seriously by one or two organs of British opinion. It was agreed that the British embassy in Washington could not be regarded by His

Majesty's Government as a mission in a foreign country in the sense in which the British embasy in Berlin, for instance, is so regarded. It was also agreed that the man appointed should be one whom the Americans knew and liked. Before the appointment of Mr. Herbert was announced. The Spectator London) said.

"It is our deliberate and firm conviction that to this great post should be appointed, not a member of the regular diplomatic service, but a man outside who is a personage in English public life. The office is nominally that of an ambassador, but in reality it is something much more-something different in kind. Just as we can never consent to the notion of speaking of America as a foreign nation, or of Americans as foreigners-the British public long ago abandoned that idea, and when it thinks or speaks of foreigners never dreams of including any member of the English-spenking kin-so we can not regard the British embassy at Washington as an embassy in foreign parts, or the American embassy in London as a foreign embassy. Those embassies stand on n perfectly different footing from ordinary embassies, and their occupants must be selected on perfectly different lines and with perfectly different intentions. The Americans have discovered most successfully the right type of man to send to us as ambassador. The moment the American envoy lands at South-

ampton he becomes a great figure in English public life, and the President and the State Department are always careful to send us of their best, and to choose a man able to fill the part assigned by the opinion of the nation to the ambassador from the United States. We must reciprocate, and send an Englishman capable not merely of doing the regular work of an ambassador, but of standing out in American public life as a great personage and a typical representative of his country. He must, that is, be a man capable of putting what is best and most worthy in our public life in touch with what is best and most worthy in America. The fulfilling of those functions will not in the least interfere with his necessary and important official work. Instead, they will facilitate it. Americans are by nature impatient of the old diplomatic forms and ponetilios.

All this was said in the course of an elaborate leading article before Mr. Herbert's appointment had been announced. When the Herbert appointment had become public, *The Spectator* printed this brief paragraph:

"It was announced on Thursday that Mr. Michael Herbert had been appointed to the British embasy at Washington. We stated last week our reasons for holding that in the exceptional case of Washington it would be better to appoint a distinguished Englishman rather than a regular diplomat. Granted, however, that the appointment was to fall to a diplomat, we feel sure that no better member of the service could have been appointed than no letter member of the service could have been appointed than Mr. Herbert. His career has been a most dustinguished one, and he is said to be a persona grafa at Washington, where he was stationed for several years. We trust that in executing more than an ambassador or the condour-pipe for communications between the Foreign Office and the State Department. He is something much more than the British counterpart of the foreign office and the State Department.

But this is not so remarkable as a letter printed by The Spectator which throws a most significant light upon the work Mr. Herbert will be called upon to do in Washington. The writer savs:

"Washington is, of all diplomatic centers, the one into which I would not introduce an outsider, however brilliant: to make a

practise of such appointments would invite disaster. The 'machine '-the vast machine which carries forward eighty millions of those who speak our tongue-is really controiled by a smail 'family group' of Senators. Half a dozen men in the Senate, very quiet men, men who would be the first to disclaim this influence-herein is the problem of a successful diplomacy. What chance has an 'outsider,' an admiral or a general, who comes to Washington late in life, to penetrate these recesses? Lord Pauncefote never did, but during his first four years he was admirably served by at least two young men who would probably not have made that patient study of Washington had they been assured in advance that the big house in Connecticut Avenue was never to receive them as ambassadors. They would have taken elsewhere their genius for diplomacy, that infinite capacity for taking pains. Nor again should the chief be a lawyer; true, Lord Pauncefote was a lawyer, but he always regarded that as a disability. The Senate is full of brilliant lawyers; I pity Mr. Secretary Hay if an English ambassador began to practise law on the foreign relations committee, An'honest English gentleman,' if possible a rich man with the right kind of wife, but above and beyond ail this, a man who knows his Senate! I do not know what word to apply to that formidable, almost impossible, body, the United States Senate.

LATEST PORTRAIT OF MICHAEL HERBERT.

In reply to this The Noctator editorially pooh-poolis the idea that any "British ambassador will ever really succeed in handling the Senate, or the inner Senate, be he never so dexterous at the game." Be this as it may, the London Tunet, regardless of Senates and inner Senates, and taking its now usual pro-American tone, congratulates all concerned, thus.

"There is, indeed, no more important position in the diplomatic service at the present day than that of British ambassador at Washington, for there can be no more important task than that of drawing continually closer the manifold ties which should and do link together the two great branches of the Anglo-Saxon race on either side of the Atlantic. To that end it is essential that the representative of Great Britain in the United States should possess that sympathetic understanding of the American people and of the institutions of America which the distinguished representatives of the United States in Great Britain have for many years past possessed of the British people and of British institutions. It is because responsible Americans are satisfied that Mr. Herbert possesses in a lugh degree that invaluable qualification that they welcome his appointment with the cordiality to which the telegram of our Washington correspondent bears witness. In fact they not only welcome it, but we are told that they have done all in their power to let it be known that they desire it. His Majesty's Government would certainly have been, to say the least, ill-advised if in these circumstances they had allowed their choice to be fettered by any of the ordinary considerations with regard to seniority which are, unfortunately, too often allowed to prevail over the interests of the public service: and the diplomatic service may congratulate itself upon possessing amongst its relatively junior members a man of sufficiently brilliant qualifications to have rendered it innecessary to look outside its ranks for a worthy successor to Lord Pauncefote "

As for Mr. Herbert personally, the statement is made by many papers and in many forms that he is a perfect gentleman. The Westminster Gazette (London) says:

"Great Britain and America both like to send each other good representatives, and if in the United States they appreciate our ambassadors as much as we do theirs, there is no fear of our not getting on well together. Mr. Herbert, who is a brother of Lord Pembroke, married an American hady, and therefore anything like strained relations between the two countries ought naturally to be out of the question."

#### PERSONAL INFLUENCE OF EDWARD VII.

Tille coronation has not been without its effect in attracting attention to the personality of Edward VII. The impression he has made upon the world is on the whole favorable. He is considered an inpright, capable, and conscientions man who does what he can to make life happy for his people. But he has shown a dislike to being a mere figurelical, altho he is willing enough to be acconstitutional monarch. The London correspondent of The Evening Post (New York) throws much light on this side of his falarater:

"He is evidently determined to keep clearly before the popular mind the close connection between the crown and Parhament, and he is taking a much more active personal interest in the course of administration. He occupies himself a good deal with military matters. On several occasions recently Lord Roberts has been required to explain to the King, and this without the assistance of a cabinet minister, the scope and meaning of some of the pending changes in the organization of the forces. Some months ago, when certain new uniforms were required for the troops, specimens were submitted to the King before they were passed by the authorities at the War Office, and a couple of private soldiers, arrayed in the new equipment, were sent to Marl-borough House for his Majesty's inspection. The episode would not have occasioned any remark in Berlin, but it is a distinct innovation in Great Britaiu. Again, his Majesty is known to have kept a pretty tight hand over high military appointments, and he has insisted that his veto in such matters shall not be, as it usually was during the later portion of his predecessor's reign, merely nominal."

The habit of asserting himself is said by this observer to be

growing on Edward VII. To quote again the exact words of our authority;

"This new attitude on the part of the King is not at all unlikely to exhibit further interesting developments before long. It is due to several causes. Admiration of the German Kaiser

THE KING AND QUEEN IN CORONALION ROBES

has something to do with it. Until recent years the uncle and the nephew were not partieularly good friends; but there is no doubt that the older man lass been fascinated by the brilliest versatility and the overpowering activity of the younger. Constitutional kingship in the Victorian series seems a pale and shadowy affair when compared with the solid flesh-and-blood kind of sovereignty which the Holmenollern dynasty is supposed to exercise. King Edward, like the Cara and most other European rulers, has been impressed by the Kaiser's example, and is not without the hatural desire to demonstrate that he too can be a monarch who governs as well as reggas."

The Spectiture (London) recently declared that the intercenties of the King in political affairs was unconstitutional and not to be thought of. This opinion it expressed in reply to a plea by an annuy moss writer in The Fortinghtey Review (London) for the King's intervention in the cabinet crisis. It was proposed that Edward VII. should use his personal influence to make Lord Roschery Premier. The reception this proposal met with showed that the King could not go very far in his initiation of Emperor Williams. A comparison of King Edward with his mother, as the characters of both were brought out by the Boer war, is modelers follows by the London Tomes:

"It is worth recalling now that, while she deplored the necessivy of war, she never wavered to the end in her conviction that at must be fought through. It is to her, perhaps above all elses, that we owe the eafm dignity of temper with which the peples of her empire have pussed through the greatest ordeal they have been called upon to undergo since the downfall of Napleon. Her son, Kieg Edward, has inherited her spirit, and key become the management of the control of

#### CURRENT POETRY. A Coronation Ode.

By BLISS CARMAN

The Independent welcomes this poem as "a literary event of large present value and larger promise." In an editorial it says :

"We warrant that it [the 'Ode'] will be easily the finest poem which the occasion will produce. The lines that we have had from Kipling are not equal to it. The Poet-Laurente can not write such a poem. It expresses, in fine musical vertex, without a bit of obsequious flattery, the welcome which the procession of the British peoples offer to their new King, and their worship of right more than glory, and their recognition of the task they have undertaken for the world." There are joy-bells over England, there are flags on London town ;

There is bunting on the Channel, where the flects

go up and down :

There are bonfires alight

In the pageant of the night :

There are bands that blare for splendor, and guns that speak for might; For another King in England is coming to the Crown.

What people are these passing to the sound of

pipe and drum : In the garments of all nations, and singing as they

By the color on the cheek,

come?

By the accent when they speak,

They are foreign-born and alien, and their homes are far to seek; But they all come up to England, when England calls them home

And these who speak the English tongue not in

the English way. With the careless mien and temper self-assured,

whose sons are they? readers of THE LITERARY DIDEST are asked to mention the publication when writing to advertisers.

But stand firm," he went on, "until you see the whites of their eves and." he added, "as I am a little lame, I think I'll start now." Philadelphia Temes.

#### Willie's Morning in History I. -

9 07-9.08, Read the Crimion.

9.08-9.10, Took notes. 9.10-9.16, Wrote "Willie" eight times in note-

9.16 9.25, Drew pictures of the lecturer.

9.25-9.29, Examined scar on thungh. 9 29-9-36, Matched pennies.

o s6. Dropped a penny on floor. 9.16-9.17. Shuffled feet with the crowd.

7 37-9 39, Squirmed. 9. 19-10.00, Slept .- Harvard Lampon.

A Few "Til-Bits."-"I am a atranger here, sir, Can you direct me to a first-rate church?"

"Oh, yes. Right round the corner." "What sort of a preacher have they?"

'A very good man," Interesting ?"

"Intensely so."

"Bloquent?" "Very."

"The best preacher in town, I suppose?" "Unquestionably."

"What's the preacher's name?"

"Ah, my friend, that is a question which modesty forbids me to answer. Two commercial travelers were comparing

notes. "I have been out three weeks," said the first, "and have only got four orders." "That beats me." said the other . "I have been

out four weeks and have only got one order, and that's from the firm to come home." Gurst (impatiently): "I say waiter how form

have you been employed here? WAITER: "Bout a week, sir." GUEST: "Oh, is that all? Then I must have

given my order to some other waiter." "How will you have your eggs cooked?" asked

the waiter. "Make any difference in the cost o' 'em?" inqoired the customer, cautiously

" No " "Then cook 'em with a nice slice o' ham," said be, greatly relieved.

Suggestions for a Popular Song .- (Submitted to composers of touching and sentimental airs)

> By a cottage neat, So trim and sweet. Stood, once upon a time. A maiden faur. With jet-black hair. And never mind the rime : A youth came nigh. With loving eye, And fondly did he greet her. The youth, mind you, had Walked eleven miles to see her, And never mind the meter !

Pretty Maggie O'Rafferty, Evet so tender and true oor young Patsy McCafferty

Is having a fit about you; He's coming, I ween, and likewise I trow. To ask you, forsooth, to marry him now,

And I've gone and timed two of the lines, any Poetty Malagogie O'Rasaf-ferty ! - Harward Lampson.

Shakespeare Shown Up .- The following is a criticism of "Hamlet" by a genius in New South Wales:

"There is too much chinning in the piece. author is behind the times, and appears to forget that what we want nowadays is hair raising situations and detectives. In the hands of a skilful playwright a detective would have been put upon the track of Hamlet's nucle, and the old man would have been hunted down in a manner that would have excited the audience out of their number elevens. The moral of the piece is not good. The scene where Hamlet cheeks his mother is a very bad example to the rising generation, and it is not improved when the dreary old ghost comes in and blows him up. Our advice to the author is a little more action, a little more fine sentiment, and a fair share of variety business in his pext piece. In the specialty arts of the play-scene he entite'v missed his opportunities."-Tit-Bits.

Ping Pong .- The Critic for May gives the following by Mr. Burges Johnson; it is his idea of an up-to-date Tennysonian "Burle Song"

Grim portent (alls o'er dining-halls, Excited hearts full high are beating ;

O quick! Snatch off the table-cloth Before the folks have done their eating

Ping, Father, Ping, Set the wild echoes ringing, And Pong, Mother! Auswer echoes, Ponging, Panging, Pinging.

O hark, O hear! How sharp and clear! As Grand-dad pings across the table ! O faint and far the echoes are,~

With Jenkins ponging in the stable.

Page " 'Tis the cook and eke the housemaid flinging Care to to the winds and Ponging, Panging, Ping-

O Love, it pails,-this chasing balls

That hide themselves in dusty places, -While one, alas, flew in the gas,

And three knocked over valued vases. Ping! Is it true that angels, no more singing. With harps for bats, go Ponging, Panging, Pinging?

### GREATEST COMM

For Laymen Students

" Taking it as a whole, and as adapted to every class of readers, this Commentary combines more excellence than any other work of the kind which was ever written in any langu -ARCHIBALD ALEXANDER, D.D.

Matthew Herry's commensary has been a standard work for religious sorkers of all denominations through out the world dwing two centuries. Many other commensaries have been given to the sort discretible one was first edited, but Matthew Henry's has never been superseded. That it combines more points of advantage than any other work of the haird in any langage; it the opinion of judicious theologians everywhere.

### One-Third Less Regular Price Seldown

are able to offer a rare opportunity to procure this famous and widely useful commentary and refe work. We will supply it to LITERARY DIGEST readers at one-third less than the regular cash price (which is \$18) end on very easy terms. You will have to pay only \$18 in all and you will have nearly half a year in which to pay it, but you will have use of the complete set of books while paying for them To those who accept this special offer we will supply this great commentary for \$12-\$2 down and the balance in monthly instalments of \$4." Sign the acceptance form below, or a copy of it, and send it to us with \$4.

# ON THE ENTIRE BIBLE

The work is a People's and Pastor's Commentary and Bible treasure-house. It is invaluable to all Pasters, Sunday-School Teachers, Superintendents, Class Lenders, Christian Familles, in fact to all who wish to give their Bible intelligent reading and accurate interpretation.

6 Royal Octave Vols., 4,306 Pages, 100 Illustrations

#### "IT IS INCOMPARABLE"

"There is nothing to be compared with Metthew Henry's Commentary for pungent and practical applica-and teachings of the text,"—The Sunday School Times.

"For clear, evangelical, spiritual, and practical Biblical exposition there has been nothing better than this tandard."—Blehop John H. Vincent. " Matthew Henry's Commentaries will prove, in all the ages to come, to be a perfect mine of gold for lay-men."-R. S. MacArthur, D.D.

men."—R. S. MacArthur, U.D.

"For those who desire a common-sense, pithy, quickening, reverent, upiliting commentary on it
nothing in better than Matthew Henry."—Geo. Donn Boardmann, D.D.

"Matthew Henry's Commentary will list for ages because of its thorough evengelism, its lovelines
attractiveness."—Ex-Pres. James McCosh, D.D.

#### FEATURES OF UNAPPROACHED VALUE

A Clear and Convenient Arrangement, Re- | Packed with Suggestive Material, Concise, markable Spirituality and Purity Consistent, Comprehensive

Many Bible students and preachers will be surprised to find the emple treasure of exposition and instruc-n a work which has been held to be the standard Protestant commentary in the English tonges."

—Bishop P. D. Healtington (Episcopal).

# Rheumatism

The Editor of the NEW ALBANY (Ind.) MEDICAL HERALD, in the course of an article on the treatment of rheumatism, says:

"But not until lately, when Tartarlithine has been employed by us, have we obtained results that were even fairly satisfactory in the treatment of gout and rheumatism. By the emren able to relieve some of the most distressing affiliations of this class, and now regard Tartarlithine as the most valuable remedy at our disposal in the treatment of this class of affections. In rheumatism and in gout Tartarlithine can be administered with confidence."

Send for our free pamphlet, telling you have to cure rhoumatism,

SEVENTY CENTURIES OF HISTORY MADE INSTANTLY ACCESSIBLE

### The Cyclopedia of Classified Dates

Compiled by CHARLES E. LITTLE Compiler of " Historical Lights," " Biblical Lights and Side-Lights," etc., etc.

All important known facts are recorded and classified for quick reference, including all the notable events of universal history from earliest times down to the present. Each event is brought out in its historical setting and its relation to all other events. Over two hundred thousand facts are given, classified chronologically under topics representing every branch of human interest.

Hou Thomas B. Reed:
"A very valuable volume, very well arranged."

Justin McCarthy, Esq., M.P.: "Of the utmost value to all students and readers generally."
